16. To students: Mobilize peacefully; channel your commitments, your ideals, into peaceful, nonviolent, missionary tactics; take your message to "adults" in our society: ring their doorbells, go to their service clubs, unions, churches, every group; engage them in dialogue, one-to-one and in small groups; persist until there results some openness, some understanding, some acceptance, some reconciliation; don't heighten the fear that separates us one from another, seek to reach and touch the humanness that unites us one with another.

17. To everyone: break the circle of force—break the cycle of escalation; have faith in ourselves, in each other, even in our system—which is as good as you—and I—make it. It takes a lot of faith to live in a free society—we've got to believe again.

18. Explore the proposals by "Look" magazine Senior Editor George Leonard in "Beyond Campus Chaos—A Bold Plan for Peace" in the June 10th issue of "Look"—for policy reforms in admissions, courses, lectures, exams, grades, buildings, war work, curriculum, open learning, research, communications and ceremony.

No one person, and no one approach, can promise simple or quick answers or peace—for we've generated so much change in our society, with technology and affluence and education and mass media—that our times are bound to be turbulent with adjustment.

The above approach isn't guaranteed to provide all the answers—but at least it asks the right questions—a healthier foundation than we have so far utilized.

We've got to appeal to the best—not the worst—in each other. With trust and faith in each other; with a recognition that as human beings we all have more in common than we have in conflict; with an openness to each other and to change, and to searching together for peaceful resolutions of our difficulties—we can minimize our problems, and maximize our potential—to really build a society in which each man and woman is free, has equality of opportunity, good education and housing and medical care. The elimination of poverty and prejudice are within our grasp—if we but bend ourselves, lend ourselves, to its attainment.

We stand on the threshold of a magnificent future—if we don't scare ourselves to death, if we don't kill each other off. A nation, a future, of real freedom awaits us, beckons us—if we do not run from it, if we do not seek escape in some prior time.

It is the task, the responsibility, of each individual human being living in California to involve himself and herself generously in our search—for only if each of us gives ourselves to our common struggle, will any of us find peace in our times.

I invite each Californian to join me in our search.

TRIBUTE TO DR. WERNHER VON BRAUN AND SUCCESSFUL SPACE TEAM THAT PLANNED AND CARRIED OUT FANTASTIC APOLLO MOON MISSION

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. EVINS of Tennessee. Mr. Speaker, as we contemplate the successful moon-landing mission of Apollo 11, the name and work of Dr. Wernher von Braun stands out as a great space leader and pioneer.

Dr. Von Braun was a leader in the German space team that came to the United States following World War II. Dr. Von Braun has always had the faith and belief that man could achieve this astounding feat and this famous scientist's ability and dedication played a vital role in the development of our Nation's space capability.

In this connection I also want to pay tribute to two colleagues of Dr. Von Braun, Dr. Kurt Debus, Director of the John F. Kennedy Space Center at Cape Kennedy and Dr. Robert R. Gilruth, Director of the Manned Spacecraft Center at Houston, who also provided great leadership in our program of space exploration.

I commend and congratulate these great space scientists for their perseverance, determination, and success.

In addition to his capabilities as a great scientist, Dr. Von Braun also has a remarkable and acute understanding of the relationship of space exploration to religion. In Dr. Von Braun's view, space exploration and additional knowledge of the solar system and the universe reassure man of the existence of a Divine being.

Because of the interest of my colleagues and the American people in space exploration and its religious implications, I place in the RECORD herewith recent newspaper articles which appeared in the Cookeville, Tenn., Dispatch and in the Los Angeles Herald-Examiner concerning Dr. Von Braun.

The articles follow:

[From the Cookeville (Tenn.) Dispatch]

GOD, MAN, AND THE MOON

(By Bill J. Austin)

Years ago when man's great mind began to solve some of the riddles of illness, when physicians became fully capable of isolating a speck of trouble on a tiny cell, when spare parts were assembled and put inside the body of men, when it seemed, really, that this walking around, talking, upright person was nothing more than something to be tinkered with and fixed at will, when these things came about, some people believed that Man, man alone, could do it all. Nobody else was needed. Man had just popped up. And modern medicine could solve his problems and woes.

But the more these great physicians and researchers looked, the more they probed, the more they searched, the more they came to believe that there was some delicate hand at the root of it all, some sort of Creator.

Then space scientists began to fling all

sorts of stuff into the heavens. They flung sputniks into the sky and then sent them swirling around the globe. They developed weather satellites, and communications networks which would send television pictures across the 10,000 miles in a twinkling of the eye. And then they hurled man into the sky and when nobody saw a God standing up there directing traffic, breathing fire and brimstone at this earthly intrusion, it seemed for certain, at least to some, that this Creator business was a bunch of puritanical nonsense.

That's what some of the "God is dead" crowd thought.

This is no sermon. The writer is not qualified to deliver one. But it is a way of noting the remarks of one of the great scientific minds of the world, and the man who developed the rocket which has placed two Americans on the moon, 250,000 miles from home. .

Dr. Wernher von Braun said last week that space travel is not only man's new physical frontier but also the gateway to keener spiritual awareness of God's sovereignty in the universe.

He said this space travel signals the start of the "cosmic age," a second phase in mankind's long development, an era in which the earth will be seen in truer perspective as a "planet among planets," and in which the magnificence of divine creation and power will become increasingly evident."

In a word, Von Braun believes in God.

"I started reading religious books," he said, "and the truth of Christ's teachings emerged like a revelation," he told a writer for the Miami Herald.

And he adds:

"Our outlook through this peephole at the vast mysteries of the universe only confirms our belief in the certainty of its creator . . . any effort to visualize God, to reduce Him to our comprehension, to describe Him in our language, beggars His greatness.

"We must learn to consider God as creator of the universe and master of everything. We need a greater Lord than we have had in the past. . . . Our religion, our environment and our outlook have been earthbound," Von Braun said.

Von Braun's genius got man on the moon. And the genius of great physicians have enriched our walk on this planet by providing the miracles of healing.

But in each case, it seems, when light is put to the darkness, when a disease is whipped, or a new journey experienced, it only validates the words of that onetime carpenter who gently trod this earth 2,000 years ago.

They cut short his teachings, forced marched him to the place called Golgotha, cut and slashed His body with nails and hung Him there to die.

Now, lo, these many years later man puts a microscope to a particle from a tiny cell, or he walks on the moon, and the truth emerges.

And still we continue to learn it all the hard way.

[From the Los Angeles Herald-Examiner, July 5, 1969]

VON BRAUN: SCIENCE AND RELIGION ARE COMPATIBLE

(By Louis Cassels)

Dr. Wernher von Braun, the German-born scientist who has played a major role in America's space program, is baffled by people who suggest that modern science has discredited belief in God.

As far as he is concerned, just the opposite is true.

Since he became director of the National Aeronautics and Space Administration's George C. Marshall Space Flight Center at Huntsville, Ala., von Braun has joined the Episcopal Church and has become an avid reader of theological books.

He discussed his religious beliefs in a recent interview with Adon Taft, religion writer for the Miami Herald. The interview will be published in the July issue of the magazine Christian Life.

Von Braun said he finds it as difficult "to understand a scientist who does not acknowledge the presence of a superior rationality behind the existence of the universe as it is to comprehend a theologian who would deny the advances of science."

Von Braun added: "There certainly is no scientific reason why God cannot retain the same position in our modern world that He held before we began probing His creation with telescope and cyclotron."

The God which many people find it hard to believe in, von Braun suggested, is actually a pathetic caricature constructed by limited human vision.

"Any effort to visualize God, to reduce Him to our comprehension, to describe Him in our language, beggars His greatness," the famous physicist said.

"I find it best to accept God as an intelligent will, perfect in goodness, revealing Himself in the world of experience more fully down through the ages as man's capacity for understanding grows."

Thus, in this age of space travel, which dramatizes the immensity of the universe, men must enlarge their concept of God and recognize that He is not a local deity of this planet but "the Creator and Master of everything."

"Manned space flight is an amazing achievement, but it has opened for us thus far only a tiny door for viewing the awesome reaches of space. Our outlook through this peephole at the vast mysteries of the universe only confirms our belief in its Creator."

Von Braun said he believes in "the continuity of our spiritual existence after death" for essentially scientific reasons.

"Science has found that nothing can disappear without a trace. Nature does not know extinction. All it knows is transformation.

"Now if God applies this fundamental principle to the most minute and insignificant parts of His universe, doesn't it make sense to assume that he applies it also to the masterpiece of His creation—the human soul? I think it does."

"MISS KATIE" HUTTO: A REMARKABLE LADY

HON. ALBERT W. WATSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. WATSON. Mr. Speaker, recently I initiated a program designed to give my constituents an opportunity to suggest an idea that they would like to see enacted into law. Entitled "There Ought to be a Law," this form of public opinion poll attracted over 4500 entries. From this number, a distinguished panel of judges selected 10 finalists, or what they considered to be the 10 best suggestions for a law.

One of the finalists was Mrs. Katie W. Hutto of Orangeburg, S.C. Affectionately known as "Miss Katie," this remarkable lady has devoted a lifetime to the service of others. Coincidentally, at the time she was selected as a finalist in the law contest, Miss Katie decided to retire after 47 years of public service.

Mr. Speaker, in the July 25 issue of the Orangeburg, S.C. Times and Democrat, reporter Joyce Milkie wrote a very interesting and inspiring story about "Miss Katie." I recommend it to the attention of my colleagues and request that it be included as a part of my remarks as follows:

A BUSY WOMAN ALL OF HER LIFE, SHE PLANS NOW TO "SET A SPELL"

(By Joyce W. Milkie)

Miss Katie has been a busy lady all her life. After 21 years at the Orangeburg County Library, she finally decided it was time she found out what it's like to "set and rest a spell." So Mrs. Katie Hutto, known to at least two generations of Library patrons as Miss Katie, has made the decision to retire.

Of course, this is the third time in her 47 year career she has made this decision, but this time, she said, she really means it . . . this is it!

Miss Katie, nee Katherine Williams, was born and raised "right on Broughton St.," and claims nobody would ever know who she was if the story carried her name as "Katherine." She is the daughter of the late Dr. Frank Howard Williams and Mary Caroline Gleason of Charleston.

During the early part of her life, Miss Katie set the pattern for the latter part. She began to work and she's never stopped.

She attended Winthrop College, then married Purcell Hutto from Livingston and became a housewife and mother to two daughters, Mrs. Wilbur N. (Carolyn) Creech of Orangeburg and Mrs. Phil (Jean) Corker of Signal Mountain, Tenn.

Along with managing all this, Miss Katie worked for two years at Moseley's Dept. Store as an office employe then became a teacher. For 24 years, she taught the first grade at Livingston, S.C.

During the depression years, Mr. Hutto died, leaving Miss Katie with two daughters to raise and educate and a living to make.

"Well," she said consideringly, "I kept on teaching. Of course, we didn't make much money, but we managed. Then I worked at Moseley's Saturdays and summers all during the time the girls were in college."

After her husband's death in 1938, Miss Katie continued to reside in Livingston. When her second daughter married, the girls didn't think much of their mother staying by herself in Livingston and finally, in 1948, she returned to Orangeburg to stay, retiring from teaching.

This was her first retirement.

Since it's almost impossible to keep a good woman down . . . it wasn't long before Miss Katie was looking around for something to keep her busy, add to her income, and challenge her.

She found it at the Orangeburg County Library where she began work in August of 1948 and was on the Bookmobile for 18 years. For about 10 years at that time, her companion on the lumbering book wagon was Mrs. Mary B. Herbert.

"Everybody in the county," said Mrs. Herbert, "knows and loves Miss Katie. We made a team—she's fast and I'm slow—we complemented each other.

"This is a fine gal, you hear?"

Miss Katie blushed and protested.

"Well," Mrs. Herbert continued, "we always tried to conduct ourselves in a way to bring credit to the library. We always felt we represented the library . . . and the county."

In June of 1966, Miss Katie tried retiring again.

"I thought that was the time for me to quit," she said. "My doctor said, 'You're 65. No more truck driving for you.' So that was that.

"But when they called me to do part time work, I hurried on back and have been working in the library on a part-time basis ever since."

She lives in a small, pretty house. She loves her daughter's German Shepherd "Casey," and visits Casey every day, but she doesn't have a dog of her own. She's afraid she'd get too attached to it and be too upset if something happens.

Right now, she has few plans. She just wants to "stay home and read, which is her passion, and she especially loves mystery stories.

Mrs. Hutto is active in several professional organizations. She is a member of the Orangeburg-Calhoun County Retired Teachers; the S.C. State Retired Teachers and the National Retired Teachers Association. She is also active in her church, the First Baptist.

She loves children. And she gets a lot of pleasure from mature people hailing her on the street and saying, "Miss Katie, don't you remember me? You taught me in first grade!"

"If I don't know children," she said, nodding vigorously, "I don't know who does!"

She especially enjoys her four grandchildren, although none of them are very small anymore. One grandson, Charles Creech, is in the Marine Corps and studying data processing; Kathy Creech was given the Thackston Award for being an outstanding student this past year; Bob Corker is president of the student body at Chattanooga City High School in Chattanooga, Tenn.; and Phyllis Corker was chosen Miss Signal Mountain this year.

"They are all nice children," she said, obviously the proud grandmother.

She loves to walk and when it gets cooler weather, she plans to do a lot of that. She doesn't think she's a very good cook, and believes you are either born a good cook . . . or you'll never be one.

"I'm not a bit domestic," she said ruefully, "but I have worked and fought to educate my children. I have never made much money, but I was willing to do any job I could . . . and we have always gotten through.

"I went to work when I was 16 and I made 50 cents a day running errands for a milliner. My grandson, who is 16, made over a hundred dollars a week during the summer working in an ice house . . . and he couldn't understand why they took out income tax!"

She laughed heartedly at the difference between now and then.

"Well, I believe it is better for everybody to work . . . to keep busy. But now I'm going to relax and learn to enjoy a lot of things I haven't had the time for. I'll visit my children, I'll read, and walk and just relax.

"My children and my sons-in-law are wonderful to me. They are fine people. I'm a lucky old woman!"

Happy retirement . . . Miss Katie.

A BALL ON THE MOON

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. DULSKI. Mr. Speaker, the great achievement of Apollo 11 is being hailed widely—and rightfully. As the late President John F. Kennedy predicted early in this decade, an American has set foot on the moon in this decade and an American was the first to do it.

Acclaim has come from far and wide. I was particularly interested in the editorial which was published in a group of weekly newspapers in my district of Buffalo, N.Y. It appeared in the several editions of the Front Page, the South Buffalo News, and the West Seneca News. Following is the text of the editorial in the July 24 editions:

A BALL ON THE MOON

There will never be another event which will rival or overshadow the momentous landing on the moon of America's two gallant astronauts, Neil A. Armstrong and Edwin E. "Buzz" Aldrin, Jr.

The closest parallel of significance goes back to the Resurrection of Jesus Christ.

Now, as then, there are disbelievers and apathetic indifference among all kinds of people. This is most unfortunate since these same people do not fully comprehend the universal history which was made on Sunday, July 20, 1969.

Man has finally broken his confinement to one planet and has opened a new vista for travel to distant heavenly bodies. It was only a question of time before the mystery of space travel and planet landings was solved.

The Lord created many mysteries when he created this Earth and its human inhabitants. He also provided for ways to solve these mysteries—all man had to do was to place his accumulative brain power to earnest work. This was evident when good old Yankee know-how triumphed over the stumbling efforts of the Soviet Union to beat this country in space technology.

Any country which still does not have adequate sanitary facilities for its populace, and which still provides the communal use of one bathroom to six families in a so-called modern apartment building, is rated no threat to our scientific, technological or medical superiority.

The Soviet Union again pulled a celebrated bluff by sending Luna-15 around the moon at the time America was due to attempt the first moon landing. Its sole mission was to spy on our men and see if we actually would land men on the moon. The weak attempt to dull the tremendous breakthrough by sending the unmanned satellite around the moon only served to further embarass the Soviet Union. The Russians have themselves to blame for this since they awakened a sleeping giant when they sent Sputnik aloft and caught the whole world napping.

The Soviets have been afforded plenty of opportunities to join in a collective effort to conquer space and other planets. The lip service and refusals by the Reds have now served to blunt their boasting.

Their silence on all their space shots and the subsequent successes by the United States must make even the most hard-bitten Russian wonder just what kind of game his leaders are playing when the saber-rattling takes place each May 1.

Make no mistake about it—America has proved in every way it has participated in, and now with the successful moon landing, that this country is still the most powerful, the most knowledgeable—and, by far, the best—country in the universe.

Our words will never be able to convey our most heartfelt thanks to the men and women in our space program. History will now take a sharp turn in a different direction. New words, new worlds, new horizons will become a new part of our lives.

In the next 31 years, reaching for the Year 2,000, this old Earth will never be the same. New challenges will face us; somehow we have the feeling, backed up by proof, that "We shall overcome!"

RED DONALDSON—SAVANNAH'S MASTER HOST

HON. G. ELLIOTT HAGAN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. HAGAN. Mr. Speaker, it is almost as though an era has been drastically diminished in Savannah because of the untimely passing of one of this proud city's most famous sons, Kermit L. "Red" Donaldson.

I cannot imagine anyone having been to the almost fabled Johnny Harris' Resturant not remembering the "master host." For Red Donaldson was just what that name implied—a rich personality with a fondness for the humanity that walked through his restaurant doors and a friendly exuberance with which he greeted all patrons.

There are many who will recall the famous "Johnny Harris barbeque sauce," especially the servicemen who were stationed at Fort Hunter and Fort Stewart and other nearby military installations during World War II and since.

Wesley Willis' article about Red Donaldson from the Savannah News-Press magazine describes him well. I feel once you read it, you will almost know him and will understand my keen feeling of pride in being among Red Donaldson's friends. The article follows:

RED DONALDSON—SAVANNAH'S MASTER HOST

(By Wesley Willis)

Many, many Savannahians and nomads will long remember and revere the warm greeting received as they entered one of three portals at Johnny Harris' Restaurant. The man responsible for energizing this nostalgia is gone. His epitaph, etched on the hearts of a multiude of people would have to read: Red Donaldson-Savannah's Master Host.

This is the Horatio Alger story about a man and his restaurant. The first chapter commenced shortly after the turn of the century, when Red was born on a farm in Nevils, Georgia. Even a city boy knows that hard work is no stranger to a boy reared on a farm. Thus, the key to his success, hard work.

Red, who preferred the excitement of city living, ventured into Savannah at an early age. His first job was in a service station. His genial personality and hard work soon built this station into a fine paying business for his employer. Yet he was not satisfied with this as his permanent livelihood and many lives here have benefited by his decision to change vocations.

Red Donaldson and Johnny Harris' Restaurant were a melding of one since the two became intermingled in 1927. The original location of the restaurant was at Victory Drive and Bee Road. This was the genesis of the success story of the Master Host. His first duties were varied and included dishwashing, cooking, manning the cash register or you name it. He was like a human pogo stick, full of bounce and energy, performing where his services were most needed. Red was diligent and thorough. His father taught him a lesson that stuck with him through the years. It was that success is within the reach of all men if they are willing to pay the price for this beautiful treasure called S-U-C-C-E-S-S. Red Donaldson was willing, otherwise there would be no harvest for the story you are reading.

Early in his restaurant career, besides working long hours, he walked to and from work in all kinds of weather. As the crow flies it is a long haul from Abercorn and Duffy streets to Victory Drive and Bee Road. An ordinary man would have succumbed to this tortuous pace. The big difference was that Red was an extraordinary man and this slight inconvenience was just the beginning of the man and his successful venture into the restaurant field.

The restaurant flourished and soon Red assumed managerial duties and became indispensable to Johnny Harris. The place became to cramped to take care of the crowds who came to feast on the two specialties of the house, barbecue and fried chicken. So

plans were made to expand. Rather than do patch work on that location it was decided to build a completely new facility.

On September 13, 1936, the new house that Red surely helped to build opened for business at the present location. Through the years the original specialties of the establishment have grown into a menu of many succulent foods that would please the palate of even a master gourmet. Yet, the most important entree' has never appeared on the menu. Red's real down to earth specialty was good clean fun. It was a commonplace sight to see a rabbi or ministers of many faiths dining with their wives and children. Then there were priests with their friends. All of them have dined in complete comfort with the Master Host. Really, the only go-go girls ever to perform there were the young daughters of customers, scurrying to the ladies room!

The fine foods of Johnny Harris' would not be complete without that tantalizing barbecue sauce. You will find it on every table in every booth. Some of you oldtimers will remember how it was at first dispensed in soft drink bottles to the many customers who wanted to drench their home foods with this delicacy. The sauce business is now full grown and can be procured in supermarkets and to the delicatessen trade throughout the Southland. Gift boxes are also shipped all over the United States and to our servicemen overseas. It is delicious on all foods and as one commercial states, "Johnny Harris' Barbecue Sauce is good on Johnny Harris' Barbecue Sauce!!"

Johnny Harris, the founder, died in April, 1942. Red continued on as manager and part owner. The business flourished under his competent leadership. This growth was due to a combination of fine food and the congeniality of the man. He met all with a smile and a sincere hello.

When ex-Savannahians return for a visit, Johnny Harris' Restaurant is the most likely mecca they seek for a chance reunion with old friends. The young daughter of a one-time citizen once remarked during one of their visits, "Mama and Daddy are going to Johnny Harris', the garden spot of the universe." And truly it is. It is a garden of beautiful friendship where good fellowship excels. Many long time acquaintances have been renewed under this roof. Also Johnny Harris' is where you are likely to find a member of the family in an emergency. Recently a mother passed away at midday. One brother was asked to locate his younger brother. His first call was to Johnny Harris' Restaurant. The brother was there.

As time will do, it went on and so did the ambitions of Red Donaldson. In 1955 he purchased full control of the restaurant. For the ensuing four years business continued to flourish under his supervision. Then to the sorrow of many, he decided to lease his restaurant. This took place in April, 1959. Suddenly the atmosphere lost the glow so well remembered by the legion of friends of the Master Host.

Finally, after much consultation with his innerself, Red decided in April, 1961 to return to the helm at his house of memories that he could not seem to relinquish. Immediately the building sang a joyous and triumphant melody. Red had returned to his natural habitat and following him as daylight moves behind darkness, there was again the warmth that only he could generate. Even the lights twinkled and took on added brightness.

Most people usually wait until the death of a man to shower the family with superlatives about him. Not so in the case of Red. His virtues were extolled by his friends almost daily to members of the family. Possibly these displays of fondness stemmed from his love and loyalty to his people. He was seen so often in hospital corridors, going to or from a visit with friends, that several nurses and hospital employees thought he was a minister. And truly he was a minister of goodwill and hospitality.

He was the patriarch of his clan of loyal workers. He had the capacity to sense and participate in another's feelings or thoughts. For this reason very few of his workmen were of the itinerant type. His barbecue cook, to cite an instance, has performed there for forty-five years and there is a waiter who has worn out much leather shuffling across the floors for twenty-five years. Red was also held in high esteem by his competitors, prominent business executives, leading political figures throughout the state and his fellow mortals from all walks of life.

Red believed in the epitome of atmosphere and food for his household of personalities. He was so congenial to all, regardless of social or monetary status, that all felt they were a guest, in his home rather than the paying clientele. Everyone will substantiate his policy of no rowdyism. Ladies could dine alone, sans the fear of being harassed by the male species. Some few who have tried to combat this policy are still on the outside looking in. He was long on patience yet all who knew him were well aware that he would not tolerate any hanky-panky episodes.

The illustrious career of Red Donaldson was terminated on May 13, 1969. He was stricken on his farm in Brooklet, Georgia and died a short time later at the Bulloch County Hospital in Statesboro. It was only fitting that his exodus took place only a short distance from his birthplace. Lord Baden-Powell once said, "Try and leave this world a little better than you found it, and when your time comes, you can die happy in the feeling that you have done your best." The Master Host surely must have passed on with a happy farewell to the better community he bequeathed to his fellow men.

The lights seem dimmer at Johnny Harris' Restaurant these days. Red will forever remain in the hearts of the lives that he brightened with his famous smile, sincere drawl and warm handshake. It was always difficult to think of him without Johnny Harris' Restaurant; it is almost sacrilege to imagine the restaurant without the Master Host, yet at each of the three doors and all through the edifice, his echo, "Hello my friend," will forever remain.

TWO SENTINELS OF THE STATUS QUO

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. CONYERS. Mr. Speaker, I would like to bring to my colleagues' attention the following speech delivered by the Honorable Senator FRANK CHURCH. It is one of the most perceptive analyses I have seen on the United States and the Soviet Union, observing that "in their foreign policies, the two superpowers, have taken on a remarkable resemblance." Neither policy is as honorable as its proponents envision it, nor as dissolute as its opponents would portray it. Each is ill-advisedly and contradictorily trying to protect the international status quo from subversion by the other. I include in the RECORD this excellent study as follows:

TWO SENTINELS OF THE STATUS QUO

An analysis of the parallel foreign policies of the United States and the Soviet Union

For all their immense physical power, the two dominant nations in the world—the United States and the Soviet Union—suffer from a neurotic sense of insecurity, although neither regards itself as being in imminent danger of attack by the other. At tremendous cost, their nuclear armories keep them at bay and, even if each were foolishly to add a new inventory of ABM missiles to the awesome stockpile, the delicate equilibrium will hold, leaving the two rivals in a state of chronic but only low-grade anxiety over the danger of attack by the other. It is a costly and desperately dangerous way of keeping the peace, but it is all we have shown ourselves capable of thus far.

The immediate threat that each superpower perceives from the other is its ideological impact on third countries, most particularly those that it regards as its protective buffers. It is one of the supposed realities of international politics—a kind of higher law transcending such legal documents as the United Nations Charter—that great powers are allowed to have spheres of influence made up of "friendly" neighbors. In the case of maritime powers such as the United States, the neighborhood may extend to the fringes of distant continents; but, whether or not the buffer is contiguous, the principle is the same: In order to guard itself against even the most remote or hypothetical threat to its security, a great power is held entitled to intervene in the affairs of its small neighbors, even to the extent of making the basic decisions as to how they will organize and run their own societies.

This is where ideology comes in. Neither the Soviet Union nor the United States seems to regard itself as being in danger of *direct* ideological subversion by the other, although there have been times—the period of Stalinism in the Soviet Union and of McCarthyism in the United States—when they did. In more recent years, the focus of great-power apprehension has been on their small-power buffers. Over these, each great power displays frenzied determination to exert ideological control. Within its sphere, the Soviet Union insists on the maintenance of Communist governments, inaccurately described, for the most part, as socialist; the United States, on the other hand, insists on the maintenance of non-Communist governments that we, for the most part incorrectly call free.

Starting with the assumption that ideology is an instrument of foreign policy through which the rival great power will establish its political domination over others, whenever and wherever the opportunity arises, each great power seems to look upon its own buffer states as peculiarly susceptible to ideological subversion by the other great power. It is further assumed that the ultimate aim of this subversion is to isolate and undermine the great power itself; that ideology, being contagious, is singularly suited to this purpose; and that, like a disease, it must therefore be isolated and destroyed before it can spread. These assumptions lead to the conclusion that it is no more than an act of self-defense for a great power to take such measures as it judges necessary to preserve the ideological purity of its sphere of influence.

Seen in this way, the various interventions of the United States and the Soviet Union are explained not only as legitimate defensive measures but as positive services. Thus, in the case of the intervention in the Dominican Republic in 1965, American policy makers were untroubled by the fact that the U.S. actions violated both the Rio Treaty and the Charter of the Organization of American States and that the revolution the U.S. suppressed was on behalf of a freely elected government that had been expelled by a coup. These were judged only superficial considerations when weighed against the need to defend America from the specter of a "second Cuba" while rescuing the Dominicans from their foolhardy flirtation with com-

munism. Similarly, in the case of Vietnam, far from wishing to impose anything on anybody, the United States, in former Secretary of State Dean Rusk's view, seeks only to save the world from being "cut in two by Asian communism." [1]

It remained for the Russians to devise a doctrine of ideological justification for the policy of interventionism. In a document that has come to be known as the Brezhnev doctrine, the Soviet government pointed out that, in invading Czechoslovakia, the Soviet Union and its proteges were doing no more than "discharging their internationalist duty toward the fraternal peoples of Czechoslovakia" and defending their own "socialist gains" against "anti-socialist forces" supported by "world imperialism" seeking to "export counter-revolution." [2] Turn this phraseology around, substitute "anti-democratic" for "anti-socialist," "world communism" for "world imperialism," "revolution" for "counter-revolution," and the resultant rationale differs little from the official explanation of our own interventions in recent years.

Whether or not the Russians actually believe their excuse, I would not venture to guess. At any rate, I don't believe it; I believe that the Russians—even if they persuaded themselves otherwise—suppressed the liberal government of Czechoslovakia because they feared the contagion of freedom for the rest of their empire and ultimately for the Soviet Union itself. Nor do I believe that, in suppressing revolutions in Latin America and in trying to suppress revolution in Vietnam, the United States is acting legitimately in its own self-defense. There are, God knows, profound differences between the internal orders of the United States and the Soviet Union—ours is a free society and theirs is a totalitarian society whose leaders have shown themselves to be terrified of freedom—but, in their foreign policies, the two superpowers have taken on a remarkable resemblance. Concerned primarily with the preservation of their own vast hegemonies, they have become, in their respective spheres, defenders of the *status quo* against the pressures of revolutionary upheaval in which each perceives little but the secret hand of the other.

THE IMPOTENCE OF POWER

Suppressing revolution in its own immediate vicinity is an easy if embarrassing task for a superpower. Suppressing it on a distant continent is more difficult; and, as we have learned in Vietnam, beating down a strongly motivated, capably led and well-organized indigenous force is a virtual impossibility. Confronted with rising nationalistic movements, the superpowers, to their own astonishment, sometimes find themselves muscle-bound. Their nuclear power, though colossal, is so colossal as to be unusable except for keeping *each other* terrified. But in dealing with the unruly "third world," as Presidential advisor Henry Kissinger pointed out, "Power no longer translates automatically into influence." [3]

Nor, one might add, does influence translate readily into desirable or usable power. In Europe before World War One, there was a significant relationship between influence and power and between territory and power—though perhaps even then, the correlation was less than it seemed. Yet, by conquering territory or forming alliances, a nation could hope to gain material resources and political predominance. Accordingly, the balance of power was maintained—more or less—by isolating and denying opportunities for territorial expansion to the most powerful or ambitious nation. In our own time, the balance of power is determined far more by economic and technological developments *within* countries than by alliances and territorial acquisition. China, for example, has gained far greater power through the acquisition of nuclear weapons than if it had conquered all of Southeast Asia.

Nonetheless, the great powers struggle to establish their influence in neutral countries. Guided by a ritualized, anachronistic, 19th Century concept of the balance of power, they seek influence for its own sake, as if it were a concrete, negotiable asset. I am thinking not only of Vietnam but of India, where we worry about Soviet economic aid, and to whom the President once even cut off food supplies because the Indian prime minister had sent birthday greetings to Ho Chi Minh. I am thinking of Laos, where we are not only fighting a proxy war against the Communist Pathet Lao but are engaged in an agitated rivalry with the French for the control of secondary education. And I am thinking of the global propaganda effort of the United States Information Agency, with its festivals and exhibits and libraries carefully pruned of books that seriously criticize America, all aimed at manufacturing a favorable image of the United States.

All this, we are told, is influence, and influence is power. But is it really power? Does it secure something valuable for either the other country or ourselves? If so, I have never heard a satisfactory explanation of what it is; and that, I strongly suspect, is because there is none. The real stake, I apprehend, is not power at all, but a shadow that calls itself power, nourishing an egotism that calls itself self-interest.

Vietnam, in this context, is a showcase of bankruptcy, a hopeless war fought for insubstantial stakes. As a war for high principle, Vietnam simply does not measure up: The Saigon government is neither a democracy warranting our support on ideological grounds nor a victim of *international* aggression warranting our support under the United Nations Charter. As an effort to contain Chinese power, the war in Vietnam is irrelevant as well as unsuccessful; even if a Communist Vietnam were to fall under Chinese control, as I do think it would, the gains to China would be trivial compared with those accruing from her industrialization and acquisition of nuclear weapons.

The case on which Vietnam must stand or fall—if it has not already fallen—is the theory of an exemplary war, a war fought not so much on its own intrinsic merits as to demonstrate something to the world, such as that America will always live up to its alleged commitments or that "wars of national liberation" cannot succeed. The stake, then, is ultimately a psychological one—influence conceived as power.

Knocking down the case for an exemplary war is at this point very nearly belaboring the obvious. How we can demonstrate faithfulness to our commitments by honoring dubious promises to the Saigon generals while blatantly violating our treaty commitments in the Western Hemisphere—as we have done no fewer than three times since 1954 [4]—is beyond my understanding. As to proving that wars of national liberation cannot succeed, all that we have proved in four years of bitter, inconclusive warfare is that, even with an Army of over 500,000 Americans, we cannot win a victory for an unpopular and incompetent regime against a disciplined, a nationalist insurrectionary force. In the harsh but accurate summation of a British conservative who was once a supporter of the war:

"Instead of the Americans impressing the world with their strength and virtue, they are making themselves hated by some for what they are doing, and despised by the remainder for not doing it more efficaciously." [5]

At least two prominent members of the Nixon Administration have explicitly recognized the bankruptcy of our Vietnam strategy. Henry Kissinger writes:

"Whatever the outcome of the war in Vietnam, it is clear that it has greatly diminished American willingness to become involved in this form of warfare elsewhere. Its utility as a precedent has therefore been importantly undermined." [6]

President Nixon's Ambassador to the United Nations, Mr. Charles Yost, has made the point as forcefully as possible:

The most decisive lesson of Vietnam would seem to be that no matter how much force it may expend, the United States cannot ensure the security of a country whose government is unable to mobilize and maintain sufficient popular support to control domestic insurgency. . . . If indigenous dissidents, whether or not Communist, whether or not supported from outside, are able to mobilize and maintain more effective popular support than the government, they will eventually prevail. [7]

Vietnam is only one—albeit the most striking and costly—instance of a general, if not quite invariable, American policy of opposing revolution in the developing world. In some instances, this policy has been successful, at least for the short term. With our support, repressive governments in Brazil and Greece and a conservative government in the Dominican Republic, to cite but a few examples, have successfully held down popular aspirations for social and economic change. Through our support of reactionary governments in Latin America and elsewhere, we are preserving order in our sphere of influence and momentarily, at least, excluding revolution. But it is order purchased at the price of aligning ourselves with corruption and reaction against aggrieved and indignant indigenous forces that by and large are more responsive to popular aspirations than those that we support.

This policy of preserving the *status quo* is an exceedingly shortsighted one. Sooner or later, there can be little doubt, the rising forces of popular discontent will break through the brittle lid of repression. So, at least, historical experience suggests. We did it ourselves in 1776 and much of the history of 19th Century Europe consists of the successful rebellion of nationalist movements—German, Italian, Belgian, Greek and Slavic—against the powerful European order forged by the Congress of Vienna in 1815. In the 20th Century, we have seen the great European empires—British, French and Dutch—break up in the face of nationalist rebellion in hardly more than a decade after World War Two.

Since then, the revolutionary tide has continued to swell across Asia, Africa and Latin America, and it seems unlikely that even the immense resources of the United States will prove sufficient to contain the tide much longer. We have all but acknowledged our failure in Vietnam. What would we do if Souvanna Phouma's government in Laos should collapse, as it probably would if we terminated our counterinsurgency efforts and as it may, anyway? Or if a popular rebellion should break out against the military dictatorship in Brazil? Or if a Communist-Socialist government should come to power in Chile through a free election, as it could in 1970? Would we send armies to these large countries, as we did to South Vietnam and the small Dominican Republic? With aid and arms, we have helped delay the collapse of regimes whose very existence is an obstacle to social and political justice. Eventually, there seems little doubt, they will collapse, the more violently and with greater upheaval for having been perpetuated beyond their natural life span.

Thus far, I have been talking of the fragility and shortsightedness of our policy of repressing revolution. Something should be said about its morals as well. "Order" and "stability" are antiseptic words; they do not tell us anything about the way human beings live or the way they die. The diplomatic historians who invoke the model of Metternich's European order in the 19th Century, usually

Footnotes at end of article.

neglect to mention that it was an order purchased at the cost of condemning millions of people to live under the tyranny of the Russian Czar, the Turkish sultan and other ignorant and reactionary monarchs. The absolute primacy of order over justice was neatly expressed by Metternich in his assertion that, "Barbarous as it is, Turkey is a necessary evil." In a similar vein—if not, let us hope, with equal callousness—when we speak of "stability" and "order" in the developing countries, we neglect to note that in more than a few instances, the order purchased by our aid and by our arms is one that binds millions of people to live under a feudalism that fosters ignorance, hunger and disease. It means blighted lives, children with bellies bloated and brains stunted by malnutrition, their parents scavenging food in garbarge heaps—a daily occurrence in the omnipresent slums of Asia and Latin America. Only the abstractions of diplomacy take form in high policy councils; to see its flesh and blood, one must go to a Brazilian slum or to a devastated village in Vietnam.

Besides being shortsighted and immoral, our policy of perpetuating the *status quo* has a third fatal defect—a defect that represents our best hope for formulating a new foreign policy: It goes against the American grain. That is the meaning of the dissent against Vietnam and of the deep alienation of so many of our youth. It is their belief in the values they were brought up to believe in—in the idea of their country as a model of decency and democracy—that has confounded the policy makers who only a few years ago were contending that we could fight a limited war for a decade or two without seriously disrupting the internal life of the United States. What they overlooked in their preoccupation with war games and escalation scenarios was the concern of millions of Americans not just with the cost but with the character of wars they fight and their consequent outrage against a war that—even at what the strategists would consider tolerable cost—has made a charnel house of a small and poor Asian country. In this moral sense, there is hope—hope that we will recognize at last that a foreign policy that goes against our national character is untenable.

AN ACT OF FAITH

The question to which we come is whether order, in the sense in which we now conceive it, is, indeed, a vital interest of the United States, or whether, in this revolutionary age, we can accommodate ourselves to a great deal of disorder in the world. My answer, as I am sure will be clear by now, is that we must and can learn to live with widespread revolutionary turmoil. We *must* because it is not within our means to stem the tide; we *can* because social revolution is not nearly so menacing to us as we have supposed—or at least it need not be. If we can but liberate ourselves from ideological obsession—from the automatic association of social revolution with communism and of communism with Soviet or Chinese power—we may find it possible to discriminate among disorders in the world and to evaluate them with greater objectivity, which is to say, more on the basis of their own content and less on the basis of our own fears. We should find, I think, that some revolutionary movements—including even Communist ones—will affect us little, if at all; that others may affect us adversely but not grievously; and that some may even benefit us.

All of which is to say nothing about the *right* of other peoples to settle their own affairs without interference by the great powers. There is, after all, no moral or legal right of a great power to impose its will on a small country, even if the latter does things that affect it adversely. Americans were justly outraged by the Soviet invasion of Czechoslovakia, not primarily because we thought the Russians could have endured Czech democratization without loss to themselves but because we thought the Czechs had a *right* to reform their system, whether it suited the Russians or not. Ought not the same principle apply in our relations with Latin America and, indeed, with small countries all over the world?

I believe that it should. I would go even further and suggest that we rededicate ourselves to the good Neighbor Policy enunciated by President Franklin Roosevelt 30 years ago. There is, of course, nothing new about the principle of non-intervention: We have been preaching it for years. What I suggest as an innovation is that we now undertake to *practice* it—not only when we find it perfectly consistent with what we judge to be our interests but even when it does not suit our own national preferences. I suggest, therefore, as a guiding principle of American foreign policy, that we abstain hereafter from military intervention in the internal affairs of other countries under any circumstances short of a clear and certain danger to our national security—such as that posed by Castro's decision to make Cuba a Soviet missile base—and that we adhere to this principle whether others, including the Russians and the Chinese, do so or not.

Surely, it will be argued, we cannot be expected to refrain from interference while the Russians hold eastern Europe in thrall and the Chinese foster wars of national liberation in Asia and both seek opportunities to subvert non-Communist governments all over the world. Would this not throw open the floodgates to a torrent of revolutions leading to communism?

Setting aside for the moment the question of whether Communist rule elsewhere is invariably detrimental to the United States, experience suggests a policy of nonintervention would *not* throw open the floodgates to communism. Communist bids for power have failed more often than they have succeeded in countries beyond the direct reach of Soviet military power—Indonesia and Guinea, for example. Of all the scores of countries, old and new, in Asia, Africa and Latin America, only four are Communist. There is, of course, no assurance that an American policy of nonintervention would guarantee against new Communist takeovers—obviously, our abstention from Cuba in 1959 was a factor in the success of Castro's revolution. But neither is there a guarantee that military intervention will defeat every Communist revolution—witness Vietnam. Neither abstention nor military intervention can be counted on to immunize against communism, for the simple reason that neither is of ultimate relevance to the conditions that militate for or against revolution within a country, in the first place.

We have, in fact, had positive benefits from pursuing a policy of nonintervention. There is no country in Latin America more friendly to the United States than Mexico, which expelled American oil interests 40 years ago, while seemingly enthralled with Marxist doctrines, and which even now pursues an independent foreign policy, including the maintenance of cordial relations with Cuba. The thought presents itself that a policy of nonintervention could now serve as well to liberate us from the embrace of incompetent and reactionary regimes, which ignore popular aspirations at home out of confidence that, if trouble develops, they can summon the American Marines, while holding us in line by the threat of their own collapse.

The critical factor is nationalism, which, far more than any ideology, has shown itself to be the engine of change in modern history. When an ideology is as strongly identified with nationalism as communism is in Cuba and Vietnam and as democracy is in Czechoslovakia, foreign military intervention must either fail outright or, as the Russians have learned in Czechoslovakia, succeed at such cost in world-wide moral opprobrium as to be self-defeating. My own personal feeling is that, in a free market of ideals, communism has no record of achievement to commend itself as a means toward rapid modernization in developing countries. But, be that as it may, it will ultimately succeed or fail for reasons having little to do with the preferences of the superpowers.

We could profitably take a leaf from the Chinese notebook in this respect. The Lin Piao doctrine of "wars of national liberation," often mistaken as a blueprint for world conquest, is in fact, an explicit acknowledgement of the inability of a foreign power to sustain a revolution without indigenous support. This is what Lin Piao said:

"In order to make a revolution and to fight a people's war and be victorious, it is imperative to adhere to the policy of self-reliance, rely on the strength of the masses in one's own country and prepare to carry on the fight independently even when all material aid from outside is cut off. If one does not operate by one's own efforts, does not independently ponder and solve the problems of the revolution in one's own country and does not rely on the strength of the masses, but leans wholly on foreign aid—even though this be aid from socialist countries which persist in revolution (i.e., China)—no victory can be won, or be consolidated even if it is won.[8]"

One hears in this the echo of President Kennedy, speaking of South Vietnam in 1963: "In the final analysis, it is their war. They are the ones who have to win it or lose it." Or, as Theodore Draper summed it up, "The crisis in 1965 in South Vietnam was far more intimately related to South Vietnamese disintegration than to North Vietnamese infiltration." [9]

Nationalism is not only the barrier to communism in countries that reject it; it is a modifier and neutralizer of communism in those few small countries that do possess it. As Tito has demonstrated in Europe and as Ho Chi Minh has demonstrated in Asia, a strongly nationalist regime will defend its independence regardless of common ideology; and it will do so with far greater effectiveness than a weak and unpopular regime, also regardless of ideology. It is beyond question that the Tito government has been a vastly more effective barrier to Soviet power in the Balkans than the old pre-monarchy ever could have been; and, as Edwin O. Reischauer has written:

"It seems highly probable that Ho's Communist-dominated regime, if it had been allowed by us to take over all Vietnam at the end of the war, would have moved to a position with relation to China not unlike that of Tito's Yugoslavia toward the Soviet Union." [10]

If freedom is the basic human drive we believe it to be, an act of faith seems warranted—not in its universal triumph, which experience gives us no particular reason to expect, but in its survival and continuing appeal. The root fact of ideology to which we come—perhaps the only tenet that can be called a fact—is that, at some basic level of being, every man and woman alive aspires to freedom and abhors compulsion. It does not allow from this—as, in the rhetorical excess of the Cold War, it is so often said to follow—that communism is doomed to perish from the earth as a distortion of nature, or that democracy, as we know it in America, is predestined to triumph everywhere. Political forms that seem to offend human nature have existed throughout history, and others that have seemed attuned to human needs have been known to perish. All that can be said with confidence is that, whatever is done to suppress them, man's basic aspirations have a way of reasserting themselves and, insofar as our American political forms are attunded to these basic aspirations, they are a long leg ahead in the struggle for survival.

Footnotes at end of article.

Faith in the viability of freedom will not, in itself, guarantee our national security. But it can and should help allay our extravagant fear of communism. It should enable us to compete with confidence in the market of ideas. It should free us from the fatal temptation to fight fire with fire by imitating the tactics of a rival who *cannot* be as sure of the viability of his ideas in an open contest. The Russians, when you come right down to it, have better reason to fear freedom in Czechoslovakia than we have to fear communism in Vietnam. Appealing as it does to basic human aspirations, the contagion of Czech liberty very likely *is* a threat, at least in the long run, to the totalitarian system of the Soviet Union; by no stretch of the imagination can Ho Chi Minh's rule in Vietnam be said to pose a comparable threat to democracy in the United States.

The greatest danger to our democracy, I dare say, is not that the Communists will destroy it, but that we will betray it by the very means chosen to defend it. Foreign policy is not and cannot be permitted to become an end in itself. It is, rather, a means toward an end, which in our case is not only the safety of the United States but the preservation of her democratic values. A foreign policy of intervention must ultimately be subversive of that purpose. Requiring as it does the maintenance of a huge and costly military establishment, it must also entail the neglect of domestic needs, a burgeoning military-industrial-academic complex, chronic crises and marathon wars—all anathema to a democratic society. Every time we surpress a popular revolution abroad, we subvert our own democratic principles at home. In no single instance is the self-inflicted injury likely to be fatal; but with each successive occurrence, the contradiction and hypocrisy become more apparent and more of our people become disillusioned, more become alienated or angry, while a few are simply corrupted.

Being gradual and cumulative, the malady went largely undetected for too long a time. Now, however, a hue and cry has been raised, and for that we may be grateful, because the great debate in which we are engaged can, if we wish, be corrective as well as cathartic, by laying the foundations for a new approach in our foreign relations.

The shape and content of a new foreign policy are still beyond our view. For the moment, all that comes clearly into focus are the contradictions of our present approach and a few basic inferences that can be drawn from recent experience, notably: that we need not rely on military intervention to give freedom a chance of surviving in the world; that, indeed, we cannot do so without compromising our own freedom; and that only by being true to our traditional values and our own best concept of ourselves can we hope to play a decent and constructive role in a revolutionary world.

MEMORIAL TRIBUTE TO REV. A. D. WILLIAMS KING, SR.

HON. ALLARD K. LOWENSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. LOWENSTEIN, Mr. Speaker, the world and the Nation have yet to start recovering from the wound at the heart that came with the death of Dr. Martin Luther King, Jr.—if recovery is possible. We can only glimpse from our own anguish what that loss was to those closest to him, to the leadership of the Southern Christian Leadership Conference, to the Congregation of the Ebenezer Baptist Church, to his family.

And now a few months later we again bury a leader of the SCLC, a pastor of the Ebenezer Baptist Church, a member of this family: the Reverend A. D. Williams King, whose fate it was to be best known to the public as "the brother of Rev. Martin Luther King, Jr."

Those who knew this Rev. King cherished him as one of those rare spirits whose presence was a blessing wherever he appeared—one who needed to be no one's brother to be beloved in life and sorely missed in death, because he was in fact so genuinely everyone's brother.

Yet one of the remarkable things about this remarkable man was his relationship with his famous brother, for it is not always an easy thing thing to be known everywhere you go as the younger brother of one of the great folk heroes of your time, of one of the greatest men of all time. To be overshadowed without being jealous, to be compared without feeling competitive—in short, to take pride in another man's achievements and to give everything you have to help that man to do his work better: that was A. D. Williams King, truly his brother's brother.

On April 3, 1968, A. D. arrived in Memphis. "I heard my brother needed help," he said, and unheralded and unsung he came, as he always had, to give it. So the brothers embraced and laughed in the hallway of the fatal motel, and in the last hours of his life Martin King was strengthened and cheered as he could not otherwise have been.

There is no group of men and women on earth who bear more nobly than do the leaders of the SCLC, the best of mankind's spiritual heritage. There is no group of Americans who bear more devotedly the best of America's hopes and dreams. When they are hurt, all men are hurt who want a world at peace, who want an America with liberty and justice for all. Few families have given so much that is enduring and good to their times and to their country as has the King family of the Ebenezer Baptist Church of Atlanta, Ga. No family has given so much starting from such humble origins.

So again the heart of the Nation goes out to the congregation of the Ebenezer Baptist Church, to Dr. Abernathy and his associates in the SCLC, and to this extraordinary and beautiful family, smitten so soon again by so great a grief. And our prayers go especially to the widow and children of Rev. A. D. Williams King, and to his parents, gallant, gracious, indomitable, enduring.

What a debt we shall all owe to the King family and to the leaders of the SCLC if America ever becomes what America could and should become. And what an inspiration they provide to work for that kind of America. There has to be hope for a land that can produce people like these, and it has to be the duty of those of us who are left to do more than we have to see that hope realized.

I include in the RECORD at this point the memorial tribute to Rev. King from the program published by his church on the occasion of his funeral:

ALFRED DANIEL WILLIAMS KING, SR.
1930–1969

Alfred Daniel Williams King, Sr., was born July 30, 1930, the third child and second son of Alberta Williams King and Martin Luther King, Sr.

It was the destiny of this second son to live in the shadow of his great and honored brother. And yet, the Reverend Alfred Daniel Williams King, Sr., worked with such humility, such courage, such an abiding faith in the cause of his family, his people and mankind itself, that he now stands forever in his own right as a hero and a good man.

He was born into a family rich in tradition and prophetic in vision. His maternal grandfather was Adam Daniel Williams, second pastor of Ebenezer Baptist Church in Atlanta. His father had assumed that pastorate and became a legend in the struggle of the Negro people.

Christine King Farris, Martin Luther King, Jr., and A. D. Williams King were all born at 501 Auburn Avenue, N.E., in Atlanta, where they were brought up in a home of love, understanding and compassion. They also learned of injustice in the land.

"A.D." was educated first in the public schools of Atlanta, then at Palmer Memorial Institute in Sedalia, North Carolina. In 1960, he graduated from Morehouse College in Atlanta. He completed his formal education with studies at the Interdenominational Theological Center in Atlanta. He was honored in 1968 with a doctoral degree from the University of Haiti.

His heritage beckoned A.D. Williams King to the ministry, and though he resisted it, his humanity finally made him a preacher. His pastoral career began in 1957 at Mt. Vernon Baptist Church in Newman, Georgia. In 1961 he became pastor of the First Baptist Church of Ensley in Birmingham, Alabama.

In May, 1965, he was installed as pastor of Zion Baptist Church in Louisville, Kentucky. On that occasion, for the first time, three members of the King family preached successively in one day: M. L. King, Sr., in the morning; Martin Luther King, Jr., in the afternoon; the Reverend Joel King, brother of the senior Dr. King from Mansfield, Ohio, in the evening.

On April 4, 1968, Martin Luther King, Jr., was assassinated in Memphis, Tennessee. His younger brother, Alfred Daniel Williams King, had come to Memphis that day "to help my brother."

In August, 1968, A.D. Williams King accepted a call to become Co-Paster of Ebenezer Baptist Church.

On July 21, 1969, he was the victim of an accidental drowning at his home in Atlanta.

He is survived by his wife, the former Naomi Barber, married to him June 17, 1950, in Atlanta; their children, Mrs. Alveda Celeste King Ellis, Alfred Daniel Williams King, Jr., Derek Barber King, Esther Darlene King, and Vernon Christopher King; his parents, the Reverend and Mrs. Martin Luther King, Sr.; his brother-in-law and sister, Mr. and Mrs. Isaac Farris, Sr.; their children, Isaac, Jr. and Angela Christine; his sister-in-law, Mrs. Martin Lurther King, Jr.; her children, Yolanda Denise, Martin Luther III, Dexter Scott and Bernice Albertine; four aunts; three uncles; his son-in-law, Mr. Jerry Ray Ellis; his mother-in-law, Mrs. Bessie Barber Bailey; and numerous other relatives and friends who are legion.

Alfred Daniel Williams King, Sr., had an unheralded but significant career as a civil rights leader and freedom fighter.

He was in the sit-ins and the Freedom Rides of the early 1960's—a testament of bravery exhibited by few men of his time. He was also jailed many times in the cause of the nonviolent movement. He was in Albany, Georgia, in 1961; St. Augustine, Florida, in 1964; Selma, Alabama in 1965.

In the historic Birmingham, Alabama, Movement of 1963 he played a leading role. His home there was bombed as he assumed a leadership that challenged America and the world.

In Louisville, he organized the Kentucky Christian Leadership Conference and the Louisville Movement of 1967–68, which culminated in the first open-housing law below the Mason-Dixon line. In August, 1968, as the Southern Christian Leadership Conference, of which his brother served as Founding President, met in Memphis, the church of Rev. King was bombed.

After the passing of his brother, Rev. A. D. Williams King was everywhere he was needed. He was a faithful and valued Member of the Board of Directors of the Southern Christian Leadership Conference. He served and sacrificed in the struggles of garbage workers in Memphis, Atlanta, St. Petersburg and Macon. He was a leading strategist of the Poor Peoples's Campaign. He was the first representative of SCLC to appear in support of the historic strike of hospital workers in Charleston, S.C., a strike that recently ended in victory for all black and poor people.

History thrust Alfred Daniel Williams King, Sr., into a most delicate and difficult position. He assumed that position with grace and dignity.

He was a decent, generous, strong and gentle man.

He was the kind of brother, son, husband, father and leader that men hope to be.

Alfred Daniel Williams King, Sr., loved life and he loved people with a gorgeous and limitless passion.

People moved him so much because he loved them so much.

FEDERAL BIRTH CONTROL

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. JACOBS. Mr. Speaker, I insert this the following article, which appeared in the Indianapolis News on Saturday, July 12, 1969:

FEDERAL BIRTH CONTROL

Talk is cheap, and that's about all the public has heard from Washington concerning economies in government.

Expenditures keep going up and there is considerable speculation that the Federal government may spend up to $200 billion this fiscal year, which began July 1. While that figure is almost incomprehensible, it's not too difficult to see why the budget keeps rising when individual cases are considered.

For example, the Department of Health, Education and Welfare has announced a grant of a quarter of a million dollars to Indiana to provide family planning for the poor in the state's metropolitan areas. The $244,000 grant will provide counseling, medication and birth-control devices.

The public is assured by Dr. Joseph F. Thompson, who will have charge of the grant, that "there is no coercion involved. A woman must request the information or equipment before we give it out."

The lack of coercion doesn't answer the religious and moral objection many Americans have to the use of artificial methods of birth control. It is ironic that a number of people who are so eager to encourage young men to opt out of military service on religious grounds are also so persistent in getting the Federal government to force others to subsidize birth control.

We believe that birth control is a private matter among individuals and should be neither encouraged or discouraged by the government. It's another expense contributing to the high cost of government when the need is for a little common sense about the use of the taxpayer's money.

BUFFALO EVENING-NEWS ISSUES MEN-ON-THE-MOON EDITION

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. DULSKI. Mr. Speaker, all of us are bursting with pride—and rightfully—at the triumphant success of Apollo 11, allowing American astronauts to be the first to set foot on the moon.

The achievement staggers the imagination, coming on the heels of a long series of successes in the space program of our United States.

Yet, even at this time of great jubilation we must not forget the great sacrifices that have gone into our effort over the years. I refer, of course, in particular, to the tragedy on the pad at Cape Kennedy which took the lives of three of our brave and dedicated astronauts.

The successful voyage to the moon of Apollo 11 has been chronicled in a special edition of the Buffalo Evening News, published last weekend in my home city of Buffalo, N.Y.

I have today sent a copy of this excellent souvenir edition to every Member of the House and the Senate.

The lead article in the special edition of the News puts this achievement in focus, as follows:

OUR MEN ON THE MOON—FULL STORY OF MANKIND'S GREATEST ADVENTURE

The white-clothed human leg stretched down the ladder, probing carefully. It was motionless for a moment—and then it went downward those last awful inches to the surface below.

After his many millenia on earth, man was beginning the move into a new home in the vast mansion of space.

It was July 20, 1969, and Neil A. Armstrong was standing on the surface of earth's closest neighbor in the solar system, the silent, dusty wasteland of the moon.

Armstrong, who had reported the lunar module's arrival a few hours earlier with the eloquently simple words, "Eagle has landed," now spoke into the microphone inside his space helmet.

"That's one small step for man." His voice faltered on the last word. There was a moment of silence. Then he added, "A giant leap for mankind."

Another white-suited figure came down the ladder.

Edwin E. Aldrin Jr. hesitated near one of the space ship's spidery legs, turned uncertainly and then spoke reverently into his microphone about the "magnificent desolation."

Thousands of miles away, million of human beings were experiencing an excitement they never will forget.

Most of them in America had eaten Sunday dinner and then settled themselves in easy chairs before television sets with the same feeling of casual anticipation they would for a Sugar Bowl football game.

Suddenly, the full realization struck. They were watching one of the great moments in all of human history.

Many of the viewers wept. Many prayed. And many just stared in disbelief.

"In the beginning, God created the heaven and the earth," begins the Biblical chronicle of Genesis.

Over countless centuries, man had clung precariously to life on God's earth. He had made it a comfortable home—a "good earth." And he had made it a place of pain and tears, a place of hopeless poverty. He had soaked its fair meadows with the blood of soldiers and made wide stretches of it ugly as he seized its resources.

Now, man was moving out into God's heaven.

Then, incredibly, the solmenity of the moment evaporated. Armstrong and Aldrin were dancing and cavorting over the moon's surface—like two young boys dashing out to play in winter's first snowfall.

Deliberately or unwillingly, the two space travelers were demonstrating again the miracle of man's powers of adaptability. Suddenly, you knew that man would be able to live with what he found in space . . . that, in the words of human young, he'd "hack it" out there.

Returning to earth Thursday, the Apollo-11 astronauts are men apart for a while, quarantined against the possibility that, if moon bacteria exists, they could start deadly plagues.

Looking backward, it is strange to think that man's quest into space began less than a dozen years ago. On Oct. 4, 1957, a Russian rocket hurled a 184-pound sphere into an earth orbit.

The U.S. got into space Jan. 27, 1957, when the Army launched Explorer II—a basketball-sized orbiter.

Four years later, the first two men were in space within a month of each other.

Russian Yuri Gagarin rode a space ship for one earth orbit April 12, 1961.

On May 6, Alan B. Shepard rode a Mercury ship in a sub-orbital space trip down the Atlantic missile range.

The Russians scored their last major space victory on March 18, 1965, when Aleksea A. Leonov stepped out of a two-man capsule for history's first space walk.

On June 3, 1965, Edward H. White made the first American space walk and enjoyed it so much that his co-pilot, James A. McDivitt, had to coax him back into the capsule.

Both American and Russian space programs were jarred by tragedies in 1967. The first crew for the Apollo series—Gus Grissom, White and Roger Chaffee—died in a launch-pad fire as they were rehearsing in a liftoff simulation.

Three months later, the Russian Soyuz-1 crashed during re-entry, killing its pilot.

Both countries' space programs were slowed after the tragedies. The American NASA pro-

gram had to operate in the 1968 fiscal year on its smallest budget in six years.

The Russians were having their troubles, too. They were struggling with design problems for the manned lunar trip—problems that they apparently never have solved.

The world continued to watch the U.S.-Russian race to the moon, not knowing that the race already had been decided.

Apollo-8 made the first manned lunar orbits and the world was thrilled last Christmas Eve, as Frank Borman read the words of the Bible's Book of Genesis while he moved across the moon's wastelands.

The troublesome lunar module problems were shown to have been solved by its successful use during the Apollo-9 trip in earth orbit. The lunar module, or "Lem," was ridden during Apollo-10 by Thomas Stafford and Eugene Cernan, who made breathtaking passes over mountains on the moon in it. That set the stage for the historic Apollo-11 journey.

The future of space travel stretches ahead in inviting vistas.

But, aside from more detailed moon explorations, the next order of business is the prosaic job of putting big observatories, laboratories, and launching pads in permanent earth orbit.

The Saturn rocket will be the work-horse of the lunar age.

But work is well along on the designs of Nova-type and nuclear space engines.

Then, man will turn his attention to our planetary neighbors, Mars and Venus. Already, American probes are on the long voyage to Mars that will be climaxed when they photograph the "red planet" from close range. We'll be looking at those pictures before summer's end.

Sometime after the year 2000 man will depart on voyages to the vast reaches of space outside our solar system. Those trips will stretch over many years, but Einstein's findings tell us the voyagers will return to earth still young men—probably to find their grandchildren old and gray.

For the nearer future, the most interesting footnote has been spoken by America's first man in space, Alan Shephard.

He thinks future space travelers will not have to undergo the rigorous training of today's astronauts.

"I think there is no question that we could send a man into space without astronaut training," he says.

Maybe your grandchildren will be telling you about their trip to the moon.

No one would say that's impossible—not after the night of July 20.

Mr. Speaker, a feature on the front page of the special moon landing edition of the Buffalo Evening News was a poem written by our superintendent of schools in Buffalo, Dr. Joseph Manch.

Following is the text of the poem:

MOON WALK

We watched and waited, prayer in every heart,
And slowly learned this miracle of space
Was real, and that these men, with astral art,
Would walk the gray earth satellite whose face
Has known the poet's pen, the lover's plaint
And the philosopher's surmise. And so
The truth is clear and joy needs no restraint
To celebate the "giant leap" we know.

The wonder of it all! Our fearless men
Have stepped upon the moon and stirred the dust
Of eons and returned to us again
To give fresh promise of another thrust:
An orbit of the heart to find increase
Of hope—that men may walk the earth in peace!

—JOSEPH MANCH.

BECAUSE I AM AN AMERICAN

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. BROWN of California. Mr. Speaker, recently, Miss Mary L. Kulper, a constituent of mine from Alhambra, Calif., wrote to the Alhambra Post-Advocate a short statement presenting her feelings on what it is to be an American.

I agree with Miss Kulper that all of us would benefit from more personal expressions about our country and how we, as individuals, relate to it and to its continuing traditions. I found Miss Kulper's article quite interesting, and I now insert it into the RECORD so as to share it with the rest of my colleagues:

BECAUSE I AM AN AMERICAN

EDITOR,
Post-Advocate:

Lately I have been concerned about my fellow man. I feel as though Americans are forgetting what an American is and what their job as Americans is.

I have jotted down a few things that I feel Americans are forgetting. I realize that what I have written is just a small portion of what I feel as an American. If it meets your approval please print it in your paper. I think that if people see more and more articles dealing with what Americans feel maybe more and more people will start thinking what it is to be an American.

I wrote to my Congressman (Rep. George E. Brown) and asked if I could obtain a flag that has flown over the capital of the United States. I told him I would fly it every day. Well, I have flown it every day for almost a year.

Now, when I drive around Alhambra I notice more and more people flying their flags every day. It makes me feel good.

I want to thank you for taking the time to read this letter.

MARY L. KULPER.

ALHAMBRA.

(The flag that Congressman Brown sent to Miss Kulper was flown over the nation's capital on July 30, 1968—EDITOR)

I AM AN AMERICAN

(By Mary L. Kulper)

I am an American. Oh, that doesn't make me perfect, but it does make me a special breed of person. One thing an American is is a believer, and I believe in what my fellow man is striving for.

I am not capable of doing wrong when I believe in America, but today too many Americans are going too far—defacing and not accepting the flag. Oh, I realize that all that comprises a flag is a piece of cloth with some stars and stripes on it, but that is not all that our flag is. That flag of ours has been through every war America has fought, starting with George Washington. So we are not honoring only the flag itself but the Americans who have died for it. The flag represents freedom for all, no matter what color, race or creed.

People today are going too far and they want too much freedom. Sure, we fought for freedom for all, but there is a limit; if there wasn't things would have been much different than they are today. Today, like in the beginning of this great nation, we need people to protect our freedom so that we don't ruin a truly free nation.

People today also take every day's living too much for granted. These people don't realize or don't want to realize the hardship our forefathers went through—but I do, because I am an American.

When I see a flag waving in the breeze, I picture struggling men fighting for our freedom. I realize our life is a free life but we must all help each other to really benefit. We must truly be Americans.

FREEDOM FROM HUNGER FOUNDATION SPONSORS HIKE

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. JACOBS. Mr. Speaker, on May 17, the American Freedom From Hunger Foundation sponsored a successful "African Trek" of 24 miles through Rock Creek Park, in Washington, D.C.

Participants in the hike were matched by citizens who pledged to contribute varying amounts per mile walked by the various participants. The contributions were specifically for the purpose of food for hungry children.

Various Members of the Congress including the Honorable PATSY T. MINK of Hawaii, Hon. DONALD M. FRASER of Minnesota, Hon. CHARLES H. PERCY of Illinois, Hon. BROCK ADAMS of Washington, as well as John Mink, Jay and Mrs. Rockefeller and numerous other notables, donned their walking shoes for what was really a rather grueling physical experience, wearing out one kind of sole and uplifting another kind of soul.

Some of the other really outstanding citizens who participated in this altruistic event included Mr. Louis J. Mahern, one of the world's foremost authorities; the Honorable Joseph Palmer, Assistant Secretary of State and Mr. William Satterwhaite, Ambassador to South Africa.

At various checkpoints along the 24-mile course, various African embassies delighted the participants with displays reflecting the culture of various African States.

Though the hike was as exhausting as one might imagine, the very large proportion of the very young who participated was an inspiration in itself.

We older ones were inspired by the performance of the young people, particularly the high school boy who literally ran nearly the entire distance, finishing hours ahead of the hikers.

One could not help but be inspired by young Henry Schoelkopf who unfortunately had worn formal shoes which pinched a bit but who said, "Hurting feet aren't as bad as empty stomachs." Henry marched for more than 20 miles. Chaning and Chesley Jonker were among the youngest participants and as they learned to recite Kipling's "If" they inspired us all to persevere.

Mr. Speaker, the song goes, "If everyone would light just one little candle." The brilliant torch of concern for starving fellow humans was held high on May 17 by all these wonderful people and institutions who literally gave of themselves for the American Freedom From Hunger Foundation African Trek in Washington on May 17, 1969:

The Honorable Walter E. Washington.
The Honorable Senator CHARLES H. PERCY.
The Honorable BROCK ADAMS.
The Honorable DON FRASER.
The Honorable PATSY T. MINK.
The Honorable Joseph Palmer, Assistant Secretary of State.
William Satterwhaite, Ambassador to South Africa.
Lt. Robert Peck, District of Columbia Fire Department, Office of Public Safety.
Mr. Lee Thurman, Director, Civil Defense.
Clinton Mitchell, Special Assistant to Executive Director, Community Relations, Mayor's Office.
Dean Francis B. Sayre, Jr., Washington National Cathedral.
Canon Charles Martin, St. Albans School.
Mr. Edward Curran, National Cathedral School for Girls.
Detective Ray Wrenn, Police Boys Club.
Lieutenant Ellis, Special Events, Metropolitan Police.
Mr. Martinek, Superintendent, Park Police.
Washington Red Cross, Rescue Unit.
Georgetown University nurses—four nurses volunteered their services for first aid.
Dr. William Robinson, medical doctor on route all day.
Miss Condy Smith, in charge of manning checkpoints.
Mr. Phil Lee, transportation.
Mr. Ian Smith, Peace Corps Liaison.
Miss Linda Sawyer, radio stations WMAL, WTOP, WABA, and WOL.
Charles Cheng, Teacher Union, District of Columbia.
Mr. Robert Pellaton, route coordinator and map director.

In addition to the above, numerous letters were sent to African ambassadors, churches, schools, and neighborhood groups who contributed both their time and their energy to make the walk a success.

Organizations with more than three walkers were: Walt Whitman High School; Gordon Junior High School; Office of Economic Opportunity; Sidwell Friends School; St. Albans School; National Cathedral School for girls; Coolidge High School; Paul Junior High School; Peace Corps; Backus Junior High School; Howard University; St. Cecilia Academy; W. T. Woodson High School; First Trinity Walther League, Lutheran Church; VISTA.

Notre Dame Academy; Walter Johnson High School; Federal City College; Young Christians Movement; District of Columbia Teachers Union; Roosevelt High School; Western High School; Holy Trinity; American Institute; Sousa Junior High; Williamsburg Junior High; St. Anthony's; Bishop McNamara; Junior Neighbors Committee; Cardozo High School; Rabaut Junior High; Eastern High School; Anacostia High School; Kelly Miller Junior High; Taft Junior High; Deal Junior High; Wilson High School.

Former Representative Leonard Wolf of Iowa, executive director of the Freedom From Hunger Foundation is to be credited with the management of this entire philanthropic effort.

THE COMMUTER RAIL CRISIS

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. OTTINGER. Mr. Speaker, it is particularly timely that this week, with the Senate Subcommittee on Housing scheduled to conduct hearings on mass transportation and the House Banking and Currency Committee having before it proposals to create a mass transportation trust fund, a definitive report on the commuter rail crisis in New York, New Jersey, and Connecticut has appeared in the New York Times.

I and other Members of the Congress have pointed out repeatedly how vital fast, efficient, and economical mass transit is to our cities and suburbs but we still lack a meaningful national commitment in this area. We know now that we have the ability to place men on the moon with great precision and speed, but we cannot assure the commuter from Westchester, Putnam, Fairfield, or Bergen Counties that he can get to his job in New York in anything resembling a reasonable amount of time.

The crisis we face is the result of many different factors and government, the railroads and labor must all share the responsibility. But to point the finger of blame accomplishes little; our task must be to forge a meaningful program to develop balanced systems of public transportation for this Nation's metropolitan areas. This will take imagination, courage and vast sums of money, but above all, it will take an urgent sense of commitment, for we really have little time left.

A first step must be passage of the mass transit trust fund legislation pending in the House and Senate. I am proud to be a cosponsor of this measure, and I sincerely hope the chairman of the Committee on Banking and Currency will schedule hearings in the near future. Inaction on the part of the administration is no excuse for inaction on the part of this House.

So that there may be no question about the seriousness of the situation which faces us, I present, for inclusion in the RECORD, today's articles in the New York Times:

COMMUTER LINES AT CRISIS POINT—NEGLECTED FOR YEARS, RAILROADS SERVING CITY ARE FALTERING

No American city is as dependent on railroad commuter service as New York. But after decades of neglect, the state of the commuter lines has reached a point of acute crisis.

Last-minute cancellations of Long Island Rail Road trains are delaying and embittering more and more commuters every day. New Haven riders are finding their trains crowded, littered and late. The Penn Central is arguing with New York State's Public Service Commission over how to get badly needed cars for its Hudson and Harlem Divisions. And commuters throughout New York City's suburbs are wondering if they will be forced to pay higher fares for poorer service.

Perhaps the only plus in the metropolitan commuter rail situation is to be found in New Jersey, where two of the three commuter lines serving New York City are showing signs of improvement, in part through an infusion of state operating subsidies. But these gains have been made in a situation regarded as so unsatisfactory as not to afford much gratification to riders.

This picture has been drawn by The New York Times from interviews with rail officials, commuters and representatives of government and civic agencies concerned with the plight of the six railroads that bring a quarter of a million commuters into the city each working day.

Experts and observers say the inefficiency of metropolitan rail service springs from a variety of factors, including the need to turn from the railroad's long-term origins to rapid-service systems, an increase in vandalism over which the lines have little control, public indifference and a history of controversial management practices.

But increasingly the commuter who daily faces the threat of cancellations, breakdowns, overcrowding and long delays has been showing a lack of patience with such explanations.

"It's amazing what a stoic lot commuters have been," a New Haven rider remarked recently. However, this stoicism has been yielding to rage and activism.

T. David Reznik, a marketing analyst, doesn't ride the railroad to work these days—he walks the railroad to work. Instead of taking his regular Penn Central trains to and from Larchmont each day, he takes a variety of trains so he can go through the aisles distributing complaint sheets to his fellow passengers.

The printed sheets have blank spaces in which passengers can write in the number of "bulbs not working" and "fans not working" or the "minutes late" in arriving.

"I start in back and work my way forward, car by car," Mr. Reznik said. "The conductors keep threatening to arrest me." He said he had handed out 4,000 forms in the last three weeks, and the Federal Department of Transportation has been receiving the completed forms from passengers.

On Long Island, a drive is being organized to obtain 10,000 signatures on petitions asking for the removal of the top management of the state-owned Long Island Rail Road. and reports are current that Governor Rockefeller will seek the dismissal of the line's president.

Conductors are hearing more and more from angry passengers, and at least a few of them are growling back. Asked what the trouble was in a delay, one conductor told a fuming commuter recently: "I'll write you a letter."

Passengers are expressing a rising anxiety over railroad safety, especially on overcrowded trains. They suffer and swelter in cars with sealed windows when air-conditioning fails. With cinder blocks dropped on trains from overpasses and sharp rocks flung at windows by vandals, some riders feel like moving objects in a shooting gallery. Executives do not know at what hour they will get to work and their wives do not know what time they will reach home at night.

Frederick A. Menes of Old Westbury, L.I., has been getting up at 5:30 A.M. every weekday, half an hour earlier than usual, to be certain of getting a train that will bring him in on time to his job as general personnel supervisor for the New York Telephone Company.

Mr. Menes begins his morning anxiously listening to radio reports on rail delays on the Long Island Rail Road. What has been canceled today? Until recently he counted on catching a 7:26 train out of East Williston that was due at Pennsylvania Station at 8:12.

If the 7:26 has been scratched, Mr. Menes dashes for the 7:02, changing at Jamaica for a packed train that is scheduled to arrive in Manhattan at 7:55.

But even if the 7:26 is running, it is not at all certain that it will arrive on time. If another train has been canceled, the 7:26—normally an express after Jamaica—may add

some local stops in Queens, and may lumber into Penn Station at 8:30 or 8:35.

Such frustrations have important implications for New York City.

Late arrivals to work mean costly lost time and scrapped schedules for the city's businesses. Suburbanites who turn to their automobiles add to the city's traffic, parking and pollution problems and swell demands for new expressways or increased subway facilities. State officials confront demands for subsidies or even railroad takeovers that would shift costs to all taxpayers, including city residents who never ride the commuter lines.

"It's getting to the point at which something's about to blow," said Barrie Vreeland, director of the transportation department of the Commerce and Industry Association. Mr. Vreeland's office has been receiving a stream of complaints from corporate personnel officers worried about late arrivals at work.

Ralph C. Gross, president of the association, described the rail problems as "detrimental to business expansion and economic growth" here because "most of the top and middle-level executives who work in New York live outside the city."

Urban planners are generally agreed that there is no more efficient, or potentially faster, way of moving large numbers of people from suburban or urban business centers than by rail. Yet in much of the nation, railroad passenger service largely has disappeared.

The Federal Urban Mass Transportation Administration says only five American cities still have regular commuter rail service: New York, Chicago, Philadelphia, San Francisco and Boston. Most cities now have auto-oriented transportation systems.

As a result, experts say that billions of dollars of public money have been pouring into expressway systems while only a few millions have trickled into capital improvements for commuter railroads.

As urbanization chews up fields and meadows near the city, executives are moving farther out into the suburbs, sometimes well beyond the 50-mile range, and that makes high-speed rail transit more necessary for them. But suburbanites who turn from trains to autos put pressure on for the building of more highways.

The Regional Plan Association, the nongovernmental research organization, notes that "the autos required to transport the equivalent of one trainload of commuters use about four acres of parking space—eight times the area of the main concourse at Grand Central Terminal."

Fundamental to the railroads' problem is the fact that they were not designed to do the job they are now doing. According to Robert W. Minor, senior vice president of the Penn Central, the lines were originally long-haul carriers and were not engineered for the short-haul, high-speed service required today.

Commuter railroads here do not have the equipment needed for rapid acceleration and decleration in the short distances between suburban stations. And the stations themselves generally lack the high-level platforms needed for fast loading and unloading of passengers.

Efforts are beginning to be made to change all this through the introduction of new equipment, financing and major reconstruction, but the overhaul is going to take years, according to railroad experts. And they note that the transition itself is contributing to delays and breakdowns.

Those who nourish a hope that things will soon get better have little to go on but optimism, in the opinion of most rail specialists.

The Regional Plan Association pointed out that the commuter lines are largely based on "the investments made in capital rail equipment prior to 1929." The Depression discouraged investments, then World War II came along, and then the postwar automobile boom, with its corresponding decline in riders using the rails.

According to records of the American Railway Car Institute, the trade association of railway car manufacturers, there is no continuing industry in the manufacture of self-propelled "inter-urban or commuter cars."

In 1969, said Walter A. Renz, the association's president, only 25 cars have been ordered for all the commuter lines in the nation.

"The cars cost so much because there are so few orders," he said. "It's no secret that the railroads detest these passenger runs, and I haven't seen any real commuter car business for a long, long time."

Added to these problems are difficulties and prospects peculiar to each of the commuter railroads in this area. Some of these aspects are discussed on this page.

METROPOLITAN LONG ISLAND RAILROAD

In the barnlike Dunton Electric Repair Shop in Jamaica, Queens, a score or more cars awaited repairs recently. There are commuters who believe that the true symbol of the Long Island line should not be Dashing Dan (which the railroad is phasing out), but these disabled cars.

Anthony F. D'Avanzo, general chairman of the Brotherhood of Railway Carmen, Lodge 886, says the members of his union have been working an average 24 hours overtime to catch up on a servicing backlog that has restricted railroad efficiency for many months.

Moreover, Mr. D'Avanzo says, the work strain accounts for high absenteeism and this compounds the problem of how to find enough cars to take 90,000 regular commuters and 40,000 others into and out of the city each day.

On June 26, its worst day, as many as 223 of the Long Island's 774 electric cars—both old and new—were out of service for inspection and repairs. Thirty-five of 363 diesel and other cars also were not in use. As a result 19 of the line's 631 trains for that day had to be canceled, and each cancellation affected about 1,000 riders.

This was not an isolated situation on the nations biggest commuter railroad. On a recent Friday, nine morning and nine evening rush-hour trains were scratched from the schedule.

Such cancellations cause more than just inconvenience.

"The other day I was not just uncomfortable, I was physically freightened," a young rider said. "With passengers from one of the canceled trains, my train, normally crowded, was dangerously crowded.

"At Jamaica an elderly woman was pushed into the car and her arm got caught and she cried, 'My arm, my arm!'

"You know that small area up at the front of the train, where the door is open and all they have is a chain across the front? Well, in that little space about four feet wide there were, as far as I could count, 23 people wedged in. I had my hand up, holding the edge of the door and I could not get my arm down. I couldn't turn my body either way and I could move my feet about an inch in either direction.

"I was scared

"There wasn't any question of taking tickets. Impossible. So the conductors rode outside on the catwalk of the engine. I felt trapped and smothered and helpless. Usually I am just so angry I could choke somebody, but this time I was scared."

The line says its last major report of on-time performance was 97.1 per cent for the 10-year period ending Dec. 31, 1967. For 1968, it says its record was 89.9 per cent; for the first six months of this year, 89.3 per cent. These are over-all figures, however, and do not indicate the performance of individual trains.

Another major problem for the line, which originated from older railroads, is that its routes are now often well away from areas of population growth. The Long Island's more modern electric service, for example, ends its eastward thrust at Babylon on the south, Mineola and East Williston in mid-island, Port Washington on the north.

Since 1966, the line has been operated by the Metropolitan Transportation Authority, which was created by the Legislature. When the authority took over, the line was in bankruptcy. The following year it obtained a $30-million Federal grant for improvement and extension of its electric system. The authority is now extending electric lines, rebuilding roadbeds and building high-level station platforms.

Electric cars ordered

The authority has also sought to replace most of its antiquated electric stock. A fleet of 620 electric cars was ordered from the Budd Company of Philadelphia for delivery by October, 1970.

The first cars arrived Dec. 23. Dr. William J. Ronan, chairman of the M.T.A., says this was 25 weeks later than he anticipated.

So far, 108 have been delivered. They have not performed well. There have been repeated electric malfunctions. Brakes have locked. Air-conditioning has failed. Trains have broken down at rush hours.

The M.T.A. stopped formal acceptance after the first 94 cars arrived. By July 1, 52 were out of service on one day. This has since been reduced to about 30 in a day.

Setbacks such as these have led at least one of Long Island's militant commuter organizations to demand the ouster of Dr. Ronan. But the beleaguered chairman has his defenders, including Governnor Rockefeller, whom Dr. Ronan formerly served as a key aide.

"Those new Budd cars, if they had all worked, would have meant progress," Ralph Gross of the Commerce and Industry Association said. "As we understand it, Dr. Ronan had a choice of two courses: Either to go on pouring money into keeping old and worn-out rolling stock going or to stop doing that and to put the money into getting badly needed new cars.

"We think the planning was logical and had the timetable been adhered to, things would already have been better on the line. All those breakdowns were not Dr. Ronan's fault."

The Long Island Rail Road deals with 17 labor unions representing 6,500 of its 7,000 employes. The dates on which contracts expire vary among the unions. The line says they have higher wages and more favorable work rules than the national average. Nevertheless, labor friction has been frequent, including strikes and work slowdowns that at times have made commuting a nightmare.

Dr. Ronan says labor-management relations have been improving. This is his hope for restoring the rate of inspection and repair to the level at which it stood before a dispute last August with the carmen that led to a three-week labor slowdown.

As a result of the slowdown, inspections and repairs were delayed on 288 cars on a single day.

NEW JERSEY CARRIERS

Anyone wishing to indulge a bout of nostalgia for the old days of railroading need not go to a railroad museum. He has only to go to Hoboken and board almost any Erie-Lackawanna commuter train.

Getting to Hoboken from New York City is the easiest part of the journey. On one of the hottest days of the year, at the height of the evening rush with the trains fully crowded, the Port of New York's Authority's PATH cars were fully air-conditioned and completely comfortable. Next, however, the commuter boards an Erie-Lackawanna train.

"Well, I see they've got the heat on," a

commuter grumbled as he boarded the 5:38 Boonton Branch train to Dover and sat in a car of great age that creaked as the train began its trip.

The 10 globe lights in the car—three of them out—afforded a very dim light and the blue paint on the ceiling and sides of the car was cracked and chipped, leaving large patches of rust.

The slow-motion fan in the center of the car could not have stirred tissue at eight feet, but the windows were wide open and a good breeze came in.

As the train got close to the end of its run, a conductor looked at a passenger and said, "Well, it won't be long now, thank heaven."

On summer days the sun can heat temperatures inside the line's old cars to extreme highs, but the railroad that calls itself "The Friendly Route" says its dependability is also lofty—98 and 99 per cent on time. Passengers, many of whom object to the line's old and dirty equipment, give it full credit for that.

More than 70,000 Jersey commuters

More than 70,000 commuters use the three major New Jersey railroads—the Erie-Lackawanna, the Jersey Central and the Penn Central. But as recently as 1967 both the Erie-Lackawanna and the Jersey Central were formally seeking to abandon passenger operations. It was then that they were put under the control of the State Department of Transportation.

David J. Goldberg, New Jersey's Commissioner of Transportation, said commuter traffic had increased on the three New Jersey railroads about 10 per cent since his department began operations in January, 1967.

The state pays operating subsidies to the Jersey Central and the Erie-Lackawanna, which is owned by Dereco, Inc., a holding company of the Norfolk & Western Railway. These subsidies are negotiated annually, $4.9-million and $4.5-million respectively for the year ended June 30. The Pennsylvania, together with others, gets state aid for equipment.

Mr. Goldberg said New Jersey had "purchased virtually all the coaches available around the country worth investing funds in to rehabilitate." Of 53 it bought from the Santa Fe Railway, 27 have been assigned to the Penn Central and 26 to the Erie-Lackawanna, some to start service in October.

But the outlook seems bleak for any large-scale modernizing of the lines.

William B. Hurd, assistant administrator of the Federal Urban Mass Transportation Administration, was asked: "With so few cars being built, isn't it probable that 5 and 10 years from now, commuters on the Erie-Lackawanna will be riding the same outdated cars they're riding now?"

His answer was, "I think so, yes."

For the Jersey Central, in receivership since April, 1967, the state has obtained an agreement that the Norfolk & Western and Chesapeake & Ohio railroads would acquire the line as part of their merger plan and include it in Dereco. But the merger is still awaiting Interstate Commerce Commission approval.

State leases locomotives

Mr. Goldberg says that 13 new locomotives the state has leased to the Jersey Central have helped improve on-time performance, which had been "very poor."

Long-range plans call for electrifying the Jersey Central lines. But for interim service, the N. & W. and C. & O. are to provide 50 air-conditioned and rehabilitated coaches acquired from other railroads.

The state is also rehabilitating 60 Jersey Central coaches and beginning to buy new equipment, including 35 speedy Jersey Arrow self-propelled electric cars for the Penn Central.

But Spencer Scheffling, the Penn Central passenger statistician, said the 26 Jersey Arrows now in service had encountered "most persistent problems" in power transmission, couplers and doors. On a typical day, 8 to 10 are out of service for part of the day, he said.

HARLEM AND HUDSON

Not all commuters are uniformly incensed by their experience. Arthur Feldman, who was born and reared in the Bronx and who recently moved to Croton-on-Hudson, has a different perspective:

"It's a lot better than the subways," he said. "I take the 6:30 a.m. train from the Croton-Harmon station. It never leaves at 6:30 and it runs 5 or 10 minutes late, but to me that's nothing.

"The windows are so dirty you can hardly see out of them, but when I was on the subways could I see out of the windows? To me, it's a dream. I get a seat. In the subways if I got a seat, it was a miracle."

Other commuters, who have the choice of subway or train, agree with his view, and are willing to pay for the difference.

At 5:38 P.M. a local train leaves Grand Central Terminal for Yonkers and Glenwood by way of 125th Street and several intermediate stops in the Bronx. A single fare of $1.10 is charged everyone boarding the train, whether they go one stop or to the end of the run.

Vandalism a problem

The other night, the train was nearly filled but there were only five riders left in it by Yonkers. The others had got off at earlier stops; all rode in preference to the subway.

But many of the 24,000 daily commuters of Penn Central's Harlem Division and the 12,000 commuters of its Hudson Division are hardly enthusiastic about the service they get.

Between April 1 and June 16, the Harlem and Hudson Divisions had 18 fires that delayed a total of 300 trains, according to the Public Service Commission. Fourteen of the fires were caused by vandalism.

Vandalism is but one problem confronting these lines and their growing number of riders.

In 1967, the Public Service Commission found a "noticeable deterioration" in service, including "deficiencies in track maintenance" and worn shock absorbers that made passengers feel they were "riding on a washboard."

In June, 1968, the commission ordered the upgrading of track and equipment and it limited electric engines to 50 miles an hour speed, instead of 60, while this was being done.

One consequence was that on-time performance for the 120 rush-hour trains declined from 81 per cent to 60 per cent, according to George E. McHugh, chief of the railroad bureau of the State Public Service Commission.

In June, the railroad said, its over-all on-time record was 87 per cent for its 340 daily suburban trains. The divisions are under orders of the Public Service Commission to maintain 80 per cent on-time performances for each of its trains every month.

The state commission also has ordered the Penn Central to buy or lease 80 new self-propelled, multiple-unit cars to replace its Harlem and Hudson electric fleet within two years. The Penn Central is strongly resisting this as requiring an uneconomic investment in "1918-type" service.

Tells of Improvements

According to Leonard W. Maglione, Penn Central's suburban service manager, the railroad has made a number of major improvements in Hudson and Harlem service.

In the last five years, he said, 79 more trains have been added each weekday. Since 1965, 34 new multiple-unit electric cars have been received, and 40 mainline passenger coaches have been refurbished and placed in commuter service for non-electrified areas, with 12 more due by Oct. 1. In addition, 22 locomotives, with both diesel and electric power have replaced antiquated equipment on the Harlem Division.

Since fares were restructured, service on the divisions is "operating on approximately a break-even basis," as opposed to "large and increasing deficits" before 1962, the railroad said. This gain has been cited by the Penn Central in its hotly contested bid to restructure fares on the New Haven.

THE NEW HAVEN

Frederick Gilbert, vice president and general manager of Time-Life Broadcasting, takes the crowded 8:04 A.M. New Haven train from New Canaan, Conn. It arrived at Grand Central at 9:10 one recent day.

"My goodness," Mr. Gilbert said. "We're in right on time. What'll we do with the rest of the morning? It's too early for a martini."

There was a touch of hyperbole in his observation, but the New Haven's report on operations for the Monday-to-Friday train for a full month ended June 26 showed that not one run was completed on schedule. Only three of the 23 trains met the New York standard of on-time performance—arrival within 5 minutes of timetable.

Woodlawn, in the Bronx, is a frequent slowdown point on the line. The New Haven, alone of the commuter railroads, runs the same train on two different electrical systems. In Connecticut it draws power from an overhead line carrying 11,000 volts of alternating current. At Woodlawn it changes over to pick up power from a third rail. When the connection goes even slightly awry, it takes tinkering—and time.

Delays, breakdowns and overcrowding have angered New Haven commuters at a time when the railroad, to help with its basic financial problem, is bidding for a restructuring of fares on a portion of its suburban service.

Last Tuesday the Public Service Commission barred the Penn Central, which operates the New Haven, from imposing the new fare structure on 14,000 of its 23,000 commuters until the agency could investigate the request. The following day officials of Westchester communities served by the line assailed what they said was unsafe and unsanitary equipment.

New Haven officials say no other railroad except the Long Island has had a higher percentage of its total revenue coming from passengers—42 per cent, as against about 6 per cent on most lines.

Bankrupt in 1961

Lacking enough freight income to offset passenger deficits, the New Haven went bankrupt in 1961. Plant and equipment deteriorated.

The Penn Central took over the line last Dec. 31 and says it found the overhead electric system "grossly deficient," with some wires that draw the power worn to one-fifth their original size.

Nearly 10 per cent—about 24 of 264—of the New Haven's cars were soon scrapped. Almost half of the locomotive fleet was found to be long overdue for overhaul.

The railroad reports that it is overhauling 50 of its 60 passenger locomotives this year. Six stainless steel coaches are being refurbished each month out of a fleet of 100; other coaches will be run until scrapping time. This and other refurbishing are causing shortening of trains.

Penn Central officials say they believe that in the immediate future the line's lateness record will get worse and may remain so for some time. In its first four months as a Penn Central division, the New Haven experienced a 5 per cent reduction in number of trains—and an 82 per cent rise in number of trains late.

The Penn Central attributes these delays to the deteriorated equipment it inherited

and to its efforts to modernize it. Track upgrading and round-the-clock restoration of the overhead electrical supply have delayed trains.

Vandalism also plagues the New Haven. Twenty-seven hundred broken windows have had to be replaced since Jan. 1 at $100 a window. Some riders pull down window shades as a shield against shattering glass when riding through the city.

Grant of $20.4 million

In 1967, the Federal Government made a grant of $20.4-million to cover the cost of 144 new cars and modernizing other New Haven line facilities. The grant, made through the Urban Mass Transportation Act, was made jointly to the Connecticut Transportation Authority and to the M.T.A. for these purposes.

But the grant depended upon certain agreements between the two states and the railroad that have still to be fulfilled, so the money has not yet been pumped into the ailing line.

The expectation is that the M.T.A. will buy the New Haven's right of way, stations, shops and power installations in New York State. The Connecticut authority would lease most such facilities in its state.

The two authorities would then contract with the Penn Central for the operation of the commuter service and, with the help of the Federal grant, would pay for the new cars and other improvements.

"This seems to be close to settlement," a Federal official said. But then he added:

"Of course, it will take some years to procure the cars and do the other fixing up."

FREEDOM BECOMES ILLEGAL—VI

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. RARICK. Mr. Speaker, the quasi-judicial court decision outlawing freedom of choice in my State has produced so much bewilderment that the Louisiana School Board Association is asking popular support for an en banc reconsideration by all the member judges of the fifth circuit court of appeals.

Mr. Speaker, I include a letter from the president of the Louisiana School Boards and a statement for the press following my remarks:

LOUISIANA SCHOOL
BOARDS ASSOCIATION,
Baton Rouge, La., July 24, 1969.

Hon. JOHN R. RARICK,
House of Representatives,
Washington, D.C.

DEAR JOHN: The school boards of Louisiana are making an urgent and serious effort to secure an en banc hearing by the U.S. Fifth Circuit Court of Appeals on recent decisions deeply affecting public education.

Your help would be invaluable and I earnestly solicit your fullest assistance in using your position and influence to aid us in obtaining this full court hearing.

For your information, I am attaching a copy of a statement I have just released to the press and mailed to all judges of the Fifth Circuit.

With sincere belief that it is time for a full review in order to clarify these sweeping decisions and to prevent chaos, I appeal to you respectfully with the hope that you will lend your active and effective support to this effort to procure an en banc hearing.

Many thanks for your cooperation.

Yours sincerely,

JAMES J. ROBERSON,
President, Louisiana School Boards Association.

STATEMENT BY JAMES ROBERSON, PRESIDENT LOUISIANA SCHOOL BOARDS ASSOCIATION, JULY 21, 1969

Who has made a mistake? Who is right? The few Judges of the Fifth Circuit who have sat as three-man teams to issue orders for all schools in several states to be totally unitary by the 1969–70 school year or the District Judges from the many districts and the vast majority of the citizens who say freedom of choice is still the only workable way to maintain the school systems?

Only three Judges of the Fifth Circuit have participated on as many as four hearings pertaining to school desegregation. No one judge has sat on as many as one-half of these cases. Only three of 11 judges in active service have sat on as many as one-fourth of these. Moreover, 10 District Judges have sat on these cases.

After looking at these facts, it does seem that we do not have a decision of the Fifth Circuit. Rather, the decision of a few Judges of the Fifth Circuit and several District Judges sitting in place of members of the Fifth Circuit.

These facts alone should be reason enough for the Fifth Circuit to call an en banc hearing to decide how best to preserve public education. They have sat en banc in cases such as a white man who had been indicted by a Grand Jury which contained no Negro; a draft dodger; an ex-convict for carrying a deadly weapon; in interstate commerce; and in the case of a woman who lost a judgment to the United States over a loan.

Maybe, if they did sit en banc, they just might consider that there is a possibility they have made a mistake. They might accept some constructive criticism, of which there has been much—criticism from fellow Judges of their own Court, from three District Judges who have said, ". . . with every ounce of sincerity which we possess, we think freedom of choice is the best plan available." And from one District Judge who said, "There is in my opinion no authority in the law for this Court to issue such an order and it seems to me that the time has come for the Federal Courts to cease experimenting with the public school systems of this Country.

Secretary Finch has said, "That a vast majority of southern schools are in compliance with the Civil Rights Law," and has privately stated that the problems that needed attention were the school districts in our western and northern states.

With these and many other facts, there is a good possibility that the Fifth Circuit has made a mistake, that they should accept constructive criticism and have an en banc hearing of all of the Fifth Circuit Judges and with no District Judges participating.

I ask every Federal Judge and citizen to ask these honorable men of the higher Court to reconsider their orders pertaining to education. I will also ask all school board associations and citizens in other states to join together in asking for a full Court hearing.

SURVEY INTERVIEWS DETROIT WHITE COMMUNITY

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mrs. GRIFFITHS. Mr. Speaker, on Sunday, July 27, the Detroit Free Press featured two articles written by Philip Meyer, the first entitled, "What Do Detroit Area Whites Think Now on Race Issue? Survey Detects a Softening," and the second entitled, "What Young Interviewers Found, the Paradoxes of 'Prejudiced People,'" which presented the preliminary analysis of the 19th annual survey of the Detroit area study, a yearly survey run as a research and training program for the University of Michigan faculty and students. This year's survey directed by Prof. Howard Schumann of the University of Michigan in cooperation with the survey team interviewed a scientifically devised sampling of Detroit area white homeowners. For the benefit of my colleagues, I wish to include the preliminary results of this survey as reported in the Detroit Free Press by Philip Meyer:

[From the Detroit Free Press, July 27, 1969]

WHAT DO DETROIT-AREA WHITES THINK NOW ON RACE ISSUE? SURVEY DETECTS A SOFTENING

(By Philip Meyer)

The all-too-familiar story of rapidly growing racial tension among Detroit area whites may be a myth, a new survey by the University of Michigan has revealed.

A sizable proportion of metropolitan-area whites are frightened and hostile to Negroes—enough to cause a continuing problem for anyone interested in seeking racial peace. But their number appears to be shrinking, not growing.

This finding comes from the Detroit Area Study, a yearly survey run as a research and training program. The student interviewers talked to a probability sample of 330 Detroit-area residents, and many were troubled by what they found.

"I was surprised by the prevalance of drawn drapes, barking dogs, and inhospitable people. I got the distinct impression that Detroit has indeed become an uptight city," reported one of the students after the week of interviewing, in late April and early May.

But the answers to their questions showed that there are both short-term and long-term trends toward a softening of white attitudes toward blacks.

Early in 1968, when the riot was still fresh in the minds of Detroit-area residents, black and white, another survey of the city and its suburbs asked, "What do you think is the most important thing the city government in Detroit could do to keep a riot like the one in 1967 from breaking out again."

The answers were classified according to whether the first thing mentioned was a repressive measure—such as more police or giving police more authority—or something else, such as improving conditions for Negroes.

In that earlier survey, 72 percent of the whites in Detroit and its suburbs thought of repressive measures first. This year, the proportion with that kind of response had faded to 61 percent.

There was, however, no corresponding increase in the proportion of whites who volunteered the idea that conditions for blacks ought to be improved. Instead, more people this year said they couldn't think of any important anti-riot measures.

It is a small sign, but a hopeful one. A more dramatic shift was found by comparing white attitudes toward blacks over a much longer time span—nearly half a generation.

In 1956, a similar survey put this revealing question to Detroiters:

"One day a six-year-old asks her mother if she can bring another girl home to play. The mother knows that the other girl is a Negro, and that her own daughter has only played with white children before. What should the mother do?"

Three possible responses are offered: The mother should tell her daughter that she must never play with Negroes; or the daughter should be told that she may play with Negro children in school but not at home; or the Negro child should be permitted to come to the home.

Thirteen years ago, a majority of Detroit whites was against letting the Negro child

play at the white child's home. Today, three out of four say the black child should be invited to the home.

[In percent]

	1956	1969
The exact comparison:		
Don't play with blacks	12	2
Play at school only	47	22
Bring the child home	41	76
Depends, don't know, no answer	4	5

Detroit whites have come a long way in those 13 years toward bridging the gap between the races. But a hard-core reservoir of fear, hate, and distrust still exists. Yet, this reservoir is not as great as it sometimes seems.

Many whites who have basically friendly feelings toward blacks tend to think they are pretty much alone in feeling this way. the survey findings suggest that they are wrong.

For example, nearly half the people who answered the question about the Negro child this year said they didn't think most people in the Detroit area would agree with them. And almost all of these thought other Detroiters were less liberal than themselves.

An explanation for this discrepancy will have to await more detailed study and analysis. But one possibility is that racial problems have made people with liberal or tolerant views afraid to speak out. Publicity given riots in the past few years may have made well-meaning whites afraid to express their real views for fear of seeming different.

The discrepancy also turned up in a question about housing.

Eighty-one percent said their neighbors wouldn't want them to sell their house to a Negro. Most of them were wrong in this judgment. Because when the question was reversed to, "Suppose a close neighbor was selling his house and he had a Negro customer for it. What would you want him to do?" fully 50 percent either said they didn't care or that they would want the neighbor to sell to the Negro.

"It might be a rationalization," said Elizabeth Fischer, one of the student interviewers. "Respondents may want to present themselves to interviewers in the most favorable, least prejudiced light and blame it all on the neighbors . . .

"An alternative explanation would be that the most prejudiced people are also the most vociferous and that the people who say they wouldn't care if a neighbor sold his house to a Negro keep their mouths shut. Thus, people's perceptions of what the neighbors think would be dominated by what the most bigoted neighbors think."

If true, this means that white Detroiters are not as anti-Negro as they seem. It could also mean that people may hide their tolerant feelings because they don't want to seem out of step.

The survey takes a fairly precise measure of the mood of fear among Detroit whites today. Ever since the 1967 riot there has been the fear, encouraged by some black militant statements, that the next large-scale disorder will involve the invasion of white neighborhoods by rioting blacks.

It is an unreasonable fear for several reasons: no such incident has taken place in any American city, no matter how bad its racial troubles; and the dynamics of crowd behavior are such that riots can be sustained only where large numbers of people congregate. Even if a suburban target were singled out by an angry mob, the mob would cool off by the time it got there.

Yet, the fear persists. The question was, "How much danger, if any do you think there is of groups of Negroes from the inner city going out to white areas and suburbs to commit violence on whites; do you think this is a great danger, some danger, little danger, or no danger?"

The answers:

	Percent
Great danger	24
Some danger	36
Little danger	29
No danger	9
Don't know	1

These responses show that whites in Detroit are far more frightened of Negroes than Negroes are of whites. Last fall, a Detroit Free Press survey asked inner city Negroes if they had heard any stories about groups of whites planning to attack Negro neighborhoods. Only seven percent had heard and believed such stories.

The Negro groups who talk of organizing themselves for self-protection against whites have their white counterparts. One white person out of five in the survey said it would be a "good idea" for the whites to organize into groups for protection against violence by Negroes—a sign that there are a lot of frightened people in this town.

There are also a lot of poorly informed white people. Detroit Negroes have been surveyed repeatedly since the riot to see what they want, and one of the most consistent findings is that the great majority wants integrated housing.

Yet Detroit whites, for some reason, are unwilling to believe this. Fifty-four percent said they think most Negroes want separate all-black housing. Only 35 percent gave the correct answer: most Negroes want mixed housing.

The reason for this misinformation is unclear. Perhaps it is wish fulfillment on the part of whites who see segregation as the way out of the race problem. Or perhaps it is due to over-exposure in the news media of the black nationalists who do want separate Negro neighborhoods and claim to speak for more than the minority they actually represent.

Another myth persists in Detroit: that property values go down when Negroes move in. Fifty-one percent said they always or usually go down; 32 percent said they sometimes go down. But in areas where the effect of integration on property values has been carefully studied, it has been found that it normally causes property values to rise in the long run. There is a simple economic reason for this: Housing is scarcer for blacks than for whites. Therefore, blacks pay as much or more. However, panicky whites who don't know this often lose money when they sell to speculators who do.

Some common racial stereotypes are fairly widely accepted among Detroit whites: 60 percent said whites have more ambition than Negroes; 50 percent said whites have higher morals; 43 percent said Negroes are more inclined toward violence than whites.

However, the great majority of whites who believe in white superiority don't attribute it to basic racial differences.

For example, those who said whites have higher ambition than Negroes were then asked whether they think "whites are just naturally more ambitious or that it's something about the way they are brought up?" A five-to-one majority agreed that it was the way people are brought up that matters.

The survey revealed that whites are very badly misinformed of the effects of Negro crimes. They were asked, "Do you think the victims of Negro crimes are mostly Negro or mostly white?" Sixty percent said mostly white and 24 per cent said about half and half. Both were wrong.

The right answer—(mostly Negro)—was given by only 13 percent. According to the Detroit police department, from 60 to 65 percent of the victims of Negro crimes are Negroes. In homicide cases, the proportion of Negro victims is even higher—80 to 85 percent.

A majority of respondents in the survey were right, however, in assessing the proportion of crimes such as robbery and assault which are committed by Negroes. Sixty percent said more than half, and this is true, at least in the city of Detroit. The police department estimates that blacks commit about 80 percent of the robberies and 65 to 70 percent of the assaults.

The survey probed for subtle distinctions in racial attitudes with questions that described action situations requiring a decision. The question on selling a house to a Negro was built this way.

Thirty-seven percent said, without any qualifications, that if they owned a house, wanted to sell it, and a Negro couple offered to buy, they would sell it to them.

But nearly half of these people then admitted they would back down and not sell to the Negro couple if their neighbors came around and asked them not to.

Getting people to change their minds in the other direction was harder. Those who first said they would not sell to a Negro were asked what they would do if the buyer were "a respected doctor with very high references and you know he would not cause trouble in the neighborhood."

Seven out of eight said they still wouldn't sell to a Negro.

Favorable attitudes toward blacks held up more strongly when the subject was switched from housing to schools. This time, the question was:

"Suppose there was a proposal at your children's school to give Negro parents an opportunity to transfer in about 25 Negro children from a very over-crowded school. The principal of your school calls a meeting of all parents to decide on the proposal and you go to the meeting. Would you support or oppose the proposal at the meeting?"

Persons who had no children were asked to imagine that they did. Fifty-four percent said they would support the proposal for busing in black children, and only 40 percent said they would oppose it.

"Suppose," the student interviewers then said to the 54 percent who favored bringing in blacks, "several very worried friends come to you before the meeting and urge you not to support the transfer because they are concerned about what it may do to the school and to the education of their children. Would you be willing to change your vote to avoid causing them worry, or at least not to vote at all?"

Four out of five stood their ground and said they would still vote to bring the Negro pupils into the school.

When the topic switched to jobs, things got more complicated. Eighty-three percent said they think that employers should hire men for top management without paying any attention to whether they are white or Negro.

For many, however, this is not a very strongly-held conviction. The interviewers posed this problem situation:

"Suppose a good Negro engineer applied for a job as an engineering executive. The personnel director explained to him, 'Personally, I'd never give your race a thought, but the two men you would have to work with most closely—the plant manager and the chief engineer—both have strong feelings about Negroes. I can offer you a job as a regular engineer, but not at the executive level, because any serious friction at the top could ruin the organization."

Fifty-one percent of those interviewed thought the personnel director did the right thing. More, 54 percent, thought he was in the wrong, but this is still far less than the number who said they favor color-blind hiring practices as a general principle.

The typical white Detroiter, then, comes across in the survey as someone who has some sympathetic attitudes toward the prob-

lems of blacks but is not particularly willing to go to any trouble to help solve them.

The student interviewers, trained to stay neutral while they asked the questions, did have some reaction that came out later in term papers. The gap between thought and action struck some of them.

"Many of the respondents reflected a remarkable ability to admit the high degree of poverty and disorganization in Negro life," said one coed, Diana P. Wright. But she also noted "an equal unwillingness to give up anything, whether it be all-white neighborhoods, employment practices, and so forth."

One of the interviewers was a coed who wrote about the "stunning" differences between the university environment and the world outside.

"Most overwhelming and despairing," she said, "was learning the extent to which our present society is closed to real change."

HOW THE SURVEY WAS MADE

This study of racial attitudes of Detroit area whites was designed by Profs. Irwin Katz and Howard Schuman of the University of Michigan. It is the 19th annual survey of the Detroit Area Study, a research and training program for U-M faculty and students currently directed by Dr. Schuman. Each year, it covers a different problem. The survey is conducted in the spring and analyzed the following fall. Because of the urgency of this year's subject matter, the normal data processing routine was accelerated and a preliminary analysis carried out under the sponsorship of the Detroit Free Press. The information presented here is based on 330 interviews with heads of households and wives of heads obtained by graduate students. Another 300 interviews taken by professional interviewers of the U-M Survey Research Center show substantially the same results and will permit more detailed analysis.

[From the Detroit Free Press, July 27, 1969]

WHAT YOUNG INTERVIEWERS FOUND—THE PARADOXES OF "PREJUDICED PEOPLE"

(By Philip Meyer)

One of the troublesome things about the racial prejudice is that people can have it without knowing it.

Others can have it, know that they have it, and still find it logical from the point of their own limited words.

University of Michigan students, young and bright, were surprised to find this out when they fanned out across Detroit and its suburbs recently to gather information on white racial attitudes.

The students found that the world is not like the university. It is full of people with vastly different experiences and social and economic positions. And if they see things differently it is because they have experienced life differently.

"Given their information," said Rick Ogmundson of some of the people he interviewed, "there is usually a sort of understandable rationality to their world view. Furthermore, no matter how bigoted or prejudiced they were, most of them seemed to be pretty good people doing the best they could under the circumstances. My stereotypes of the evil bigot were shattered."

Elizabeth Fischer, who interviewed people in Warren, went back to Ann Arbor with a "more sympathetic view of my white suburbanite respondents and their prejudices and fears."

"The first stereotype to go," she said, "was that the inhabitants of the identical brick houses would also be identical. I found instead that they ranged from quite liberal to quite prejudiced, and their life styles also seemed very different."

She found that even those with prejudices can be nice. "My most prejudiced respondent was one of my most cooperative. He offered me a highball and had two himself during the course of the interview."

The student interviewers noted a very close connection between the racial attitudes of whites and the personal experiences, no matter how limited, they had had with blacks. And the data they gathered told the same story.

In general, the whites who were most sympathetic to Negroes and their problems were those who had had more everyday-life exposure to blacks. About half the people in the survey had gone to integrated schools, and they were more aware of racial discrimination, more ready to socialize with Negroes, and considerably less frightened than those who had gone to segregated schools.

For example, only 20 percent of those who had gone to school with blacks thought there was a "great danger" of groups of Negroes going out to the suburbs to commit violence. Among those without any integrated school experience, 31 percent saw such a "great danger."

Another finding was that people who are frightened of blacks are scared of other things as well. The students asked people how dangerous they think Communists are in the United States. Those who considered Communists a great danger, about 45 percent of the total sample, were twice as likely as other Detroiters to be scared of Negroes, too.

There was even a connection between fear of movies with nude actors and fear of Negroes. Among those who thought such movies should be banned, 31 percent think an invasion by violent blacks is a great danger. Among the majority who think adults should be allowed to see naked performers only 21 percent fear the mythical black invasion.

There is, therefore, in Detroit a fearful personality type, and racial attitudes are only a part of this general uptightness. This will not be news to many social psychologists, because faith in people, a sense that the world is a pretty good place and not a jungle, has long been known as a frequently-useful predictor of attitudes.

One interviewer encountered an example of this "the-world-is-a-jungle" attitude in a 41-year-old Wallace voter in a working-class suburb. He was a small man, dark and solidly built, and he talked for some time on his front porch where it was dark and cold before letting the interviewer inside.

"You can just look at it," he said, when asked to describe some of the main problems in the Detroit area. "The colored having the uprising, they're going to take over Detroit. There's nothing but problems. There's no respect for the right."

This man is for banning movies with nude performers and he is particularly anxious about dirty words. "They've got a song with the filthiest word there is, and they play it right over the radio," he said. The word is so awful he could not bear to say it himself, he said.

He is frightened of Communists. "I don't know why they let anything happen, an enemy of the country, why don't they send the commies out?" he asked.

He avoids his neighbors, even though he has lived 23 years in the same block. "I don't think you should get too close," he said. "I say, 'Hi,' to them. You have to."

Given this set of attitudes, his feeling toward blacks and their problems is fairly easy to guess.

"It's their own self," he said. "They won't work. They could get jobs if they wanted. There's lots of jobs. They just won't work."

Why did he think Negroes are like that?

"I don't know."

The survey included two items that measure a person's faith in people. They ask for agreement or disagreement to two statements. One statement is, "Most people can be trusted." The other is, "Most people will take advantage of another person if given a chance." If you agree with the first and disagree with the second, you rate high—as did 45 percent of all those interviewed—in faith in people.

And these questions are good predictors of racial attitudes in Detroit. Sixty percent of those who rank the highest in faith in people also believe that where Negroes lag in jobs or income or housing, it is mainly due to the way that whites have treated Negroes in the past.

Among those with the lowest faith in people, only about half as many believe that white behavior is to blame.

This low-faith-in-people group is, not surprisingly, the most ready to organize to defend white neighbors from the expected Negro attack. Forty percent in this category want to organize such groups, compared to only 13 percent in the high-faith category.

Education and age are also strong predictors of racial attitudes. A white person who is young and has finished high school is more likely than older, less educated people to let his children play with black children, attend parties with Negro guests and not feel uneasy, sell a house to a Negro, and to support fair housing practices.

To the extent that the young are becoming more visible and more influential and with the population becoming steadily more educated, this is a hopeful long-range sign. It means that white prejudices should continue to decrease as time goes by.

But meanwhile, there is still enough prejudice to cause trouble. And there are the people who are not really prejudiced but still don't want to inconvenience themselves to ease racial tensions.

When Angus Campbell and Howard Schuman surveyed 15 cities last year for the Kerner Commission, they sought to build a base for comparing the attitudes of whites and blacks and the relative antagonism in each city.

According to Schuman, Detroit ranks in the "low middle" in racial polarization—not the best, but far from the worst. Detroit contrasted sharply with Newark, the other city to have a major riot in 1967. The 15-city survey found "extreme" antagonism among both whites and blacks in Newark the following year.

Despite the riot, then, Detroit has a better basis for building good feeling between blacks and whites than many other cities. One thing that holds progress back is the fact that a great many white people here are simply unthinking: "I think I'm more liberal about race relations than the average American," said a 42-year-old department story buyer. One incongruous detail: throughout the conversation, she kept using the word, "nigger."

Interviewer Mary Sadowski found that most prejudiced whites knew that their prejudiced beliefs were a hindrance to getting along in the world efficiently, but, nevertheless held tenaciously to them . . .

"There are a few respondents whom I will remember for a long while. One was an elderly man, 68 years old, who lived with his wife in a modest brick home in a partially integrated neighborhood. He was definitely anti-integration and anti-civil rights, although he was doing his best to adjust to the racial mixture in his own area.

"He would comment on the different questions, saying he did not appreciate the Negroes living near him . . . However, he seemed somewhat apologetic for his statements, said he realized his views were not completely Christian and, as a strong Christian, he realized he should not discriminate so greatly."

The fact that seeing Negroes socially and having gone to an integrated school makes attitudes more tolerant might suggest that living in an integrated neighborhood improves racial feeling. But this is not the case in Detroit.

In general, residents of integrated neighborhoods—and 30 percent of the whites in the survey live within at least two or three blocks of Negroes—are more afraid of blacks than those in all-white neighborhoods. Probably in most cases, these people are not living in integrated neighborhoods by choice.

They are tense whites preparing to flee the central city.

Interviewer Robert E. Klein found "an enclave of largely poor whites who are surrounded by what they perceive as an encroaching, formidable black majority. The neighborhood is a last vestige of a once all-white area . . . A substantial number of young people, poor people who have probably migrated from the South in search for jobs in industrial Detroit, and a predominant number of poor, old people."

Klein asked some of his suburban respondents how often they get into Detroit. "They average maybe two trips a year," he said. "One housewife said that all the facilities she needs are where she lives. The problems of the inner city are alien to them."

This observation suggests a basic problem: where fresh contact is made between blacks and whites these days the whites being contacted are those least disposed to respond favorably. As the black population spreads outward from the poorer, older central part of the city, it touches first the poorer, less educated, most frightened whites.

It touches people like the retired auto worker who said, "There's no more socializing in the Detroit area. You can't go out at night without being assaulted. And the taxes are outrageous. Blacks migrating from the South are not paying taxes. As far as I'm concerned, Detroit is a dead area. I'm going to move out of here."

And a Redford Township man said he moved from Detroit "partly to get away from them . . . it kept getting worse."

One of the risks of living in a university community is that you tend to forget how different the rest of the world is. The student interviewers totally immersed themselves in Detroit, living during the interviewing period at the Andoria Hotel.

At the end of the third day, one of the coed interviewers was driving back to the hotel and suddenly realized that she was talking to herself. Later, she figured out why.

"For so many hours," she said, "I had to read a structured questionnaire and record responses which radically differed from my attitudes and remain neutral throughout. I had had to present myself as a proper . . . young lady who was completely impartial. In short, it was relief to talk with someone as rational as my myself again."

She was partly kidding, of course, but her point makes sense. White Detroit is not as progressive as its bright, educated young people. But it is getting there. This a tense and painful time, but there is no reason to suppose that it will last forever. If there are fear-breeding, destructive forces at work in Detroit, there are also civilizing influences, and the survey results offer hope that the latter will eventually prevail.

ANTICIVIL RIGHTS PROVISIONS IN H.R. 13111, LABOR, HEALTH, EDUCATION AND WELFARE APPROPRIATIONS FOR FISCAL YEAR 1970

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. COHELAN. Mr. Speaker, tomorrow, or perhaps the day after, the House will again consider the anticivil rights provisions offered by the gentleman from Mississippi (Mr. WHITTEN).

The provisions, if retained in the bill, would effectively repeal title VI of the Civil Rights Act of 1964 as it applies to education.

I will at the appropriate time introduce amendments to strike these obnoxious, anticivil rights provisions.

I solicit, and indeed I urge, your support for these amendments to delete the Whitten provisions.

LETTER TO THE MEMBERS OF THE HOUSE

I have in fact written to each Member of the House stating my opposition to the Whitten provisions and expressing my concern.

I include a copy of this letter at this point in the RECORD:

HOUSE OF REPRESENTATIVES,
Washington, D.C., July 25, 1969.

DEAR COLLEAGUES: Next week the House will decide whether the Federal Government should be able to effectively encourage desegregation in schools which are unconstitutionally segregated. Beginning on Tuesday, July 29, the House will consider H.R. 13111, the HEW Labor Appropriations Bill for FY 1970. This bill as it stands would effectively repeal the Civil Rights Act of 1964 as it applies to education. This letter is to urge your support for amendments which will be introduced to strike these anti-civil rights provisions.

Sections 408 and 409 of the bill were added in committee on the motion of Representative Jamie Whitten of Mississippi. These sections are the same as provisions introduced last year by Mr. Whitten. At that time, the House approved the provisions on a teller vote, but later defeated the sections on two very close roll call votes on the conference report.

Mr. Whitten's provisions have nothing to do with bussing. Under the present law, federal funds may not be spent to force bussing. The provisions have nothing to do with school closings. HEW cannot under current law force any school to be closed.

These provisions have a lot to do with freedom of choice desegregation plans. Under the Constitution, as interpreted by the Supreme Court, freedom of choice plans are unlawful unless they promptly result in the abolition of unconstitutional dual school systems.

These provisions might also force the end of neighborhood schools. Under them, parents would be in the position of overriding local school board decisions regarding geographical pupil assignment.

This is clearly an issue of black and white. A vote against the amendments to strike will be a vote against Civil Rights, against the Constitution, and against elementary fairness and equality in education.

Sincerely yours,

JEFFERY COHELAN.

WIDESPREAD OPPOSITION

Mr. Speaker, these noxious antiblack provisions are opposed by every civil rights and civil liberties group in the country.

Major religious groups are adamant in their opposition.

Organized labor, too, is vigorously opposing these provisions. In fact just today I received a letter from Mr. Andrew Biemiller of the AFL–CIO strongly urging the deletion of the Whitten provisions. I include this letter from Mr. Biemiller at this point in the RECORD.

AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS,
Washington, D.C., July 28, 1969.

Hon. JEFFERY COHELAN,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN COHELAN: This year is the 15th since the Supreme Court ruled in its landmark *Brown* decision that racially-segregated dual school systems are unconstitutional. It has been five years since Congress declared in Title VI of the Civil Rights Act that federal funds may not be used to support activities which discriminate on the basis of race.

In January of this year, the Office for Civil Rights at the Department of Health, Education and Welfare released statistics showing that the desegregation figure stood at slightly more than 20 percent—that's one black child in every five attending school with whites—in 11 of the states whose school systems had, before *Brown*, been segregated under state laws. This progress, while encouraging, can hardly be called satisfactory when one considers that black children are continuing to be denied their constitutional rights.

Title VI has proven itself an effective instrument for school desegregation. That is why the AFL–CIO is particularly disturbed about two provisions of the Labor-HEW Appropriations Bill (H.R. 13111), as reported by the Committee on Appropriations. We refer to Sections 408 and 409 which would have the effect of undermining the HEW Title VI school desegregation program by requiring that the Department accept so-called "free choice" plans regardless of their effectiveness. The Supreme Court ruled just last year that the only acceptable free choice plan is one which is effective in ending the dual school system. Sections 408 and 409 are aimed at preventing HEW from requiring changes in assignment patterns to accomplish desegregation of dual, racially-segregated systems.

We must not permit this to happen, just a few months after Congress last fall rejected almost identical provisions in the 1969 Labor-HEW Appropriations Bill. We in the AFL–CIO commend you for the leadership you are providing in the effort to protect the HEW program to assure equal educational opportunity. We urge support for your amendment.

Sincerely yours,

ANDREW J. BIEMILLER,
Director, Department of Legislation.

ANALYSIS OF THE WHITTEN PROVISIONS

Mr. Speaker, I have had prepared a detailed analysis of the Whitten provisions. It is the conclusion of this analysis that the mention of bussing and school closings in the text of the provisions is simply a red herring designed to obfuscate the real purpose of the amendments which is to perpetuate unconstitutional segregation in schools.

I include this analysis of the Whitten provisions in the RECORD at this point:

ANTICIVIL RIGHTS PROVISIONS OF LABOR-HEW APPROPRIATIONS BILL

The following provisions were added to the Fiscal Year 1970 Labor-HEW Appropriations Bill by the Full House Appropriations Committee:

"SEC. 408. No part of the funds contained in this Act may be used to force bussing of students, the abolishment of any school, or to force any student attending any elementary or secondary school to attend a particular school against the choice of his or her parents or parent.

"SEC. 409. No part of the funds contained in this Act shall be used to force bussing of students, the abolishment of any school or the attendance of students at a particular school as a condition precedent to obtaining Federal funds otherwise available to any State, school district or school."

These anti-civil rights provisions are intended by their sponsors to undercut the Federal law prohibiting the use of Federal funds in school systems which discriminate on the basis of race, color, or national origin.

The House sponsor of these provisions was Congressman Whitten of Mississippi. If enacted, the provisions would seriously impede the efforts of the Department of Health, Ed-

ucation and Welfare under Title VI of the Civil Rights Act of 1964 to prevent discrimination in federally-aided education programs and to eliminate unconstitutionally segregated (dual) school systems.

Identical provisions were approved by the House Committee in 1968. However, both the full Senate and House modified the provisions so that their anti-civil rights effect was nullified.

ANALYSIS

Freedom of Choice—Sections 408 and 409 are intended to require that HEW accept so-called "freedom of choice" desegregation plans for Title VI compliance purposes whether or not such plans are effective in ending discrimination and unconstitutional segregation of schools. The courts have held that freedom of choice plans are acceptable only when these plans result in the elimination of discrimination and unconstitutional segregation. If, under a free choice plan, vestiges of a dual system remain, school officials must take additional steps to complete the desegregation of schools.

On May 27, 1968, the Supreme Court held in *Green* v. *School Board of New Kent County, Virginia,* that:

"The burden of a school board today is to come forward with a (desegregation) plan that promises realistically to work, and promises realistically to work *now*."

If, said the Court:

"There are reasonably available other ways, such for illustration as zoning, promising speedier and more effective conversion to a unitary, nonracial school system, 'freedom of choice' must be held unacceptable."

The Nixon Administration has stated its unequivocal commitment to ending racial discrimination in schools in accordance with the law and court decisions. In a joint statement issued on July 3, 1969, Attorney General Mitchell and Health, Education and Welfare Secretary Finch said:

"Our policy . . . will be as defined in the latest Supreme Court and Circuit Court decisions: that school districts not now in compliance are required to complete the process of desegregation 'at the earliest practicable date'; that 'the time for mere "deliberate speed" has run out'; and, in the words of *Green,* that 'the burden on a school board today is to come forward with a plan that promises realistically to work, and promises realistically to work *now*.' " * * *

"In accordance with recent decisions which place strict limitations on 'freedom of choice,' if 'freedom of choice' is used in the plan, the school district must demonstrate, on the basis of its record, that this is not a subterfuge for maintaining a dual system, but rather that the plan as a whole genuinely promises to achieve a complete end to racial discrimination at the earliest practicable date. Otherwise, the use of 'freedom of choice' in such a plan is not acceptable.

Busing and Closing of Schools—Sections 408 and 409 also refer to busing and closing of schools. These are spurious issues, designed to attract support for the real object of the provisions: the legitimization of unconstitutional freedom of choice plans.

(1) HEW does *not* require the transportation of students to overcome racial imbalance. It does require that federally-assisted school systems eliminate discrimination and unconstitutional segregation as a condition for receiving Federal funds. *How school systems eliminate discrimination and unconstitutional segregation is a decision for local school authorities.*

(2) HEW does *not* require the closing of schools. If schools were originally established for the purpose of segregating students by race and their continued operation has the effect of perpetuating segregation or denying equal educational opportunity to students of a particular race, color or national origin, such operation must be discontinued. In cases where clearly inferior schools are operated for minority students, it is sometimes necessary that they be closed in order to equalize educational opportunity within a school system. The only cases in which school districts have closed usable facilities have been where they elected to do so because school officials felt that white children would not attend them. *This is always the choice of the school district.*

FREEDOM OF CHOICE PLANS

Mr. Speaker, earlier this year the Civil Rights Office of the Department of Health, Education, and Welfare prepared a memorandum explaining the details of the freedom of choice issue.

This memo makes clear the point that freedom of choice plans are clearly unconstitutional unless they result effectively and promptly in the abolition of dual school systems.

I include this memo at this point in the RECORD:

FREEDOM OF CHOICE

A freedom of choice student enrollment plan is a system of assigning students to school by requiring all students, or their parents to make a choice of school. Experience has demonstrated that use of the so-called freedom of choice plan simply keeps in effect for the vast majority of Negro students a racially segregated school system with inherently resulting inequities and badges of servitude.

In many communities, direct intimidation, harassment and physical force were used to discourage the choice of a white school by a Negro. In other instances indirect social and economic pressures as well as the long established relegation of Negroes to subservient status have prevented a true exercise of choice.

Freedom of choice plans were listed, among other suggested plans, in the Department's first school desegregation guidelines issued in the spring of 1965 as a possible method of eliminating the dual, racially segregated school system, in accordance with the nondiscrimination provisions of Title VI of the Civil Rights Act of 1964. The guidelines emphasized, however, that the responsibility for establishing a unitary, non-racial system rested with local school authorities and that the free choice plan, or any other plan, was expected to achieve this purpose.

Many school authorities using freedom of choice contend they have complied with Title VI, as well as with the 1954 Supreme Court decision in *Brown* v. *Board of Education* outlawing racially segregated school systems, as long as a choice is offered to Negro students to attend the white schools.

In almost every case, however, this policy leaves unchanged the same illegal dual school system that existed before the free choice plan was adopted. In other words, most Negro children continue to attend all-Negro schools staffed by Negro teachers and white children attend predominantly white schools with white teachers. Obviously, this does not achieve the desegregation required by law.

Federal courts, the Supreme Court and the Department of HEW have determined that when freedom of choice failed to bring about a unitary, non-racial system, school officials were obliged under the law to use some other method or a combination of alternatives which would accomplish the legally required result. In short, the issue under the law is not the means, but the end result.

The unanimous Supreme Court decision made this clear on May 27, 1968, in *Green* v. *County School Board of New Kent County, Virginia:*

"In desegregating a dual system, a plan utilizing freedom of choice is not an end in itself . . . The burden on a school board today is to come forward with a plan that promises realistically to work, and promises realistically to work *now* . . . It is incumbent upon the school board to establish that its proposed plan promises meaningful and immediate progress toward disestablishing State-imposed segregation."

The court also quoted Judge Sobeloff in *Bowman* v. *County School Board:*

"Freedom of choice is not a sacred talisman; it is only a means to a constitutionally required end—the abolition of the system of segregation and its effects. If the means prove effective, it is acceptable but if it fails to undo segregation, other means must be used to achieve this end. The school officials have the continuing duty to take whatever action may be necessary to create a 'unitary, nonracial system.' "

Earlier, on December 29, 1966, a three-judge panel of the Fifth Circuit Court of Appeals ruled in seven school desegregation cases in Louisiana and Alabama that:

"School authorities are under the constitutional compulsion of furnishing a single, integrated school system."

The court added, on the basis of the Supreme Court's historic 1954 Brown decision:

"As Brown dictates, the decree places responsibility on the school authorities to take affirmative action to bring about a unitary, non-racial system. As the Constitution dictates, the proof of the pudding is in the eating; the proof of a school board's compliance with constitutional standards is the result—the performance. Has the operation of the promised plan actually eliminated segregated and token-desegregated schools and achieved substantial integration?"

The court also states:

"Freedom of choice is not a key that opens all doors to equal educational opportunities."

The three-judge ruling was affirmed by a majority of the full 12-judge appellate court in March 1967. This court has jurisdiction in the Deep South States of Georgia, Alabama, Florida, Texas, Louisiana and Mississippi.

GENERAL STATEMENT

Mr. Speaker, these Whitten anti-civil-rights provisions should be clearly understood—and rejected—for what they are:

They are an attempt to impose a Federal limitation on the flexibility of local school districts to decide locally the means they shall employ to eliminate discrimination in schools;

They are an attempt to legislate a requirement that so-called freedom of choice plans are acceptable means of desegregating schools even though such plans may fail to eliminate discrimination and unconstitutional segregation in schools;

They are an attempt to perpetuate the infamous and blatantly discriminatory "separate but equal" dual schools system in the South which was declared unconstitutional by the Supreme Court 15 years ago in Brown against Board of Education; and

They are an attempt to negate effective HEW enforcement of title VI of the Civil Rights Act of 1964, which prohibits discrimination in federally assisted education on account of race, color, or national origin.

Mr. Speaker, for these and many other reasons, I urge the deletion of these noxious provisions from the Health, Education, and Welfare, Labor appropriations bill tomorrow.

THE FIGHT FOR CONGRESSIONAL REFORM

HON. DONALD W. RIEGLE, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. RIEGLE. Mr. Speaker, I have been encouraged by the interest that outside individuals and organizations have shown in the vital issues of congressional reform. I have recently read an article in the Ripon Forum concerning the application of computer technology to congressional decisionmaking. As you know, I have joined with nearly 150 of my colleagues in sponsoring legislation to improve the operations of Congress—the use of computer technology is a very important section of this legislation.

Therefore, Mr. Speaker, at this point in the RECORD I am inserting the Forum article, entitled "Coming Soon: Systems Politics," by the past president of the Ripon Society, John S. Saloma III, as a further assertion of the pressing needs which the Congress has for the thorough and effective application of computer methodology to the congressional processes:

COMING SOON: SYSTEMS POLITICS

(NOTE.—Despite all the talk about the electronic age, the computer era is not really upon us yet. Its arrival awaits reductions in the net costs of acquiring, processing, storing, retrieving, and using information. As the next five or ten years witness the beginnings of this process, government as well as the rest of society will begin to feel the results of this new technology which will make possible an advance in human intellectual capacity comparable to the invention of language, arabic numerals and calculus.

(The consequences of computerization for the American system of checks and balances will of course be fundamental. With systems analysis will come "systems politics." John S. Saloma III, former president of the Ripon Society and associate professor of political science at M.I.T., working under a grant from the Carnegie Corporation to the American Political Science Association, has been studying the likely impact of a computer technology on the governmental decision-making process. His fascinating discussion of the potential changes in the balance of power among the Congress, the President, and the Bureaucracies that computers may spur is adapted from his book *Congress and the New Politics* published by Little, Brown and Company this month.)

(By John S. Saloma III)

Is the demonstrated success of the computer and the new information technology in business, industry and private institutions transferable to the arena of public policy? If Congress embraces the computer, the really significant result will be improved techniques of decision-making—operations research, mathematical analysis, systems modeling and simulation—used in conjunction with computers and a more adequate data base.

No matter how conservatively one views the future, computers, by virtue of their ability to store and process enormous amounts of data, to calculate at lightning speeds, and to simulate human and organizational decision-behavior, provide man with an intellectual tool of almost inconceivable power. Almost certainly the application of the computer will introduce a new era for both the social and political systems. There will be cumulative improvement in information processing and computer-assisted techniques for analysis. Together these advances will dramatically alter the decision-making context. Looking at the massive information problems in government today suggests the potential.

Information provides the premises for decision or action. By one definition, decision-making is simply "the process of converting information into action." Yet in a political system where information is a form of power, there are many limitations on acquiring the right information. The political decision maker needs, broadly speaking, two types of information: *technical* information defining the content of a policy issue and *political* information concerning the relative strength of competing claims and the consequences of alternative decisions.

CONGRESSIONAL DATA WOES

The Congress suffers from several specific information problems. It is dependent on the Executive bureaucracy, and that bureaucracy often cites Executive privilege as a justification for withholding information. In addition the widespread secret classification of material under the mantle of "national security" raises another powerful barrier to Congressional access to needed information.

Also, the individual member of Congress groans under a glut of paper and strains to acquire specific, reliable information as anyone familiar with "the Hill" will testify. Not surprisingly, a variety of simplifying devices are substituted for individual decisions; following party leadership, deferring to the judgment of the responsible committee, voting with state delegation, consulting members who are expert on the subject under consideration, etc.

The point is clear. Most of the limiting conditions that act to constrain decision-makers in a world of imperfect information are abundantly present in the contemporary Congress. Congressmen and Senators muddle through as best they can.

The question of interest to us is what difference will the new information technology make for the decision-making process in government. First we shall examine a range of technically feasible change; then, some of the political factors that will condition such change in the American political system.

One of the most obvious advances that will be made possible by the new information technology is increased quality of information (including factors such as relevance, precision, completeness, and timeliness) and quality of information processing (accuracy, speed, ability to handle complex relationships, inflexibility, and potential for codification in standard rules).

But, with the computer the problem of information overload will be more subject to the control of the individual decision-maker. He will have the potential to get "on top" of his work. The computer can be programmed to provide top decision-makers with "exception" information demanding attention or action.

Decision-makers may specify in advance what types of information they wish to receive on given subjects of interest as new information becomes available. Central libraries or document centers can then service the individual decision-maker according to his "interest profile" through a technique of "selective dissemination of information."

Instead of being a largely passive recipient of information, the decision-maker will be able to interact with the data system using it as an active search mechanism.

IMPORTANT CONTROLS INTRODUCED

Congressmen may continue to tap a variety of information sources on a random basis to obtain political information, but improved selective processing of relevant technical information (and even political information on their constituency) should significantly change the problem of information overload. The individual legislator will have an important degree of control over the amount and nature of information he receives.

The legislator will be provided with the capacity for systems thinking and systems analysis—that is, the dynamic behavior of complicated systems and the analysis of multiple variables. Such simulations will permit the preparation of major contingency plans. A lengthened time perspective, and a greater opportunity for strategic planning will replace the "remedial" orientation of incremental policy-making with orientation toward the future. He will be able to think ahead more, instead of exhausting himself just trying to keep abreast.

The incrementalist's view that "public policy problems are too complex to be well understood, too complex to be mastered" and that decision-makers develop "a strategy to cope with problems, not to solve them" will be replaced with a more optimistic perspective. The decision-maker will be "on top" of information. He will have analytical techniques and information processing capabilities that will give him new understanding of governmental and social systems and with this a sense that he can manipulate and control them. Where the incrementalists have rejected the impossible prescription to be comprehensive in favor of a more manageable strategy of "outright neglect." The new information technology will enable the decision-maker to develop a *more rational* and *aggressive* strategy of problem-solving.

But perhaps the greatest long-run contribution of the computer to man's problem-solving capacity will be its ability to facilitate two types of breakthrough in collaborative research. The first of these gains is the cumulative storage and preservation of solutions—a kind of division of intellectual labor. Since a computer never forgets, all gains or improvements in computation or analysis, no matter how incremental, are preserved until better techniques are perfected and may be retrieved, used and refined by contemporary and future generations of decision-makers.

One does not have to be a technological radical to appreciate the cumulative potential of computer programming. If most human decisions have an underlying structure, as disjointed, incremental, restricted in scope as that structure may be, in time computer programmers and analysts will discover and program the implicit decision techniques, rules, and coefficients. Already computer programs based on the analysis of past managerial behavior have proved more efficient than continued management practices (*i.e.*, rules of thumb) based on experience. Most computer experts do not expect the computer to replace the human decision-maker but rather to extend his planning and decisional capacities through the continued refinement of man-machine interaction. The computer will thus absorb the incrementalists in its inexorable accumulation of intellectual power.

"ON-LINE" COMMUNITY

Even more significant than the steady development of computer programs is the advent in prototype form of "the on-line intellectual community" based on man-computer interaction and computer-facilitated cooperation among men in a university setting. Carl F. J. Overhage and R. Joyce Harman describe the potential breakthrough based on the experience of Project MAC (research and development of Machine-Aided Cognition and Multiple-Access Computer systems) at M.I.T.:

"Because communication among men is fallible, and because heretofore men did not have effective ways of expressing complex ideas unambiguously—and recalling them, testing them, transferring them, and converting them from a static record into observable, dynamic behavior—the accumulation

of correlatable contributions was opposed by continual erosion; and the melding of contributions was hampered by divergencies of convention and format that kept one man's ideas from meshing with another's. The prospect is that, when several or many people work together within the context of an online, interactive, community computer network, the superior facilities of that network for expressing ideas, preserving facts, modeling processes, and information and the same behavior—those superior facilities will so foster the growth and integration of knowledge that the incidence of major achievement will be markedly increased."

Comparable networks will in time be available in business and government and among sectors of each of these communities with overlapping research interests. The potential of man-machine-man interaction for pure and applied research is one of the scarcely realized but most staggering potentials of the new information technology.

Before examining the overall significance of these factors on decision-making in government, it would be wise to examine some reservations about the revolutionary impact of information technology.

DILEMMAS PERSIST

Lessening the information constraints on and increasing the potency of the analytical tools available to decision-makers will not remove the dilemmas of decision-making. There are limitations that go well beyond information *per se*. As the information constraints on decision-makers are eased, other limiting factors and decisions will come into play:

1. The problem of values. If we define politics as a struggle for control stemming from conflict over the direction of social life and public policy, it is clear that the central problem of politics is one of values, not information. Decision-making involves values at all stages. Choice activity especially requires value criteria for decision. For instance, budgeting is a political activity and the problem of choice or allocation ultimately remains one of values.

2. The political use and abuse of information. Information systems in government may be used to serve the political purposes of the political actors who have the resources to control them. How then can one prevent the President or program-oriented bureau chief from consciously or unconsciously biasing an information system that Congress must use?

3. Cost factors. Government (and the taxpayer) must pay the bill for the computers, their programming and the personnel to man them. Balanced against this cost is the problem of final payoffs: how much tangible difference will all this new equipment make?

Acknowledging these reservations, however, we still believe that the combined and cumulative impact of the new information technology will bring some radical changes in the environment of governmental decision-making.

Mid-1970 is only six years away—is it impossible that improvements in the legislative process from wide use of advanced data systems will actually be achieved by 1975? Studies by RAND Corporation experts suggest that by the early 1970's computers will be small, plentiful, and inexpensive. Computing power will be available to anyone who needs it, or wants it, or can use it either by means of a personal console connected to some large central facility, or by a small personal machine. Additional projections foresee, by 1975, a computer that will make possible automatic libraries able to look up and reproduce copy; by 1978, automated looking up of legal information, and the widespread use of automatic decision-making at the management level for industrial and national planning. By the mid-1980's, the computer will begin to realize its potential as a research tool through modeling and experimentation, as an integral part of the educational system, and in areas such as medicine and biological sciences.

Assuming that the projected technology is largely realized within the Executive branch by the mid-1970's, we shall examine some of its consequences within the Executive and then go on to examine the potential impact on Congress.

NEW BUREAUCRATIC CLASS

First, there will result a centralization of effective decision-making authority at the Presidential and departmental levels. As the compartmentalized information resources of individual agencies are integrated into comprehensive information systems, political executives will have greater leverage over the bureaucracy. At the same time fewer people will be involved in policy decisions. The likely long-term trend in the Federal government is toward the development of highly trained professional "analyst" staffs within the Budget Bureau and at the departmental secretary level. The power of the analyst within the Executive branch will pose new problems for Congressional watchdogs. Congress must define new points of access and review in the decision-making process if the historical concept of balance is to be maintained.

Secondly, there will develop a more explicit candid style of politics which may complicate the problem of achieving political consensus. The above point to important secondary consequences for Congress.

THE IMPACT ON CONGRESS

In January, 1968, the Legislative branch acquired its first Analysis and Data Processing (ADP) installation directly involved in aiding the legislative process. The new online terminal system, installed in the American Law Division of the Legislative Reference Service, now enables LRS to record and store on magnetic tape descriptions of all bills and resolutions introduced in the 90th Congress. The system will compile by computer the "Digest of Public Bills" and eventually allow random recall of bills by number, title, and word descriptions, at the request of a Congressional office or committee. (Upwards of 26,000 bills and resolutions were introduced in the 89th Congress—an indication of the scale of the project.)

Congressman Robert McClory (R-Ill.) who in the 89th Congress introduced the first bill in either House directly applying ADP techniques to the work of Congress, has been the most articulate spokesman for Congressional action. Congressman McClory, concerned by the growing "information gap" between the President and Congress, proposed to equip the Congress with "an identified capability, based on automatic data processing devices and procedures, to retrieve selected information that is of priority value to the Members and committees."

After viewing the new system, Congressman McClory anticipated that some of the next ADP applications might be:

(1) Daily printouts summarizing the previous day's Congressional action;

(2) An automated index of congressional documents and legal periodicals;

(3) Up-to-the-minute information on legislative issues scheduled for debate;

(4) Vote summaries on bills already passed;

(5) The status of legislation pending in committee;

(6) Description of information stored on computer files in the Executive departments.

THE WIND IS SHIFTING

A quiet revolution in thinking appears to be taking place on Capitol Hill. Members privately express the desire to be aware of coming problems so they can "gear up" for them. A few Senators and Congressmen already sense that information technology is the "coming thing" and are investing their own time as well as that of their committee staff and/or their office staff in developing a greater familiarity with information systems.

A wide range of Congressional committees have been studying a variety of related problems (and educating their members in the process): the implementation of (PPBS) the Planning-Programming Budgeting System pioneered by former Secretary of Defense Robert S. McNamara; the development of social indicators and a system of social accounts; copyright legislation relating to information retrieval; the application of the systems approach to urban problems and environmental pollution; and, the consequences of computer technology for individual privacy. The committee publications of the Congress—hearings, staff reports and memoranda, selected documents—already constitute one of the most comprehensive and relevant sheafs of facts on the social and political implications of the new information technology.

While most Congressmen and their staffs have had only a brief introduction to information technology and its potential, a start has at least been made. The real change in Congressional attitude and skills will probably not be felt, however, until a new wave of political talent with practical experience with computers—through universities and the private sector—is elected to Congress. Some of the IBM experts have already turned up in the halls of Congress. One of them; formerly employed by the International Business Machines Corporation and a candidate for the Doctorate in Business/Government Relations from the Harvard Business School (then) freshman Congressman Donald W. Riegle, Jr., (R-Mich.), caused somewhat of a stir in Washington in the fall of 1967 by sending then Secretary of Defense Robert McNamara a request for a matrix of 85 specific data items for which he (Riegel) had written a computer program. Another freshman Senator with a combined engineering and law background, Senator Howard H. Baker, Jr. (R-Tenn.), lectured the Association for Computing Machinery about the impending nuclear power breakthrough in breeder reactors that could produce power at almost zero fuel cost and the need for a much broader Congressional overview and plan for the technological and social revolution that this implied. Senator Baker has been an articulate spokesman for a new Senate Select Committee for Technology and the Human Environment.

Impressive as these individual examples may be, Congress as an institution has yet to experience the potential of information technology. Widespread Congressional interest suggests a greater receptivity toward computers and information systems than might at first inspection have been anticipated. It is still likely, however, that Congress will lag behind the Executive in fully accepting the new technology.

HOW LONG WILL IT TAKE

How great a lag will exist by our projected date of 1975—assuming that Congress permits the Executive to implement the new technology without hinderances? We may posit three points on a continuum from (I) *Congressional resistance* to computer technology, notably the failure to fund any central computational facility for use by the Congress, the failure to budget any allowance for Congressmen to utilize other facilities, and the failure to provide analyst staff for the use of the committees and/or members; through (II) *limited Congressional acceptance* of computer facilities and analyst staff with access tightly controlled by the individual committees and/or party leaderships; to (III) *open Congressional acceptance*, with all members enjoying "free" use of computer facilities and full access to staff and data resources. According to our projection, Congress could have moved all the way to Situation III by the mid-1970's. A more realistic

estimate would place it somewhere between Situations II and III. Ultimately, in our estimate, Congress will operate in Situation III although the exact institutional *form* in which it organizes and applies these new resources remains to be determined.

Accelerating the acceptance of innovation are the built-in tensions between authorizing and appropriations committees both eager to control program decision; the publicity incentive for committee and subcommittee chairmen generally to identify themselves with innovations and the perennial Congressional fear that Congress is yielding initiative and authority to the President; party competition; and, the generational divide between "activists" and high seniority Congressmen.

Indeed, once he had access to the new data processing and systems analysis tools, the contributions of the individual legislator would be considerably enlarged. We have noted the contribution of individual legislators to Congressional initiative in legislation and investigation. Although only a minority of Congressmen will choose to play the role of legislative inventor or watchdog, the effectiveness of such members will be enormously increased by computer-assisted techniques of search and analysis. Members will be free to "browse" through the data archives in developing and assessing legislative alternatives. Some legislators will hire professional analysts on their office staffs or acquire analytical skills themselves. While such legislative diligence will still be the exception, one can readily foresee a Congressman sitting at a console in his office pouring over a computer print-out into the late evening hours and cutting through the paper arguments and justifications of Executive programs with penetrating lines of questions.

In addition, *ad hoc* congressional study and work groups would freely form and disperse as new challenging tasks arose at the interstices of committee power. The work of such study groups would be "collateral" to that of the standing committees but would introduce a needed flexibility into the Congressional organization.

CAN DEMOCRATIZE COMMITTEES

While information systems afford new possibilities for specialization and increased committee power—especially in the area of legislative oversight or control of the Executive bureaucracy, they should also afford possibilities to "democratize" committee power. Where limited information previously conferred important advantages on those few individuals who had the legislative seniority and central committee positions to accumulate such information, now generalized availability of information and program analyses would enable junior committee members and interested Congressmen not on the committee to gain a better understanding of the issues involved. The majority would have greater opportunity to influence committee action and to prevail against the committee on the floor when its action was not representative of the views of the entire membership.

Generalized information systems should enable Congress to satisfy both the necessity for specialization and the goal of comprehensive policy reviews. Where information on Executive agency activities has been compartmentalized within the Executive budget and the Congressional committee system, it would now be available to any curious Congressman. The "special analyses" of the federal budget already being developed by the Bureau of the Budget are a prototype of the kind of comprehensive information that Congressional committees will be able to tap. Individual Congressional committees, no longer limited to information within their agency jurisdiction, could become important loci for government-wide program review and coordination. Where the President alone has had the information to develop a measure of agency coordination. Congressional committees would now share that information, *and* the authority to use it, subject to the majority support of Congress.

NEW BALANCE OF POWER

While the application of information technology in government will have its greatest immediate political impact *within* the Executive (with important secondary consequences, as we have observed for the Congress), the longer term consequences of better information in government raise fundamental questions about the American system of separated powers. Congress and legislative bodies generally need *not* lose power to the Executive. The potential advance in information technology is theoretically equally accessible to *both* the President and Congress, with Congress standing to enhance its powers versus the Executive considerably. The thorny question of how power should be organized in the American politcial system will be faced once again.

Beginning roughly with the Budget and Accounting Act of 1921 and including the establishment of the modern Executive bureaucracy, the Executive staffs to the President, and the Legislative Reorganization Act of 1946, there arose a specialization of roles—Executive leadership and Congressional review or oversight. The model of "Executive-centered" government while tending to enhance the power of the President and reduce the autonomy of Congress, was based on a rationale that differentiated roles for President and Congress.

Simply stated, the President set the agenda for legislation; the Congress reviewed, amended, and passed legislation; the President supervised the execution of the laws by the federal bureaucracy; and the Congress reviewed administrative performance. Executive-centered government, however, conferred important relative information advantages on the President. The President was closer to the day-to-day operations of the Executive bureaucracy. He had access to the detailed information generated by the budgetary cycle and the numerous intelligence activities of the general bureaucracy. Moreover, the budgetary process and supporting central staff gave him a continuing framework for decision.

BLURRING DISTINCTIONS

A second major rationalization of authority has begun with the new emphasis on program budgeting and information systems in government. As this rationalization proceeds many of the assumptions underlying specialized roles for the President and Congress will have to be re-examined. The distinction between Executive decision-making and broad policy oversight will become increasingly blurred as the time perspective of governmental decision-makers is lengthened. As improved information systems yield better indicators of performance, reduce the time of the management information cycle, and permit real-time monitoring of governmental activities, the Congressional role of "oversight" (review after the fact) will be supplemented by new possibilities for "control" (legislative decision or activity prior to the relevant administrative action). The policy or control functions of the President and Congress will become less distinguishable as both develop the capacity to ask program questions and undertake analyses of data from the same generalized information systems or specially developed systems for their own use.

One restraint on a fully developed Congressional policy role in the past has been the unwillingness of Congress to build a parallel legislative staff bureaucracy. As a result, Congress has often had to "second guess" the Executive without the information to back its hunches. Now, as technology generalizes the availability of information, Congress can tap into Executive-based information systems, establish quality controls, and develop more limited information systems for its own specific requirements. Congress will review, evaluate, analyze and make its own determination of priorities. The process of making choices and analyses more explicit enables Congress to participate much more intelligently and vigorously, with a *limited* staff, in the decision-making process. In fact, there may even be a danger of too vigorous participation.

The new definition of the separation of powers that will evolve is a matter for speculation. If we assume the trends that we projected earlier, distinctive Presidential and Congressional biases may soon develop in the decision-making process. We might expect the Executive to overemphasize the benefits of rationalization in program formulation and administration, to overvalue economic and technical criteria of performance. If the new information technology leads to an increasing separation between operating missions, life styles, and social roles for those institutions and individuals involved in rationalized activities compared to those involved in nonrationalized ones, Congress, representative of a society embracing both lifestyles, would inherit the difficult task of mediating the impact of the former on the latter and restraining the tendency toward irrational and frustrated response. Congress would add elements of "political rationality," considerations of human costs and benefits to the decision-making process.

SYSTEMIC DISSONANCE

In this context, one rationale for the separation of powers—"systemic dissonance"—takes on new significance. We have suggested through this discussion that the revolution in information technology represents an almost immeasurable potential increase in man's knowledge—especially in his understanding of and ability to control his environment. The intelligent use of that knowledge and the power it confers is an awesome responsibility. In the United States it involves the democratic consideration of emerging technological possibility and consequences. The multiple perspective of the American system, the numerous points for developing, testing, and advancing ideas may ultimately prove to be one of the greatest assets of American democracy in the future.

DRUG ABUSE AND OUR PRESENT EFFORTS TO MEET THE PROBLEM

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. WILLIAM D. FORD. Mr. Speaker, as a cosponsor of H.R. 9312, a bill to provide assistance to special education programs on the very serious drug problem we face, I was pleased to see the Nixon administration express its intention to work toward a solution to the problem.

In an effort to determine exactly what sources of Federal aid are presently available for the treatment and prevention of drug abuse, I have had the following compilations of Federal programs prepared. The first is a "Summary of Federal Laws Providing Aid to States and Localities for the Treatment and Rehabilitation of Narcotic Drug Addicts" prepared by the Library of Congress. The second is an abstraction

from the "Catalog of Federal Domestic Assistance" compiled by the Office of Economic Opportunity.

I insert these in the RECORD in the hope that a look at our past efforts at drug control may provide some insight into where our emphasis should be placed in the future:

SUMMARY OF FEDERAL LAWS PROVIDING AID TO STATES AND LOCALITIES FOR THE TREATMENT AND REHABILITATION OF NARCOTIC DRUG ADDICTS

COMMUNITY MENTAL HEALTH CENTERS ACT OF 1963

The Act provides for grants to States for the construction of public and other nonprofit mental health centers. The grant may range from one-third to two-thirds of the total cost of the project. Allotments to States are based upon population and need.

Under a 1965 amendment, grants are available to help pay salaries of professional and technical personnel employed in mental health centers. The funds are awarded on a decreasing percentage basis for a center's first 51 months of operation. Grants may cover 75 percent of eligible staff costs the first 15 months, 60 percent in the first subsequent year, 45 percent in the second, and 30 percent in the final year of support. Staffing grants are awarded by the National Institute for Mental Health directly to the facility on a 12-month basis. Construction grants go to mental health centers that will provide at least 5 services: consultation and education, emergency psychiatric help, partial hospitalization, and inpatient and outpatient services.

During consideration of the legislation in 1963, it was established that the Department of Health, Education and Welfare—responsible for administration of the Act—interpreted the term "mental illness" so as to include narcotic drug addiction. The community mental health centers, therefore, may be used (although not exclusively) for the treatment and care of narcotic drug addicts (however, see the Alcoholic and Narcotic Addict Rehabilitation Amendments of 1968, below).

As of March 1, 1968, 271 centers had received Federal support either for construction or staffing, or both. These centers are located in 48 States, the District of Columbia, and Puerto Rico. More than 1,000 institutions—universities, social service agencies, clinics, community and State hospitals—have aided in the development of these centers.

ECONOMIC OPPORTUNITY ACT OF 1964

The 1966 amendments to the Economic Opportunity Act of 1964 contained authorization for programs for the prevention of narcotic addiction and the rehabilitation of narcotic addicts. Such programs are to include provisions for the detoxification, guidance, training, and job placement of narcotic addicts. Although the amendments do not specify the amount of money to be spent for these programs, the conference report indicates that the committee explicitly agreed that no less than $12 million of the earmarked funds for health service programs ($61,000,000) or an equivalent proportion of such funds as may actually be appropriated, be used for narcotic rehabilitation. Subsequently, $11.2 million was appropriated for the anti-addiction programs for fiscal year 1967. No further appropriations have been made.

The funds are made available for the treatment and rehabilitation of narotic drug addicts through the Community Action Program (Title II of the Economic Opportunity Act), and in 1967 CAP supported eight narcotic control projects. The first of these to be funded was a narcotic addition program in San Antonio, Texas. The program provides for both hospitalization and job training. The rehabilitation program involves not only the addict but his family as well. Funds were also awarded to Puerto Rico, Chicago, Tacoma (Washington), New Jersey, Washington, D.C., New York City and Los Angeles in 1967.

NARCOTIC ADDICT REHABILITATION ACT OF 1966

The Act is designed primarily to promote the rehabilitation of narcotic addicts charged with or convicted of violating certain Federal criminal laws. In addition, it provides for procedures whereby an individual not charged with any crime may be committed to a Federal institution for treatment; and it provides for assistance to State and local governments and to other public and private organizations and institutions for the development and operation of addict treatment facilities.

Title I provides for the civil commitment of certain addicts charged with Federal law violation who desire to be treated for their addiction in lieu of standing trial. Title II provides for a sentencing procedure to commit for treatment those addicts (qualifying under the law) who are *convicted* of a Federal crime. Title III provides for civil commitment to a Federal institution of addicts who are not charged with any criminal offense. Title IV, Section 401, provides for the establishment of outpatient services for persons released after confinement under this or any other act providing for treatment of narcotic drug addiction.

Section 402 of Title IV authorizes the Suregon General to make grants to States, local governments and other public and private non-profit organizations and institutions for the development and operation of facilities for the treatment (including post-hospitalization treatment) of addicts. It also provides for Federal aid for field testing and demonstration projects, surveys and training programs. An appropriation of $15,000,000 was authorized for fiscal year 1966 and for the succeeding year.

Section 402 of the Act was repealed by the Alcoholic and Narcotic Addict Rehabilitation Amendments of 1968 (see below). Under these amendments the assistance program provisions are transferred from the Narcotic Addict Rehabilitation Act to the Community Mental Health Centers Act of 1963.

THE ALCOHOLIC AND NARCOTIC REHABILITATION AMENDMENTS OF 1968

These amendments amend the Community Mental Health Centers Act of 1963 by authorizing funds ($15,000,000 for fiscal year 1969 and $25,000,000 for fiscal year 1970) for grants for construction and staffing of facilities for the prevention and treatment of alcoholism and the prevention and treatment of narcotic addiction.

The grants are offered to public or nonprofit private agencies and organizations to pay part of the cost of construction of treatment facilities (including post-hospitalization treatment facilities) for narcotic addicts and to assist in meeting professional and technical personnel costs for the initial operation of such facilities. The grants for personnel costs may be awarded to those facilities constructed under Part A of the Community Mental Health Centers Act (providing for construction of mental health centers in general) or under the provisions of the new amendments. In addition, such grants may be made for the operation of new services in other treatment facilities for narcotic addicts.

Grants are to be administered on the same basis as are those made to general mental health centers as provided for in Parts A and B of the Community Mental Health Centers Act. The construction grants are made to the States, based on population and need, and are administered by State mental health agencies in accordance with such plans as have been approved by the Surgeon General. The amount of the Federal share of the total grant received by any one construction project may range from one-third to two-thirds.

Staffing grants are awarded by the National Institute of Mental Health directly to the facility. The funds are made available on a decreasing percentage basis during the center's first 51 months of operation. Grants may cover 75 percent of eligible staff costs for the first 15 months, 60 percent in the first subsequent year, 45 percent in the second, and 30 percent in the final year of support.

The amendments also contain authorization for training development and for the conduct of surveys to evaluate the addiction treatment and prevention programs funded under the Act.

The provisions of the narcotic addict rehabilitation section of these amendments are modifications of the program authorized under section 402 of the Narcotic Addict Rehabilitation Act. According to the House report accompanying the amendments, "The stated intent of this provision of the 1966 Act is to assist communities in the development of a network of comprehensive, aftercare, treatment, and rehabilitation programs. The legislative history clearly indicates that the development of these community-based programs was intended to be related to other community mental health services." The provisions of this program were transferred to the Community Mental Health Centers Act by these amendments and Section 402 of the Narcotic Addict Rehabilitation Act was repealed.

It was noted in the House report: "The purpose of the legislation is not to establish Federal programs for those problem areas, but rather to provide seed money to encourage the States and local communities to establish programs to deal with these health problems."

CATALOG OF FEDERAL DOMESTIC ASSISTANCE

ALCOHOLISM—PREVENTION AND CONTROL

Nature and Purpose of Program: This program provides for Federal assistance in the construction and initial staffing of services for alcoholics *and narcotic addicts* as *part of community mental health centers*. The purpose is to provide a wide range of services and continuity of care for alcoholics and also narcotic addicts.

Who Can Apply and How to Apply: Public and nonprofit private agencies may apply but they must be affiliated with a community mental health center, if one exists in the community. Applications received by Regional Offices of the Department of Health, Education, and Welfare are reviewed and approved by the National Institute of Mental Health.

For Information Contact: National Center for the Prevention and Control of Alcoholism, National Institute of Mental Health, 5454 Wisconsin Avenue, Chevy Chase, Md. 20203. Printed information available.

Authorizing Legislation: 42 U.S.C. 291 et seq.

Administering Agency: Public Health Service, Health Services and Mental Health Administration, Department of Health, Education, and Welfare.

INDIAN HEALTH FACILITIES CONSTRUCTION

Nature and Purpose of Program: This program provides for the construction of hospitals, sanitation facilities and health centers, including school health centers, and health stations for provision of health care for more than 403,000 Indians, Eskimos, and Aleuts who apply directly to the facilities for services. In certain locations the Service constructs personnel quarters, and it performs alterations to upgrade and modernize its facilities.

Who Can Apply and How to Apply: Communities may request financial assistance for construction of community hospitals from the Indian Health Service. The Service can

provide such assistance when it is deemed the most effective way of providing health care. Applications for assistance may be directed to the address shown below.

For Information Contact: Indian Health Service, 7915 Eastern Avenue, Silver Spring, Md. 20910.

Printed Information Available: The Indian Health Program of the U.S. Public Health Service; The Second Annual Report to the Indian People.

Authorizing Legislation: 42 U.S.C. 2001–2004a.

Administering Agency: Public Health Service, Health Services and Mental Health Administration, Department of Health, Education, and Welfare.

JUVENILE DELINQUENCY PREVENTION AND CONTROL

Nature and Purpose of Program: This program is designed to help States and local communities strengthen and improve their juvenile justice and juvenile aid systems, and to provide diagnostic treatment, rehabilitative, and preventive services to youth who are delinquent or in danger of becoming delinquent. To accomplish these aims, grants, technical assistance, and information services are authorized in the following areas: planning comprehensive anti-delinquency programs; providing rehabilitative services; implementing community-based prevention services; training professional personnel for youth work; supplying information services; and providing technical assistance.

Who Can Apply and How to Apply: States, local communities, public and private nonprofit agencies, correctional systems, courts, law enforcement agencies, youth agencies, universities, and school systems are among those eligible for assistance. Prospective grantees should write to the address shown below.

For Information Contact: Office of Juvenile Delinquency, Social and Rehabilitation Service, U.S. Department of Health, Education, and Welfare, Washington, D.C. 20201.

Printed Information Available: Public Law 90–445, regulations, guidelines, and application forms.

Authorizing Legislation: 42 U.S.C. 3801–3890, Juvenile Delinquency Prevention and Control Act of 1968, Public Law 90–445.

Administering Agency: Social and Rehabilitation Service, Department of Health, Education, and Welfare.

NARCOTICS AND DANGEROUS DRUGS—PUBLIC EDUCATION

Nature and Purpose of Program: This program is offered to assist any professional, service, social, educational, religious or other interested group in establishing an educational program on drug abuse. By exposing the interested parties to experts and available resources in the Field and advising various approaches to the problem, it is anticipated that the requesting organization will function as the program's proponent. The assistance offered by the Bureau is strictly advisory, exposing the technical advantages of our expertise to those planning to initiate programs. The beneficiaries of the programs are not limited, but emphasis is placed on those who abuse or misuse drugs and persons and their families who may be inclined to use, misuse, or abuse drugs.

Who Can Apply and How To Apply: Any service, social, professional, educational, religious or other similar organization interested in initiating a Drug Abuse Educational Program designed at eliminating drug abuse or its attendant problems may apply for technical assistance. Interested applicants should address applications to: Assistant Director for Science and Education, Bureau of Narcotics and Dangerous Drugs, 1405 Eye Street NW., Washington, D.C. 20005.

For Information Contact: Division Chief, Educational Programs Division, Bureau of Narcotics and Dangerous Drugs, 1405 Eye Street NW., Washington, D.C. 20005.

Printed Information Available: *Drugs on the College Campus*—Single copy free from Bureau of Narcotics and Dangerous Drugs; *Drugs of Abuse*, $.20—Available from: Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402; *Progress of Marihuana: Facts you Should Know*, $.20—Available from Government Printing Office.

Authorizing Legislation: Reorganization Plan, No. 1, 1968: Federal Register, Volume 33, No. 71, Apr. 1, 1968.

Administering Agency: Bureau of Narcotics and Dangerous Drugs, Department of Justice.

NARCOTIC ADDICT—CLINICAL CENTERS

Nature and Purpose of Program: The Clinical Research Centers at Lexington, Ky., and Fort Worth, Tex., are authorized to treat voluntary patients who are addicted to narcotic drugs and who are committed under the Narcotic Addict Rehabilitation Act.

The term "addict" means any person who habitually uses any habit-forming narcotic drug, the sale of which may be covered by executive order or Presidential, proclamation, under the Harrison Narcotic Act.

Users of barbiturates, alcohol, and other drugs are not eligible for acceptance by the centers unless they are also addicted to a narcotic drug cited in the Federal narcotics laws.

Who Can Apply and How To Apply: Those eligible are narcotic addicts who are committed by Federal courts. Application should be made to the U.S. Attorney in the Judicial District in which the addict resides.

For Information Contact: Chief, Narcotic Addict Rehabilitation Branch, National Institute of Mental Health, 5454 Wisconsin Avenue, Chevy Chase, Md. 20203.

Printed Information Available: *Narcotic Addict Rehabilitation Act of 1966; Community-Based Treatment Programs for Narcotic Addiction.*

Authorizing Legislation: 42 U.S.C. 341.

Administering Agency: Public Health Service, Health Services and Mental Health Administration, Department of Health, Education, and Welfare.

NARCOTIC ADDICTION REHABILITATION FACILITIES

Nature and Purpose of Program: This program provides for the civil commitment of narcotic addicts for treatment and rehabilitation. It gives the Federal government, for the first time, responsibility for providing aftercare for addicts. Addicts may be committed to treatment under Title I, II and III. Titles I and III are administered by the National Institute of Mental Health; Title II, which provides for the treatment of addicts convicted of a Federal crime, is administered by the Attorney General's Office.

Title I authorizes civil commitment in lieu of prosecution: addicts charged with but not yet convicted of a Federal crime may elect civil commitment in lieu of prosecution. Title III permits addicts to request commitment to inpatient treatment if State or other local treatment facilities are not available. Under Title IV, construction and staffing grants on a shared basis can be made to public or nonprofit private agencies for treatment facilities for narcotic addicts. Training and evaluation grants are also available.

Who Can Apply and How To Apply: Title I—Narcotic addicts charged with, but not yet convicted of a Federal crime. Apply through a court petition.

Title III—Persons who are, according to law, narcotic addicts. Before applying through court petition under this Title, it must be determined that State or other treatment facilities are not available.

Title IV—Community Mental Health Centers or organizations able to affiliate with such centers. Apply to the address shown below.

For Information Contact: Narcotic Addict Rehabilitation Branch, National Institute of Mental Health, 5454 Wisconsin Avenue, Chevy Chase, Md. 20203, or DHEW Regional Offices, or The local U.S. Attorney's Office.

Printed Information Available: *Community-Based Treatment Programs for Narcotic Addiction; Narcotic Addict Rehabilitation Act of 1966.*

Authorizing Legislation: 28 U.S.C. 2901–2906; 42 U.S.C. 291 et seq., Narcotic Addict Rehabilitation Act.

Administering Agency: Public Health Service, Health Services and Mental Health Administration, Department of Health, Education and Welfare.

NARCOTICS AND DRUG ABUSE—RESEARCH AND TRAINING

Nature and Purpose of Program: Grants and contracts are awarded for research into various aspects of the narcotic and dangerous drug problem under this program.

It is anticipated that through basic research, clinical investigations, surveys, *demonstrations,* and carefully monitored *treatment trials,* improved methods of dealing with these problems will emerge. Funds for the establishment of nonresearch treatment facilities are not available. Training support is offered universities, community mental health centers and other organizations engaged in this effort.

Who Can Apply and How To Apply: Individuals or agencies connected with teaching institutions or appropriate foundations engaged in this effort may apply to the address shown below.

For Information Contact: National Institute of Mental Health, Public Health Service, 5454 Wisconsin Avenue, Chevy Chase, Md. 20203.

Printed Information Available: *NIMH Support Programs,* PHS No. 1700.

Authorizing Legislation: 42 U.S.C. 241, 242, 242a.

Administering Agency: Public Health Service, Health Services and Mental Health Administration, Department of Health, Education and Welfare.

CATHOLIC PUPILS EXCELL IN BASIC SKILLS

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. EILBERG. Mr. Speaker, I rise today in recognition and praise of the Catholic school children in Philadelphia. These children scored 1½ to 2 years above the national average in a recent series of tests administered to 20,000 students. At a time when pressures and competition are great and educational accomplishment is of increasing importance, this is indeed a commendable achievement.

The archdiocesan schools, which educate 275,000 children in the Philadelphia area, have been striving to perfect their system through the reduction in class sizes and the introduction of new instructional techniques. These efforts have, indeed, been reflected in the performance of the students.

I applaud the accomplishments of these children, as well as the dedicated efforts of their instructors. For the RECORD I insert an account of their achievements from the Philadelphia Inquirer of July 24, 1969:

TWO YEARS ABOVE U.S. NORMS: CATHOLIC PUPILS EXCEL IN BASIC SKILLS

(By John P. Corr)

Catholic school children in this area score, on the average, up to two years above the national norms in basic skills, according to standardized tests given to 20,000 students this year.

The average child in Philadephia's Catholic school is doing better than 60 percent of the school children in America, and his progress is improving.

The average child in the archdiocesan school system has an I.Q. rating of 109.2. The national average is about 100.

The system-wide testing also revealed a direct relationship between economic status of children and their test scores, with children in inner-city, poverty area schools scoring lowest.

The same income relationship was found in similar testing conducted by the public school system in Philadelphia, which is slightly larger than the Catholic school system in terms of enrollment.

However, while Catholic schools score 1½-to-2 years above national norms, the public school system has been scoring 1½-to-2 years below.

There are a number of reasons for the disparity.

First, public schools must accept nearly all children applying to them, regardless of ability. Secondly, Catholic schools may—if they chose—get rid of children who are discipline problems.

Also, the fact that parents will undertake the extra expense to send their children to Catholic schools indicates a home environment in which children are urged to succeed in school.

Experts are virtually unanimous in pointing out that parental motivation is a key factor in the scholastic success of students—particularly at the elementary level.

In addition, the archdiocese has many schools in suburbs where they do not have to deal with the enervating effects of poverty. All public schools are in the city with its heavy concentrations of poverty-stricken families.

Catholic school children scored above average in every grade and in every subject tested.

The pattern of achievement through the grades appears to be the opposite of that of the public schools.

Public school children tend to slip further behind the national average as they progress through the grades. Catholic school children pull further ahead.

For example, in reading, first graders in the Catholic schools score 2–3 as compared to the national average of 1.8. In seventh grade, however, the average is 8.9 compared to the national score of 7.8.

First graders in the Catholic school system here are in the 67th percentile in reading nationally, second graders in the 73rd percentile and third graders in the 77th percentile.

Children registered dramatic gains in science, which is attributed to a new science curriculum introduced this year after children scored in the 46th percentile in national testing last year. This year, they rose to the 56th percentile.

MATH RANK DROPS

Although scores remain about the same, children in Catholic schools dropped 10 percentile points in mathematics, from the 71st percentile to the 61st.

School authorities attributed this to adoption of the "new math" by an increasing number of school systems during recent months. Catholic schools here have used "new math" for years. Drop in percentile level, however, does not indicate a lowering of achievement levels.

Some children were tested in each of the more than 300 elementary schools in the five-county archdiocese—which educates about 275,000 children.

AREAS INCLUDED

Children were tested in the areas of reading, language, arts, modern mathematics, social studies and science.

School officials did not express complete satisfaction with the results which, they say, indicate that the schools are doing a good job of educating the average child but need to do more for slow learners and exceptionally bright children.

The tests will be administered each year and a gradual improvement is hoped for in the near future. The principal reason for this optimism is the school system's campaign to reduce class sizes.

During the last eight years, the system has reduced its average class size from 50 to 39.

SOVIET HUMANISM

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. RARICK. Mr. Speaker, the State Department announcement that the Bolsheviks of Russia are going to serve as a clearinghouse for gift packages to the American prisoners of war in Vietnam should surprise no one.

After all, to Moscow it creates little inconvenience because they can load the gifts going to our imprisoned servicemen in the same transport vehicles which carry munitions and weapons to the Communist enemy responsible for capturing our boys in the first place.

If our State Department is desirous of giving the Russian Communists a humanitarian image they could just ask that the Russians cease arming and supplying Hanoi. The American people know that without Russian support the war would end in short order without an American offensive in which case the American prisoners of war would be free before the gifts arrive.

Mr. Speaker, I include a news clipping following my remarks:

HANOI POW'S WILL GET GIFTS VIA MOSCOW

The United States has arranged to send packages to American prisoners of war in North Vietnam by way of Moscow, the State Department announced yesterday.

In a statement, the department appealed to North Vietnam to deliver the packages to the men even if they were received in Hanoi after Aug. 15—a cutoff date announced by North Vietnam on Wednesday.

The State Department said the original declaration permitting POW packages did not specify any cutoff date.

Furthermore, the department said that while 1,400 men, including civilians, are "missing or captured in Southeast Asia" many families are uncertain about sending gifts because the names of those held have never been released—nor has the total number been given by Hanoi.

"Families of missing and captured men," the statement said, "have received mailing information from the military services and arrangements have been made by the U.S. Post Office to get the packages to Hanoi by way of Moscow as quickly as possible.

"We would certainly hope, however, that packages received after Aug. 15 would not be turned back."

Hanoi said on July 3 that gifts for POWs would be accepted. At the same time it announced that it would release three U.S. pilots. They have not been freed and press officer Carl Bartch said they have not been identified.

A POSTAL WORKER'S VIEW OF THE POST OFFICE PROBLEM

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. DULSKI. Mr. Speaker, a former postal worker has put an interesting focus on the problems of the postal service in an article which she wrote for the July 27 edition of This Week magazine.

Mrs. Yetta Horn Jay, worked for the post office, as a mail sorter at intervals over more than 4 years and has received several departmental awards for her suggestions on improving the service.

Our Post Office and Civil Service Committee is completing 3 months of intensive full committee hearings this Thursday on postal reform. We have several reorganization plans before the committee, including my own H.R. 4 which was the basis for my starting the hearings last April 22.

Mrs. Jay looks at the postal problems from the more practical side of the ways in which the individual mail users ignore the practical rules of the game and then blame delays and mail losses on the Department. It is worthwhile reading. Following is the text of the article in This Week:

YOU ARE RUINING OUR POSTAL SERVICE

(By Yetta Horn Jay)

America's postal system is headed toward a mammoth breakdown, due not so much to the glut of mail as to the negligence and sloppiness of those who mail it.

True, our mail volume is staggering: every day our Post Office handles more than one piece of mail for every man, woman, and child in our 50 states, moving twice as much mail as all the rest of the world postal systems combined.

But unlike private industry, the Post Office must take on all comers; it can't reject or control the growing demands made upon it. It is confronting this crisis head-on, using modern technology to help speed 83 billion pieces of mail annually, up from 38 billion in 1945. Postmaster General Winton M. Blount is planning a complete structural reorganization so our Post Office will serve us most effectively.

But our mailing habits are failing to keep pace with these changes—they are often inadequate, sloppy, and downright incorrect. Huge corporations and Joe Smiths alike constantly make the same errors. A conservative estimate is that *one out of every two First-Class letters mailed today is mailed incorrectly.* Yet when a letter arrives too late or not at all, we shrilly play the national game called "Blame it on the Post Office."

Each of the following cases illustrates at least one major mailing error committed daily by thousands of Americans.

CASE I. "BUNDLING'S GREAT"

One of this country's major mailers sent a number of highly important letters clearly marked "Airmail" and "Special Delivery" and correctly metered. Yet all arrived from 24 to 48 hours too late.

Blame it on the Post Office?

No. The facts are these: Like most large firms, this one bundles its mail into canvas sacks, directly dispatching them to the Post Office. In this case, its mailroom clerks bundled in reverse: they put the Airmail Specials in first, then the regular First Class mail, and finally Third Class advertising matter which filled the sack's top two-thirds. On opening the sack, the postal worker assumed that it contained all Third Class mail. Since First Class mail is always handled first, some time elapsed before the contents were processed and the error discovered.

Moral: No matter how large or small your mailing, *always bundle the most important letters on top.* Specials are always processed first, followed by Airmail and then First Class mail. Completely separate your First Class mail from other classes. Table workers at the Post Office toss bundled mail into the different bins in split seconds. They judge by the top letter. No one has the time to rifle through bundles.

CASE II. "OUNCES AND CENTS"

A non-profit club mailed several hundred routine monthly meeting reminders. The surprised local members got theirs Special Delivery, and the out-of-towners' were Airmailed.

Was the Post Office playing Santa Claus?

Hardly. A common metered mail snafu. The meter's prior setting had been for 48 cents. Failing to check, the club's mailer ran these reminders through at the same amount. He then threw the letters untied into the mailbox. The loose letters were dispersed into numerous trays worked by various clerks. Where the mailer's intention is not stated and the mailing is small, the Post Office matches service to postage. Had this mailing been bundled, the Post Office would have phoned the mailer to make sure of its intention. A postage refund could have been arranged. Instead, the club lost over $100.

Moral: *Watch your postage.* American mailers, large and small, are losing money by overpaid mail and losing good will by underpaid mail. Underpaid mail is sent directly to the mailee, who pays on receipt. Overpayments occur mostly in metered mail—and more than half of all First Class letters are metered. The meter operator forgets to check the setting or reverses the number. The routine First Class 0.06 zooms to 0.60, or the Airmail 0.10 skyrockets to 1.00.

One of the greatest underpayment culprits is the First Class heavy letter weighing over an ounce. Some senders just naturally put 6 cents on everything. Another culprit is the foreign Airmail letter whose sender forgets that these rates are in *half ounces.*

CASE III. "DEAD OR ALIVE?"

A woman invited her niece, who was visiting a cousin in a nearby city, to visit her. Her niece failed to get the invitation and soon returned to her far-off home. A family feud erupted with the aunt accusing the cousin of withholding the letter. Angrily, the cousin retorted she never saw it.

Letter lost in the Post Office?

No. The letter was sent from a suburban private home to a big city high-rise apartment house. The aunt sent her letter directly to the niece, whose name differed from the cousin's. She also failed to include her own return address. Marked "Undeliverable," the letter was sent to the Regional Dead Letter office where it was opened for a possible clue to the sender or mailee. (*Note*: this is the *sole* exception to the rule forbidding the Post Office to open First Class mail.) The letter bore no clues, and was destroyed.

Moral: *Never omit your return address.* It's a vital part of your letter, and keeps it "alive." In order for a dead letter to become deliverable these steps are required: (1) letter returned to local Post Office; (2) letter sent to regional Dead Letter office; (3) letter opened; (4) clue searched for; (5) letter re-addressed; (6) letter completely reprocessed. And all this for a mere 6 cents an ounce!

CASE IV. "DOUGH RE MI"

A loving grandmother mailed her grandson a gift of money. Eventually he got an envelope marked "Damaged in Handling" containing no money.

Wails the grandmother, *"It must've been stolen in the Post Office."*

It wasn't. Grandma sent several dollars in loose coins. Not caught in time, the envelope jammed up the stamp-canceling machine; coins flew in all directions, and her letter plus several others got mangled. A machinist had to repair the disabled canceler, the mangled mail had to be mended, the loose money (which letter did it come from?) wound up at the U.S. Treasury after endless paper work. All told, grandma's letter cost the Post Office considerably more than it contained.

Moral: *Never send loose coins in the mails.* This constant Post Office warning falls on many deaf ears.

Related is another moral: *Mark your slugs.* A slug is a bulky letter. You should print "Hand Stamp" on the front and back of the envelope in large red letters. The table worker will then immediately toss it into the slug bin. Unmarked slugs aren't always readily seen. Our Post Office constantly contends with unmarked mail containing lipsticks and other cosmetics, pens, pencils, calendars, material swatches, combs, bottle caps, razor blades. *Always tie your slugs together* to reduce the number of table-to-bin tosses.

CASE V. "TIME IS MONEY"

A rising firm sent a large national mailing announcing a new merchandise line. All the letters were delivered in A–1 condition within 24 to 48 hours. That same day a competing firm in the same city put out a similar mailing, which arrived from one to three days after its rival's, and in poor condition.

Post Office efficient in one case, inefficient in another?

Hardly. The first firm mailed its properly bundled letters early in the day. All its letters were Zip Coded.

The second firm committed almost every possible error. It sent its loosely tied mail out after 5 p.m. To attract attention, it used outsized envelopes, and these were poorly sealed. To save time and money, this firm used a window-type envelope. But since the letters were sloppily inserted, the last line of each address wasn't visible. Finally, not one letter was Zip Coded.

The first mailing arrived when the Post Office could give it maximum care, the second at a peak period. Harassed clerks had to tear apart many letters which were glued together; then they had to shake each letter to see the address. Many had to be returned to their sender for better addressing. With no Zip Code, the mailable letters had to be sorted one by one. And the outsized envelopes got bent as the clerks tried to fit them into the pigeon holes.

Morals: *Mail early in the day.* Avoid the avalanche. *Seal your mail right.* Un-sealed, partially sealed, and oversealed wet envelopes (which stick together) constantly eat up time and manpower. *Use standard envelopes.* Using today's mass methods and equipment—canceling machines, mail trays, pigeon holes—the Post Office is geared to standard-size mail. Thus undersized mail may get lost, while the outsized get bent and tattered. *Zip it!* No letter is correctly mailed without a Zip Code.

The Zip Code is the most radical change in Post Office history. It's the major solution to our mail deluge and our major hope for speedier delivery.

ZIP MAIL IS FASTER

Zipping means mail will get faster transportation.

The word Zip stands for Zone Improvement Plan which is the extension, on national lines, of the local zoning idea. Each number in the Zip Code is vital. The first digit stands for one of our country's ten major geographical areas. The second and third digits narrow it down to a sectional center. The fourth and fifth digits pinpoint your local Post Office. Thus a Zip Code for Washington, D.C. is 20037: 2 is the specific geographical region, 00 means it's inside Washington, 37 is the local station that delivers the mail.

The Zip Code plus mechanization will bring speedy delivery. Fantastic new machines—handling 36,000 letters an hour—are gradually replacing present outmoded hand-sorting methods. But these machines can work best only with correctly Zip Coded mail. The machines can't read the Zip Code that isn't there, or appears in the wrong place (it should be on the last line, two to six spaces after the state name).

Unless we drastically reform our mailing habits today, we'll find our Post Office in trouble tomorrow—even with mechanization. For as helpful as our new machines are, they can't decipher illegible or incomplete addresses, or look through an envelope to see if its contents are fragile, or separate stuck-together mail, or rescue lost contents.

The solution is simple: let's start helping our Post Office now. We aren't doing all we can when one out of every five First Class letters mailed has no Zip Code, and 30,000,000 letters end up in the Dead Letter Office every year. Let's weigh, mark, and bundle our mail carefully, correctly, and *early,* to allow the mechanical improvements to speed mail safely.

Let's stop playing "Blame it on the Post Office," and start playing by the rules.

THE CORRUPTERS

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. JACOBS. Mr. Speaker, I insert an editorial from the Indianapolis News of July 26, 1969, at this point:

THE CORRUPTERS

It should by now be apparent, even to zealous advocates of expanded welfarism, that the notion of remaking society through handouts is not working.

Latest evidence of this fact is a dispatch from New Haven, Conn., which reveals that by 1971 this New England city will be blessed with a bumper crop of illegitimate babies—greater than the number of children born in wedlock.

This astounding projection is supplied by the city's public health director, Dr. John B. Atwater. The doctor made his prediction after a survey showing illegitimate births increasing rapidly in New Haven with the total birth rate declining. The survey disclosed, among other things, that a total of 100 women in New Haven had, over a five-year period given birth to no less than 340 illegitimate children.

Those results could, all too easily, be duplicated and even surpassed in other large American cities. Surveys in New York, Washington, D.C., and Los Angeles show administration of Aid to Dependent Children programs has put a premium on births out of wedlock. The more illegitimate children a woman has, the greater the subsidy.

The result of this is to insure that in many cases these women do not get married or, if they are married, that their husbands "get lost" in order to qualify the family for welfare. Sen. Robert Byrd discovered countless subterfuges being employed in Washington, D.C., to qualify for ADC, and the McCone Commission in Los Angeles found that "the unemployed male often finds it to his family's advantage to drift away and leave the family to fend for itself."

Under these circumstances, it is not sur-

prising that in the past decade ADC rolls have more than doubled—some 2 million new recipients being added to the relief rosters. We are in effect manufacturing a welfare population, replete with squadrons of illegitimate children, through the ministrations of the social-planners and handout artists who tell us they are going to abolish poverty in America.

The handout philosophy, in this instance, has clearly become an influence for corruption rather than improvement. It has created a system of incentives which makes it more profitable not to work than to work, more desirable to be irresponsible than to stand on one's own two feet, more seemly to exist on government checks than to labor for a living.

The purposes of relief programs, supposedly, is to help transform dependent citizens into useful ones; the real effect, as the above-cited figures indicate, is precisely the reverse. When the workings of welfare can bring a major American city to the point where it anticipates more illegitimate children than legitimate ones, we are in serious trouble.

SENATE—*Tuesday, July 29, 1969*

The Senate met at 11 o'clock a.m. and was called to order by the Vice President.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O God, our Father, giver of grace and wisdom, we lift our tangled lives and jaded spirits into the light of Thy presence, beseeching Thee to make the work this day acceptable in Thy sight. Deliver us from any coldness of heart or callousness of spirit that would shut Thee out. Deliver us, too, from all weakness of will; from the indecision which cannot make up its mind; from the irresolution which cannot abide by a decision once it is made; from giving up or giving in too soon; from being too easily discouraged; from allowing any task to defeat us however difficult. Grant us the will to say "Yes" or to say "No" as conscience commands. May we walk and work with Thee this day with a clear mind, a gentle spirit, and a pure purpose.

Through Jesus Christ our Lord. Amen.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Monday, July 28, 1969, be dispensed with.

The VICE PRESIDENT. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the House had agreed to the amendments of the Senate to the bill (H.R. 10946) to promote health and safety in the building trades and construction industry in all Federal and federally financed or federally assisted construction projects.

The message also announced that the House had passed a bill (H.R. 13079) to continue for a temporary period the existing interest equalization tax, in which it requested the concurrence of the Senate.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, with the approval of the distinguished Senator from New Hampshire (Mr. COTTON) who will be recognized shortly, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The VICE PRESIDENT. Without objection, it is so ordered.

ADJUSTMENT OF LEGISLATIVE JURISDICTION OVER LANDS—ETHAN ALLEN AND UNDERHILL, VT.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 328, S. 59.

The VICE PRESIDENT. The bill will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 59) to authorize the Secretary of the Army to adjust the legislative jurisdiction exercised by the United States over lands within the Army National Guard Facility, Ethan Allen, and the U.S. Army Materiel Command Firing Range, Underhill, Vt.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 59

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding any other provisions of law, the Secretary of the Army may, at such times as he may deem desirable, relinquish to the State of Vermont all, or such portion as he may deem desirable for relinquishment, of the jurisdiction heretofore acquired by the United States over any land within the Army National Guard Facility, Ethan Allen, and the United States Army Materiel Command Firing Range, Chittenden County, Vermont, reserving to the United States such concurrent or partial jurisdiction as he may deem necessary. Relinquishment of jurisdiction under authority of this Act may be made by filing with the Governor of the State of Vermont a notice of such relinquishment, which shall take effect upon acceptance thereof by the State of Vermont in such manner as its laws may prescribe.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-335), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of S. 59 is, as stated in the title, to authorize the Secretary of the Army to adjust the legislative jurisdiction exercised by the United States over lands within the Army National Guard Facility, Ethan Allen, and the U.S. Army Materiel Command Firing Range, Underhill, Vt.

EXPLANATION OF THE BILL

This measure, if enacted into law, will grant general authority to the Secretary of the Army to retrocede such legislative jurisdiction as he deems necessary within the two Government-owned military resevations described above and over which the United States is now vested with exclusive legislative jurisdiction. This will permit the local authorities to afford these areas adequate police protection which is now lacking. This measure is identical with previous enactments on the subject with respect to other military reservations and is in keeping with the position of the Interdepartmental Committee for the Study of Jurisdiction Over Federal Areas Within the States.

BACKGROUND OF THE BILL

The two military reservations referred to in this bill are located about 12 miles apart in Chittenden County, Vt. Both are presently under the control of the Department of the Army and are licensed to the Vermont National Guard. Since over the years these installations have been alternatively used under various designations by the Army and the Air Force, a brief history of each may be helpful.

(*a*) The Army National Guard Facility, Ethan Allen, is situated in the towns of Colchester and Essex, County of Chittenden, Vt. It was originally established by the Department of the Army in 1892 as the Fort Ethan Allen Military Reservation on 600 acres of land, acquired in fee by the United States and was expanded by additional land acquisitions in 1896, 1918, and 1942 to a total of 1,203 acres. In 1952, the reservation was transferred to the Department of the Air Force for use as a cantonment and housing area and designated Fort Ethan Allen Air Force Base. In 1960, the airbase was inactivated, determined excess to Air Force requirements, following which, in 1964, the Army reacquired 822 acres by transfer for joint use by the Vermont National Guard and Army Reserve components. The remaining lands were disposed of by the Air Force and the General Services Administration. The reservation, now known as the Army National Guard Facility, Ethan Allen, currently comprises 822 acres of land and improvements, and is under license to the Vermont National Guard.

(*b*) The U.S. Army Materiel Command Firing Range, Underhill, Vt., is located in the towns of Bolten, Jericho, and Underhill, County of Chittenden, Vt. It was originally established by the Department of the Army in 1926 as the Fort Ethan Allen Artillery Range on 6,025.97 acres of land acquired in fee by the United States. In 1941, it was expanded by the acquisition of an additional 5,192.73 acres, making a total land holding of 11,218.70 acres. The installation was transferred to the Department of the Air Force in 1952 and redesignated Air Force Plant No. 55. In 1965, it was again transferred to the Army and assigned to the U.S. Army Materiel Command. Now known as the USAMC Firing Range, Underhill, it is licensed to the Vermont National Guard which uses the reservation jointly with Reserve components of the Armed Forces for training and testing purposes. Additionally, approximately 2,175 acres are used on a joint basis by the General Electric Corp. in conduct of testing activities for weapons and armament systems under contracts with the Army and Air Force.

The United States is vested with exclu-

sive legislative jurisdiction over all of the lands within both of these reservations by virtue of various acts of cession and the general statutes of the State of Vermont, generally granted coincidental to the dates of Federal acquisitions of the respective lands. From the time of the inactivation of these bases, an increasing need has developed for greater police protection and surveillance of the lands and buildings thereon. During recent years numerous incidents of vandalism have occurred and on two occasions, ammunition bunkers were broken into and live ammunition stolen. Neither the military departments nor the U.S. attorney, located 70 miles away, have sufficient staff to provide the necessary police protection. On the other hand, the State and the local municipalities do have sufficient law enforcement agencies to provide the necessary protection. However, the State and local agencies, while willing to do so, are without legal authority over these areas by reason that exclusive jurisdiction is held by the United States.

It is well established that, as long as the United States retains ownership of subject lands, legislative jurisdiction cannot be revested in the State unless authorized by an act of Congress. The Adjutant General of the State of Vermont, with the concurrence of the Attorney General, has urgently solicited the support of this Department in obtaining revestment of concurrent jurisdiction. It is anticipated that the ability to utilize the combined forces of the Federal, State, and local agencies will result in effective protection and law enforcement in the reservation areas. This bill, if enacted, would provide the requisite authority for the retrocession of jurisdiction to the State of Vermont.

FISCAL DATA

The enactment of this bill will have no effect on the budgetary requirements of the Department of Defense.

A SLIPPERY STEP FOR MAN

Mr. SCOTT. Mr. President, I am just asking a moment for a philosophical observation.

The astronauts reported, when they landed on the moon, that the footing was slippery. This does not indicate necessarily that the moon is made of glass, but it does suggest to me that, with our fiscal and tax problems what they are, with our concern over the pending bill, and with our concern over the defense of the United States, our footing on earth is not too sure, either.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nominations on the Executive Calendar beginning with "New Reports."

There being no objection, the Senate proceeded to the consideration of executive business.

The VICE PRESIDENT. The nominations on the Executive Calendar will be stated, beginning with "New Reports."

HOUSING AND URBAN DEVELOPMENT ACT OF 1968 CORPORATION

The assistant legislative clerk read the nomination of Carter L. Burgess, of New York, to be an incorporator of the corporation authorized by section 902(a) of the Housing and Urban Development Act of 1968.

The VICE PRESIDENT. Without objection, the nomination is considered and confirmed.

FEDERAL HOME LOAN BANK BOARD

The assistant legislative clerk read the nomination of Thomas Hal Clarke, of Georgia, to be a member of the Federal Home Loan Bank Board.

The VICE PRESIDENT. Without objection, the nomination is considered and confirmed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The VICE PRESIDENT. Without objection, it is so ordered.

SPECIAL REPRESENTATIVE FOR TRADE NEGOTIATIONS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Executive Calendar No. 473.

The VICE PRESIDENT. Without objection, it is so ordered.

The nomination will be stated.

The assistant legislative clerk read the nomination of Carl J. Gilbert, of Massachusetts, to be Special Representative for Trade Negotiations, with the rank of Ambassador Extraordinary and Plenipotentiary.

The VICE PRESIDENT. Under the previous order, the Senator from New Hampshire (Mr. COTTON) is recognized for a period not to exceed 2½ hours.

Mr. COTTON. Mr. President, the nomination of Carl J. Gilbert is to a position of dignity and great significance. It is to the position of Special Representative for Trade Negotiations, with the rank of Ambassador Extraordinary and Plenipotentiary.

Mr. President, I have the highest respect and regard for Mr. Gilbert. He is a man of unquestioned integrity. He is a man having long experience, dating back, I believe, to 1950, with membership on various trade committees and councils, and in advising and participating in our trade negotiations with other countries. He is skillful; he is a man of exceptional ability.

The reason why I am raising a question regarding the confirmation of his nomination is that he is a symbol, he has become a symbol, for devoted, dedicated adherence to a position of this country's having absolutely no restrictions of any kind upon importations from foreign countries, in a world in which practically every other nation engaged in manufacturing does, directly or indirectly, impose restrictions. The result is that this Nation has become a complete, open dumping ground for all kinds of foreign imports, which are, year by year, throwing more and more thousands of our workers out of their jobs and out of employment.

Mr. President, I believe in the two-party system. Ninety percent of the time I am a loyal supporter of the President and his administration. I want the President and Secretary Stans to have the people whom they want to assist them in their negotiations. I believe that this very week Secretary Stans is engaged in negotiations with the Japanese, particularly or almost entirely on the subject of textile imports and the problem of trying to obtain some voluntary agreement for restrictions.

But I think there should be a tangible indication that the Senate has some reluctance to confirm the nomination of a man for this significant position who is known to be and is frank in his disapproval of any restrictions on the part of the United States except those that are obtained by importuning other nations to exercise some measure of restraint in dumping their goods into this country, thus causing the destruction of American jobs.

Mr. President, I would remind Senators that through the past years—I do not know how many years, but it has been a reasonable number—I have come to the Chamber on an average of once every 2 months and sometimes every month. The word goes out to the offices of Senators who represent States that are being hard hit by foreign imports that Senator so-and-so is about to make a speech on the floor of the Senate about the destruction of our textile industry or about the coming destruction of our shoe industry or the electronics industry or something else. They say, "Will you please, Senator, come over to the floor and after the distinguished Senator has finished his speech we would like to have as many Senators as possible register their protests."

So we come over time after time and we have a full-dressed talkfest. Sometimes as many as 28, 29, or even 30 Senators rise and register their deep concern. They wring their hands about what has happened to our textile jobs, what is happening to our shoe jobs, and what is happening to jobs in the electronics industry, or steel, or perhaps some other industry.

Then, we all go back to our offices, having done our good deed for the day.

Mr. President, I have a feeling that unless we do something other than talk, unless there is a protest on the floor of the Senate, unless we register by our votes what we have been saying over the years, we are not going to be effective in trying to remedy this situation.

Mr. President, in stating this protest today, I am doing so with the feeling it is not hostile to the President, to the administration, to Secretary Stans, or even to Mr. Gilbert. I feel that it will strengthen the hand of the President.

There has been a good deal of discussion here over the past week about the assertion that the installation of the Safeguard system will strengthen the hand of the President at the conference table. I shall not go into the merits or demerits of that contention. It is a subject of contention. However, there is one thing I think I can say without fear of intelligent contradiction, whatever may be the facts about the Safeguard system being a weapon in the hands of the President in his dealings and negotiations

for disarmament. Certainly some tangible action or protest by Members of the Senate, evidenced by their votes, and not just by speeches, will be of value to the President, Secretary Stans, and even Mr. Gilbert, assuming that his nomination will be confirmed.

I do not think any of us like the matter of unilateral quotas or restrictions unless we find no other way. A vote will strengthen the hand of the President in dealing with other countries, if there is real evidence that Congress is becoming extremely restive and is getting ready to do something unless we have some satisfactory and reasonable agreement.

Mr. President, it should be unnecessary for me to remind the Senate that we are not seeking to freeze imports where they are today, even though they have jumped during the past few years. It is not the desire of those of us who are concerned about this matter to prevent a reasonable increase as the market grows. We do feel we must take steps to see that the increase in controlled; that it be 3 percent, 5 percent, or even 8 percent, or perhaps 10 percent, which would be a reasonable restraint on the continued increase, instead of jumping 25 percent and 30 percent yearly.

(At this point, Mr. ALLEN assumed the chair.)

Mr. President, when it was known that Mr. Gilbert's name was coming to the Senate for disposition, the distinguished Senator from Rhode Island (Mr. PASTORE) asked Mr. Gilbert to come to his office. I do not know who all of the Senators were who were invited, but he telephoned me and I went to his office. There I found Mr. Gilbert, the Senator from Rhode Island (Mr. PASTORE), and the Senator from Georgia (Mr. TALMADGE). The three of us had a heart-to-heart talk with Mr. Gilbert. He was very frank, he was very honest, and he was very cooperative with us in stating his position.

I have not lobbied Senators. It is quite possible the distinguished Senator from Rhode Island or the distinguished Senator from Georgia might feel some obligation to support the nomination of Mr. Gilbert after having had the conference. But I am very clear so far as I am concerned. While I appreciate his courtesy and frankness, I was not bound by anything said at that conference.

Mr. Gilbert made his position perfectly clear to us—and if it is necessary to take the time I shall do so but I do not intend to do it now—and he made it clear in his evidence before committees, including the Ways and Means Committee of the other body, the Committee on Foreign Relations, and the Finance Committee of the Senate.

His position is that he is now, as he always has been, absolutely and positively opposed in general to any kind of quotas or restrictions on foreign trade by this country except by mutual agreement. He made it perfectly clear that he considers textiles to be in a class by themselves; that he is prepared to the extent of his ability—and I take his word for this because I consider him to be a man of scrupulous honesty and honor—to back the President and Secretary Stans to the fullest extent in conferences regarding textiles seeking a voluntary agreement, but that he is not ready and has no intention of pressing for voluntary agreements, at present at least, on any other commodity, and that so far as textiles are concerned he is still opposed to any unilateral action by Congress, the Executive, or anyone else in imposing or attempting to impose restrictions of any kind whatsoever.

Let me say, first, that the attitude of Secretary Stans is that textiles are in a class by themselves and he wants to press, particularly the Japanese and others, for some voluntary restrictions. But when I addressed questions to Secretary Stans on another occasion, about shoes and footwear, he said, "We will take one thing at a time. I am not going to becloud our case on textiles by even pressing or talking about shoes, electronics, steel, glass, or anything else."

It was my distinct impression from what Secretary Stans said that he, too, was opposed, even as a last resort, to any action on the part of Congress to impose even a very, very slight and reasonable restraint on textiles.

Now, I do not need to remind the Senate that practically all the nations engaged in foreign trade—by various means are restraining exports from this country into their country.

They do so by various expedients. One, by import licenses. Two, by excessive port fees. Three, by indirect sales taxes. Four, by health, safety, and sanitary regulations. Five, by State trading, the setting up of monopolies by the State. Six, by border tax adjustments. Seven, by excessive health and safety inspection requirements of the kind which are entirely unrealistic and only a coverup and actually are a restraint upon our exports into their country. Eight, by discriminatory credit restrictions.

Now this very week, as I have already said, the Secretary of Commerce, his advisers and assistants met, and, I assume, even though he is not yet confirmed, that Mr. Gilbert is among them—and quite properly so—trying to deal with the Japanese.

Mr. President, in 1959, the late distinguished Senator from Kansas, Andrew Schoeppel, who was at that time the ranking minority member of the Committee on Commerce, and I, after holding hearings in the then Territory of Alaska on another matter within the jurisdiction of the committee, went to Japan.

I went there because of my interest in the textile situation. We went down to Kobe, where most of the Japanese textile mills are located. The Japanese are very courteous and polite. I was shown through their mills equipped with the best and most modern machinery that any plant in this world could possibly have—furnished by us, while our own mills were gradually limping along trying to modernize their machinery.

Former Senator Schoeppel and I had the opportunity to talk to the Japanese millowners. I have said that they are very courteous people and they were courteous enough to us, but when it came even to venture to suggest some kind of voluntary restraints on the flow of their textiles into the United States of America, they simply laughed at us.

I do not remember how they phrased it. They phrased it in somewhat smooth and stilted language. But what they said in effect was, "You fellows must believe in Santa Claus. It is ridiculous. Of course we are going to export our goods to the United States as long as we can and in as great quantities as we can"—by inference, until something is done to restrict the amount.

I do not think their attitude has changed. I recall Secretary Stans, in his report, talking about his visit to the United Kingdom, France, Italy, and then on to Japan and talking about his reception there. He reported that he felt encouraged that in many of the countries they had come to the point that they were willing, at least, to discuss and contemplate voluntary restraints on the increase of their exports to us. He reported that was so in every country except Japan.

Frankly, former Senator Schoeppel and I found no real, encouraging disposition on their part to consider such an agreement.

I hope that during negotiations this week, the Secretary finds something more encouraging.

I hardly dare to expect it.

I note that the distinguished chairman of the Ways and Means Committee in the other body made a statement yesterday in which he warned that he will support restrictive trade bills unless other countries reach an agreement with the United States on textiles.

Mr. President, I am being very frank. I suppose it is a poor lawyer and a poor advocate who gives away his case. I do not expect that the Senate will refuse to confirm the nomination of Mr. Gilbert. But I want to say, Mr. President, if a substantial number of Senators—and I have never challenged any Senator, I have never tried to embarrass any Senator, and I am not doing so now—but if only those Senators who have spoken repeatedly in this Chamber expressing their deep apprehension about the loss of jobs, if only they will cast a protest vote, not against Mr. Gilbert personally, not against the President or the Secretary of Commerce, but write it into the RECORD of the Senate that they recognize the time has come to act, then I believe it will have two beneficial effects.

First, it will serve notice on the administration that we are not prepared to sit quietly by and simply make sporadic speeches, but that we have come to the point where we are going to begin to take action.

Second, as I said before, it will help the President, it will help the Secretary of Commerce, it will help Mr. Gilbert himself, if that indication can be brought to his attention.

It is easy to say to representatives of other countries, "Well, if you do not come to some agreement, if you do not make some little concession, Congress will take the matter into its own hands and impose restrictions." But if we cannot point to one single vote that has been cast to back up the sentiments so many of us

have expressed, I do not think it is going to be very impressive.

Other Senators are waiting to speak, and I shall not prolong these remarks, but I just want to mention that, as far as textiles are concerned—and I am speaking now for my own section, for my own State, for New England—I am aware that long before foreign nations began to take away our textiles, our good friends from across the aisle from the Southern States did quite a job in getting our textiles away from us. But solicitous as I am about the textile industry, it is almost like locking the stable door after the horse has been stolen.

Finally, in the Kennedy round, we got some kind of protection for cotton fabrics; but so far as New England and my own State are concerned, the largest cotton mills in the world, the famous Amoskeag Mills that had existed for a century, closed their doors and went out of existence some years ago. So we have practically no cotton industry left.

Our woolen industry is fighting a last-ditch fight and needs protection.

There is, of course, the present problem of protecting man-made fibers.

I would like to mention, so it is in the RECORD, the fact that in the matter of footwear, we are starting down the same road. Apparently the administration and the Secretary of Commerce and Mr. Gilbert have not learned the lesson that an ounce of prevention is worth a pound of cure. While we are holding postmortems on much of the textile industry, the footwear industry is going the same way.

In 1966 the increase of exports over 1965 was practically 10 percent—9.7 percent. In 1967 there was a 34.2 percent increase over 1966. Last year, 1968, it was 35.8 percent—over 1967.

Thus, from 1965 up to the present time there has been a 100 percent increase in footwear imports into this country, mostly lower-priced footwear. The projection for 1975, if only the present rate of increase continues, is a 434 percent increase over 1965—in 10 years.

I ask unanimous consent to insert in the RECORD at this point the actual figures, in addition to the percentages.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

1965	87,632,000
1966	96,135,000
1967	129,137,000
1968	175,438,000
1975	468,000,000

Mr. COTTON. Mr. President, one-fourth of the sales for footwear in our domestic market has been taken by imports. If the growth is allowed to continue at the present rate, by 1975 over 50 percent of that market will have been taken over by foreign imports.

As to jobs lost, in 1968 alone there was a loss of 64,00 jobs in footwear.

I am using this as an example to show we do not talk only about textiles. It was 64,000 in 1968.

By 1975, if allowed to continue at the present rate—the jobs lost in this country will be 168,600.

Foreign workers in footwear receive about one-fourth, in most cases—in all cases less than one-half—the wages paid in the United States.

Three hundred footwear companies have gone out of business in this country in recent years. In New England 12 factories have closed in the past 10 months. In my own small State of New Hampshire three factories have closed since January. In my small State, 2,500 footwear jobs are done and the people are out of work.

Mr. President, Mr. Gilbert serves on certain committees, one of them as chairman and director of the Committee for National Trade Policy. That committee is almost entirely composed of executives of companies that have already built factories abroad. Their interest in maintaining jobs for American workers could not possibly be as keen—though I am sure they are interested, but they could not possibly have the same force of interest—as domestic companies and the interest of American workers.

It is a healthful sympton that organized labor has at last awakened to the situation and is beginning to make its voice heard.

That brings up another point, which I shall not go into, but company after company has been compelled to construct factories in Taiwan and in Hong Kong to avail themselves of cheap labor. So American concerns are going abroad and sending back into this country foreign constructed goods.

In the case of electronics, the Sprague Co., which has three plants in my own State and many other plants throughout the United States, is being compelled, reluctantly, to do so. It has already constructed factories abroad, but so far as I know, up to now it has used those factories only to send its goods into other foreign countries, not back into the United States. But its officials are very frank to say that they will be compelled to close many of their own factories in this country, and put our people out of work. Sprague makes electrical components that go into radios and television sets. It feels compelled, in order to compete, to send goods back into this country from its foreign plants.

Mr. President, that is a situation which absolutely calls for affirmative action. I do not know how long we are going to wait. I have bills I have introduced in the Senate, and the distinguished Senator from South Carolina (Mr. HOLLINGS) has bills, which we are pressing. I will not start talking about the Democrats. I will let them speak for themselves. I shall not intrude into their business. I will talk only about my own party. The last Republican National Convention wrote into the platform a promise "to work toward freer trade among all nations of the free world," but added, "But artificial obstacles to such trade are a serious concern."

Then the platform says:

> We promise hard-headed bargaining to lower the non-tariff barriers against American exports and to develop a code of fair competition, including international fair labor standards, between the United States and its principal trading partners.

It goes on to say:

> A sudden influx of imports can endanger many industries. These problems, differing in each industry, must be considered case by case. Our guideline will be fairness for both producers and workers, without foreclosing imports.

Then the platform continues:

> Thousands of jobs have been lost to foreign producers because discriminatory and unfair trade practices—

Practices which I have enumerated already—

> The State Department must give closest attention to the development of agreements with exporting nations to bring about fair competition. Imports should not be permitted to capture excessive portions of the American market, but should, through international agreements, be able to participate in the growth of consumption.

It goes on with three or four paragraphs more of plain, downright promises. I do not know whether the President or the Secretary of Commerce—as to Mr. Gilbert himself, I know nothing about his political affiliations—have refreshed his memory about this promise made by the Republican Party, in its convention, to the workers of America. I am not talking so much about the employers or manufacturers, although, if we are ever going to compete with the markets of the world, they also must have a chance—a chance to machine their mills, a chance to improve their efficiency and effectiveness, and do what America has done for generations, or we would not be where we are today—wherever that may be right now. They must have an opportunity.

I am speaking for the workers. I speak for the workers in my own State, who are my constituents, and who have been thrown out of employment every month in increasing numbers in the last 2 years and will continue to be unless something is done.

Those are some of the reasons. I could quote the statements of Mr. Gilbert, made to the committee. I have here a statement which he made in response to questions by members of the Senate Finance Committee, in which he said that he would consider textiles in a class by themselves, and he wanted to back up the President and the Secretary of Commerce in trying to get voluntary agreements. He would not say that in the absence of voluntary agreements he would ever approve of any unilateral restrictions on our part to counterbalance restrictions elsewhere.

I was in Spain, Mr. President, 3 years ago. The commercial attaché of the American Embassy told me that the Spanish people are eager to buy American-made goods, particularly radios, televisions, toasters, and all kinds of electrical appliances; but they could not buy them. Why? Because only perhaps half a dozen people in Spain were allowed import licenses; and those import licenses were restricted to minimum amounts.

Here we are, openly inviting and allowing everybody to dump their goods here; and not one of those countries—I do not care whether it was Japan, the United Kingdom, France, or any other—not one of the exporting countries has

failed to protect its own by restrictions in some form or other.

Mr. President, I have not had the opportunity to confer with the distinguished Senator from South Carolina (Mr. HOLLINGS), who just arrived in Washington a few minutes ago, but I would feel that the opportunity to vote on this matter—and by that I mean a record vote— should be afforded so that Members of the Senate, after all of the protests we have made in speeches, may be recorded. I think that a reasonably substantial protest vote, which is not a reflection in any way, shape, or manner on the skill or the integrity of the nominee, Mr. Gilbert, would be of great value, and would be a weapon in the hands of our negotiators as they negotiate with these other countries.

I reserve the remainder of my time.

The PRESIDING OFFICER. The Chair recognizes the Senator from South Carolina.

Mr. HOLLINGS. Mr. President, I admire the character and courage of my distinguished colleague from New Hampshire, to be able to stand up and speak for the preservation of American jobs and the economic sustenance of our country. With respect to his desire that we have a record vote, that is also my desire. With respect to having a protest vote, I hasten, just on my short return to Washington, to point out to the distinguished Senator from New Hampshire that the other crowd has been working, and our crowd has been taken down the primrose path that "We are going to look out for textiles, so why vote against a guy who is supposed to go to bat for you, and get him irritated? Let us just sort of go along with this situation."

The fact of the matter is, Mr. President, that I speak not only for textiles but for all jobs. In the last 3 years, the U.S. Government has appropriated approximately $577 million to preserve the jobs of Americans. Last year and the year before, the style on the Senate floor was "jobs." Anywhere we could pour money into the urban areas, money into the ghettos—job training, OEO, any kind of programs—the key word was "jobs." And yet, at the very time that we were spending almost three-quarters of a billion dollars to create jobs, we actually exported jobs by the tens of thousands—an equal number of jobs. So our policy has been frustrated.

Simply and to the point, obviously Mr. Gilbert is very able to do very many jobs. He has character and he has ability. But from his past record, it is equally obvious that he would be a very poor negotiator for American jobs and for U.S. trade policy.

He defends himself by saying he is an advocate. You do not take the fellow who has been the attorney for arson cases for 19 years and appoint him fire marshal; you do not take the lawyer who has been defending drunk drivers for 19 years and make him highway safety director; you do not ask Melvin Belli to defend a personal injury case; and you do not ask the insurance lawyer to prosecute on behalf of the plaintiff in a personal injury case.

Specifically, you do not ask to negotiate for the sale of a horse with a man who has already characterized the horse as a nag, and dead, and out on its feet. This is the position that Mr. Gilbert has taken as to American industry.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. HOLLINGS. I am happy to yield to the Senator from Rhode Island.

Mr. PASTORE. And you do not choose a fox to protect the henhouse.

Mr. HOLLINGS. Well, I was going to mention that, but the distinguished former Vice President and Presiding Officer of the Senate did not do too well. There are some around here who are willing to put the fox in the chickencoop, and I am holding back on that particular.

But the fact is that we reached this confirmation discussion, Mr. President, at a time very critical in America's trade history with respect to jobs and with respect to the credibility of the U.S. Government itself.

Referring specifically to jobs, we were common adversaries, known to each other, who had been working on both sides of the fence for 10 years—I on the one side in favor of a policy to help us compete competitively and preserve jobs, and Mr. Gilbert on the other side exporting them willy-nilly to any country. Do not give me the talk about competition. Let us specifically take the Japanese jobs. There is a $1.3 billion deficit in trade.

There is no antitrust act in Japan. There is no wage and hour law. There is no safety standard. There is no workmen's compensation. There is no overtime. There is no child-labor standard.

Most of those jobs—I would say 90 percent of those jobs—are performed under conditions that would be criminal in a manufacturing industry in the United States.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. HOLLINGS. I yield.

Mr. PASTORE. Mr. President, I do not know if the Senator has brought out this point, but to me it is a very crucial and important point. During the campaign, the President of the United States recognized the problems of the textile and some other industries because of this great influx of imports. And he said that special consideration ought to be given to some of these domestic industries to make sure that we will not see their demise and thereby jeopardize American jobs.

I am inclined to believe that the President of the United States is very sincere about this matter.

Immediately after his inauguration and the appointment of the Secretary of Commerce, he expedited the trip of Maurice Stans throughout the world to have talks with these various nations exporting to the United States.

Secretary Stans appeared before a group of Senators. I was there. The Senator from New Hampshire was there. The Senator from South Carolina was there. And I think we were all impressed with the sincerity of Maurice Stans and believed he wanted to do something about the matter.

I think that our friends abroad who are exporting to our country at a tremendous volume began to understand that there was sincerity and resolve on the part of the administration to do something about bringing these matters under control, not by any false procedure, but by agreement.

Lo and behold, an appointment is made of an individual who represents everything contrary to what we are doing. After all, these foreign exporters are not fools. They are pretty smart people. One ought to deal with them to see how really smart they are.

What are they saying to themselves? They are saying, "You cannot possibly mean what you said during the campaign. You cannot possibly take this Maurice Stans seriously if you want to send someone to negotiate the agreements who does not believe in the same policy."

That is what we are up against. I think we have counteracted all the good we have done and all the progress we have made thus far, although it is limited progress, by appointing someone who exemplifies the opposite viewpoint and is a contradiction of everything that we are attempting to accomplish.

I think that the Italians, the Japanese, the French, and the people in Hong Kong are looking at us and saying, "You cannot be serious. This is double talk. You send Maurice Stans to us to tell us we have to control the exports to your country, and then by the same token you send a man to negotiate with us who does not stand for any control at all. What is this?"

This is the difficulty. This is the dilemma. And this is where the irreparable harm has been done.

I have nothing against the man. I have talked to him. I think he is a fine American. As a matter of fact, I think the people on the other side of the aisle think he is a fine American. I think that the Senator from New Hampshire is a fine American. He is a Republican and I am a Democrat, but we just do not agree on some things.

And that is all we are saying.

Mr. COTTON. The Senator is correct.

Mr. PASTORE. I am glad we agree on this matter.

That is all we are saying about Mr. Gilbert. We do not agree with him. We think he is a fine man of excellent character. This is no reflection on him. He has a right to believe as he does, as much as I have a right to believe as I do. I would not deny him that right. However, how can I in good conscience go along with the appointment when he is a contradiction of everything that the Senator and I have been striving for on the floor of the Senate and in private meetings for years and years? It does not make any sense to me.

Mr. COTTON. Mr. President, will the Senator yield?

Mr. HOLLINGS. I yield.

Mr. COTTON. Mr. President, there is not a Senator who does not remember down through the years when the Senate has taken a certain position on a bill and the conferees appointed on the part of the Senate to stand by the Senate position in conference with the House have been those who were against the

Senate position and for the House position.

They were honorable men and they did their best. We have their confidence, but I have always had the feeling that we never go into a conference between the Senate and the House with the Senate conferees agreeing with the House in their hearts and come out as well as we would if we had in conference those who really had supported the Senate position. It is exactly the same situation here.

If the President had sent us the name of the distinguished Senator from Rhode Island or the distinguished Senator from South Carolina for this very important task of negotiator with the rank of Ambassador Extraordinary, of course, I would be in favor of that, although I would rather he had sent up the name of a Republican.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. COTTON. I yield.

Mr. PASTORE. Mr. President, I do not even want them to send up my name for the position, as extraordinary as it is. I would rather be a Senator.

Mr. COTTON. What I am saying is that everyone in the industry, whether employer or employee, would have really been reassured because they would know that this ambassador would conduct negotiations, believing in his heart in reasonable restraint on the industry.

Just as the Senator from Rhode Island and the Senator from South Carolina have so well said, the confirmation of this gentleman is notice that we are approving someone to negotiate that we know is not really in our corner.

Mr. HOLLINGS. Mr. President, in substance, I am sure that the distinguished Senator from New Hampshire would not want me to negotiate the Republican vote in New Hampshire, and I certainly would not want to call on him to negotiate the Democratic vote in South Carolina.

We have been working on opposite sides of the fence politically.

I think highly significant is not what he may say now on textiles, but his record through the years, because we will be negotiating in the main with the Japanese, for whom I have the highest respect. They are the toughest, canniest, wiliest, and cleverest of negotiators.

I have been working on the other side of the fence for about 10 years. I think I know a little bit about how they operate. Is not the Japanese trade negotiator going to say to Ambassador Gilbert: "Now, Carl, really, do you mean that? Do you not remember that in 1968 before the Merchandise Mart in Chicago, you said your domestic industry ought to discipline itself better and ought to be willing to be competitive and not be weaned by the Federal Government?"

Or they may later say: "Carl, now, really, before the House Ways and Means Committee in 1968, did you not say that import quotas you oppose, of all kinds, and now you are asking us to agree to something that you said you always opposed and opposed religiously and zealously for 19 years?"

Or, again, before the same committee, is the Japanese negotiator going to use the words "corruption," "catastrophic," and "explosive"? Is he not going to say, "Mr. Gilbert, are you not the one who says quotas would really demoralize and bring about corrupt practices in trade? Did you not say it would be explosive to put these things on that you want us to agree to now?"

Are they not going to say: "Mr. Ambassador Gilbert, when questioned by Congressman LANDRUM, before the House Ways and Means Committee, on trade policy, when Mr. LANDRUM pointed out the thousands of employees in the textile industry in Georgia that he was about to lose, are you not the one who told Mr. LANDRUM to go ahead and get in a different business and write off this industry as expendable and noncompetitive and archaic?"

Mr. President, is not the Japanese negotiator going to say: "Carl, are you not the one who says that this really has to do with national security; go ahead and give the money to the Pentagon and let the Pentagon give them a grant, but do not innovate import quotas as a policy for international trade?"

Those are the kinds of things that the negotiator, Ambassador Gilbert, would be confronted with, and as a result he would end up with being a very, very poor trade negotiator. And all the time, as the distinguished Senator from New Hampshire has pointed out, we Senators would run down and beat our breasts and indicate how we were so concerned about the American worker, concerned about the employees, and everything else back in the United States.

As I said earlier, to ask him to be the trade negotiator is like delivering lettuce by way of a rabbit. It will never arrive.

Back in 1960, after attesting before the Tariff Commission as a witness in the trade cases, we were told at that time by the then occupant of the chair in which the Presiding Officer is now seated—Richard Milhous Nixon—he said:

> Don't worry. The Tariff Commission is going to find with you on your textile case. You have lost about 400,000 jobs in a 10-year period.

This was in March of 1960, when I came into the Senate Chamber and shook hands with the then Vice President. He said:

> Don't worry. The Tariff Commission is going to come out all right. The Japanese realize the predicament they are in and how unfair and how uncompetitive this is. They have put on voluntary quotas; and rather than go into legislating, they are going to make a verbal finding in the Tariff Commission.

But on June 23 of that year, the Tariff Commission found again as they had found in many other hearings. Mr. Gilbert, in his testimony, time and again said: "Exhaust your remedies. You, as an industry, have not exhausted all your legal and administrative remedies."

We are already at the point of exhaustion. We were at the point of exhaustion in 1960; and I read the original letter of then Senator John F. Kennedy, who was exhausted:

> U.S. SENATE,
> *Washington, D.C., August 30, 1960.*
>
> Hon. ERNEST HOLLINGS,
> *Governor of the State of South Carolina,*
> *State Capitol Building, Columbia, S.C.*
>
> DEAR GOVERNOR HOLLINGS: I would, of course, be delighted to discuss with you and with textile industry leaders the problems of the textile industry and the development of constructive methods for showing the growth and prosperity of the industry in the future. The critical import situation that confronts the textile industry which you so eloquently describe in your letter is one with which I am familiar. My own State of Massachusetts has suffered and is suffering from the same conditions.

Mind you, this is the Carl Gilbert from Massachusetts, who at that time was working with the Massachusetts Ports Authority. He is now—up until his appointment about 3 months ago—chairman of that port authority. But then Senator Kennedy said that he recognized the problem in his own State.

Continuing Senator Kennedy's letter:

> The past few years have been particularly difficult for this industry. There seems to have been a basic unwillingness to meet the problem and deal constructively with it. During the first six months of this year imports of cotton cloth are twice what they were during the same period in 1959, the highest year on record. Similarly alarming increases are occurring on other textile and apparel products. Since 1958 imports have exceeded exports by constantly increasing margins. There are now 400,000 less jobs in the industry than there were 10 years ago. It is no longer possible to depend upon makeshift policies and piecemeal remedies to solve the problems which the industry faces.
>
> As you know, I supported the establishment of the Special Senate Sub-committee for the Textile Industry, under the chairmanship of Senator Pastore, of which Senator Strom Thurmond is a member. In an effort to help develop suggestions to improve the competitive position of the industry in the United States and world markets, this Subcommittee for the first time undertook a broad investigation of the problems of the United States textile industry and offered a number of constructive recommendations. With only minor exceptions, the Eisenhower Administration has failed to implement these recommendations.

This was in 1960. In a moment I shall come to President Nixon and Candidate Nixon, when he tells of the Johnson-Humphrey administration failure as to the industry. In August of 1960, the Eisenhower administration had failed to implement these recommendations.

The letter continues:

> I agree with the conclusions of the Pastore Committee that sweeping changes in our foreign trade policies are not necessary. Nevertheless, we must recognize that the textile and apparel industries are of international scope and are peculiarly susceptible to competitive pressure from imports. Clearly the problems of the industry will not disappear by neglect nor can we wait for large scale unemployment and shutdown of the industry to inspire us to action. A comprehensive industry-wide remedy is necessary.
>
> The outline of such a remedy can be found in the Report of the Pastore Committee. Imports of textile products, including apparel, should be within limits which will not endanger our own existing textile capacity and employment, and which will permit growth of the industry in reasonable relationship to the expansion of our over-all economy.

I will divert for a moment. After I had set in the RECORD—July 10, 1969—the answer to Michael Daniels of the Import Council and all his charges and paper that preceded Secretary Stans' visits to Europe and Japan, Senator GOODELL came up and said this was a novel approach, that the domestic industry should think that it had a fair share in the growth of domestic industry, in the percentage growth. It is not novel. It was in Senate John F. Kennedy's mind in August of 1960, and he so wrote:

We are pledged in the Democratic Platform—

The Senator from New Hampshire has pointed out the Republican platform. This is the same platform the Democrats have had over the years—

to combat sub-standard wages abroad through the development of international fair labor standards. Effort along this line is of special importance to the United States textile industry.

The office of the Presidency carries with it the authority and influence to explore and work out solutions within the framework of our foreign trade policies for the problems peculiar to our textile and apparel industry. Because of the broad ramifications of any action and because of the necessity of approaching a solution in terms of total needs of the textile industry, this is a responsibility which only the President can adequately discharge. I can assure you that the next Democratic Administration will regard this as a high priority objective.

Additionally, we shall make vigorous use of the procedures provided by Congress such as Section 22 of the Agricultural Adjustment Act and the Escape Clause in accordance with the intention of Congress in enacting these laws.

Lastly, I assure you that should further authority be necessary to enable the President to carry out these objectives, I shall request such authorization from the Congress.

I hope that these thoughts are helpful to you in your own deliberations and I reaffirm my interest in discussing problems of mutual concern with you.

With all good wishes, I am,

Sincerely yours,

JOHN F. KENNEDY.

Mr. President, President Kennedy was elected on a Tuesday in November of 1960. By Friday of the same week he called me on the telephone and said, "Let us go to work on that textile problem." We began meetings. I met with him at his home in Georgetown. We agreed to set up a Cabinet committee, which held hearings and made findings which thereafter culminated in his White House seven-point program.

Without reading the entire program, then, President Kennedy stated in a White House release of May 2, 1961:

The problems of the textile industry are serious and deeprooted. They have been the subject of investigation at least as far back as 1935, when a Cabinet committee was appointed by President Roosevelt to investigate the conditions in this industry. Most recently these problems were the subject of a special study by the Interdepartmental Committee headed by Secretary of Commerce Luther H. Hodges. I believe it is time for action.

It is our second largest employer. Some 2 million workers are directly affected by conditions in the industry. There are another 2 million persons employed in furnishing requirements of the industry at its present level of production. Two years ago, the Office of Defense Mobilization testified that it was one of the industries essential to our National security. It is of vital importance in peacetime and it has a direct effect upon our total economy. All the studies have shown that unemployment in textile mills strikes hardest at those communities suffering most from depressed conditions.

Mr. President, I ask unanimous consent to have printed in the RECORD the release dealing with the entire seven-point program.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

WHITE HOUSE PRESS RELEASE, MAY 2, 1961

The President today announced a program of assistance to the United States textile industry, designed to meet a wide range of the problems it faces as a result of rapid technological change, shifts in consumer preference, and increasing international competition. The program was developed by the Cabinet Committee, headed by Secretary of Commerce Luther H. Hodges, which was formed by the President on February 16, 1961.

In announcing the program, the President said:

"The problems of the textile industry are serious and deeprooted. They have been the subject of investigation at least as far back as 1935, when a Cabinet committee was appointed by President Roosevelt to investigate the conditions in this industry. Most recently these problems were the subject of a special study by the Interdepartmental Committee headed by Secretary of Commerce Luther Hodges. I believe it is time for action.

"It is our second largest employer. Some 2 million workers are directly affected by conditions in the industry. There are another 2 million persons employed in furnishing requirements of the industry at its present level of production. Two years ago, the Office of Defense Mobilization testified that it was one of the industries essential to our National security. It is of vital importance in peacetime and it has a direct effect upon our total economy. All the studies have shown that unemployment in textile mills strikes hardest at those communities suffering most from depressed conditions.

"I propose to initiate the following measures:

"*First,* I have directed the Department of Commerce to launch an expanded program of research, covering new products, processes and markets. This should be done in cooperation with both union and management groups.

"*Second,* I have asked the Treasury Department to review existing depreciation allowances on textile machinery. Revision of these allowances, together with adoption of the investment incentive credit proposals contained in my message to the Congress of April 20, 1961, should assist in the modernization of the industry.

"*Third,* I have directed the Small Business Association to assist the cotton textile industry to obtain the necessary financing for modernization of its equipment.

"*Fourth,* I have directed the Department of Agriculture to explore and make recommendations to eliminate or offset the cost to United States mills of the adverse differential in raw cotton costs between domestic and foreign textile producers.

"*Fifth,* I will shortly send to the Congress a proposal to permit industries seriously injured or threatened with serious injury as a result of increased imports to be eligible for assistance from the Federal Government.

"*Sixth,* I have directed the Department of State to arrange for calling an early conference of the principal textile exporting and importing countries. This conference will seek an international understanding which will provide a basis for trade that will avoid undue disruption of established industries.

"*Seventh,* In addition to this program, an application by the textile industry for action under existing statutes, such as the escape clause or the national security provision of the Trade Agreements Extension Act, will be carefully considered on its merits.

"I believe this program will assist our textile industry to meet its basic problems, while at the same time recognizing the national interest in expansion of world trade and the successful development of less developed nations. It takes into account the dispersion of the industry, the range of its products, and its highly competitive character. It is my hope that these measures will strengthen the industry and expand consumption of its products without disrupting international trade and without disruption of the markets of any country."

Mr. COTTON. Mr. President, will the Senator yield?

Mr. HOLLINGS. Mr. President, I yield to the distinguished Senator from New Hampshire.

Mr. COTTON. Mr. President, I believe that technically the Senator from New Hampshire is in control of the time.

The PRESIDING OFFICER (Mr. EAGLETON in the chair). The Senator is correct.

Mr. COTTON. Mr. President, we do not wish to monopolize the time on one side.

Mr. President, will the Senator from South Carolina suspend for the time being so that other Senators may have an opportunity to speak, particularly those who must go to the Republican policy committee meeting?

Mr. HOLLINS. I yield for that purpose.

Mr. COTTON. Mr. President, I ask unanimous consent that the Senator from South Carolina be recognized after certain other Senators have spoken, without the rule being applied with respect to a Senator speaking twice.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. COTTON. Mr. President, I now yield such time as he may require to my distinguished colleague from New Hampshire.

Mr. McINTYRE. Mr. President, I ask unanimous consent to proceed for 5 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McINTYRE. Mr. President, first I commend my senior colleague, along with the distinguished Senator from South Carolina (Mr. HOLLINGS), for bringing this matter of the nomination of Mr. Gilbert so forcibly to the attention of the Senate.

I have examined Mr. Gilbert's record at some length. I have read the transcript of the hearings conducted by the Committee on Finance. I have decided that my vote today will be cast against Mr. Gilbert's confirmation for one simple reason—the shameful, unfair, unjust, and obviously political attitude which he took in the Finance Committee hearings toward two industries of great importance, in very different ways, to my own constituents.

I refer to the shoe industry and the petroleum industry.

New Hampshire produces shoes, and the policy of the U.S. Government re-

garding shoe imports is of vital significance to the workers of my State.

New Hampshire consumes petroleum and petroleum products, and the policy of the U.S. Government regarding petroleum imports is of vital significance to the consumers of my State.

How does Mr. Gilbert react to the problems of the shoe manufacturers and petroleum consumers of New Hampshire? The answer is clearly given in the hearings before the Finance Committee.

There is "no question at all" in Mr. Gilbert's mind that the oil industry deserves the totally unwarranted quota protections which it presently receives. His reason is very simple.

He said:

> There has been a finding by the appropriate agency that it was important.

And he had no questions about that finding.

When it comes to shoes, however, Mr. Gilbert is far less sympathetic to the needs of domestic industry. He is, fortunately, aware that many of us in the Congress do have information indicating that the shoe industry is really in need of quota protection. Nevertheless, he feels that our views should be discounted in light of a Tariff Commission report which states that protection is not needed. My Small Business Subcommittee will be holding hearings early this fall to investigate in depth the problems being experienced by small shoe manufacturers and their workers. In New Hampshire alone over 1,200 workers have lost their jobs already this year as a result of plant shutdowns. These hearings should resolve once and for all the extent to which the recent flood of imported shoes into this country is responsible for these shutdowns.

Mr. President, I simply cannot, as a Senator from the State of New Hampshire, support the nomination of a special representative for trade negotiations who is perfectly willing to question the need for legitimate help for the shoe industry but who is unwilling to question the unwarranted and unfair subsidies granted to the petroleum industry.

We are not, in New England, asking for any more than our fair share of the benefits which can accrue from the National Government. But it is totally unfair for national trade policy to force us to pay outrageously high prices for petroleum while at the same time not permitting us to keep our citizens employed in the shoe industry. If Mr. Gilbert were consistent in his philosophy, I could probably find it possible to vote for his nomination, even if I disagreed with him. But when his inconsistencies add up to a totally unfair trade policy from the point of view of my own constituents, I must vote "no" on his nomination.

Mr. COTTON. Mr. President, I thank my colleague for his remarks.

Mr. HOLLINGS. Mr. President, I commend the Senator from New Hampshire for placing into focus vital considerations with respect to this particular appointment. It is very important to realize that Mr. Gilbert's record in his trusteeship jobs, as chairman of the Committee for a National Trade Policy, coupled with the knowledge that for 19 years Mr. Gilbert has been in favor of free trade against any kind of unilateral or import quotas, has sustained the fact that, while he is a man of character, his interest in this field has been established as representing those of a committee favoring a policy of free trade, which the leaders of our Government opposed in both 1960 and 1961.

The very seven-point program by President Kennedy, which I placed in the RECORD, was implemented with respect to cotton but not with respect to woolens and manmade fibers.

Specifically what is the power of a trade negotiator? For one thing, Mr. Gilbert thinks he does not have enough power. He has been a witness before the Congress many times. When the Trade Expansion Act was presented to the Congress in 1962, he attested that that office should have more power than it has, that it should be at the highest level, the ambassadorial level.

Specifically, I may mention the bill that was passed by the Senate last year and was before the committee of conference. We had the Senate speak on this important bill. We had over half of the Members of the House of Representatives endorse a similar bill, word for word. In fact, we told them we would accept theirs. But Ambassador Roth kept chastising us that it would be the end of free trade, that it would be the worst thing that could happen to the United States of America. He was representing the State Department viewpoint, which has been its position consistently from the time we began on this particular problem in 1959.

What was the position of President Nixon? As a candidate for the Presidency, he sent a telegram to Republican sponsors of textile import control legislation on August 21 of last year, during the campaign, which was given nationwide publicity. The telegram reads:

> As you know, my associates and I are continuing our evaluation of factors bearing on constructive development of the total U.S. economy in the years ahead. Among these factors is the ability of private enterprise to achieve real growth, thereby contributing most effectively to job preservation and opportunity.

Again answering the distinguished Senator from New York (Mr. GOODELL), there was placed in the RECORD an answer to the particular question of wherein we ever got the idea that domestic industry was entitled to such protection. The President of the United States, running on that platform, said so in this telegram, which I continue to read:

> One such consideration involves the impact of dramatically increasing imports on the 2.4 million people directly employed in the Nation's textile and apparel industries and the countless additional thousands involved directly or indirectly in related activity.
>
> Knowing of the concern you have demonstrated in these industries and their employees, as evidenced by your support of legislation designed to encourage orderly textile trade, I thought you might like to have my views on the subject.
>
> The Johnson-Humphrey Administration has failed to carry out the Program initiated by President Kennedy and reaffirmed less than four years ago.

There is the record. President Kennedy blamed President Eisenhower. President Nixon blamed President Johnson and Vice President Humphrey. Every time the people get a chance to vote on the question, this is the way they vote. They put the man in. Where does the policy come from? From the people. The policy we have before us is the policy of the people, and we should not have it destroyed by a negotiator who is representing the other side. I read further from the telegram:

> At the same time, it has permitted much of the rest of the world to establish or maintain barriers to the products of our industry while we have provided foreign textile producing nations virtually unlimited access to our markets.
>
> As President, my policy will be to rectify this unfair development and to assure prompt action to effectively administer the existing Long-Term International Cotton Textile Arrangement.

Mr. President, President Nixon said that, as President, he was going to rectify this unfair development, however, he is nominating a man who has opposed LTA from its inception and has insisted on nothing being done on wool and manmade fibers.

This raises the credibility gap. I conclude the reading of the telegram:

> Also, I will promptly take the steps necessary to extend the concept of international trade agreements to all other textile articles involving wool, man-made fibers and blends.
>
> Our goal will be the creation of an environment which will encourage job-creating growth of the domestic industry while permitting imports to participate fairly and in an orderly fashion in the future expansion of the domestic market. Opportunities for our own industries to participate on a reciprocal basis in the future expansion of textile and apparel markets in the rest of the world also must be assured.
>
> Minus such an overall policy I am convinced that the potential for tens of thousands of new jobs in these industries will be jeopardized. On the other hand, the program to which I am committed will provide this vast industrial-agricultural-fiber complex far-reaching opportunity for employment of American citizens in both rural and urban communities where jobs are needed most.

Mr. President, the importation, for example, of manmade fibers, has increased 100 percent during the first 4 months of 1969. By the same token, a specialized study by Arthur Anderson Associates was made of the textile industry, projecting a 25-percent lowering in jobs, at the present rate and under the present policy, by 1975, or 600,000 jobs.

This study was made during the last few months. And here is a President committing himself to rectify that situation, and appointing, if you please, a man who has opposed it religiously for 19 years. The credibility gap. This is what cursed us with foreign countries, with respect to manmades and woolens. Specifically, in December of 1961, when the Assistant Secretary of Commerce, Mr. Hickman Price, went to the London conference to represent the U.S. Government, he was preceded by State Department personnel, who advised the conferring nations, "Do not worry, have no fear, we are not serious about this thing; let Secretary Price make his noise, let

him go through his act, let him get his headlines; we will adjourn this conference and nothing will be done."

And that is exactly what happened. It was so bad that Mr. Price, after using the conference room for 4 hours one afternoon, was told by the authorities at the hotel that the rent on the room was over with. The State Department did not have any other place to meet and the meeting had to be adjourned. Mr. Price had to go and rent a room out of his own pocket and try to salvage the conference.

Time and again, the President has said one thing and the State Department another. President Johnson said in Rhode Island in September 1964, and in Georgia in October 1964, that he was going to implement the Kennedy program. But where was the State Department and Secretary Rusk? Where were Nick Katzenbach and that crowd last year, when we were working in direct opposition to the policy?

I think by now the Japanese have got the message: "If you stick with the State Department, do not worry, we will get all the jobs. Pour the coals on, boys, we have got a readymade situation."

As a result, they have almost no concern. They voted almost unanimously in their Diet—save one vote—not to even discuss the subject with Secretary Stans, Mr. Gilbert, or the U.S. representative—the country that we freed and nourished back to economic sustenence, the country whose textile industry we built with American payroll dollars. We are told: "We will not even discuss it with you," and on top of that, the administration appoints as its negotiator Mr. Carl Gilbert, and asks the Senate to confirm it.

Mr. President, in a speech before the 31st Chicago World Trade Conference on February 28, 1968, Carl Gilbert made a very stirring address in behalf of his position that he has stuck to for the past 19 years. Mr. John Hight, the executive director of the Committee for a National Trade Policy, on March 13 of that same year said this about the Gilbert speech:

> Although Mr. Gilbert spoke in his personal capacity, we feel that what he said represents essentially the viewpoint of this Committee. We know you are familiar with the problems discussed here and recognize that 1968 is a critical year both for maintaining a liberal trade policy and for beginning to solve our balance-of-payments problems.

Here are excerpts from the speech made by Mr. Gilbert:

> There seems to be complete agreement, verbally at least, to the proposition that of vital importance to our national future "is the ability to maintain and improve the competitive position of the United States", to quote the recent report of the Council of Economic Advisers. Virtually all of the private sector would agree on this proposition when talking in terms of the need of greater governmental restraint on inflationary forces. Yet those industries now seeking new protection from the forces of import competition seem hell bent on permanent and virtually irreversible impairment of their industries' capacity to compete by removing the restraining influence of competition. What is the ultimate end of this course of action?
>
> If any industry should have learned how ineffective are "jawbone" controls of the wage-price spiral, the steel industry, God knows, should have. If it weren't for the impossibly bad results on all the rest of us, I would almost like to sit back and watch the inevitable interplay of the forces involved if they should get the quotas some of the industry seem to think they want.
>
> With quotas in effect I would expect within a short terms of years to find the American steel industry permanently priced out of the international market and to be returning to the Congress again and again asking the Congress for further legislation to erect other and higher barriers to protect them against the inevitable consequences of the earlier measures enacted to enable them to avoid the restraining influences and stimulation afforded by competition.
>
> Most of us have learned the hard way the basic truth that in this hard world in which we live, no one is going to get anything of value for nothing. The same is true of whole countries in the field of national trade regulation. If new tariffs are imposed or quotas established by the United States at the instance of one industry, some other American industry or industries must be made to pay the price for that new protection, either by compensatory reductions in tariffs on imports in their fields or through consent by the U.S. to increases of foreign tariffs on U.S. exports. At its best, this is bad, since in its simplest terms this involves robbing Peter to pay Paul—a regrettable degree of direct participation by government in the allocation of foreign trade between industries.

How does Mr. Gilbert say to "compete?" Like all the other members of the Committee on a National Trade Policy, he says, "Go overseas and build your plant, and employ Japanese and Chinamen in Hong Kong, and the people in Pakistan; go to India and all the other countries."

Mr. President, that is what he says—to compete. He does not say anything about the wage and hour law. He does not say anything about unemployment compensation. He does not say anything about child labor standards, about safety standards and regulations. He does not say anything about the cost to the industry of health regulation and pollution control. He does not say anything about the antitrust laws in America which all American industry is beset with now. In Japan, they have the cartel system.

He is talking as if he were back in the Smoot-Hawley days of the 1930's. He says to compete, and to go ahead under noncompetitive conditions in manufacturing under circumstances which would be criminal within the United States.

On page 7 of his talk he says:

> God knows nothing stimulates research and development, process improvement and the drive for greater efficiency than the hot breath of competition, and we would be fools to seek to remove that stimulus or reduce its influence.

Mr. President, no one has ever asked for less than that in the American textile industry which is the most competitive. I have had cases of plagiarization where they have copied the exact pattern, cases where they had tried to develop, as we have done in the United States, modes and processes of manufacture. We are the most competitive industry. And we have been sustaining a limited growth in spite of all of this just because we are competitive and productive.

Mr. President, I again quote from Mr. Gilbert:

> In short, to a very great extent the industries now seeking quotas have not, to use the old lawyer's phrase, exhausted their existing specific remedies against some of these alleged evils, and instead seek to short-cut established procedures by going direct to Congress where the alleged evils can be asserted in terms of generalities rather than specifics.

Mr. President, we had during the 1950's over 20 escape clause cases which were brought before the Tariff Commission and in only two cases were there favorable findings.

As former Senator John F. Kennedy said in the earlier correspondence which I submitted for the RECORD, the industry was exhausted to the tune of 400,000 jobs. And the projection is that it will be exhausted under the present policy to the tune of an additional 600,000 jobs.

This is the lawyer running around making lawyer talk and saying, "You have not exhausted your remedies."

The only thing this policy has supported is jobs for lawyers before the Tariff Commission. It has not created any additional jobs. Let me point out the contrast between sophisticated jobs in some industries and the unsophisticated jobs in the textile industry. Everyone will agree that textile jobs are semiskilled.

Question: Is the United States satisfied with the policy where we will relegate to ourselves nothing but the sophisticated technology, the computerized type of industry and leave all of the other jobs for the countries importing into the United States?

Everyone talks about black power and black economy and black enterprise and giving them loans.

Seventeen percent of the textile industry is in black employment in the State of South Carolina. And since the first of the year, since January 1, 1969, they have had an increase in Negro employment of more than 10 percent.

This is what we are talking about. These are the job opportunities we need. But, instead, we get this runaround about being competitive and exhausting our remedies. We listen to Senators on the floor say how they stand for jobs and training to give the underprivileged, the undereducated, the unskilled an education and the economic opportunity to become a part of society. At the same time, we are exporting jobs by the thousands.

This is what we have to listen to and yet we are being asked to confirm this man.

I quote further from Mr. Gilbert:

> Perhaps it was a mistake for the U.S. to agree to this provision in the GATT in 1947, but the answer to the problems it creates today does not lie in unilateral action on the part of the U.S. It can come only from patient negotiation and agreement with the other GATT nations.

I quote further from Mr. Gilbert:

> It seems to me unfortunate that the heavy emphasis in the administration's 1968 program to remedy our balance of payments problems sound so strongly of protectionism. Restriction on the international movement of capital, of people, and of goods runs counter to all of our national aims.

This is the foreign investor talking who further stated:

What has happened to us as a nation when our government, as well as major segments of industry, faced with the disciplines of the international market place moves first to find ways to remove the immediate pressures to action which those disciplines provide.

It sounds to me as if the gentleman is more qualified to be the president of a military college. I never heard anyone talk about discipline in the Senate and never heard anyone in the world of international trade use that term.

Mr. Gilbert says further:

Have we lost our fortitude?

Now we get the adjectives. Have we lost our fortitude? We are losing our shirts. We are losing our economic subsistence. We are not losing fortitude.

Mr. Gilbert continues:

Are we confessing to the world that we haven't the moral stamina to justify our position of world leadership?

We are confessing to the world that we believe in the wage and hour law controls, unemployment compensation, a safe place for man to work, and that we believe in health standards and the right of competition protected by our antitrust laws. That is what we are saying to the world. We are not saying this gobbledygook about moral stamina and fortitude.

Mr. Gilbert continues:

There are these deeper issues involved in the question we have been discussing. I hate to believe that the answers to these questions are in the affirmative but I keep waiting for the clarion call from Washington to pull in our belts and fight to defend the things we believe in.

Here is a man chastising us and urging us to fight for the things we believe in. And after 19 years of fighting the American textile industry and the quota policy for Japan. Japan has a quota today and all of the trade countries have quotas. They were agreed to by 34 countries.

He wants to fight, he says, against what he has believed in for 19 years. I cannot take his word in a personal call when he says, "Don't worry, Fritz, I will look out for you on textiles."

I think it is more serious than that. I think we will lose textile jobs, leather jobs, electronic jobs, and all other kinds of jobs we can possibly think of to foreign trade under a noncompetitive situation.

I read further from Mr. Gilbert:

It has also seemed clear to me for a long time that national defense motivated support of a particular industry should be in the form of a direct open subsidy—rather than by way of inducement to industry wide price increases—and ought to be charged to the defense budget—if defense consideration are that direct and significant.

The businessman approach to the problems of America always destroys the human element. They get frustrated. They become a little restless. And they say to throw money into the problem. That is the guaranteed annual wage, the negative income tax. Then, when we have an industry that involves the national security, we are told to give them a grant through national defense and give them the money. We are told that we do not have to be competitive in free enterprise, as enunciated by Cordell Hull, but that we should give them a grant.

This is the fellow who will negotiate for the United States on this all-important question.

Mr. President, Mr. Gilbert appeared before the House Ways and Means Committee on June 11, 1968. At that particular time he testified for the Committee for a National Trade Policy as follows:

Our committee has always opposed import control legislation, because such statutes would impair the national interest. Once the United States starts a pattern of import quotas, allocating a fixed percentage of the U.S. market to American producers and the balance to foreign suppliers, we will find ourselves opening a Pandora's box of governmental controls.

Of course, Mr. President, we got import quotas under the long-term arrangement; and all we are asking for is the very same thing that President Kennedy talked about—a comprehensive, industrywide solution, to make it comprehensive or extend it to woolen and manmade fibers. No Pandora's box has been opened under the LTA for cotton.

The fact is that the wholesale price index has been increased .7 percent since 1961, when we had the 1-year short-term arrangement extended for 5 years under the LTA, and last year for a 3-year period, in comparison with a 6-point increase in the wholesale price index of all other commodities.

I continue to quote Mr. Gilbert:

A protected market inevitably leads to a spiral of price increases.

It has not led to price increases in cotton articles. For the cotton, in the shirts we wear, the cotton farmer gets less than does the launderer for cleaning it. The price of that shirt, relatively speaking, has increased by three times less than the average increase in the wholesale price index of other articles in America.

Mr. Gilbert further stated:

We could expect to see a wide range of Government intervention in the U.S. economy such as we have never experienced except in wartime, and one which could totally distort the competitive economy which has made America prosperous.

I will state what it does to the competitive economy, Mr. President. When I was Governor of South Carolina, a watch industry came to open up a plant—the Elgin Co., from Elgin, Ill. We even renamed the town of Blaney, S.C., to Elgin, S.C. South Carolina trained 425 employees for this plant. Within a year and a half, they were 30 percent more productive than the average employee at the Elgin, Ill., installation. There was nothing wrong with their training; there was nothing wrong with their skill. But they could not make a profit under Mr. Gilbert's concept of competitive enterprise. They came, exhausting their remedies before the Tariff Commission. The result: They were denied relief, and the plant has moved overseas. They do not make Elgin watches in Illinois or in South Carolina or in America. The directors and the stockholders of Elgin are making a grand profit now. But the American worker does not have a job. Unemployment—that is what we are talking about.

I quote Mr. Gilbert further:

In addition, we must anticipate that foreign suppliers, limited to a fixed share of the U.S. market, regardless of how efficiently they produce, will turn more and more to dividing up that share on a cartel-like basis, and will undoubtedly raise their prices in the process. The temptations to price rigging, and even corruption, will be great. And the price that will be paid by U.S. consumers will be a heavy one.

Now, Mr. President, here is a man who last year—within the past 13 months—believes that any kind of trade regulation to help a man hold a job in America and help the industry to compete on a fair and equitable basis is going to bring corruption. He said it regularly, constantly, persistently, and repeatedly for 19 years—until he was appointed trade negotiator. Then he said: "Oh, I believe there is something to be said for the textile industry. It deserves study. You know, if the President is thinking along these lines, maybe I could help."

I do not happen to think so. I think he has made such a sorry record in this regard that any fellow negotiating with him would put him in deep centerfield, and he would be completely powerless to represent the interests of the United States.

I quote Mr. Gilbert further:

Moreover, U.S. manufacturers who are big users of steel, and other important materials, will find themselves progressively priced out of world markets on their manufacturers and, in more and more cases, obliged to manufacture abroad not only to supply foreign markets, but even to supply their own normal markets in the United States.

Temporarily, Mr. President, steel is being taken care of. Oil is taken care of. They have a quota. Steel is taken care of. They have their quota. So we do not find the oil people around, and we do not find the steel people around, because they are temporarily taken care of.

But what is happening to black jobs, that everybody is talking about, on a national basis? Where are we employing them in the textile industry in South Carolina? What has happened to the semiskilled in Appalachia, for whom we are trying to get jobs? We are exporting the job overseas by giving them Gilbert. Do we understand why they riot and are restless and wonder about Congress? They wonder about this body. They give all this talk and get headlines on TV, but what do they give us? The Japanese negotiator—that is what they have.

Mr. JAVITS. Mr. President, I appear today in support of the confirmation of the nomination of Carl J. Gilbert to be the President's Special Representative for Trade Negotiations.

This is a key post in the trade field. The nomination has not been confirmed for 3 months. I do appreciate the sincerity of the opposition to the nomination. I have known Mr. Gilbert for a long time, and I have had a great interest in the trade policies of the United States under a series of administrations which go back over the past 20 years. Therefore, I felt it appropriate that I speak at this time.

Mr. Gilbert is an American who is unusually well qualified for this position. He has appeared at length before the Committee on Finance and the Committee on Foreign Relations, and has answered all questions fully. Both committees have reported his nomination favor-

ably. Yet, although a crucial trade conference is presently underway in Japan, and at a time when the new administration is actively formulating its new trade policies, the United States is being denied the use of the full services of Mr. Gilbert because the Senate has yet to act on the President's nomination.

I make this point because he is now leading the position of the United States in a very important area. We have a serious trade imbalance with Japan. Later in my statement I shall refer to some of the problems that are involved. The position of the United States becomes of great importance.

There can be no doubt of Mr. Gilbert's qualifications. A lawyer for 17 years in the Boston firm of Ropes, Gray, Best, Coolidge, & Rugg, he distinguished himself as a citizen with a cool, reasoned approach to complex issues. For the past 20 years he has served the Gillette Co. in various capacities and was chairman of the board at the time of President Nixon's nomination on April 10 of this year. His business affiliations are impressively extensive. As a former director of firms dealing with textiles, electronics, banking, and publishing, Mr. Gilbert would bring to this critical position the breadth that is so important in the formulation, coordination, and administration of our foreign trade policy.

The opposition to Mr. Gilbert has trained its guns upon his advocacy of trade liberalization. In fact, those most vehemently opposed to the nomination have expressed concern that Carl Gilbert would be anathema to the textile industry. I cannot concur with this opinion as this is not the impression I obtained from the Foreign Relations Committee hearings on the nomination and from my knowledge of Mr. Gilbert.

Under questioning by the Senator from Wyoming (Mr. McGEE), he agreed that the textile interests must be preserved but not overprotected. This is an eminently reasonable position. It is also important to note that the Senator from South Carolina (Mr. HOLLINGS) carefully questioned Mr. Gilbert at length before the Senate Finance Committee in regard to his position on foreign imports and quotas. The Senator from South Carolina (Mr. HOLLINGS) apparently was satisfied with Mr. Gilbert's answers, particularly with regard to Mr. Gilbert's stated firm intent to carry out the President's textile policy and general trade policy.

Yet, there is a potentially more critical aspect surrounding this recommendation. During the tenure of Ambassadors Christian Herter and William Roth, the Special Representative for Trade Negotiations has been responsible to the Executive Office of the President. This structure reflected the belief that U.S. trade policy should not be the hostage of a particular agency or department of the Government.

In order effectively to coordinate often conflicting views within the executive branch of our Government, it is important that the lines of responsibility run directly to the White House. Only then can U.S. commercial interests be clearly delineated and translated into an effective policy.

Mr. Gilbert has, much to my satisfaction, assured the members of the Foreign Relations Committee that this traditional structure will be preserved when he undertakes his duties as U.S. chief trade negotiator. It is worth repeating that Mr. Gilbert has publicly testified that as a representative of the President of the United States, he would carry out the trade policies of this administration to the best of his ability.

I should now like to explain why it is urgent that the Senate act on this nomination today. Indeed, we will act on it affirmatively.

With significant justification, we in Congress and the Nation have been concentrating our attention and efforts in recent months on the serious inflationary danger threatening this Nation. These problems certainly demand our concerted action, but we must not let it obscure our view of an integrally related and equally serious economic problem—our deteriorating international trade position. The Nation's balance of payments, the chief indicater of that position, skidded from a surplus in the fourth quarter of 1968 to a deficit of over $1.7 billion in the first quarter of the current year. Similarly, our balance of trade with the nations of the world showed a deficit of about $275,000,000 in the first quarter of 1969 in the area of general merchandise alone and an overall balance of payments deficit of up to $4 billion is threatened in 1969.

It must be remembered, the sharp reversal of the whole postwar trade history of the United States, when we had surpluses in trade of $5 billion to $6 billion consistently, year after year.

Although our balance-of-payments problem is longstanding and obviously not easily solvable, I rise now to bring to the attention of my colleagues one opportunity to begin the alleviation of this serious imbalance—the 7th annual meeting of the Joint U.S.-Japan Committee on Trade and Economic Affairs which has just opened in Tokyo. It is not mere coincidence that the eyes of the international economic community are viewing this conference with particular interest. Not only is Japan our greatest overseas trading partner—two-way trade exceeded $7 billion in 1968—but Japan as well makes the greatest contribution to the U.S. trade imbalance.

In the past year, Japan showed a surplus of over $1 billion in her export-import trade with the United States. In the first 5 months of this year alone, the Japanese surplus was more than a half billion dollars. In April and May, the Japanese trade surplus was running at a monthly rate of approximately $150 million. This contrasts with 1961 when our trade balance with Japan was $782 million in the black.

In terms of the health of the international trading and monetary system, a surplus of such magnitude needs careful handling. Surplus nations must act with a special sense of responsibility—and it is my hope that Japan will soon take the necessary measures to help in dealing constructively with this imbalance. I repeat, trade policies which result in a mere 9-percent annual rate of increase in 1968 of U.S. exports to Japan, while our imports from Japan increase by 35 percent over the same 1-year period, raise political and economic problems.

Yet, more than any other nation in the free world, Japan has erected the most severe nontariff barriers to U.S. goods and capital. Since the war, our corporations have actively promoted U.S. sales in the Japanese market, but have been faced with continuing and, in my view, increasingly unjustified trade and investment barriers. It is true that some easing of restrictions were enacted by Japan as a result of the Kennedy round and GATT. I am also gratified that the Japanese Government has just put 24 items including automotive engines, wool textile goods, color film, large electric generators, and machine tools on liberalized trade list. It is to be hoped that more significant items will be added to this list in the very near future.

But in reviewing these limited liberalization measures, I must ask whether a progressive, economically powerful country whose automobiles are now being sold in all principal markets of the world, should not move away from trade and investment controls more appropriate to the era of the model T. Is not the complex and comprehensive Japanese system of trade and investment controls, established when Japan was striving to rebuild its economy, in need of a complete model change? Would not, also, the Japanese consumer welcome the product diversification and lower prices that would result from trade liberalization?

Now, the reason I place these issues before the Senate is that they are the very issues with which the President's special representative for trade will be dealing in Japan—right now. It is with issues such as these which the President's Special Representative for Trade Negotiations must be integrally involved. Mr. Gilbert, a member of the American delegation to the meetings with Japan, is scheduled to make a major address concerning the need for an improved trading relationship between the United States and Japan. It should be obvious to us all that such an otherwise significant statement would have negligible impact if delivered by a man who has not yet been confirmed by the U.S. Senate.

Mr. HOLLINGS. Mr. President, will the Senator from New York yield at that point, so that I may ask for the yeas and nays?

Mr. JAVITS. I yield.

Mr. HOLLINGS. Mr. President, I ask for the yeas and nays.

The yeas and nays are ordered.

Mr. HOLLINGS. I thank the Senator from New York.

Mr. JAVITS. Mr. President, traditionally, the Japanese are a people more sensitive to the proprieties of proper protocol than perhaps are Americans. More than 3 months have passed since the President of the United States nominated an American of outstanding qualifications and character to become his special representative. Hopefully, if we do confirm him today, it will acquire much more significance to Japan and

I hope will have a measurable effect on them, which is certainly very badly needed.

The situation certainly calls for our immediate and positive action in the Senate on this nomination. Mr. Gilbert is over there, under the shadow of having been appointed 3 months ago. Although he is an outstanding man and very well known, he is still not confirmed by the Senate. How much more acceptable will be his speech and his representation of the United States in the ensuing negotiations if his status is confirmed by the Senate.

I, therefore, sum up as follows, Mr. President.

First. Mr. Gilbert is a man of outstanding qualifications, one of the most distinguished Americans who could be appointed in this field. He is a most desirable man for the United States to enlist in its services in this very critically important position.

Second, because of his assurance of objectivity and his profound awareness of the problems, particularly of the textile industry in terms of trade and tariff barriers, which he has explained to the committees of the Foreign Relations and Finance, which have caused them to report him out favorably.

Third, because he is right now in a conference of critical responsibility and great delicacy in which his confirmation will be of materially beneficial effect to the United States, I urge the Senate to confirm this nomination.

Mr. COTTON. Mr. President, I thank the Senator from New York for his contribution.

Mr. President, without losing his right to the floor, will the Senator yield 10 minutes to the distinguished Senator from Massachusetts (Mr. BROOKE), who must go to a policy meeting?

Mr. HOLLINGS. I am delighted to yield to the Senator from Massachusetts.

The PRESIDING OFFICER (Mr. HARRIS in the chair). The Senator from Massachusetts is recognized for 10 minutes.

Mr. BROOKE. Mr. President, I rise in support of the nomination of Carl J. Gilbert to be the President's special representative for trade negotiations. I believe that the President could not have chosen a better man to fill this key position.

I have known Carl Gilbert for many years. He has lived and practiced in Massachusetts since the late 1920's. In his career at the Harvard Law School, as a partner in the distinguished Boston law firm of Ropes & Gray, in his military service, as president and chairman of the board of the Gillette Co. in Boston, and as officer, director, and counsel for several major U.S. firms and organizations, Carl Gilbert has always distinguished himself.

His experience in the field of international trade has been extensive, deriving not only from his business associations but from his role in many trade-related organizations. Over the years he has served as chairman of the advisory committee on the Export-Import Bank, chairman of the Committee for a National Trade Policy, director of the Atlantic Council, and chairman of the Massachusetts Port Authority, to name but a few.

In appearances before both the Committee on Foreign Relations and the Committee on Finance, from which he received unanimous approval, questioning was extensive and detailed; and I believe a number of important points emerged which will be of interest to the Senate.

I know that much concern has been expressed regarding Mr. Gilbert's views on what has been referred to as "free trade." This is, of course, a relative term, for never in the history of the world has genuine free trade been in effect.

Mr. Gilbert readily acknowledged that as a spokesman for various organizations, and for the Committee for a National Trade Policy in particular, he had advocated freer trade among the many exporting and importing nations of the world. Freer trade, as he described it at that time was essentially an anti-inflationary measure; for where genuine competition exists, industries will make every effort to reduce prices and improve the quality of their goods.

But Mr. Gilbert also emphasized in his testimony that his commitment to freer trade was neither ideological nor irrevocable. First of all, he stressed that his previous arguments had been made as an advocate, in the fullest legal sense of the term. In his own words:

> My entire life has been spent either as a lawyer presenting my clients' views in the strongest terms of which I was capable, or as a member of an organization pursuing the organization's objectives with all the energy at my command.

He goes on to explain that—

> In these (previous) statements I was speaking, of course, as a private citizen, sometimes in terms of hyperbole.

Second, he readily agreed that our trade policy could not be decided in a vacuum. Considerations of national security, protection of domestic manufacturers, and preservation and expansion of employment opportunities, are also essential factors. "Free trade," or "freer trade," is not an unmitigated blessing and cannot be pursued as an end in itself. His previous positions will, therefore, be carefully reviewed in the light of the additional facts to which he now has access and his own larger responsibilities.

In other areas, Mr. Gilbert expressed grave concern over the expanding use of nontariffs by our trading partners, and he committed himself to insuring that not only the United States, but also the other nations of the world meticulously observe their international commitments. He promised to take a "much tougher approach" in policing present international trade agreements and committing ourselves to new ones. And he promised to take another serious look at the growing problems of such troubled industries as shoes, textiles, and steel.

As an advocate for international business and trade associations, Mr. Gilbert presented an eloquent and persuasive case for freer trade. As an administrator, with concerns encompassing the health of domestic industries as well as our role in world trade, I am certain that Mr. Gilbert will apply that same understanding and eloquence to representing the interests of all his "clients" fairly and effectively.

I have great confidence in Carl Gilbert's knowledge, judgment, and exceptional abilities. I urge that he be confirmed for the office to which he has been nominated, that of the President's special representative for trade negotiations.

I thank the distinguished Senator from New Hampshire and the distinguished Senator from South Carolina.

Mr. HOLLINGS. Mr. President, will the Senator from Massachusetts yield?

Mr. BROOKE. I yield.

Mr. HOLLINGS. Does the Senator from Massachusetts believe that the electronics industry of Japan, with no wage and hour controls, with no unemployment compensation, with no child labor standards, with no health and safety standards, is competitive with the Massachusetts electronics industry?

Mr. BROOKE. Not at all. I do not suggest that in my vote of confidence for Mr. Gilbert.

Mr. HOLLINGS. Does the Senator know that the nominee does not subscribe to competition?

Mr. BROOKE. No; and in his testimony before the Committee on Finance he did not so indicate.

Mr. HOLLINGS. Does the Senator know that on the contrary, before Mr. Gilbert testified before the Committee on Finance, he testified last year before the Ways and Means Committee and opposed legislation such as the Senator has offered on electronics and textiles as promoting corruption that would cause spiraling prices and wages, and that the industry should discipline itself?

Mr. BROOKE. As the Senator from South Carolina knows, I have long been an advocate and have worked very closely with him in these matters affecting the textile industry, the shoe industry, and the electronics industry. I can assure the Senator with all the persuasion at my command that I would not vote for the confirmation of Carl Gilbert if I thought he would not act fairly and equitably and in the best interests of American industry. I think that his statements before the Committee on Finance are statements upon which the distinguished Senator can rely because this is a man of exceptional ability and great integrity. As he said before those committees, he had acted as an advocate, as a lawyer by profession, and he represented his clients to the best of his ability. In dealing with other nations as representative of a larger and more diverse clientele, he will keep in mind the best interests of the United States and its industries. I believe him and I ask my colleagues to believe him.

Mr. HOLLINGS. It is not a question of his integrity. The question is with respect to how capable he would be in the position of trade negotiator as a result of his 19 years of advocacy of a different position. He has been zealous in opposing what the distinguished Senator proposed and voted for last year. The question is:

How is he going to answer the question from the country of Japan, when he proposes quotas on woolens and says, "This is what my Government wants. I have integrity and I am sincere," and the Japanese negotiator says, "Carl, forget it. This is the thing you said would promote corruption."

Does not the Senator think that compromises his position if he is the trade negotiator?

Mr. BROOKE. I do not think he can be or will be compromised.

Mr. HOLLINGS. Does not the Senator think that after 19 years of taking one position and the last 60 days taking another position, that that, in and of itself, is a compromise?

Mr. BROOKE. No, I do not think so. As I said, I think the man will represent the United States and its industries to the best of his ability and in keeping with the policies established by our Government.

Mr. COTTON. Mr. President, will the Senator yield?

Mr. BROOKE. I yield.

Mr. COTTON. Mr. President, as I said earlier, I recognize the fact that since 1950 Mr. Gilbert has acted in various capacities. He is experienced in the problems of our foreign trade. His integrity has been brought out to me.

He has definitely said before the Committee on Finance and in conversation with the Senator from Rhode Island (Mr. PASTORE) and me, "I want it definitely understood that textiles are in a class by themselves. I am willing to do all I can wholeheartedly do to secure voluntary curtailment or some restraint of increasing imports in textiles. This is as far as I can go."

I asked him about shoes. He said he was not sure shoes needed protection.

In the Committee on Finance in response to a question by the minority leader, Mr. Gilbert said:

Mr. GILBERT. Well, my response was not intended to indicate that I had an opinion as to whether the shoe industry needed protection or not. It was to indicate that, on the record there are two conflicting views as to the need or lack of it. And my point was that I think this called for prompt and thorough examination of the facts to find out what the true facts are on the basis of which a judgment could be arrived at. I have no opinion on the subject at all, sir.

Senator DIRKSEN. Of course, Mr. Gilbert, it calls for something more than an investigation. It calls for some action, if what is related to me is the fact.

Mr. GILBERT. It is that "if" that we are talking about.

I cannot conceive of a man who has been concerned in his various capacities over the years since 1950 or earlier as director of the Foreign Trade Council and a former director of the Committee for National Trade Policy, and who has before him obviously the facts that we have that in 1968 alone 64,000 shoe workers lost their jobs; that in New England alone, in the last 10 months, 12 plants have gone out of business—incidentally, five of them in my little State of New Hampshire where we lost over 2,500 jobs—I cannot conceive his saying that he has no opinion at all or "I am not satisfied the shoe industry needs any protection at all. We have to start from the beginning and give it a study."

He is honest about it. He said, "I will go with you on textiles. I do not approve of any unilateral action taken by this country so as to get a curtailment on textiles. I am with you 100 percent in my assurance, but on nothing else." I think that that sort of proclaimed position, sincere as he is, and honest and able as he is, is just like sending the Senator from New Hampshire over to the House to sit in a committee on conference and when I sit down for the House position out of a belief in the House position as a matter of honor to carry through, I do not believe that the House Members will listen to me. I do not think this impresses people with whom we are bargaining.

Mr. BROOKE. Mr. President, I do not think anything will be gained by discussion and debate on protectionism at this time. As I understand it, what Mr. Gilbert was saying before the Finance Committee—and apparently he made his case because they unanimously voted to report his name to the Senate for confirmation—was that he was well informed about the textile industry, that he understood it, and understood the need for strengthening the textile industry's position. When it got to a question of shoes and other products, there are many who feel that we cannot have a blanket quota which would cover all the industries, that we should take each one separately and discuss it and investigate it and make a determination as to what each industry needs. A quota may not be the best thing; perhaps subsidies may be the answer to some industries. But I think what he was saying was that he had an open mind, and that he would do the work and make the investigations before he made a final determination.

I think Carl Gilbert is the kind of man we need in this position. The Senator from New Hampshire has said that the man has eminent qualifications for the job by virtue of the long service he has had. And his integrity is not in question.

When we have qualifications such as his, and the unquestioned integrity of a man who has always been honest with us, when he has been before the committee twice, and the committee being satisfied with what he said, I think that the distinguished Senator from South Carolina may have exaggerated fears concerning Mr. Gilbert. I would have fears myself if I did not believe that Mr. Gilbert could take a larger view in carrying out the policies of the President and the country, but I firmly believe he can do this, and will do it.

Mr. HOLLINGS. Mr. President, there is no question as to the character and integrity of George Ball and Christian Herter or of William Roth. But they have been the nemeses of our premise on textiles for the past 10 years.

When President Kennedy was trying to implement his own program, the State Department, through George Ball, dragged its feet. Mr. Ball said he did not believe in it.

That is not a question of integrity. It is a question of heart, of belief, of confidence in fair representation of the Government's position.

George Ball did not believe in President Kennedy's seven-point program and dragged his feet and undercut the program.

Later on, trade negotiator Christian Herter just sort of stood still. Although President Johnson came forward and said in Providence, R.I., and in Georgia, what he was going to do but nothing was done. Thereupon came Mr. Roth, who outright opposed what the distinguished Senator from Massachusetts and I voted for last year when it got over to the conference committee. So it is not a question of the man just coming up. I rather question it when they tell me, "You have got to fight." He says, "You have got to believe," when he talks about discipline in strong terms, just like a cheerleader in a ball game. But I find his heart has been on the other side. His word I respect, but I do not believe he has developed his heart in the past 60 days to represent the employees of America, underprivileged as they are. He thinks otherwise.

Mr. President, we never had any trouble with the pronouncement of President Eisenhower, but President Kennedy later said it was President Eisenhower's fault.

We never had any trouble with President Kennedy in his pronouncement, but President Johnson said it was President Kennedy's fault.

Now when we get to President Nixon, we did not have any trouble with President Johnson's pronouncement, but President Nixon ran on a program that the Johnson administration did not carry out what it was supposed to do.

All on account of one point: the trade negotiator. He has been the one ruining us every time when they bring up the bill on foreign trade policy and Mr. Gilbert, nominated for trade negotiator has been on the other side for years—for 19 years.

The Senator from Massachusetts says I have got unfounded fears. Well, there is no education in the second kick of a mule. I am now around to the fifth kick.

Mr. COTTON. Mr. President, unfortunately, I have the responsibility of controlling the time, and shortly all our time will expire, unless we are able to get an extension, in 10 minutes.

There is one Senator who wishes to be heard. I do not wish any one of us to——

Mr. BROOKE. I appreciate very much the time the distinguished Senator from New Hampshire has given me. Let me just say in conclusion that I think that the distinguished Senator from South Carolina has made out a case against all Presidents of the United States. I think that is where the power to make policy lies, so that is probably where he should lodge his complaint, not necessarily with the trade negotiator. The trade negotiator is only carrying out the philosophy and the policies of Presidents of the United States.

I believe we will see that Mr. Gilbert will be a pleasant surprise to us. The fears the Senator entertains at the present time are false fears.

Mr. COTTON. Let me say to the Senator from Massachusetts——

Mr. BROOKE. I hope that I am right.

Mr. COTTON. That in this respect every President of the United States I have served under since Harry S. Truman—who, incidentally was capable of telling the State Department to take a jump in the lake, every one since—Republican and Democrat—in this respect has knuckled under to the State Department time and time again. Thus, I am disappointed in our Presidents, as is my good friend from South Carolina.

Mr. BROOKE. I am not being critical, I assure the distinguished Senator. He knows that, of course.

Mr. COTTON. Mr. President, I am happy now to yield to the distinguished Senator from Wyoming (Mr. HANSEN).

Mr. HANSEN. Mr. President, let me say, first of all, that I have nothing but the greatest respect for Mr. Gilbert. Although I do not know him personally, everything I have read about him inclines me to believe that he is a man of extraordinary talent and ability, and of unimpeachable integrity. Certainly, he is a person in whom the President of the United States might well repose the utmost confidence.

Mr. President, let me point out that, philosophically, I am a free trader.

As a student many years ago of economics courses, it seemed to me to make good sense to contend that if a country can produce things which it is best equipped to produce, we would all have more in the long run.

It is only because of some very personal experiences and a rather long period of observation over the intervening years between my academic career and where I now serve, that I have become disillusioned with the argument that holds such great philosophical appeal for so many.

I would also like to point out that I am not unaware that the argument has been made repeatedly and pointedly and persuasively that to lower tariff barriers is, indeed, one of the surer and more direct routes to world peace.

Mr. President, I occupy, as it is my privilege to do, one of the two Senate seats of the State of Wyoming.

For those who may not know, Wyoming ranks fifth among the 50 States in oil production.

Wyoming is probably No. 2 in production of uranium at this time.

Wyoming is high up in the production of wool. Further, we consider ourselves to be an important beef-producing State, although we are not in the top 10. We also produce sugar beets.

For those who have been in the West and have visited Wyoming, I need not point out that we are, as my distinguished predecessor Milward Simpson pointed out, "a land of high altitude and low multitude."

We do not have many people in Wyoming. Our average elevation is perhaps 5,000 feet. As a consequence, there are not many crops that can be successfully produced in Wyoming.

Sugar beets happen to be one of those crops. They are our best cash crop.

The production of hay on the mountain meadows found throughout the State is an important source of winter forage for the cattle raised in our State and for some of the herds of sheep that are found in Wyoming.

I point out that we do not have all of the agriculture options some States have. We do not have an agricultural economy of sufficient flexibility to enable us to go into the production of other types of crops if we cannot raise and profitably market our sugar beets.

While I know the problem of sugar quotas is resolved in a separate act, nevertheless I want to point out that sugar beets happen to be one of the relatively few successful cash crops we have in Wyoming.

I would like to ask the question, Why does not free trade work? What is wrong? Where has this policy, which has such great appeal to many, many people, broken down?

Let us consider our declining trade balances. If we were to subtract from the balances in the last few years the amount of money that has been poured into different types of subsidized industry by the United States, we would have had a negative balance of trade long before this.

Why does not free trade work? In the first place, we ought to take note of the fact that the taxes the average businessman pays in this country represent a far greater investment in government than is true in many other parts of the world.

These taxes provide funds for some of the finest government services. They finance programs that are of interest to all of us. Therefore taxes necessarily represent a very important cost of doing business.

Secondly, and of prime importance, American wages and the American standard of living are higher in this country than in any other country in the world. While it can be contended philosophically that free trade makes sense, it does not make good sense when we compare, on the one hand, the wages paid in this country and the wages paid in other countries that are in competition for the American market.

I know something about the cattle business because I happen to be in that business. I have been observing that imports of beef into this country have been climbing steadily, almost without interruption, for the last 20 years. They have come from countries like Australia, New Zealand, and Ireland. Denmark imports a great deal of pork into this country. Those imports have come from areas of the world that do not start to pay the wages that the American livestock producer pays. They come from parts of the world where the contribution the livestock producer makes to his country does not start to approximate the contribution that is made here.

Why should that be of concern to us? It is of concern to me because actually what we are doing is exporting jobs. Every time we put an industry out of business, every time we make the economic stability of a business shaky, we threaten the jobs of the people who are engaged in that business.

It is unnecessary for me to point out, because distinguished Members of this body have already called attention to it, what has happened in the textile and shoe industries. The same thing is happening in other industries. As a matter of fact, just across the border in Mexico, one of the important electronic manufacturing companies that is based in the United States has a sizable number of employees in the nation of Mexico. The wage paid those Mexican workers is about 30 cents an hour.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. COTTON. Mr. President, it is proposed that there be a quorum call in order that Members of the Senate who are now in committee can return in time for the vote. I ask unanimous consent that the limitation of time be extended for 5 minutes more.

The PRESIDING OFFICER. Is there objection to the request of the Senator from New Hampshire?

Mr. BYRD of West Virginia. Reserving the right to object, for how long?

Mr. COTTON. Five minutes.

Mr. BYRD of West Virginia. I have no objection.

The PRESIDING OFFICER. Without objection, the Senator is recognized for an additional 5 minutes.

Mr. HANSEN. Mr. President, it is of prime concern to all of us that we examine what is happening today. The American market is the most avidly sought after market in the world. That is true because of the purchasing power Americans have.

I say it makes little sense at all to destroy the purchasing power of our people by depriving them of jobs, which is precisely what we are doing when we permit different facets of American industry to go under because of competition from foreign countries where the wages paid do not even approximate what we pay workers in the United States.

For that reason, I must express my concern for the jobs not only of the people in my State of Wyoming but people throughout America, and for the kind of purchasing power that those jobs produce, in order that there may be a ready and a good market for the products we raise in Wyoming and throughout the rest of the country.

The oil business today is an important contributor to Wyoming's economy. If we were to lower all of the barriers that limit the importation of oil into the United States at this time, there is no doubt in my mind at all that the oil industry as we know it in the State of Wyoming would dry up and become practically nonexistent.

Likewise, if we permit the unlimited importation of beef, lamb, and wool these industries would suffer irreparable damage.

Such a course of action might have an initial appeal to consumers anticipating lower prices.

But I respectfully point out, Mr. President, that in the long run such actions would weaken the United States. It would wreak havoc to our schools in many districts of Wyoming, and elsewhere, because of the loss of taxes the cowman, the woolgrower, the oilman presently pay.

It would hurt our economy. The money these businesses generate would go to foreign producers—not our next door neighbors.

It would mean unemployment. No longer would the services of many now employed in the United States be needed.

The welfare and relief burden would be increased upon our remaining taxpayers and employers.

For these reasons, Mr. President, I shall vote "nay" on the matter of the confirmation of Mr. Gilbert in order that there can be no doubt about my position regarding the further lowering of our trade barriers to unlimited imports.

Mr. COTTON. Mr. President, I ask unanimous consent that an article in today's Washington Post, reporting on a speech by Representative WILBUR MILLS, chairman of the Ways and Means Committee of the House of Representatives, be inserted in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MILLS WARNS OF U.S. TRADE RESTRICTIONS

Rep. Wilbur Mills (D-Ark.), chief sponsor of trade legislation in the House, warned yesterday that he will support restrictive trade bills unless other countries reach agreement with the U.S. on textile exports.

Mills, in a House speech, said he would give other nations until this fall to accept a voluntary limitation on textile exports to the U.S.

Mills, chairman of the House Ways and Means Committee, indicated his remarks were mainly aimed at Japan. They were clearly timed to coincide with a meeting this week between Japanese cabinet ministers and U.S. officials, including Commerce Secretary Maurice Stans.

Mills said that if the Japanese would agree to negotiate, then other countries would follow.

Noting that during the first five months of this year U.S. imports of woolens and synthetic fibers were up 29 per cent over the same 1968 period, Mills declared that "this situation is out of control."

Mr. COTTON. Mr. President, there being no other requests for time, I yield back any time that may be left.

The PRESIDING OFFICER. All time is yielded back.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Chair, under the previous order, will now state the question.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, notwithstanding the previous order, the able junior Senator from Arkansas be recognized for a period not to exceed 5 minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. FULBRIGHT. Mr. President, I merely report—not that it is new—that this nomination was referred to the Committee on Foreign Relations on April 14. There were printed hearings. I do not think there was any objection to the nomination in the committee.

As the Senate knows, this matter was really held up at the request of the chairman of the Committee on Finance. That committee has now looked at the nomination and, as I understand it, reported it back. It has been on the calendar again for 3 weeks.

I have known Mr. Gilbert for many years. He is a very reputable man of unquestionable integrity. He has been a great success in our private enterprise system. He has been nominated by the President. The Foreign Relations Committee approved his nomination unanimously, I believe.

We have insisted upon the jurisdiction of that committee over ambassadorial nominations. This matter was discussed at considerable length before. So I will not repeat that.

All I wish to say is that I think it is entirely proper that the Senate now pass upon the nomination of Mr. Gilbert. I hope the Senate will overwhelmingly approve him.

I realize that there is some difference of opinion about our present tariff policies. All of us have interests in our own States which conflict even within individual States. Certainly there is a conflict among the various States.

In my own State there is a degree of difference of view between the export segment of our economy, such as cotton, soybeans, and poultry producers.

I believe that it is in the interest of certainly a majority of the people in my State and in this country that we keep a high degree of freedom of trade. I realize that there are certain special situations that need special attention. I would not for a moment pretend that there is never a situation which does not warrant special attention. However, in general, I think the country has prospered and that we have done much better in a period of relatively free trade.

I am always apprehensive of the return to the principles of Smoot-Hawley following World War I, or not long preceding the great depression of the early 1930's.

I would hope that the Senate would endorse Mr. Gilbert, who, I believe, shares the views that, on balance, it is best for the industries of our country to maintain a relatively free trade, always acknowledging that there may be special cases.

I am very pleased, in any case, to support the nomination.

Mr. BYRD of West Virginia. Mr. President, several Senators must attend committee meetings at 2 o'clock. There has been considerable discussion on the nomination. If no other Senators wish to address their remarks to the nomination, I ask at this time that the Chair put the question.

The PRESIDING OFFICER. All time having expired, the question is, Will the Senate advise and consent to the nomination of Carl J. Gilbert, of Massachusetts, to be Special Representative for Trade Negotiations? On this question the yeas and nays have been ordered, and the clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. DIRKSEN (when his name was called). On this vote I have a pair with the distinguished Senator from Alaska (Mr. STEVENS). If he were present, he would vote "yea." If I were permitted to vote, I would vote "nay." Therefore, I withhold my vote.

Mr. BENNETT (after having voted in the negative). On this vote I have a pair with the senior Senator from Kentucky (Mr. COOPER). If he were present, he would vote "yea." If I were permitted to vote, I would vote "nay." I therefore withdraw my vote.

The bill clerk resumed and concluded the call of the roll.

Mr. BYRD of West Virginia. I announce that the Senator from Massachusetts (Mr. KENNEDY), the Senator from Utah (Mr. MOSS), and the Senator from Maryland (Mr. TYDINGS) are necessarily absent.

Mr. SCOTT. I announce that the Senator from Oklahoma (Mr. BELLMON) and the Senator from Alaska (Mr. STEVENS) are absent on official business.

The Senator from Maryland (Mr. MATHIAS) is necessarily absent to attend the funeral of a friend.

The Senator from Kentucky (Mr. COOPER) is detained on official business.

If present and voting, the Senator from Oklahoma (Mr. BELLMON), and the Senator from Maryland (Mr. MATHIAS) would each vote "yea."

The position of the Senator from Utah (Mr. BENNETT), the Senator from Kentucky (Mr. COOPER), the Senator from Illinois (Mr. DIRKSEN), and the Senator from Alaska (Mr. STEVENS) have been previously announced.

The result was announced—yeas 61, nays 30, as follows:

[No. 58 Ex.]

YEAS—61

Aiken	Gore	Miller
Allott	Gravel	Mondale
Anderson	Griffin	Montoya
Baker	Harris	Mundt
Bayh	Hart	Murphy
Boggs	Hartke	Nelson
Brooke	Hatfield	Packwood
Burdick	Hruska	Pearson
Byrd, Va.	Hughes	Percy
Cannon	Inouye	Proxmire
Case	Jackson	Ribicoff
Church	Javits	Schweiker
Cranston	Jordan, N.C.	Spong
Curtis	Jordan, Idaho	Symington
Dodd	Long	Williams, N.J.
Dominick	Magnuson	Williams, Del.
Eagleton	Mansfield	Yarborough
Ellender	McCarthy	Young, N. Dak.
Fong	McGee	Young, Ohio

PRESENT AND GIVING LIVE PAIRS, AS PREVIOUSLY RECORDED—2

Dirksen, against.
Bennett, against.

NOT VOTING—7

Bellmon	Mathias	Tydings
Cooper	Moss	
Kennedy	Stevens	

So the nomination was confirmed.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of this nomination.

The PRESIDING OFFICER. Without

objection, the President will be notified forthwith.

Mr. PELL subsequently said: Mr. President, it was with the greatest of reluctance that I cast my vote against the nomination of Mr. Gilbert. I would not have done so if he were being nominated for any other position within the gift of the executive branch of our Government, because he is a man of singular intelligence, integrity, and ability.

However, the welfare of the textile industry is of particular importance to my own State, and that welfare depends in great part, upon the necessity for quotas on our imports of textile goods. Mr. Gilbert is opposed to quotas, and for that reason would be in a difficult position in working out and negotiating arrangements favorable to the textile interests of our area.

I hope, though, that at a later day I may have the opportunity to vote for the confirmation of Mr. Gilbert for any other job not directly related to this question of quotas.

LEGISLATIVE SESSION

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate resume the consideration of legislative business.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The PRESIDING OFFICER. The Chair lays before the Senate the unfinished business, which the clerk will state.

The LEGISLATIVE CLERK. S. 2546, to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

The PRESIDING OFFICER. Pursuant to the previous order, the Senate will now proceed for a period of 30 minutes to the transaction of routine morning business, with statements therein limited to 3 minutes.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following letters, which were referred as indicated:

PROPOSED WATER USER ACT OF 1969

A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to provide for the imposition of waterway user charges and for other purposes (with accompanying papers); to the Committee on Finance.

PROPOSED HIGHWAY USER ACT OF 1969

A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to provide additional revenues for the Highway Trust Fund and for other purposes (with accompanying papers); to the Committee on Finance.

REPORT OF THE COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the costs incurred to preserve the Columbia River Basin as a source of salmon and steelhead trout, dated July 29, 1969 (with an accompanying report); to the Committee on Government Operations.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

A resolution adopted by the Rockland County Board of Supervisors, New City, N.Y., praying for the continuance of tax exemption of bonds of local governments; to the Committee on Finance.

A letter, in the nature of a petition, from Francis L. and Lucile P. Cavendar, of Attleboro, Mass., expressing the hope that the recent accident will not adversely reflect upon Senator EDWARD KENNEDY, personally or professionally; to the Committee on Rules and Administration.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. SPARKMAN, from the Committee on Banking and Currency, with amendments:

S.J. Res. 140. Joint resolution to provide for the striking of medals in honor of American astronauts who have flown in outer space (Rept. No. 91-337).

By Mr. FULBRIGHT, from the Committee on Foreign Relations, with amendments:

S. Res. 205. Resolution to set forth as an expression of the sense of the Senate a basic principle regarding the recognition by the United States of foreign governments (Rept. No. 91-338).

Mr. BYRD of West Virginia subsequently said: Mr. President, I ask unanimous consent that the report on Senate Resolution 205, filed earlier today by the Senator from Arkansas (Mr. FULBRIGHT), from the Committee on Foreign Relations, be printed, together with individual views.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE REPORTS OF A COMMITTEE

As in executive session, the following favorable reports of nominations were submitted:

By Mr. FULBRIGHT, from the Committee on Foreign Relations:

I. W. Abel, of Pennsylvania, Harold Brown, of California, William J. Casey, of New York, Douglas Dillon, of New Jersey, William C. Foster, of the District of Columbia, Kermit Gordon, of the District of Columbia, James R. Killian, Jr., of Massachusetts, John J. McCloy, of New York, Lauris Norstad, of Ohio, Peter G. Peterson, of Illinois, J. P. Ruina, of Massachusetts, Dean Rusk, of the District of Columbia, William W. Scranton, of Pennsylvania, Cyrus Roberts Vance, of New York, and John Archibald Wheeler, of New Jersey, to be members of the General Advisory Committee of the U.S. Arms Control and Disarmament Agency; and

Kenneth Franzheim II, of Texas, to be Ambassador Extraordinary and Plenipotentiary to New Zealand.

AUTHORIZATION FOR PERMANENT SUBCOMMITTEE ON INVESTIGATIONS TO FILE REPORTS

Mr. BYRD of West Virginia. Mr. President, at the request of the Senator from Arkansas (Mr. MCCLELLAN), I ask unanimous consent that the Committee on Government Operations have until November 30, 1969, to file reports of its Permanent Subcommittee on Investigations. These reports are as follows:

"Riots, Civil, and Criminal Disorders in Houston, Tex., and Nashville, Tenn";

"Riots, Civil, and Criminal Disorders in Plainfield, N.J.";

"Riots, Civil, and Criminal Disorders in Detroit, Mich.";

"Riots, Civil, and Criminal Disorders in Newark, N.J.";

"Riots, Civil, and Criminal Disorders, OEO Grant to the Woodlawn Organization, Chicago, Ill."; and

"Riots, Civil, and Criminal Disorders, OEO Grant to Wilmington Youth Emergency Action Council, Wilmington, Del."

The PRESIDING OFFICER. Without objection, it is so ordered.

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. MONDALE:

S. 2715. A bill for the relief of Dr. Venancio Tiu Jo; to the Committee on the Judiciary.

By Mr. SCOTT:

S. 2716. A bill providing for a study of serious interruptions of certain essential services; to the Committee on Commerce.

(The remarks of Mr. SCOTT when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. ERVIN:

S. 2717. A bill to amend title II of the Social Security Act so as to permit certain additional individuals who become disabled prior to attaining age 31 to become entitled to disability insurance benefits; to the Committee on Finance.

By Mr. BENNETT (for himself, Mr. ALLEN, Mr. ALLOTT, Mr. BYRD of West Virginia, Mr. BURDICK, Mr. CANNON, Mr. CHURCH, Mr. COOK, Mr. COTTON, Mr. CURTIS, Mr. DOLE, Mr. DOMINICK, Mr. EASTLAND, Mr. ERVIN, Mr. FANNIN, Mr. GOLDWATER, Mr. GRAVEL, Mr. HANSEN, Mr. HARRIS, Mr. HRUSKA, Mr. JORDAN of Idaho, Mr. MANSFIELD, Mr. MCGEE, Mr. METCALF, Mr. MOSS, Mr. MUNDT, Mr. MURPHY, Mr. PACKWOOD, Mr. PEARSON, Mr. PROXMIRE, Mr. SAXBE, Mr. SCHWEIKER, Mr. SCOTT, Mr. SPARKMAN, Mr. STEVENS, Mr. TALMADGE, Mr. THURMOND, Mr. TOWER, and Mr. YOUNG of North Dakota):

S. 2718. A bill to modify ammunition recordkeeping requirements; to the Committee on Finance, by unanimous consent.

(The remarks of Mr. BENNETT when he

introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. TOWER:

S. 2719. A bill to prohibit the sending of certain unsolicited merchandise through the mail and to authorize treble-damage suits for injuries caused by such merchandise which is potentially harmful and unpurchased; to the Committee on Post Office and Civil Service.

(The remarks of Mr. TOWER when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. MURPHY (for himself, Mr. FANNIN, and Mr. GOLDWATER):

S. 2720. A bill to place additional restrictions on the political activities of members and commissioners of certain Federal agencies; to the Committee on Rules and Administration.

(The remarks by Mr. MURPHY when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. JAVITS (for himself, Mr. PROUTY, Mr. BELLMON, Mr. DOMINICK, Mr. MURPHY, and Mr. SCHWEIKER):

S. 2721. A bill to amend the Higher Education Act of 1965 to authorize Federal incentive payments to lenders with respect to insured student loans when necessary, in the light of economic conditions, in order to assure that students will have reasonable access to such loans for financing their education; to the Committee on Labor and Public Welfare.

(The remarks of Mr. JAVITS. when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. NELSON:

S. 2722. A bill to amend title II of the Social Security Act to provide a general increase of 25 percent in the amount of the benefits payable thereunder (with a minimum old-age benefit of $100), to provide for cost-of-living increases in such benefits in the future, to increase the amounts individuals may earn without suffering deductions from such benefits, and to amend title XVIII of such Act so as to include eye care, dental care, hearing aids, and routine physical examinations within the services covered by the insurance program established by part B of such title, and for other purposes; to the Committee on Finance.

(The remarks of Mr. NELSON when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. FONG:

S. 2723. A bill for the relief of Hermogenes Lucuesta Rana;

S. 2724. A bill for the relief of Estrella Baysa Garcia;

S. 2725. A bill for the relief of Burgos Jose Maglay; and

S. 2726. A bill for the relief of Ming Kam; to the Committee on the Judiciary.

By Mr. MILLER:

S. 2727. A bill to provide for the sharing of Federal tax receipts with the States and their political subdivisions for purposes of education; to the Committee on Finance.

(The remarks of Mr. MILLER when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. ALLOTT (for himself and Mr. DOMINICK):

S. 2728. A bill for the relief of James E. Fry, Jr., and Margaret E. Fry; to the Committee on the Judiciary.

S. 2716—INTRODUCTION OF A BILL PROVIDING FOR A STUDY OF SERIOUS INTERRUPTIONS OF CERTAIN ESSENTIAL SERVICES

Mr. SCOTT. Mr. President, I introduce, for appropriate reference, a bill providing for a thorough independent investigation of the causes and effects of electric power failure resulting from storms, severe or prolonged adverse weather conditions on transportation and other essential public services. Under my bill, the Director of the Office of Emergency Preparedness would be required to submit the results of his study to Congress within 1 year from the date of enactment together with any recommendations minimizing the adverse effects of electric power failures.

The introduction of my bill is prompted by the recent power shortage which nearly crippled the Northeast United States, as has happened at least twice in the past few years. We all well remember how New York, our Nation's largest city, was brought to a standstill a few years ago. I recall how millions of Americans, of whom I was one, groped about, flashlights in hand, in search of their cars, their homes, and their dinners. The New York blackout occurred in the cool autumn, not in the oppressive heat of summer when air conditioning is draining additional amounts of electric power. With the hottest period of this year still ahead of us, and already with one crisis just barely averted, we seem to be facing the real possibility of another blackout.

It should be noted that I introduced bills similar to the one which I am introducing today, following major blackouts, in both the 89th and 90th Congresses, but that no action was taken. With no pun intended, I would hope that in the light of recent events, my bill will now be considered favorably.

This month's power crisis was averted by prompt action of 12 major utility companies in four States, comprising one of the Nation's largest power combines. These companies were forced to appeal to their own customers to curtail the use of electricity to "avoid any widespread power failure." The four States involved, Pennsylvania, New Jersey, Maryland, and Delaware, represent approximately 20 million people, or one-tenth of our Nation's population. Officials of the Pennsylvania-New Jersey-Maryland interconnection, the power pool, said that the "potential emergency" this month existed due to the combined effect of very hot, humid weather and an "unexpected loss of generating capacity due to equipment failures."

Although it is an isolated example, I am aware of at least one instance of such equipment failure in my own Commonwealth of Pennsylvania. According to press reports, there is a malfunctioning at the Keystone Mine-Mouth generating plant near Johnstown, Pa. The plant, which normally puts out 1.8 million kilowatts, was down to only 650,000 when the emergency occurred. One of two generating units, which normally produce 900,000 kilowatts each, was shut down by mechanical failure on June 28. Since then, malfunction in the other unit has reduced its production to 650,000 kilowatts. If these reports are accurate, then we can ill afford to continue operating as we have in the past.

Mr. President, the recent power shortage underscores the great need for an in-depth look at the power setup which we utilize 24 hours a day. We must develop ways and means to avert the type of crisis which once again nearly caused us tremendous disruption. The study proposed in my bill should help in designing the framework necessary for an orderly approach to solving the problem, and I urge its prompt enactment.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2716) providing for a study of serious interruptions of certain essential services, introduced by Mr. SCOTT, was received, read twice by its title, and referred to the Committee on Commerce.

S. 2718—INTRODUCTION OF A BILL FOR REPEAL OF AMMUNITION REGISTRATION

Mr. BENNETT. Mr. President, I rise on behalf of myself and several other Senators to introduce a new ammunition bill. This is a slightly modified version of my previous bill, S. 845.

I should like to explain to the Senate the purpose for this new legislation.

It has been made quite clear to me that the House Judiciary Committee has no intention of considering and reporting any firearms or ammunition legislation in the 91st Congress. Consequently, in the end it would be a futile effort to have the bill reported by the Senate Judiciary Committee only to have it die in committee on the House side. The American sportsman deserves to have this legislation enacted. I feel an obligation, therefore, to the legitimate sportsman and gunowner who buys ammunition and to the 39 cosponsors of S. 845 to find a way to pass this bill.

I believe that I have accomplished this by redrafting the bill to amend section 4182 of title 26 of the United States Code which deals with firearms recordkeeping under the internal revenue part of the Code. This redrafting was accomplished with the full cooperation and support of the Treasury. By amending section 4182, which covers the recordkeeping responsibilities of the Alcohol, Tobacco, and Firearms Division in the Internal Revenue Service, it is entirely logical and reasonable to have this bill referred to the Senate Finance Committee.

The bill as written does precisely the same thing as did S. 845. It simply removes the recordkeeping requirements of the 1968 Gun Control Act with regard to ammunition. Of course, when this is done, the regulations drawn up by the Treasury Department in 1968 will also be abolished. These regulations, which require nine separate pieces of information, are nothing more than backdoor registration.

Under the Gun Control Act of 1968, the Secretary is required to record the name, age, and address of a person buying any type of ammunition. But, as the regulations came from the Treasury last year, a person is now required to give his name, address, date of birth, date, manufacture, caliber, gage or type of component, quantity of ammunition purchased and a driver's license or other type of identification. I do not feel from my reading of the act or the debate, that Congress intended such a procedure.

Now after administering that act for some 8 months, the Treasury is quite convinced that registration of persons buying shotgun, rifle, .22 caliber rimfire ammunition and component parts of the same types of shells is unnecessary and unrealistic.

I should point out that this bill, as did S. 845, will not eliminate registration requirements on the purchase of most handgun ammunition. The ammunition it deals with is the type used mostly in sporting types of firearms.

I also feel this bill should be enacted before the 1969 fall hunting season begins. Many of our sportsmen have not yet undergone the experience of purchasing ammunition under the present law, I predict that if we do not enact this before the fall season begins, we will hear from the law abiding, legitimate gunowners as never before.

I wish to express my thanks to the distinguished chairman of the Juvenile Delinquency Subcommittee who most graciously withheld consideration of S. 845 in the hearings which began last week. He has been most cooperative.

The following Senators have joined me in cosponsoring this new legislation:

Senators JAMES B. ALLEN, Democrat of Alabama; GORDON ALLOTT, Republican of Colorado; ROBERT C. BYRD, Democrat of West Virginia; QUENTIN BURDICK, Democrat of North Dakota; HOWARD CANNON, Democrat of Nevada; FRANK CHURCH, Democrat of Idaho, MARLOW COOK, Republican of Kentucky; NORRIS COTTON, Republican of New Hampshire; CARL CURTIS, Republican of Nebraska; ROBERT DOLE, Republican of Kansas; PETER DOMINICK, Republican of Colorado; JAMES O. EASTLAND, Democrat of Mississippi; SAM J. ERVIN, JR., Democrat of North Carolina; PAUL J. FANNIN, Republican of Arizona; BARRY M. GOLDWATER, Republican of Arizona; MIKE GRAVEL, Democrat of Alaska; CLIFFORD P. HANSEN, Republican of Wyoming; FRED R. HARRIS, Democrat of Oklahoma; ROMAN L. HRUSKA, Republican of Nebraska.

Also Senators LEN JORDAN, Republican of Idaho; MIKE MANSFIELD, Democrat of Montana; GALE W. McGEE, Democrat of Wyoming; LEE METCALF, Democrat of Montana; FRANK E. MOSS, Democrat of Utah; KARL E. MUNDT, Republican of South Dakota; GEORGE MURPHY, Republican of California; ROBERT PACKWOOD, Republican of Oregon; JAMES O. PEARSON, Republican of Kansas; WILLIAM PROXMIRE, Democrat of Wisconsin; WILLIAM B. SAXBE, Republican of Ohio; RICHARD SCHWEIKER, Republican of Pennsylvania; HUGH SCOTT, Republican of Pennsylvania; JOHN SPARKMAN, Democrat of Alabama; TED STEVENS, Republican of Alaska; HERMAN TALMADGE, Democrat of Georgia; STROM THURMOND, Republican of South Carolina; JOHN G. TOWER, Republican of Texas; MILTON R. YOUNG, Republican of North Dakota.

Mr. President, I ask unanimous consent that since this bill amends the Internal Revenue Code, it be referred to the Committee on Finance.

The PRESIDING OFFICER. The bill will be received and referred to the Committee on Finance, as requested.

The bill (S. 2718) to modify ammunition recordkeeping requirements, introduced by Mr. BENNETT (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Finance, by unanimous consent.

Mr. SCHWEIKER. Mr. President, I should like to congratulate the Senator from Utah on his worthwhile statement, and offer my strong support for his efforts to modify ammunition recordkeeping requirements.

I have been opposed to those gun control measures which have the sole effect of imposing burdensome requirements on sportsmen and other law-abiding citizens, but which have no effect on criminals, and do not serve to deter crimes. The existing ammunition reporting requirements are in this category, and I feel it is our duty to modify them.

This bill, by exempting shotgun shells, .22-caliber rimfire ammunition, and metallic ammunition suitable for use only in rifles, would relieve the buyers of these kinds of ammunition from the burdensome Internal Revenue Service reporting regulations, which I feel are beyond congressional intent when it passed the 1968 law.

Under the existing definition of "ammunition" records are required, even in routine sales of ammunition to law-abiding hunters and sportsmen, of the date of sale, the manufacturer and caliber of the ammunition, and the buyer's name, address and birth date. The buyer must also furnish a means of identification, such as driver's license, in order to buy his ammunition.

In addition, it is interesting to note that sportsmen, not criminals, load their own shells, yet under the current definitions sales of components to reload shells must be registered. This is bureaucratic paperwork at its worst, and I have asked Senator BENNETT to include the exemption of component parts in the amendment.

These paperwork requirements to buy a box of shells are an example of unnecessary bureaucratic excess. But more important, they are totally ineffective in terms of the purpose of the 1968 act; the control of crime and criminals. By removing rifle and shotgun ammunition from these paperwork requirements, we do not weaken the drive against crime in any way, but we do remove unnecessary and inefficient inconveniences from law-abiding citizens.

For instance, worthwhile measures which do deter crime are those which impose mandatory additional prison sentences for crimes committed while possessing or using firearms. I support these proposals, which can work, just as I oppose the inclusion of ammunition reporting requirements, which have no effect on crime.

Administrative complaints have not succeeded in clarifying the Internal Revenue Service regulations, and I therefore urge passage of Senator BENNETT'S bill to remedy these excessive procedures.

Mr. SAXBE. Mr. President, I think of this particularly in terms of its effect upon those who are trapshooters and skeetshooters and the difficulties which have come about through this law and the interpretations which have been changed several times.

This is a large and growing sport. A high percentage of these sportsmen load their own ammunition. They save the shells and buy simple components.

By forcing them into this intricate paperwork, and by making it difficult for gun clubs to acquire and dispense the ammunition on their grounds, they have discouraged a sport which has been one of the outstanding American sports to grow in this century.

I believe that, rather than discouraging these people, they should be encouraged. This bill, I believe, will go a long way toward encouraging them.

S. 2719—INTRODUCTION OF A BILL TO PROHIBIT THE SENDING OF CERTAIN UNSOLICITED MERCHANDISE THROUGH THE MAIL

Mr. TOWER. Mr. President, I am introducing today a bill that would prohibit the sending of certain unsolicited merchandise through the mail and authorize suit for triple damages for injuries sustained as a result of violation of this act. I am proposing this measure today because I have become increasingly aware of the need for a clarification of the consumers' rights and responsibilities in this area.

I became aware of this problem as a result of complaints from my constituents, and on further investigation, I began to see the need for legislation. At present there is no uniform law setting down the rights and responsibilities of the consumer with regard to the receipt of unwanted and unsolicited merchandise. Not knowing what is required of him, the consumer sometimes becomes obligated eventually to purchase merchandise which was never desired. This is because, many times, the burden is on the recipient to return the merchandise within a specified period of time in order to escape being billed. It may happen that the recipient inadvertently uses the merchandise, mistaking it for a sample, finding out only too late that he has obligated himself to purchase it. One would suspect that this would hit especially hard with respect to the poor, who are less informed with regard to legalities, and less able to pay. Mrs. Irma Angevine of the Consumer Federation of America, in response to my inquiries, indicated that, in her opinion, legislation would be very helpful. She stated that the problem was mentioned frequently in letters from consumers, and in question-and-answer sessions in her travels around the country. The Post Office Department also indicated that the problem would seem to be quite significant, if complaints and congressional inquiries are any indication.

My legislation would seek to relieve this situation by shifting the burden of action away from the consumer. The bill would prohibit the Postmaster General from delivering merchandise offered for sale, unless such merchandise is sent at the request of the addressee. Merchandise sent by nonprofit organizations exempt from taxation under section 501(a) of the Internal Revenue Code of 1954 would not be restricted by the provisions

of this bill. In addition to prohibiting the mailing of such merchandise, my bill would authorize suit for triple damages for injuries resulting from potentially harmful merchandise which has been transmitted through the mail in violation of this act, and which has not been purchased by the addressee. I include this provision to provide some relief for accidents which may occur when children come into contact with drugs, pesticides, and razor blades transmitted through the mail in violation of this act.

Mr. President, I feel that this legislation would be beneficial to all Americans. It would remove the burden of proof from the consumer, and hopefully avert some of the accidents involving potentially harmful products.

Mr. President, I ask that the text of this bill be printed in the RECORD at this point.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2719) to prohibit the sending of certain unsolicited merchandise through the mail and to authorize treble-damage suits for injuries caused by such merchandise which is potentially harmful and unpurchased, introduced by Mr. TOWER, was received, read twice by its title, referred to the Committee on Post Office and Civil Service, and ordered to be printed in the RECORD, as follows:

S. 2719

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) chapter 51 of title 39, United States Code, is amended by adding at the end thereof the following new section:

"§ 4011. UNSOLICITED MERCHANDISE

"(a) Merchandise offered for sale through the mail is nonmailable matter, shall not be carried or delivered by mail, and shall be disposed of as the Postmaster General directs, unless—

"(1) such merchandise is sent at the request or upon the authorization of the addressee; or

"(2) such merchandise is sent by an organization which is exempt from taxation under section 501(a) of the Internal Revenue Code of 1954.

"(b) If any person is injured, or his property is damaged, as the result of potentially harmful merchandise which (1) has been transmitted through the mails in violation of subsection (a) of this section, and (2) has not been purchased by such person, he may commence a civil action in a district court of the United States against any person who caused such merchandise to be mailed. The civil action may be brought, without regard to the amount in controversy, in any judicial district in which the defendant resides, is found, has an agent, maintains a place of business, or in which such merchandise has been received. The person may recover in any such action three times the damages sustained by him, together with the cost of the suit and any expenses, including loss of earnings and reasonable attorney fees, incurred as a result of the prosecution of such suit."

(b) The analysis of chapter 51 of such title, immediately preceding section 4001, is amended by adding at the end thereof the following new item:

"4011. Unsolicited merchandise.".

SEC. 2. (a) Chapter 83 of title 18, United States Code, is amended by adding at the end thereof the following new section:

"§ 1735. UNSOLICITED MERCHANDISE

"Whoever knowingly deposits for mailing or delivery, or knowingly causes to be delivered by mail according to the direction thereon, any matter declared to be nonmailable under section 4011 of title 39, shall be fined a sum not to exceed $50 for each such violation, each mailing constituting a separate violation."

(b) The analysis of chapter 83 of such title, immediately preceding section 1691, is amended by adding at the end thereof the following new item:

"1735. Unsolicited merchandise."

S. 2720—INTRODUCTION OF A BILL TO PLACE ADDITIONAL RESTRICTIONS ON THE POLITICAL ACTIVITIES OF MEMBERS AND COMMISSIONERS OF CERTAIN FEDERAL AGENCIES

Mr. MURPHY. Mr. President, I introduce a bill and ask that it be appropriately referred. This measure would extend present prohibitions on political activity to the heads of the Federal Government's major regulatory agencies and the Civil Service Commission. My bill would extend existing laws' prohibitions on political activity to the following Federal agencies: the Atomic Energy Commission, the Board of Governors of the Federal Reserve System, the Civil Aeronautics Board, the Federal Home Loan Bank Board, and the National Labor Relations Board, the Federal Communications Commission, the Federal Maritime Commission, the Federal Power Commission, the Federal Trade Commission, the Interstate Commerce Commission, and the Securities and Exchange Commission.

Mr. President, the regulatory process and the regulatory agencies are an important part of our Government. Decisions rendered, regulations promulgated, and actions taken impinge on the daily life of every American. A decision to buy a television set, ride on a train or a plane, buy or sell common stock, make a telephone call, borrow or lend money, hire or fire an employee—all these and many more activities are affected to some degree by the actions of the regulatory agencies of the Government.

Shortly after assuming office in 1961, former President John Kennedy said of the regulatory agencies:

> The responsibilities with which they have been entrusted permeate every sphere and almost every activity of our national life. Whether it be transportation, communications, the development of our natural resources, the handling of labor-management relationships, the elimination of unfair trade practices, or the flow of capital investment—to take only a few examples—these agencies and their performance have a profound effect upon the direction and pace of our economic growth.

Under title V, section 7324 of the United States Code, Federal employees of executive agencies are prohibited from, first, using official authority or influence for the purpose of interfering with or effecting the result of an election or second, taking an active part in political management or in political campaigns. Subsection (d)(3) of this section provides an exception from taking an active part in the political management or in political campaigns prohibition for those appointed by the President with the advice and consent of the Senate. My bill would remove this exemption and thus prohibit partisan political management and campaigning by members of certain Federal boards and independent commissions.

Also, my bill would amend section 7323 of title V of the United States Code, which prohibits political contributions. The section provides that an "employee in an executive agency may not request or receive from, or give to, an employee, a Member of Congress, or an officer of a uniformed service a thing of value for political purposes." As is the case under section 7324, there is an exemption from this prohibition for one appointed by the President with the advice and consent of the Senate. My bill would eliminate the exemption for the major regulatory agencies previously mentioned and the Civil Service Commission. There is a comparable criminal provision in section 602 of title XVIII of the United States Code and there are no exceptions; however, this criminal provision covers only soliciting or receiving things of value, and it does not apply to giving. Therefore, it would be possible for a member of the regulatory agencies or the Civil Service Commissioner to give a political contribution to a Member of Congress.

Hence, there is a need for extending the prohibition on giving to the heads of regulatory agencies and the Civil Service Commissioner, and by removing the exemption of section 7323 for these agencies my bill does just that.

Upon reexamination of these exceptions from the political activity restrictions for persons appointed by the President with the consent of the Senate, I believe it is clear that the exemption for heads of regulatory agencies does not meet the rationale and purpose of the exemption. The exemption was put in the act in recognition that certain individuals who are in top policymaking positions and who are required to answer for the administration must of necessity be allowed to identify with and support the administration in power. But it is clear to me, Mr. President, that the heads of regulatory agencies, to whom my amendment would extend the prohibition or political activity restriction, are not in political positions. These individuals have tremendous power. They exercise quasi-judicial powers. They are not supposed to be answerable to the administration in power. They are not responsible for the formulation and execution of administration policy. Their task is to carry out the policy pursuant to the various statutes enacted by the Congress. In administering these laws, they decide cases and issues that have a tremendous influence on the lives of each of our citizens. Certainly, when one considers the great social and economic impact of decisions made by the regulatory agencies, the general public has every reason to demand—and my amendment helps provide—political neutrality in the exercise of their duty.

While I would be the first to admit, Mr. President, there has been overall little abuse in this area, nevertheless one

can recall the adverse publicity and reaction that resulted during the last Congress when the former head of the Civil Service Commission, Chairman Macy, participated in party fund-raising activities. In my judgment, it was particularly unwise and unfortunate for the chairman of the Federal agency responsible for the administering of Federal laws designed to prevent pernicious political activity of public employees to actively eject himself into partisan activities. The Civil Service Commission is charged with the responsibility of administering Federal laws deemed necessary to maintain an impartial and efficient civil service. I would observe, Mr. President, that my bill would extend the political restrictions to the major regulatory agencies, including the Civil Service Commission. The bill further provides that where the Civil Service Commissioner is involved in a violation, the Justice Department will act as the enforcement agency.

Also, Mr. President, my bill would amend section 7323 of title V so as to cure a present defect. This section, originally enacted in 1876, requires the removal of an employee violating its provisions, but it does not give a particular agency enforcement responsibility. My bill would assign enforcement responsibility to the Civil Service Commission. Finally, my bill would amend the penalty provision of section 7323 of title V of the United States Code to provide a range of penalties, instead of the sole penalty of dismissal as provided in section 7325 of title V of the United States Code.

Mr. President, this bill is very consistent with past efforts of mine. Where there is abuse or great potential for abuse, and there is in this instance, I have attempted to make certain that politics are removed from the programs. For example, when the President early this year announced that he planned to eliminate politics from the Post Office Department, I immediately issued a statement applauding his action. I ask unanimous consent that this statement be inserted at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

In addition, I led the effort beginning in 1965 to remove politics from the poverty program. As ranking Republican on the Senate Labor and Public Welfare Subcommittee on Employment, Manpower, and Poverty, I am convinced that these amendments have had a salutary effect on the program and are helping to assure that the funds are being used for the program's intended beneficiaries and not for political purposes.

Mr. President, because this bill makes good sense and because it deals with an area where abuse has occurred and where the potential for abuse is even greater, I urge that the Senate Post Office and Civil Service Committee give the bill its most careful consideration. The bill is most consistent with the administration's announcements and actions toward improving Government and restoring the people's confidence and faith in our governing institutions. I am optimistic that the measure will receive the administration's endorsement.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2720) to place additional restrictions on the political activities of members and commissioners of certain Federal agencies, introduced by Mr. MURPHY (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Rules and Administration.

The statement, presented by Mr. MURPHY, is as follows:

EXHIBIT 1

WASHINGTON.—Senator George Murphy (R. Calif.), who in the 90th Congress led a successful effort to eliminate politics from the poverty program, today praised President Nixon's decision to take politics out of the Post Office Department.

"Ability, not party affiliation, must be the test of employment," Murphy said. "In the past, the party out of power has frequently urged the elimination of the 'spoils system' in the postal system. Already this patronage system has cost the taxpayers far too many dollars.

"Last year I supported a Republican amendment to the Legislative Reorganization Act which would have removed patronage from the Post Office. Although the amendment passed the Senate, the measure died when the House failed to take action prior to adjournment. By his decision, President Nixon demonstrated that performance, not promises, will be the hallmark of the Republican Administration."

Murphy said that hardly a day goes by in his office when he does not receive a complaint regarding the postal system. "There is general realization that the Post Office Department must be made to operate on a more businesslike and efficient basis. No business could survive which perpetuated a patronage system such as has existed in the Post Office Department since the days of Ben Franklin. A successful business must judge its employees on ability and performance, and so must the government," he said.

"This courageous political decision by President Nixon and Postmaster General Blount is in the best interests of the Nation, of postal efficiency, and of postal employees. I feel confident it will provide the bases for markedly superior postal service," Murphy concluded.

S. 2721—INTRODUCTION OF A BILL TO INSURE CONTINUATION OF GUARANTEED STUDENT LOANS

Mr. JAVITS. Mr. President, I introduce, for myself and Senators PROUTY, BELLMON, DOMINICK, MURPHY and SCHWEIKER, the Insured Student Loan Emergency Amendments of 1969. This is an administration bill.

As a result of soaring interest rates and the tight money market, an estimated one-third of the students seeking guaranteed loans in order to enter college this fall are being rejected. This measure seeks to forestall the crisis which these young people are facing as they make plans to return to college in a month or two. Because of the emergency situation, I intend to work for Senate action prior to the congressional recess. Hearings are already under way in the House.

This measure would permit the Secretary of Health, Education, and Welfare, after consultation with the Secretary of the Treasury, to prescribe an incentive allowance to be paid by the Government to eligible lenders whenever the statutory interest limitation of 7 percent—or current economic conditions—deter eligible lenders from making student loans. This Federal incentive payment may not exceed 3 percent per annum and rates may differ geographically. The amount of the incentive allowance is a percentage of the principal balance of all outstanding student loans disbursed by the lender on or after July 1, 1969. There is no additional cost to the student. The estimated Federal cost for fiscal year 1970 is between $5 million and $7 million. However, additional appropriations would not be required because of the availability of carryover funds from fiscal year 1969.

Last year alone more than 730,000 students obtained some $670 million in guaranteed loans and, as tuition costs and college enrollment increase, many more young people are expected to apply for the fall semester. The cost of attending college is now the second largest expenditure that a family can undertake—greater than the cost of a car which formerly held second place. Unlike the cost of a home—the largest expenditure—which can be spread over a long period of time, it falls due in a period of only 4 or 5 years. Thus, it is quite often necessary for this money to be borrowed. And, considering that college graduates earn at least $150,000 more during their lifetime than nongraduates, this loan is a wise investment in the future.

The law sets a 7-percent interest limit on guaranteed student loans. This rate is not competitive with other personal loans in the financial marketplace. Many lenders have informed the U.S. Office of Education that their activity at the 7 percent rate must either be halted entirely or restricted to children of favored customers.

The incentive grant approach which I propose has a number of advantages. As monetary conditions improve, the incentive payment may be adjusted accordingly, thus avoiding both the student and the Government being committed to artifically high interest rates. This plan will provide the immediate improvement required to get guaranteed loans flowing once more. It reflects current money market conditions. It is easier to revise downward than fixed interest rates. It avoids conflict with State usury laws and the fixed ceilings established by law in some State guarantee programs, as is the case in New York State. It is simple to administer. It is the least expensive solution to a nettling problem for, as money market conditions improve, the Federal Government is not committed to payment of inordinately high interest costs over a number of years. And, finally, costs are not increased to the student borrower, most of whom come from low- and moderate-income families.

I ask unanimous consent that a brief-

ing memorandum furnished me by the Department of Health, Education, and Welfare, be included as a part of my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the memorandum will be printed in the RECORD.

The bill (S. 2721) to amend the Higher Education Act of 1965 to authorize Federal incentive payments to lenders with respect to insured student loans when necessary, in the light of economic conditions, in order to assure that students will have reasonable access to such loans for financing their education, introduced by Mr. JAVITS, for himself and other Senators, was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

The material furnished by Mr. JAVITS is as follows:

INSURED STUDENT LOAN EMERGENCY AMENDMENTS OF 1969

BRIEFING MEMORANDUM

This legislation permits an incentive allowance payable to eligible lenders whenever the Secretary of HEW determines that statutory interest limitations or other current economic conditions deter these lenders in making student loans. The amount of the incentive allowance is a percentage of the principal balances of all outstanding loans disbursed by the lender on or after July 1, 1969. The percentage (if any) may not exceed three percent per annum, it must be prescribed each six months by regulation, and the amount determined is payable after each such period.

When making the determination of the percentage, the Secretary may, at his discretion, set differing rates on an appropriate geographical basis or according to classification of the lender.

The Act is effective as of July 1, 1969.

Question. What kind of precedent does the "incentive allowance" proposal establish for other loan programs?

Answer. None, because this program in itself is not similar to any other program. In other words, this is a unique approach for a unique program to the problem of providing appropriate flexibility in the rate of return to lenders. One of the significant differences in the Guaranteed Student Program is that the Federal Government pays directly to the participating lender a portion of the interest on behalf of eligible student borrowers. In addition, the lender is "locked into" a long period of deferred repayment at a minimum fixed rate of interest. During this period, market conditions frequently change, and lenders develop liquidity problems which are not subject to the usual secondary market forms of relief. It should also be noted that under other federally sponsored programs there is a greater flexibility in the yield to the lender by virtue of additional charges in the form of discount (points) and application of finders fees. Some permit use of the "add-on" method in computing interest. Because of the availability of a higher yield, loans under these programs are thereby made more readily attractive in secondary market. Since these techniques are not permissible under the Guaranteed Student Loan Program, the availability of this proposed "incentive allowance" becomes all the more necessary if the program is to survive.

Question. Shouldn't the student pay a portion or all of the incentive payment to lenders?

Answer. It is anticipated that there may be reluctance on the part of Congress to increase the costs to students. One advantage of the incentive cost allowance is that it keeps the costs to the borrower on a level keel.

In the States listed below this additional cost to the student would be prohibited by State statute governing the respective student loan programs. The statutes of these States limit the interest rate to seven percent. Each of these States has just recently amended its laws to permit the seven percent rate authorized by the Higher Education Amendments of 1968 (P.L. 90–575). These States are Georgia, Louisiana, Maryland, New York, and Vermont.

These legislatures are not in session at the present time and therefore lenders in those States would be prevented from sharing in an increased return. No doubt the result would be for lenders to continue to limit the number of student loans they would be willing to make.

Question. Why are we rewarding lenders for past efforts?

Answer. There are two ways in which lenders might be rewarded for past efforts under the incentive allowance proposal:

1. The proposed incentive allowance is to be effective July 1, 1969, for all loans disbursed on or after that date. It is quite possible that the legislation will not be enacted until sometime later. Unless the legislation applies to loans made on or after July 1, 1969, we are sure that the lenders in many cases will not continue to process applications until such time as they are assured of the higher rate of return. As the peak application period is during the months of July, August, September and October, any delays could have severe implications as to the availability of funds for loans to students in FY '70.

2. As the incentive allowance is to be paid on loans outstanding, we will continue, if economic conditions deem it necessary, to pay the allowance in the future on loans which were made on or after July 1, 1969. This is important so that a lender's student loan portfolio will provide a return commensurate with current economic conditions. In addition, this will help create a secondary market as investors will be assured of a return which is consistent with current market conditions.

If economic conditions improve, the amount of the payment will be reduced or even eliminated.

Question. How will the Secretary of HEW establish the percentage rate that determines the amount of the incentive allowance?

Answer. It is anticipated that the percentage rate will be determined by the Secretary of HEW in consultation with the Secretary of the Treasury, the Chairman of the Council of Economic Advisors, and the Chairman of the Federal Reserve Board. Current economic indices such as Treasury Bill Rate, the prime rate, Federal Reserve re-discount rate, etc., may be taken into account in setting an appropriate rate.

Question. Why is the Administration recommending the incentive payment plan in contrast to a free rate?

Answer. The incentive plan, which reflects monetary conditions may be more easily adjusted downward as the prime rate is reduced, and will be withdrawn when the prime rate falls below the statutory loan maximum of 7%. This is consistent with the Administration's efforts to halt inflation and improve conditions in the money market.

Question. Why should we pay this incentive allowance on loans made to borrowers with an adjusted family income over $15,000?

Answer. The adjusted family income is calculated on applications for student loans *only* to determine who pays the interest on the loan. It was not intended that those borrowers with an adjusted family income over $15,000 be discriminated against. Regardless of who pays the interest, the lender's return is the same.

If the incentive allowance were denied to holders of loans made to students whose adjusted family income is over $15,000, lenders would no doubt hesitate to make loans to these students at all since their return would be reduced. Thus the original intent of the legislation would be thwarted.

Last year, the intent of Congress on this subject was quite clear when they approved the administrative cost allowance [1] for all student loans regardless of the adjusted family income.

Paying an incentive allowance only on certain loans would also create administrative problems which lenders would consider burdensome.

Mr. MURPHY. Mr. President, I am pleased to join in cosponsoring this emergency legislation, the Insured Student's Loan Emergency Amendments of 1969.

The legislation would allow the Secretary of Health, Education, and Welfare to prescribe an incentive allowance above the present 7-percent simple interest rate authorized by the guaranteed student loan program. The incentive allowance, which may not exceed 3 percent, may be paid whenever the Secretary determines that the statutory interest limitation or economic conditions are deterring eligible lenders from making student loans. With the Federal Government paying the incentive cost allowance, there would be no additional cost to the student.

In a few days, the peak student loan application periods of August, September, and October will be upon us. Already my California offices have been deluged with desperate calls from students urging that something be done to see that the loans will be made so that they might pursue their higher education. I recently read that it had been estimated that 200,000 of the youngsters applying for the guaranteed loan program may be turned down. We clearly cannot let this happen, and I know I speak for the many students in California and their parents in congratulating the administration and Secretary Finch in sending down this emergency legislation.

As a member of the Subcommittee on Education, I certainly hope that early and expeditious action will be taken so that the student loans may be made.

Financing higher education is a real struggle for many students and their parents. The Federal Government has various programs of grants, direct loans, and guaranteed loans to help them. The latter program was enacted in 1965 with the purpose of providing assistance in financing college expenses for those students from moderate-income families who had been excluded from loan and other assistance under the various Federal programs. Last year, the guaranteed loan program, as well as the other student financial assistance programs, were

[1] The Administrative Cost Allowance was authorized by P.L. 90–460 (August 3, 1968) in order to enable lenders to receive a yield of 7 percent in those States where a guarantee agency's authorizing legislation limited the rate charged to the borrower to 6 percent. This would be paid over the life of the loan, but only for loans made until not later than 120 days after the adjournment of the State's next legislative session.

extended as part of the Higher Education Amendments of 1968. I strongly supported the extension. During the hearings on the Higher Education Amendments of 1968, we also faced this problem and for this same reason.

Interest rates were ballooning with the result that the student loans were not competitive with other loans for which the rate of return was determined by the money market. As a result, the committee increased the then maximum statutory interest rate from 6 to 7 percent. With the higher interest rate, 730,000 students received loans totaling $670 million in the past year. In California, in fiscal year 1969, 76,054 students secured loans totaling over $69 million. Thus, this is a most important program in my State.

Inflation has continued, however, and interest rates have skyrocketed until the prime interest rate today of 8½ percent is the highest in the economic history of this Nation. All other installment loan interest rates are pegged upward from the prime rate. With interest rates like this, the student loans are once again not competitive.

Thus, Mr. President, the administration has sent to the Congress a unique proposal in response to an emergency situation. It has my strong support. The need for this bill illustrates yet another group—the students—who are harmed by inflation, and spotlights once again the necessity of taking actions to curb inflation.

S. 2722—INTRODUCTION OF A BILL AMENDING THE SOCIAL SECURITY ACT

Mr. NELSON. Mr. President, I introduce, for appropriate reference, a bill for major reform of our social security law.

It is almost 35 years since Congress accepted the concept of social insurance and enacted the first social security law. Twelve times since its passage—100 years late in coming—the social security law has been gradually upgraded, so that it has now become the very bulwark of our social programs.

Today over 92 percent of persons reaching the age of 65 are eligible for social security benefits. Nineteen of every 20 widows and young children are now eligible for survivors benefits. Close to 20 million people are enrolled under medicare.

But despite the program's broad coverage on paper, it still falls pitifully short of providing a decent living wage for the majority of elderly Americans.

It has often been said that the true measure of a nation's cultural greatness can be determined by how well it cares for its elderly citizens.

In the hurry-up, quickly changing life of today's hectic world, we frequently are guilty of too quickly shunting aside those people whose productiveness has made our own lives easier and more meaningful.

When one retires, the fact is usually overlooked that income does not remain the same, but usually is reduced by about 50 percent or more. At the same time, costs rise and purchasing power dwindles.

Through the genius of medical technology, we have succeeded in creating longer life for our generation of grandparents, but I question whether we have really made life more enjoyable and comfortable.

It is a sad fact that the aged are the single largest group making up the poverty rolls in America.

Nearly 6 million Americans over the age of 65 live in poverty. This represents almost one-third of all Americans over the age of 65.

It is particularly shocking to learn that the number of people in this category is steadily increasing, while the number of people under age 65 who live below the poverty line is steadily decreasing.

Our modest "War on Poverty" is clearly not reaching these people.

The solution is not education. It is not manpower training.

The solution lies simply in the guarantee of a modest and reasonable yearly income.

Although social security was intended to supplement other retirement incomes, only about 17 percent of social security recipients have outside resources. For the more than 80 percent remaining, social security benefits are their sole means of support.

For these people, social security payments are not enough to provide even the barest necessities of life.

The bill I am introducing today would make these basic changes in the social security law:

An immediate increase in minimum monthly benefit payments to $100 for single persons and $150 for couples accompanied by a 25 percent across-the-board increase in benefits;

An automatic increase in benefits to accompany rises in the cost of living of 2 percent or more;

A raise in the amount persons may earn without having benefits withheld from $140 a month to $200 a month;

Reduction in the heavy burden of social security taxes placed upon employer and employees by inclusion of general tax revenues into social security payments;

Inclusion under medicare coverage, of the cost of prescription drugs, eye, dental and hearing care, and routine physical examinations.

BENEFIT INCREASES

The present minimum monthly benefit of $55 is clearly inadequate. In 1967, when the Congress last amended the Social Security Act, and raised the minimum from $44 to $55, many of us in the Senate fought for a higher minimum. Finally, the Senate passed a bill with a $70 minimum, but even this modest increase was lost in the conference session.

Thirteen of my colleagues and myself registered our protests by voting against this weak conference committee report because we wanted to force the bill back to conference to accept the better Senate bill. Our "Nay" votes signified that we felt that our country was capable of doing more for its elderly and its poor; and we still do.

The 25 percent across the board monthly benefit increase I am proposing and the increase to a minimum monthly payment of $100 for single persons and $150 for couples would immediately remove an estimated 2 million elderly persons from poverty. Any benefit increase less than that would have little impact.

The administration has recommended a 7-percent increase to be enacted this year and others have proposed a 10-percent increase to be passed next year. But the effect of these minimal increases would be completely wiped out by the increases in the cost of living.

The Consumer Price Index has risen over 5 percent since the last benefit increase took effect in the beginning of 1968. By January 1970, when this legislation would take effect, the cost of living will have risen at least 9 percent.

Therefore, even with a 7-percent increase, the beneficiary who received a $100 monthly payment in January 1968 will receive only $98.16 in purchasing power in January 1970—or less than he was receiving prior to the benefit increase.

COST-OF-LIVING INCREASE

The social security program's biggest single defect is the lack of adequate benefits in the face of the rising cost of living. We have increased the benefits from time to time, but the increases merely keep pace with or even fall behind the current cost of living.

The need to tie social security increases to the rise in the cost of living has long been evident. In 1968 alone the Consumer Price Index rose by 4.7 percent. The CPI will rise an additional 4 percent over each of the next 4 years.

Congress cannot possibly make adequate adjustments in benefit increases to keep pace with these CPI increases. The 7.7-percent benefit increase enacted in January 1965 was accompanied by a 7.9-percent increase in the cost of living since the previous increase. Prices are rising even more rapidly today.

I believe that we should attack this continuing and nagging problem head on. This proposal provides that for each increase of 2 percent or higher in the Consumer Price Index, social security benefits would be increased by the same percentage. Such an adjustment, taking place not more than once a year, will greatly reduce the hardships of the elderly trying to budget their expenses on fixed incomes.

The Secretary of Health, Education, and Welfare would be required to report to the Congress whenever he determines that a cost-of-living increase is to be provided and to include in his report the effect of the increase on the actuarial status of the social security trust funds, together with his recommendations for meeting the cost of the increase.

RETIREMENT TEST

Today there are an estimated 1.8 million social security recipients who are

affected by the social security retirement test which places restrictions on the amount beneficiaries may earn in outside incomes. Under present rules, those under age 72 who wish to work may earn only $1,680 a year before they begin to lose their social security benefits. Between $1,680 and $2,880, they lose $1 for every $2 earned. After $2,880 they lose $1 for every $1 earned.

Elderly persons should be encouraged to work whenever they are willing and able. They should not be penalized because they are healthy and still able to be productive members of society.

The bill I am introducing today would increase the exempt earnings from $1,680 to $2,400 a year and beyond that would withhold only $1 for every $2 in benefits.

GENERAL TREASURY FUNDS

In order to finance necessary increases in social security benefits, Congress has throughout the years had to raise the tax rates of both employees and employers. In my judgment, that tax rate—now at 4.8 percent for both employers and employees—has risen as high as it can go.

While social security was originally established as an insurance program, it has been expanded from time to time to include certain welfare benefits to recipients who have not paid into the fund. Though these benefits are wholly justifiable, employers and employees who regularly pay into the fund should not be expected to pay for benefits to other social security recipients who have paid little or none of the cost of these benefits.

Under my proposal, the Treasury would contribute to the social security funds fixed percentages of the social security funds collected in a given year. For fiscal year 1970, general tax revenues would total 6 percent of the social security taxes collected and that figure would rise to 12 percent in fiscal 1971, 18 percent in fiscal 1972, 20 percent in fiscal 1973, and 25 percent in fiscal 1974, and each year thereafter.

MEDICARE COVERAGE

While the old age, survivors, and disability insurance provisions of social security have existed for many years, medicare is relatively new and is still being developed. There are several improvements which should immediately be added to the medicare law which I have included in this bill:

Expand medicare coverage to pay for eye care, including the cost of glasses, dental care, including dentures, and hearing aids, including the examination for the aid;

Upgrade medicare to include one free annual medical examination for elderly citizens;

Include the cost of prescription drugs under medicare;

Revise medicare payment formula so that the beneficiary pays one-third of the cost, and the Government pays two-thirds.

Drug costs make up a substantial portion of every older American's budget. Even though persons 65 or over constitute only 10 percent of the American population, they account for 20 percent of the $3.5 billion spent on prescription drugs every year.

Under this bill, reimbursement for drugs under medicare would be based on the lowest priced generic or brand name drug consistent with Federal Food and Drug Administration standards.

A formulary committee would be established to compile a list of necessary drugs and would disseminate that list once a year to doctors and pharmacists. The alphabetical list would include the name of each drug or biological by established name, and a list of brand name equivalents with prices. The list would apply only to prescription, and not over the counter drugs.

The proposals of this bill are not the only reforms needed in social security. They are simply the most basic, most urgent.

But cost considerations preclude enactment of all the needed reforms at one time. Reform is long overdue. The proposals set forth in this bill will correct some of the most glaring shortcomings. Adoption of the general tax revenue funding method will make possible a more equitable and realistic social security law.

Many in the Congress have spoken for so long of the distorted sense of priorities existing in our society. Social security reform is one national priority that cannot be further postponed.

I ask unanimous consent that the text of the bill and a section by section analysis of it be printed at this point in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill and section-by-section analysis will be printed in the RECORD.

The bill (S. 2722) to amend title II of the Social Security Act to provide a general increase of 25 percent in the amount of the benefits payable thereunder (with a minimum old-age benefit of $100), to provide for cost-of-living increases in such benefits in the future, to increase the amounts individuals may earn without suffering deductions from such benefits, and to amend title XVIII of such act so as to include eye care, dental care, hearing aids, and routine physical examinations within the services covered by the insurance program established by part B of such title, and for other purposes, introduced by Mr. NELSON, was received, read twice by its title, referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

S. 2722

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 215(a) of the Social Security Act is amended by striking out the table and inserting in lieu thereof the following:

"TABLE FOR DETERMINING PRIMARY INSURANCE AMOUNT AND MAXIMUM FAMILY BENEFITS

"I		II	III		IV	V
(Primary insurance benefit under 1939 act, as modified)		(Primary insurance amount under 1967 act)	(Average monthly wage)		(Primary insurance amount)	(Maximum family benefits)
If an individual's primary insurance benefit (as determined under subsec. (d)) is—		Or his primary insurance amount (as determined under subsec. (c)) is—	Or his average monthly wage (as determined under subsec. (b)) is—		The amount referred to in the preceding paragraphs of this subsection shall be—	And the maximum amount of benefits payable (as provided in sec. 203(a)) on the basis of his wages and self-employment income shall be—
At least—	But not more than—		At least—	But not more than—		
----------	$27.46	$79.90 or less	----------	$118	$100.00	$150.00
$27.47	28.00	81.10	$119	122	101.40	152.10
28.01	28.68	82.30	123	127	102.90	154.40
28.69	29.25	83.60	128	132	104.50	156.80
29.26	29.68	84.70	133	136	105.90	158.90

(b) Section 203(a) of such Act is amended by striking out paragraph (2) and inserting in lieu thereof the following:

"(2) when two or more persons were entitled (without the application of section 202(j)(1) and section 223(b)) to monthly benefits under section 202 or 223 for the month of January 1970 on the basis of the wages and self-employment income of such insured individual, such total of benefits for such month or any subsequent month shall not be reduced to less than the larger of—

"(A) the amount determined under this subsection without regard to this paragraph, or

"(B) an amount equal to the sum of the amounts derived by multiplying the benefit amount determined under this title (including this subsection, but without the application of section 222(b), section 202(q), and subsections (b), (c), and (d) of this section), as in effect prior to January 1970, for each such person for January 1970, by 25 percent and raising each such increased amount, if it is not a multiple of $0.10, to the next higher multiple of $0.10;

but in any such case (i) paragraph (1) of this subsection shall not be applied to such total of benefits after the application of subparagraph (B), and (ii) if section 202(k)(2)(A) was applicable in the case of any such benefits for the month of January 1970, and ceases to apply after such month, the provisions of subparagraph (B) shall be applied, for and after the month in which section 202(k)(2)(A) ceases to apply, as though paragraph (1) had not been applicable to such total of benefits for January 1970, or".

(c) Section 215(b)(4) of such Act is amended to read as follows:

"(4) The provisions of this subsection shall be applicable only in the case of an individual—

"(A) who becomes entitled, after December 1969, to benefits under section 202(a) or section 223; or

"(B) who dies after December 1969 without being entitled to benefits under section 202(a) or section 223; or

"(C) whose primary insurance amount is required to be recomputed under subsection (f)(2)."

(d) Section 215(c) of such Act is amended to read as follows:

"PRIMARY INSURANCE AMOUNT UNDER 1967 ACT

"(c) (1) For the purposes of column II of the table appearing in subsection (a) of this section, an individual's primary insurance amount shall be computed on the basis of the law in effect prior to the enactment of the Social Security Amendments of 1969.

"(2) The provisions of this subsection shall be applicable only in the case of an individual who became entitled to benefits under section 202(a) or section 223 before the month of January 1970, or who died before such month."

(e) The amendments made by this section shall apply with respect to monthly benefits under title II of the Social Security Act for months after December 1969 and with respect to lump-sum death payments under such title in the case of deaths occurring after December 1969.

(f) If an individual was entitled to a disability insurance benefit under section 223 of the Social Security Act for the month of December 1969 and became entitled to old-age insurance benefits under section 202(a) of such Act for the month of January 1970, or who died in such month, then, for purposes of section 215(a)(4) of the Social Security Act (if applicable) the amount in column IV of the table appearing in such section 215(a) for such individual shall be the amount in such column on the line on which in column II appears his primary insurance amount (as determined under sec-

tion 215(c) of such Act) instead of the amount in column IV equal to the primary insurance amount on which his disability insurance benefit is based.

SEC. 2. (a) (1) Section 227(a) of the Social Security Act is amended by striking out "$40" and inserting in lieu thereof "$50", and by striking out "$20" and inserting in lieu thereof "$25".

(2) Section 227(b) of such Act is amended by striking out in the second sentence "$40" and inserting in lieu thereof "$50".

(b) (1) Section 228(b) (1) of such Act is amended by striking out "$40" and inserting in lieu thereof "$50".

(2) Section 228(b) (2) of such Act is amended by striking out "$40" and inserting in lieu thereof "$50", and by striking out "$20" and inserting in lieu thereof "$25".

(3) Section 228(c) (2) of such Act is amended by striking out "$20" and inserting in lieu thereof "$25".

(4) Section 228(c) (3) (A) of such Act is amended by striking out "$40" and inserting in lieu thereof "$50".

(5) Section 228(c) (3) (B) of such Act is amended by striking out "$20" and inserting in lieu thereof "$25".

(c) The amendments made by this section shall apply with respect to monthly benefits under title II of the Social Security Act for months after December 1969.

SEC. 3. (a) Section 202(b) (2) of the Social Security Act is amended by striking out "whichever of the following is the smaller: (A) one-half of the primary insurance amount of her husband (or, in the case of a divorced wife, her former husband) for such month, or (B) $105" and inserting in lieu thereof the following: "one-half of the primary insurance amount of her husband (or, in the case of a divorced wife, her former husband) for such month".

(b) Section 202(c) (3) of such Act is amended by striking out "whichever of the following is the smaller: (A) one-half of the primary insurance amount of his wife for such month, or (B) $105" and inserting in lieu thereof the following: "one-half of the primary insurance amount of his wife for such month".

(c) Section 202(e) (4) of such Act is amended by striking out "whichever of the following is the smaller: (A) one-half of the primary insurance amount of the deceased individual on whose wages and self-employment income such benefit is based, or (B) $105" and inserting in lieu thereof the following: "one-half of the primary insurance amount of the deceased individual on whose wages and self-employment income such benefit is based".

(d) Section 202(f) (5) of such Act is amended by striking out "whichever of the following is the smaller: (A) one-half of the primary insurance amount of the deceased individual on whose wages and self-employment income such benefit is based, or (B) $105" and inserting in lieu thereof the following: "one-half of the primary insurance amount of the deceased individual on whose wages and self-employment income such benefit is based".

(e) The amendments made by the preceding subsections of this section shall apply with respect to monthly benefits under title II of the Social Security Act for months after December 1969.

SEC. 4. (a) (1) Paragraphs (1), (3), and (4) (B) of Subsection (f) of section 203 of the Social Security Act are each amended by striking out "$140" wherever it appears therein and inserting in lieu thereof "$200".

(2) Paragraph (3) of subsection (f) of section 203 of such Act is further amended by striking out "except that of the first $1,200 of such excess (or all of such excess if it is less than $1,200), an amount equal to one-half thereof shall not be included" and inserting in lieu thereof "except that of such excess, an amount equal to one-half thereof shall not be included".

(b) Paragraph (1) (A) of subsection (h) of section 203 of such Act is amended by striking out "$140" and inserting in lieu thereof "$200".

(c) The amendments made by the preceding provisions of this section shall be effective with respect to taxable years beginning after December 31, 1969.

SEC. 5. (a) Section 1861(s) (3) of the Social Security Act is amended (1) by inserting "(A)" immediately after "(3)", and (2) by inserting before the semicolon at the end thereof the following: ", and (B) physicians' services, diagnostic X-ray tests, diagnostic laboratory tests, and other diagnostic tests involved in complete physical check-ups, except that there shall not be included more than one such check-up for any individual in a 12-month period".

(b) Section 1862(a) (1) of such Act is amended by inserting before the semicolon the following: "(except physical check-ups provided for in section 1861(s) (3) (B))".

(c) Section 1862(a) (7) of such Act is amended by inserting after "check-ups" the following: "(other than physical check-ups provided for by section 1861(s) (3) (B))".

(d) The amendments made by the preceding provisions of this section shall be effective with respect to services furnished for months after the month following the month in which this Act is enacted.

SEC. 6. (a) Section 1861 (r) (2) of the Social Security Act is amended by striking out "but only with respect to (A) surgery related to the jaw or any structure contiguous to the jaw or (B) the reduction of any fracture of the jaw or any facial bone".

(b) Section 1861 (s) (8) of such Act is amended (1) by inserting "(A)" immediately after "(8)", and (2) by striking out "(other than dental)", and (3) by adding thereunder the following new subparagraph:

"(B) dentures, eyeglasses, hearing aids, and other prosthetic devices relating to the oral cavity, jaw, eyes, or ears, including replacement thereof; and".

(c) (1) Section 1862 (a) (7) of such Act (as amended by section 5(c) of this Act) is further amended by striking out all after the matter in parentheses (which was added by section 5(c) of this Act) and inserting in lieu of the matter stricken a semicolon.

(2) Section 1862 (a) of such Act is further amended (A) by inserting "or" at the end of paragraph (11) thereof, (B) by striking out paragraph (12) thereof, and (C) by redesignating paragraph (13) thereof as paragraph (12).

(d) The amendments made by the preceding provisions of this section shall apply with respect to services furnished after the month which follows the month in which this Act is enacted.

SEC. 7. (a) The first sentence of section 1839 (a) (2) of the Social Security Act is amended by striking out "one-half" and inserting in lieu thereof "one-third".

(b) Section 1844 (a) (1) of such Act is amended by inserting "two times" after "equal to".

(c) The amendments made by the preceding subsections of this section shall be effective in the case of insurance premiums payable under the supplementary medical insurance program established by part B of title XVIII of the Social Security Act for months after June 1970.

SEC. 8. Title II of the Social Security Act is amended by adding at the end thereof the following new section:

"COST-OF-LIVING INCREASES IN BENEFITS

"SEC. 230. (a) During the month of January each year (commencing with the year 1971), the Secretary shall determine the extent (if any) by which the price index has increased over the price index for the month of January 1970. If he determines that the price index has risen by a percentage (of its level in the base period) equal to 2 percent or more, the amount of each benefit otherwise payable under this title shall be increased by a percentage equal to the percentage of the rise in such index (adjusted to the nearest one-tenth of 1 per centum), effective with respect to monthly insurance benefits under sections 202, 223, 227, and 228 for months in the 12-month period which commences with the following April, but only in the case of individuals who were entitled to such a monthly insurance benefit for such following April.

"(b) Any increase in the monthly insurance benefit of any individual under subsection (a) shall be applied only after all of the other provisions of this title which relate to eligibility for and the amount of such benefit have been applied; except that (1) the provisions of section 203 (b) through (1) and section 222(b) shall not be applied until after such increase is applied, and (2) in determining the amount of such individual's monthly benefit for purposes of applying section 203(a), any amounts payable by reason of this section shall not be regarded as part of such benefit.

"(c) If the amount of the increase in any monthly insurance benefit under subsection (a) is not a multiple of $0.10, it shall be raised to the next higher multiple of $0.10.

"(d) For purposes of this section, the term 'price index' means the Consumer Price Index (all items—United States city average) published monthly by the Bureau of Labor Statistics.

"(e) Whenever, under the preceding provisions of this section, the Secretary determines during any January that a cost-of-living increase is to take effect the following April, he shall submit (at the earliest practicable date, and before such increase takes effect) a report to the Congress. Such report shall advise the Congress of the amount of such increase, the effect such increase will have on the actuarial status of the Federal Old-Age and Survivors Insurance Trust Fund and the Federal Disability Insurance Trust Fund, and whether, in the opinion of the Secretary, additional moneys will be needed for either or both of such funds because of such increase. If the Secretary determines that additional moneys will be needed for either of such funds because of such increase, he shall submit, in such report, his recommendations as to the means through which such moneys should be obtained."

SEC 9. (a) (1) The third sentence of section 201(a) of the Social Security Act is amended—

(A) by striking out (in the matter of preceding clause (1) thereof) "amounts equivalent to 100 per centum of ——", and inserting in lieu thereof "amounts equivalent to ——";

(B) by striking out (in clauses (1), (2), (3), and (4) thereof) the term "the taxes" the first place it appears in each of such clauses, and by inserting in lieu thereof "100 per centum of the taxes";

(C) by striking out the period at the end of clause (4) thereof and inserting in lieu of such period a semicolon followed by the word "and"; and

(D) by adding after clause (4) thereof the following new clause:

"(5) for the fiscal year ending June 30, 1970, an amount equal to 6 per centum of the aggregate of the amounts appropriated pursuant to paragraphs (3) and (4) for such year; for the fiscal year ending June 30, 1971, an amount equal to 12 per centum of the aggregate so appropriated for such year; for the fiscal year ending June 30, 1972, an amount equal to 18 per centum of the aggregate so appropriated for such year; for the fiscal year ending June 30, 1973, an amount equal to 20 per centum of the aggregate so

appropriated for such year; for the fiscal year ending June 30, 1974, and for each fiscal year thereafter, an amount equal to 25 per centum of the aggregate so appropriated for such year; except that the amount appropriated pursuant to this clause for any fiscal year shall be reduced by an amount equal to the amount specified with respect to such year in clause (3) of subsection (b) of this section."

(2) The fourth sentence of section 201(a) of such Act is amended by striking out "clauses (3) and (4)" the first place it appears therein, and by inserting in lieu thereof "clauses (3), (4), and (5)".

(b)(1) The third sentence of section 201 (b) of such Act is amended—

(A) by striking out (in the matter preceding clause (1) thereof) "amounts equivalent to 100 per centum of ——" and inserting in lieu thereof "amounts equivalent to——";

(B) by striking out the period at the end of clause (2) thereof and inserting in lieu of such period a semicolon followed by the word "and"; and

(C) by adding after clause (2) thereof the following new clause:

"(3) for the fiscal year ending June 30, 1970, an amount equal to 6 per centum of the aggregate of the amounts appropriated pursuant to clauses (1) and (2) for such year; for the fiscal year ending June 30, 1971, an amount equal to 12 per centum of the aggregate so appropriated for such year; for the fiscal year ending June 30, 1972, an amount equal to 18 per centum of the aggregate so appropriated for such year; for the fiscal year ending June 30, 1973, an amount equal to 20 per centum of the aggregate so appropriated for such year; for the fiscal year ending June 30, 1974, and for each fiscal year thereafter, an amount equal to 25 per centum of the aggregate so appropriated for such year."

(2) The fourth sentence of section 201(a) of such Act (as amended by subsection (a)(2) of this section) is further amended by striking out "clauses (1) and (2)" and inserting in lieu thereof "clauses (1), (2), and (3)".

SEC. 10. (a)(1) Section 1832(a) of the Social Security Act is amended (A) by striking out "and" at the end of paragraph (1), (B) by striking out the period at the end of paragraph (2) and inserting in lieu thereof "; and", and (C) by adding at the end thereof the following new paragraph:

"(3) entitlement to have payment made to him (pursuant to sections 1833(a)(1) and (3) and 1845(a)(2)) toward expenses incurred in the purchase of qualified drugs."

(2) Section 1833(a) of such Act is amended (A) by inserting "or qualified drugs" after "incurs expenses for services", (B) by striking out the period at the end of paragraph (2) and inserting in lieu thereof "; and", and (C) by adding at the end thereof the following new paragraph:

"(3) in the case of benefits covered under section 1832(a)(3), the allowable benefit (as defined in section 1845(a)(2), or if lower, 80 percent of actual expenses incurred, for the purchase of qualified drugs."

(3) Part B of title XVIII of such Act is amended by adding at the end thereof the following new sections:

"ALLOWABLE BENEFITS FOR QUALIFIED DRUGS

"SEC. 1845. (a) For purposes of this part—

"(1) The term 'qualified drug' means a drug or biological for self-administration which (i) is included by strength and dosage forms among the drugs and biologicals approved by the Formulary Committee (established pursuant to section 1846(a)) and (ii) is dispensed by a pharmacist from a pharmacy licensed under the laws of the State in which the drug or biological is provided, or is otherwise dispensed in accordance with section 1861(s)(10).

"(2) The term 'allowable benefit', when used in connection with any quantity of a qualified drug means the payment amount established with regard to such qualified drug by the Formulary Committee and approved by the Secretary.

"(b) Notwithstanding the provisions of section 1842(b)(3)(B)(ii), amounts to which an individual is entitled by reason of the provisions of section 1832(a)(3) shall be paid directly to such individual in accordance with regulations of the Secretary prescribed pursuant to this subsection. No individual shall be paid any amount by reason of the provisions of section 1832(a)(3) prior to the presentation by him (or by another on his behalf) of documentary or other proof satisfactory to the Secretary establishing his entitlement thereto.

"(c) The benefits provided by reason of section 1832(a)(3) may be paid by the Secretary or the Secretary may utilize the services of carriers or such other agencies qualified for the administration of such benefits under contracts entered into between the Secretary and such carriers for such purpose. To the extent determined by the Secretary to be appropriate, the provisions relating to contracts entered into pursuant to section 1842 shall be applicable to contracts entered into pursuant to this subsection.

"FORMULARY COMMITTEE

"SEC. 1846. (a) There is hereby established a Formulary Committee to consist of the Surgeon General of the Public Health Service, the Assistant Secretary of Health, Education, and Welfare for Health and Scientific Affairs, the Commissioner of Food and Drugs, and five other persons who are members of the medical profession, to be selected by the Secretary. The chairman of such committee shall be designated by the Secretary and shall serve for such period of time as the Secretary deems appropriate.

"(b)(1) It shall be the duty of the Formulary Committee to—

"(A) determine which drugs and biologicals shall constitute qualified drugs for purposes of the benefits provided under section 1832(a):

"(B) determine, with the approval of the Secretary, the allowable benefit of the various quantities, strengths, or dosage forms of any drug or biological determined by the Committee to constitute a qualified drug; and

"(C) publish and disseminate at least once each calendar year among physicians, pharmacists, and other interested persons, in accordance with directives of the Secretary, (i) an alphabetical list naming each drug or biological by its established name and such other information as the Secretary deems necessary, and (ii) an indexed representative listing of such trade or other names by which such drug or biological is commonly known, together with the allowable benefit for various quantities, strengths, or dosage forms thereof, together with the names of the supplier of such drugs upon which the allowable benefit is based.

"(2)(A) Drugs and biologicals shall be determined to be qualified drugs if they can legally be obtained by the user only pursuant to a prescription of a lawful prescriber; except that the Formulary Committee may include certain drugs and biologicals not requiring such a prescription if it determines such drugs or biologicals to be of a lifesaving nature.

"(B) In the interest of orderly, economical, and equitable administration of the benefits provided under section 1832(a)(3), the Formulary Committee may, by regulation, provide that a drug or biological otherwise regarded as being a qualified drug shall not be so regarded when prescribed in unusual quantities.

"(3) In determining the allowable benefit for any quantity, dosage form, and strength of any qualified drug, the Formulary Committee shall seek to approximate the anticipated charges to beneficiaries and establish a payment amount that will include the acquisition cost to the ultimate dispenser of the qualified drug dispensed, plus—

"(A) in the case of a community pharmacy, (i) for a prescription-legend drug, a reasonable fee component to cover the costs of overhead and professional services attendant to the dispensing of a qualified drug and an amount representing a fair profit, and (ii) for other drugs determined to be of a lifesaving nature in accordance with section 1846(b)(2)(A), a billing allowance and an amount representing a fair profit; and

"(B) in the case of hospitals and extended care facilities, or when applicable, physicians (under section 1861(s)(10)), an allowance equal to the cost to the dispenser for providing the qualified drug.

In any case in which a qualified drug is available from more than one source, the acquisition cost of such qualified drug, for purposes of this section, shall be deemed to be the lowest cost of such drug, however named, which meets the quality and other standards for such drug required under the Federal Food, Drug, and Cosmetic Act, as amended. Whenever the lowest cost (to the ultimate dispensers thereof) of a particular drug or biological differs significantly in the various regions of the United States, or among the ultimate dispensers thereof, the Formulary Committee may establish, for the various regions of the United States, separate schedules of allowable benefits with respect to such drug or biological so as to reflect the lowest cost at which such drug or biological is generally available to the ultimate dispensers or among such dispensers thereof in each such region.

(4)(A) Section 1861(s) of the Social Security Act is amended by (i) striking out "and" at the end of paragraph (8), (ii) by striking out the period at the end of paragraph (9) and in lieu of such period insert "; and", and (iii) by adding immediately after paragraph (9) the following new paragraph:

"(10) qualified drugs for self-administration (as defined in section 1845(a)(1)) dispensed by a physician (i) in an emergency (but not routinely), or (ii) when adequate community pharmaceutical services are not otherwise available, as determined in accordance with regulations prescribed by the Secretary."

(B) Section 1861 (s) is further amended by redesignating paragraphs (10) through (13) as paragraphs (11) through (14), respectively.

(5) Section 1861 (t) of the Social Security Act is amended (A) by striking out "such drugs and biologicals, respectively, as are included (or approved for inclusion) in the United States Pharmacopoeia, the National Formulary, or the United States Homeopathic Pharmacopoeia, or in New Drugs or Accepted Dental Remedies (except for any drugs and biologicals unfavorably evaluated therein)" and insert in lieu thereof the following: "qualified drugs, as designated under section 1845(a)(1)", (B) by inserting "or extended care facility" after "hospital", and (C) by striking out "hospitals" and inserting in lieu thereof "institutions."

(b) The amendments to the Social Security Act made by this section shall become effective on January 1, 1971.

The material presented by Mr. NELSON is as follows:

SECTION-BY-SECTION ANALYSIS OF SOCIAL SECURITY BILL

Section 1, provides a general benefit increase of 25% with a minimum primary monthly insurance amount of $100 and $150 for couples.

Section 2, increases payments payable to certain uninsured persons under the Prouty

amendment to $50 a month for single persons and $75 for couples.

Section 3, repeals the $105 a month limitation on a wife's benefits.

Section 4, amends the retirement test to provide (a) a $2400 annual exempt amount, and (b) a $200 monthly exempt amount, and (c) a $1 reduction in benefits for each $2 in earnings above $2400.

Section 5, modifies prohibition on payments for routine physical examinations to permit one comprehensive physical examination each year for each enrollee.

Section 6, repeals provisions preventing payments for eye care (including glasses) dental care (including dentures) and hearing aids (including examinations for hearing aids).

Section 7, provides that beneficiary shall pay ⅓ of the cost of Medicare provision and government shall pay ⅔.

Section 8(a), provides that when the CPI rises by at least 2 per cent over the index for January 1970 benefits for the third month following the month in which the 2 per cent rise occurred, and for subsequent months, shall be increased by an amount equal to the percentage rise in the CPI. Only 1 increase may take effect in a 12 month period.

(b) The increase is applicable to all persons on the benefit rolls in the month in which the increased benefits are first payable.

(c) Requires the Secretary of HEW to report to the Congress whenever a cost-of-living increase is to be made, its effect on the actuarial status of the trust funds, and recommendations for meeting the cost of the increase.

Section 9, provides general tax revenues to be used in social security benefit payments.

General revenues will be contributed as a percentage of all social security taxes collected each year, on the following bases: (a) 6% for fiscal year 1970, (b) 12% for fiscal year 1971, (c) 18% for fiscal year 1972, (d) 20% for fiscal year 1973, (e) 25% for fiscal year 1974 and each year thereafter.

Section 10, extends Medicare provisions to include payment for prescription drugs. Establishes a Formulary Committee to determine for which drugs and biologicals reimbursement is to be made.

Reimbursement is to be based on lowest priced generic drug available, consistent with high standards.

Formulary Committee shall disseminate, once a year, to doctors and pharmacists, an alphabetical list of each drug or biological by established names, and include listing of brand name equivalents with prices.

Applicable only to prescription drugs.

ADDITIONAL COSPONSORS OF BILLS

S. 1781

Mr. BYRD of West Virginia. Mr. President, at the request of the Senator from West Virginia (Mr. RANDOLPH), I ask unanimous consent that, at the next printing, the name of the Senator from Wyoming (Mr. MCGEE) be added as a cosponsor of S. 1781, to amend title II of the Social Security Act to eliminate the reduction in disability insurance benefits which is presently required in the case of an individual receiving workmen's compensation benefits.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2518

Mr. HARTKE. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from California (Mr. CRANSTON) be added as a cosponsor of S. 2518, to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive insurance benefits thereunder.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2674

Mr. BYRD of West Virginia. Mr. President, in behalf of the Senator from Hawaii (Mr. INOUYE), I ask unanimous consent that, at the next printing, the names of the Senator from North Carolina (Mr. ERVIN), the Senator from New York (Mr. GOODELL), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Rhode Island (Mr. PELL), and the Senator from Alaska (Mr. STEVENS) be added as cosponsors of S. 2674, to amend title 37, United States Code, to provide for the procurement and retention of judge advocates and law specialist officers for the Armed Forces.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2689

Mr. BYRD of West Virginia. Mr. President, at the request of the Senator from Hawaii (Mr. INOUYE) I ask unanimous consent that, at the next printing, the names of the Senator from Nevada (Mr. BIBLE), the Senator from Oregon (Mr. HATFIELD), the Senator from Washington (Mr. JACKSON), the Senator from New York (Mr. JAVITS), and the Senator from Alaska (Mr. STEVENS), be added as cosponsors of S. 2689, to amend the Internal Revenue Code of 1954 to provide the same tax exemption for servicemen in and around Korea as is presently provided for those in Vietnam.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2691

Mr. PROXMIRE. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Indiana (Mr. HARTKE) be added as a cosponsor of S. 2691, to amend Public Law 87-849, approved October 23, 1962, to strengthen provisions relating to disqualification of former Federal officers and employees in matters connected with former duties and official responsibilities, and for other purposes.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE RESOLUTION 226—RESOLUTION TO EXTEND THE AUTHORITY OF THE COMMITTEE ON LABOR AND PUBLIC WELFARE TO INVESTIGATE PROBLEMS OF EDUCATION OF AMERICAN INDIANS

Mr. MONDALE, from the Committee on Labor and Public Welfare, reported an original resolution (S. Res. 226) to extend the authority of the Committee on Labor and Public Welfare to investigate problems of education of American Indians, which was considered and agreed to.

(The remarks of Mr. MONDALE when he reported the resolution appear later in the RECORD under the appropriate heading.)

SENATE RESOLUTION 227—RESOLUTION TO AUTHORIZE THE EXPENDITURE OF FUNDS BY THE COMMITTEE ON LABOR AND PUBLIC WELFARE—REPORT OF A COMMITTEE

Mr. MONDALE, from the Committee on Labor and Public Welfare, reported an original resolution (S. Res. 227); which was referred to the Committee on Rules and Administration, as follows:

S. RES. 227

Resolved, That the Committee on Labor and Public Welfare hereby is authorized to expend from the contingent fund of the Senate, during the Ninetieth Congress, $1,500, in addition to the amounts, and for the same purposes, specified in section 134(a) of the Legislative Reorganization Act, approved August 2, 1946, Senate Resolution 141, agreed to July 17, 1967, and Senate Resolution 276, agreed to May 9, 1968.

SEC. 2. Section 4 of Senate Resolution 80, agreed to February 17, 1969 is hereby amended by striking out "$72,000" where it appears therein and inserting in lieu thereof "$93,000".

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH—AMENDMENTS

AMENDMENT NO. 108

Mr. PROXMIRE submitted amendments, intended to be proposed by him, to the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes,which were ordered to lie on the table and to be printed.

(The remarks of Mr. PROXMIRE when he submitted the amendments appear later in the RECORD under the appropriate heading.)

ADDITIONAL COSPONSOR OF AMENDMENT NO. 107

Mr. PROXMIRE. Mr. President, I ask uanimous consent that, at the next printing, the name of the Senator from Montana (Mr. METCALF) be added as a cosponsor of amendment No. 107 to S. 2546, the military procurement bill.

The amendment calls for annual disclosure of high ranking former civilian and military Pentagon officials who go to work for the major defense contractors.

The PRESIDING OFFICER. Without objection, it is so ordered.

NOTICE OF HEARINGS ON S. 2453

Mr. WILLIAMS of New Jersey. Mr. President, as chairman of the Labor

Subcommittee of the Committee on Labor and Public Welfare, I announce hearings on S. 2453, a bill to further promote equal employment opportunities for American workers. The hearings will be held at 10 a.m., on August 11 and 12, 1969, in room 4232, New Senate Office Building.

Any person who wishes to testify or submit a statement for inclusion in the hearing record, should communicate as soon as possible with the Labor Subcommittee, room G–237, New Senate Office Building.

NOTICE OF RESCHEDULING OF HEARINGS ON VETERANS EDUCATION, TRAINING, AND MANPOWER BILLS BEFORE THE VETERANS' AFFAIRS SUBCOMMITTEE

Mr. CRANSTON. Mr. President, on July 23, 1969, I announced that the Veterans' Affairs Subcommittee, of which I am chairman, of the Labor and Public Welfare Committee would be holding hearings on July 30 and 31 on four bills pertaining to veterans education, training, and manpower. Unfortunately, I find that these hearings must unavoidably be postponed.

I am, therefore, announcing at this time, for the information of Senators, that the Veterans' Affairs Subcommittee will hold hearings on S. 1088, S. 2506, and a proposed amendment to it, S. 2668, and S. 2700 on August 8 and 12 at 9:30 a.m.

RADAR—THE ACHILLES HEEL IN THE SAFEGUARD SYSTEM

Mr. SYMINGTON. Mr. President, recently, my office received a brochure from the Committee To Maintain a Prudent Defense Policy, an organization with headquarters here in Washington, entitled "Safeguard: Does the Supposed 'Softness' of the Radars Render Safeguard Vulnerable?" This pamphlet is indeed an extraordinary document.

Yesterday, on the floor, I stated that Mr. Clifford J. Hynning was the author. I now find that is not accurate. The report was prepared by an unidentified "individual committee or staff member," and I hasten to make this correction.

I ask unanimous consent that this pamphlet in its entirety be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. SYMINGTON. Mr. President, now let me present to the Senate why I believe the information contained in this pamphlet with respect to the radars is wrong.

The author opens his remarks by stating:

> Many opponents of Safeguard hold the view that the system is inordinately vulnerable because its radar is less than one-tenth as hard as the missile silos it is designed to protect.

As one of the "opponents" I share this view, but my objections are based on four additional criticisms which pertain to the radar of the Safeguard. These are as follows:

First. There is only one radar to protect an "entire site" of more than 100 missiles.

Second. The MSR radar is exceedingly expensive—between $150 and $200 million each—many times as much as that of each of the Minutemen it defends.

Third. The total number of interceptor missiles protecting the site is "exceedingly small."

Fourth. Only a fraction of even this small number of interceptor missiles protecting each Minuteman site has enough range to protect the radar.

The author claims that since the Sprint missiles defend the radar, the fact that it is soft does not matter. This is only true if the defense was "infinitely reliable" and if there were an "unlimited number" of interceptor missiles deployed for defending the radar.

It is the essence of the deterrent role of Minuteman that even if some silos are destroyed the rest are available to retaliate. By basing the entire defense on a single radar we make sure that if this one radar is hit the entire defense will collapse. All the enemy has to do is to dedicate a few of his missiles to exhaust that fraction of interceptors which defend the radar—then the entire Safeguard system is dead; and all Senators who have studied the classified information know how small is the number of interceptors.

Moreover, in order to destroy the radars, the Soviets would not have to use the SS–9's, those missiles which the proponents say are of sufficient power and accuracy to endanger Minuteman. We know they could either exhaust, or penetrate, the protection around the radars by using their smaller and less accurate SS–11 missiles, of which the Soviets now have some 800.

Here then the question of the "softness" of the radar comes in, because on this basis the destruction of the radar would not necessarily even subtract from any of those missiles which some estimate the Soviets are building in order to threaten Minuteman.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. SYMINGTON. Mr. President, I ask unanimous consent to proceed for 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SYMINGTON. In fact, and based on this extraordinary pamphlet, it would appear that the writer has not really examined the Safeguard system, because he says:

> The radars are hardened to the efficient level required to give an extremely high probability that an incoming warhead will be intercepted and are located so that a single warhead could not destroy more than one of them.

Does not he know there is only one radar per missile site?

A radar supporting the defense of Minuteman would not have to be as hard as the Minuteman silos if first there were many such radars—say one radar per only a few Minuteman silos, and second, if these radars were less expensive than the missiles they defend.

In that case the radars need only be sufficiently hard so that if one radar were destroyed the neighboring one would not suffer; and as a consequence the price of admission for a Soviet attacker would be greatly raised if the cost per silo defended is low enough.

Experts in this field hope that such a system can be developed, and developed quickly, by deploying many more, and less complicated, radars.

Actually the Safeguard radar meets very few of the requirements which one would hope to have in effort to achieve "a proper defense" of hardened silos.

The remarks made in this brochure would appear to reflect a Maginot Line philosophy, about which I have already expressed my deep apprehension. It is proposed to employ exactly one radar as the eyes of the entire system; and then defend that one radar to the hilt.

If this defense is too thin, however, or has even the slightest flaw to the point where one enemy missile "leaks" through, the entire defense system then collapses; and in this connection, we know just how thin the Spint coverage is—would this information be made public—and how few things in this world are perfect.

I agree with the sentiment that, in the long run, increased hardening of silos will not assure their survival against the increasing accuracy and number of attacking warheads. Sooner or later, therefore, our fixed land-based missiles will become obsolete unless either:

First. We defend them with a system of multiple small radars and interceptors designed as proper for the job, or

Second. Replace them by a land-mobile system along with reliance on our moving Polaris submarine fleet, or

Third. Reach some "meaningful agreement" so as to halt the destructive race of military technology toward increased accuracy and multiple nuclear warheads.

In summary, Mr. President, we will never prevent obsolescence of the Minuteman force by protecting it with a defense which can be defeated before it is even built.

EXHIBIT 1

PAPER NO. 2—SAFEGUARD: DOES THE SUPPOSED "SOFTNESS" OF THE RADARS RENDER SAFEGUARD VULNERABLE?

(By the Committee To Maintain a Prudent Defense Policy; with the compliments of Dean Acheson)

Does the supposed "softness" of the radars render Safeguard vulnerable?

No. Many opponents of Safeguard hold the view that the system is inordinately vulnerable because its radar is less than one-tenth as hard [1] as the missile silos it is designed to protect. This view, while having a certain surface plausibility, reflects a fundamental misunderstnding.

That there is a difference in the hardness of the silos and radars is undeniable. That this difference is critical to the defense of the radar, however, is not true, and overlooks the central fact that the radar is defended primarily by interceptor missiles.

To say that a target is soft or only moderately hard is not the same as saying that a target can be easily destroyed.

(1) The radars in the Safeguard system are, in fact, hardened to a considerable degree.

(2) The radars are also actively defended by Sprint missiles.

[1] "Hardness" is the term used to indicate relative blast resistance and is generally measured in terms of overpressure (PSI).

Whether they are sufficiently hardened so that active defense of them will give us high enough confidence that they will survive an enemy attack is the critical question. They are in fact hard enough, and making them harder in the face of the improvements in missile accuracy expected in the 1970's would incur considerable costs without corresponding benefits in the form of a higher probability of survival under attack. With such missile accuracies, the offense can destroy with a high probability, either radars or silos *if there is no active defense to stop it.*

The chosen hardening is the modest level necessary to enable the defense to intercept an incoming warhead at relatively close range in order to get more than one shot at an incoming warhead. If the first Sprint fired at an incoming warhead should fail, there is sufficient time to fire another and even a third. Were the radars softer than they are, such a tactic—which has the effect of dramatically increasing the probability that interception will succeed—would not be possible. If, on the other hand, the radars were hardened beyond their planned level, no such improvement in the likelihood of interception would result. The critical point is that the radars rely for their defense not solely on hardening (which is a losing proposition in this period of rapidly improving accuracies) but on active intercept by Sprint and Spartan missiles.

While hardening alone is no longer adequate for the protection of our land-based missiles, it does play an important role in conjunction with the active defense provided by the Safeguard system. The missile silos are hardened so that a single enemy missile cannot destroy more than one Minuteman. The radars are hardened to the efficient level required to give an extremely high probability that an incoming warhead will be intercepted, and are located so that a single warhead could not destroy more than one of them.

THE COMMITTEE TO MAINTAIN A PRUDENT DEFENSE POLICY

Chairman, Dean Acheson; Vice-Chairman,[2] Albert Wohlstetter; Treasurer, Clifford J. Hynning.

Original members, Prof. Armen Alchian, Gordon Arneson, Max Ascoli, Ross N. Berkes, Amb. Charles Bohlen, Dr. Donald G. Brennan, Dr. Peter Clark, Dr. Joseph Cropsey, Dr. Paul Davis, Hon. Arthur Dean, Dr. Michael J. Deutsch, Dr. Freeman J. Dyson, Hon. Fredrick Eaton, Hon. Henry H. Fowler, Prof. Harry Gelber, Prof. William Griffith, Dean Edmund A. Gullion, Christian A. Herter, Jr., Dr. Charles M. Herzfeld, Prof. Jack Hirshleifer, Prof. Morton Kaplan, Lawrence R. Kegan, Amb. Foy Kohler, Irvin Kristol, and Dr. Harold Lamport.

Ernest Lefever, Dr. Willard F. Libby, Dr. David A. Little, Hon. Robert A. Lovett, Prof. Gordon MacDonald, Prof. C. Burton Marshall, Prof. William G. McMillan, Amb. Livingston Merchant, Dr. Lawrence H. O'Neill, Franz Oppenheimer, Prof. Paul Ramsey, Prof. Richard N. Rosecrance, Prof. Robert Scalapino, Prof. Paul Seabury, Dr. Frederick Seitz, Prof. Harold Smith, Philip Sporn, Robert Sprague, Sr., Dr. Kenneth Watson, Dr. John A. Wheeler, Frederick Bernays Wiener, Prof. Eugene P. Wigner, Prof. Aaron Wildavsky, and Prof. Ciro Zoppo.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. SYMINGTON. I yield to the distinguished Senator from Arkansas.

Mr. FULBRIGHT. I want to ask the Senator, who is a member of the Armed Services Committee, what is the explanation of why there was almost no evidence taken, as far as I can find, with regard to the blackout effect of a radar by an atomic explosion in the vicinity—in other words, not having to hit the radar establishment itself? Why was there no evidence as to the blackout? I have heard before that this is a very important matter. I think I read in the press that in some of the tests over Kwajalein the communication system was out for quite a long time following an atomic explosion. I was wondering why there was no evidence taken on that point by the Armed Services Committee.

Mr. SYMINGTON. I know the Senator wants me to be frank. Without any implied criticism of anybody, I honestly do not know the answer to the question.

Mr. FULBRIGHT. It is inconceivable to me that a committee which is proposing a system which could run into $10 or $20 billion or more did not take any substantial evidence on the question of what would be the effect of an explosion in the vicinity of a radar. Our radars, as I understand, depend upon electromagnetic impulses for their operation. There is no wire. It is in the nature of radio.

Mr. SYMINGTON. Speaking in terms of electricity, it is a flux, not a current—a wave would be a better characterization.

Mr. FULBRIGHT. If blackout is a substantial problem, I cannot imagine why no testimony was taken on it.

Mr. SYMINGTON. My apprehension about this system has to do primarily with the working of the five major components; their working together after they are put together; and even more, the two chief objections I have to deploying it now instead of developing it further are, first, nobody has put up any logical argument of any kind that this radar which was designed for the Sentinel system, is the right radar for the Safeguard system. Second, nobody has answered the fact that a relatively small addition to the production of Soviet missiles would nullify almost in entirety any defense protection the United States would obtain from the Safeguard, even if the system worked perfectly.

Mr. FULBRIGHT. Tomorrow afternoon the Committee on Foreign Relations will hold a hearing which is intended to go into this matter. I am not at all certain that it will be as thorough as it should be, but it will seek some information about the effect of a blackout or of radioactivity upon communications, and will also include a briefing on the ease with which an ABM system can be knocked out by multiple weapons.

The PRESIDING OFFICER. The time of the Senator from Missouri has expired.

Mr. GORE. Mr. President, I ask unanimous consent that the Senator from Missouri may proceed for an additional 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GORE. Mr. President, will the Senator yield?

Mr. SYMINGTON. I am glad to yield to the able Senator from Tennessee.

Mr. GORE. Mr. President, tomorrow morning at 9:30 the Subcommittee on Disarmament will examine some classified reports that have recently become available. I do not propose to suggest a secret session of the Senate to discuss this material, but I do take this opportunity to invite any Senator either to sit in on the examination of the reports tomorrow morning or to come later to the committee room, where he will be permitted to take from the vault the reports and the colloquy and examine them to his own satisfaction.

Mr. President, will the Senator yield once more?

Mr. SYMINGTON. I am glad to yield.

Mr. GORE. In addition to the facts cited by the distinguished junior Senator from Arkansas that electronic and radio communication was knocked out for a period of hours in an area of some 800 miles in diameter as a result of tests in Eniwetok, one other matter to which Senators might wish to give some consideration is that test animals placed on ships at varying distances from the center of the explosion suffered some dire consequences. Rabbits on a ship 200 miles away were blinded. When we consider defending or undertaking to defend America by exploding nuclear bombs over our heads, we are considering matters having dire consequences.

On this question of possible first strike capability or first strike attempt, I wonder if the able senior Senator from Missouri has contemplated the effects of westerly wind currents and the possible danger to all other nations in the Northern Hemisphere from an all-out attack upon the United States, from fallout.

Mr. SYMINGTON. Mr. President, the distinguished senior Senator from Tennessee is a member of the Joint Committee on Atomic Energy, and therefore an expert on this subject. To be frank, it is not a subject that I feel competent to discuss. I presented today facts with respect to this extraordinary statement issued by one of the various groups organized in favor of the Safeguard, because I believe I do understand the radar aspects of the situation, and because it was explained to us what would happen if the Soviets increased slightly their production of missiles. On this particular subject of the effects of atomic blast the Senator—and I hope he will develop it to his satisfaction and that of the Senate—is a far better expert than I.

The PRESIDING OFFICER. The Senator's time has expired. The Senator from Rhode Island is recognized.

Mr. PELL. Mr. President, in connection with the last exchange, the Senator from Tennessee may recall that a panel of scientists before his subcommittee agreed that the Northern Hemisphere would be uninhabitable by man if there were any full exchange of nuclear weapons.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the House had passed the following bills and joint resolutions, in which it requested the concurrence of the Senate:

H.R. 2. An act to amend the Federal Credit Union Act so as to provide for an independ-

[2] Paul H. Nitze withdrew from active service as vice-chairman of the Committee, effective June 26, when he was appointed consultant to the Department of Defense on SALT.

ent Federal agency for the supervision of federally chartered credit unions, and for other purposes;

H.R. 6947. An act to amend the Act of October 13, 1964, to regulate the location of chanceries and other business offices of foreign governments in the District of Columbia;

H.R. 9551. An act to amend the act of July 11, 1947, to authorize members of the District of Columbia Fire Department, the U.S. Park Police force, and the White House Police force to participate in the Metropolitan Police Department Band, and for other purposes;

H.R. 9553. An act to amend the District of Columbia Minimum Wage Act to authorize the computation of overtime compensation for hospital employees on the basis of a fourteen-day work period;

H.R. 12671. An act to amend the act of May 29, 1928, to facilitate and encourage the employment of minors in the District of Columbia between the ages of 14 and 16 during the summer and other school vacation periods, and for other purposes;

H.J. Res. 236. A joint resolution authorizing and requesting the President of the United States to issue a proclamation designating the week of August 1 through August 7 as "National Clown Week"; and

H.J. Res. 614. A joint resolution authorizing the President to proclaim the week of September 28, 1969, through October 4, 1969, as "National Adult-Youth Communications Week."

HOUSE BILLS AND JOINT RESOLUTIONS REFERRED

The following bills and joint resolutions were severally read twice by their titles and referred, as indicated:

H.R. 2. An act to amend the Federal Credit Union Act so as to provide for an independent Federal agency for the supervision of federally chartered credit unions, and for other purposes; to the Committee on Banking and Currency.

H.R. 6947. An act to amend the act of October 13, 1964, to regulate the location of chanceries and other business offices of foreign governments in the District of Columbia;

H.R. 9551. An act to amend the act of July 11, 1947, to authorize members of the District of Columbia Fire Department, the U.S. Park Police force, and the White House Police force to participate in the Metropolitain Police Department Band, and for other purposes;

H.R. 9553. An act to amend the District of Columbia Minimum Wage Act to authorize the computation of overtime compensation for hospital employees on the basis of a 14-day work period; and

H.R. 12671. An act to amend the act of May 29, 1928, to facilitate and encourage the employment of minors in the District of Columbia between the ages of 14 and 16 during the summer and other school vacation periods, and for other purposes; to the Committee on the District of Columbia.

H.J. Res. 236. A joint resolution authorizing and requesting the President of the United States to issue a proclamation designating the week of August 1 through August 7 as "National Clown Week"; and

H.J. Res. 614. A joint resolution authorizing the President to proclaim the week of September 28, 1969, through October 4, 1969, as "National Adult-Youth Communications Week"; to the Committee on the Judiciary.

SENATOR KENNEDY

Mr. PELL. Mr. President, I rise at this time to express publicly my belief that the senior Senator from Massachusetts should not resign. And my advice to the citizens of that great Commonwealth would be to do their best to urge Senator KENNEDY not to consider resigning.

In speaking as a friend of his and as a Member of this body, I would add that the sooner he returns, the better off I think we are. I believe he is needed and wanted right here.

NIXON FUMBLES IN BANGKOK

Mr. PELL. Mr. President, I am disturbed at the tenor of our President's remarks made in Bangkok as he accepted the key to the city.

I ask unanimous consent that his remarks be inserted in the RECORD at this point.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

[From the New York Times, July 29, 1969]

EXCERPTS FROM NIXON'S TALKS

(NOTE.—Following are statements made by President Nixon shortly after his arrival in Bangkok today. The first is an excerpt from extemporaneous remarks made by the President as he accepted a key to the city. The second is the text of a statement prepared by the traveling White House on the flight to Thailand and distributed here in the President's name.)

As we drove in through the streets from the airport and saw the thousands of people gathered there, including many of the schoolchildren, we were reminded again of the association between the American people and the Thai people, association in war and association in peace.

We were reminded too of that when we came by the SEATO treaty building, and realized that the SEATO organization has its offices here. That leads me to say that everyone knows that Thailand and the United States are signatories of that treaty. We are bound together by that treaty.

A treaty can have many meanings. It can be just a scrap of paper with no meaning at all. But as far as Thailand and the United States are concerned, a treaty means far more because we share common ideals.

What we want for Asia and the world is the right of freedom which Thailand enjoys for all peoples here.

The treaty that we have with Thailand means that it is not just another treaty, not just another piece of paper, but that it is one that has a significance far beyond that—a significance which I have indicated time and again in public statements, and I indicate today in my first public statement as I visit Bangkok and this country.

We will honor our obligations under that treaty. We will honor them not simply because we have to, because of paper, but because we believe in those words, and particularly believe in them in the association that we have with a proud and a strong people—the people of Thailand.

We have been together in the past, we are together at the present and the United States will stand proudly with Thailand against those who might threaten it from abroad or from within.

Mr. PELL. I am concerned for two reasons. First, I do not believe that any treaty should ever be referred to as "just another treaty" or "just another piece of paper." Any treaty to which the United States adheres should have greater meaning than that.

Second, and more important from the viewpoint of our national interest, is President Nixon's statement that the United States "will stand proudly with Thailand against those who might threaten it from abroad or from within."

The most careful reading of the SEATO treaty gives no support to the views that, beyond consultation we have any obligation whatsoever to defend Thailand from enemies within. The most meticulous, careful, precise and, yes, Ruskian interpretation of the treaty would not give support to this thesis. Accordingly, what the statement of our President has done I believe, is, either to have enunciated a new policy for the United States in pledging protection of the Government of Thailand from domestic insurgency or to have publicly stated support for a private commitment that has already been made to this effect.

I deeply hope neither of these eventualities is true.

Even more important, so that those around the world may not misinterpret what our policies are—and, misinterpretation is more often the cause of crisis and war than is correct interpretation—I hope the President will straighten out the record in this regard.

He can do this either by saying he overspoke. Or he can say we indeed have such a newly visible policy vis-a-vis Thailand, in which case I would urge my colleagues to do all that we can to dissuade our Chief Executive from such a policy and seek to change it. It is certainly a policy inconsistent with the Senate commitment resolution passed a few weeks ago and with the words of President Nixon in Guam last week.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PELL. I yield.

Mr. GORE. Perhaps it would be well for the RECORD of the Senate's proceedings today to show that the U.S. Senate has not approved the secret agreement between the United States and Thailand.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. PELL. I ask unanimous consent that I may have 3 additional minutes to yield to the Senator from Tennessee.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GORE. This secret agreement was entered into between Thailand and the United States by the previous administration. It was not approved by the Senate or by Congress during the previous administration. This secret agreement was reaffirmed by Secretary Rogers earlier this year on his trip to Thailand. Such reaffirmation has not been approved by the elected representatives of the people. The President, past or present, is without the power or authorty to make a binding agreement upon the United States without the approval of the representatives of the people, the U.S. Senate.

The insurgency in Thailand is not a new political phenomenon. It has existed for more than a decade. I do not wish the insurgency well, but I am not sure that it is proper for the United States to intervene in a domestic insurgency, in civil strife within a small country. This is, in-

deed, primarily what we did in Vietnam. What President Nixon has done in Thailand is to invite another Vietnamese situation for the United States, and I want the RECORD to show that he is without power to commit the United States to such a course of action.

Mr. PELL. I thank the Senator from Tennessee for his interpretation and remarks, with which I am in agreement.

Mr. COOPER subsequently said: Mr. President, I have read the full text of President Nixon's statement and I do not interpret it as describing the treaties which we are a party as scraps or pieces of paper.

It seems to me that in the full context of his statement he intended to make it clear that his administration does not intend to act or fail to act with regard to the terms of treaties to which we are parties, in such a way as to cause them to be valueless.

Concerning the SEATO treaty I would assume that his remarks were made with full cognizance of its provisions. The SEATO treaty does not commit the United States to war. It provides, in substance, that if the security of a party is threatened by armed attack that each party would take appropriate measures in accordance with its "constitutional processes." As has been resolved by the Senate in the national commitments resolution, Senate Resolution 85, "constitutional processes" intends joint action by the Executive and Congress.

Again, the full text of the President's statement is in harmony with his statements made at Guam—emphasizing the responsibilities of the nations of Asia to defend and support themselves. I quote from his statement:

Our determination to honor our commitments is fully consistent with our conviction that the nations of Asia can and must increasingly shoulder the responsibility for achieving peace and progress in the area. The challenge to our wisdom is to support the Asian countries' efforts to defend and develop themselves without attempting to take from them the responsibilities which should be theirs. For if domination by the aggressor can destroy the freedom of a nation, too much dependence on a protector can eventually erode its dignity.

What we seek for Asia is a community of free nations able to go their own way and seek their own destiny with whatever cooperation we can provide—a community of independent Asian countries each maintaining its own traditions and yet each developing through mutual cooperation. In such an arrangement we stand ready to play a responsible role in accordance with our commitments and basic interests.

The United Press International ticker reports today the following:

Winding up the business part of his Thailand mission today, Nixon told leaders of this Communist-threatened southeast Asia nation that the 47,000 American airmen and support troops in Thailand would gradually be withdrawn as the Vietnam war deescalates.

All of this further supports his Guam statement concerning our relations—military and economic—to the Asian countries.

Mr. President, I ask unanimous consent that excerpts from President Nixon's talk and the full text of his statement as printed in the New York Times today be printed in the RECORD at this point.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM NIXON'S TALK AND TEXT OF STATEMENT

(NOTE.—Following are statements made by President Nixon shortly after his arrival in Bangkok today. The first is an excerpt from extemporaneous remarks made by the President as he accepted a key to the city. The second is the text of a statement prepared by the traveling White House on the flight to Thailand and distributed here in the President's name.)

BANGKOK, THAILAND, July 28.—As we drove in through the streets from the airport and saw the thousands of people gathered there, including many of the schoolchildren, we were reminded again of the association between the American people and the Thai people, association in war and association in peace.

We were reminded too of that when we came by the SEATO treaty building, and realized that the SEATO organization has its offices here. That leads me to say that everyone knows that Thailand and the United States are signatories of that treaty. We are bound together by that treaty.

A treaty can have many meanings. It can be just a scrap of paper with no meaning at all. But as far as Thailand and the United States are concerned, a treaty means far more because we share common ideals.

What we want for Asia and the world is the right of freedom which Thailand enjoys for all peoples here.

The treaty that we have with Thailand means that it is not just another treaty, not just another piece of paper, but that it is one that has a significance far beyond that—a significance which I have indicated time and again in public statements, and I indicate today in my first public statement as I visit Bangkok and this country.

We will honor our obligations under that treaty. We will honor them not simply because we have to, because of paper, but because we believe in those words, and particularly believe in them in the association that we have with a proud and a strong people—the people of Thailand.

We have been together in the past, we are together at the present and the United States will stand proudly with Thailand against those who might threaten it from abroad or from within.

STATEMENT BY THE PRESIDENT

In returning once again to Thailand, I am deeply conscious of the fact that Thailand has a special interest in the strength of America's determination to honor its commitments in Asia and the Pacific.

We will honor those commitments—not only because we consider them solemn obligations, but equally importantly because we fully recognize that we and the nations of Southeast Asia share a vital stake in the future peace and prosperity of this region.

Both geography and common interest link the United States with the nations of Southeast Asia.

We recognize the Pacific Ocean not as a barrier, but as a bridge. We recognize also that whether peace can be maintained in Asia and the Pacific will determine whether peace can be maintained in the world, and we recognize here in Asia the beginnings of patterns of dynamic development that can be of enormous significance.

Our determination to honor our commitments is fully consistent with our conviction that the nations of Asia can and must increasingly shoulder the responsibility for achieving peace and progress in the area. The challenge to our wisdom is to support the Asian countries' efforts to defend and develop themselves without attempting to take from them the responsibilities which should be theirs. For if domination by the aggressor can destroy the freedom of a nation, too much dependence on a protector can eventually erode its dignity.

What we seek for Asia is a community of free nations able to go their own way and seek their own destiny with whatever cooperation we can provide—a community of independent Asian countries each maintaining its own traditions and yet each developing through mutual cooperation. In such an arrangement we stand ready to play a responsible role in accordance with our commitments and basic interests.

Seven centuries ago, the great Thai King Rama Kamheng, father of the Thai alphabet, had his belief inscribed in the new written language.

"In the water there are fish, in the fields there is rice. Whoever wants to trade in elephants so trades. Whoever wants to trade in horses so trades. Whoever wants to trade in silver and gold so trades."

These words expressed the philosophy that a nation, like man, should be free to seek its own destiny. In Korea and again in Vietnam, Thailand has been in the forefront of those nations actively engaged in protecting this principle.

The Thai contribution to the struggle to preserve the independence of South Vietnam has been of great significance—as befits a nation that places so high a value on its own long history of independence.

As a nation which has shared so generously in the burdens of war, Thailand has a special interest in the strategy for achieving a durable peace—that is one which guarantees to the people of South Vietnam the right to determine their own future without outside coercion. In developing this policy, the Government of Thailand has been fully consulted and will continue to be so in the future.

I believe that the greatest problem before us is not the war in Vietnam, but the bringing about of a dynamic set of international relationships which guarantee peace and progress. This cannot be done by the United States alone. It must be a cooperative effort. We must contribute to relationships by which the peoples of the area can master their challenges and shape their future.

Thailand is one of the foremost examples of the promise that the future holds in Asia—in terms of its economic development, its commitment to advancing the welfare of its people and its larger view of new patterns of regional cooperation that can benefit all the nations and peoples of Asia. We are proud to consider Thailand our friend.

In this spirit I see the vision of King Rama Kamheng coming true not only for Thailand but for all of Asia.

EXTENSION OF TIME FOR TRANSACTION OF ROUTINE MORNING BUSINESS

The PRESIDING OFFICER. Under the previous order, all time for the transaction of routine morning business has expired.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the period for the transaction of routine morning business be extended for 5 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

NEGOTIATE FROM STRENGTH

AMENDMENT TO LIMIT C–5A SPENDING

AMENDMENT NO. 108

Mr. PROXMIRE. Mr. President, I submit an amendment to the military procurement bill pending in the Senate which would cut off all funds for the second run of the giant C–5A cargo plane. I call it the negotiate from strength amendment.

The PRESIDING OFFICER. The amendment will be received, printed, and will lie on the table.

Mr. PROXMIRE. Mr. President, my amendment would allow the first run of 58 planes to go forward. But the amendment would cut out $533 million from the bill, the funds for additional planes. The amendment also calls for a study by the General Accounting Office.

This step is vital if the taxpayers are to be saved from the cruel consequences of the golden handshake provision in the Lockheed contract.

If we authorize run B, then the repricing formula letting Lockheed make up its losses would go into effect. Lockheed would then suffer little or no financial loss as a result of the huge $2 billion cost overrun on this plane.

We should stop this unconscionable giveaway. By denying funds for run B the Congress can give the Pentagon negotiators the backbone and steel they have lacked in the past when they agreed to the golden handshakes, the sweetheart clauses, and the get-well provisions on dozens of major weapons system contracts.

The just released Pentagon study on the C–5A vindicates those of us who have criticized the program but fails to propose the necessary action to give the Pentagon enough muscle to reverse their misguided contract provisions. On the one hand they admit the repricing formula on the C–5A is outrageous. On the other hand they fail to take that action; namely, stopping run B of the plane, which could prevent the detrimental results of the formula. This is true because a go-ahead on run B triggers the repricing formula. By cutting off the funds for run B, my amendment would put the Government in the driver's seat in future negotiations for the additional planes.

It is the only way the public interest can be served. The Government then could negotiate from strength.

Here is a contract in which another company, Boeing, was the original choice of the Air Force selection board. But Lockheed bought in by bidding $300 million less than the selection board's choice.

Now Lockheed is building the plane in a Government-owned plant, using Government-owned machinery, and receiving Government progress payments which essentially are interest-free loans of up to 90 percent of their working capital. It is a form of military WPA.

My amendment will put this right. As only five test models of the plane have been produced, and as delivery dates have already been delayed by 6 months, no harm can come to the interests of the United States in cutting off the funds for run B and giving the Government some real weapons to negotiate with.

The Pentagon now admits what they previously denied. They admit that the repricing formula in the contract was against the interests of the United States. They also grudgingly admit an overrun of $1.7 billion, or $300 million more than the $1.4 billion they have been claiming in the past. Our hearings showed that for a comparable plane with comparable spare parts, the actual costs increased by $2 billion between 1965 and 1968.

There is even some hope that finally the Air Force will stop protecting and making excuses for its contractors and crack down on both their own and the contractor's wasteful practices.

Under the amendment the GAO is called upon to determine and report in 90 days whether the C–5A is an economic replacement for the C–141 and other aircraft in view of the great increase in procurement and operating costs of the plane. In addition, the GAO is called upon to determine the extent of the Government liability, possible losses and termination costs, costs of repairs and modification due to the failure of the C–5 wing to meet structural strength requirements, and other crucial matters under the contract if run B is authorized.

The specific questions the GAO is called upon to examine are as follows:

First. Whether the C–5 is an economic replacement for the C–141 and other airlift capability in light of the great cost growth of both procurement and operating costs.

Second. Whether the fourth squadron of C–5's would add significantly to the deployment capability of U.S. forces.

Third. Whether purchase of the fourth squadron of C–5's would make the Government liable for all contractor losses and termination costs if the full six squadrons of run A and run B are not procured.

Fourth. Whether purchase of the fourth squadron of C–5's would make the Government liable for the cost of repairs and modifications necessary to correct the defect revealed in the recent failure of the C–5 wing to meet structural strength requirements.

Fifth. The current cost estimates to complete run A, the first 23 units of run B, and run B including spares and operating expenses over the next 10 years.

Sixth. The effects of applying the repricing formula on the cost to the Government of the first 23 units of run B and the complete run B.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. GOLDWATER. Mr. President, I asked the Senator to yield to make the point that this contract was not negotiated by the Nixon administration. We inherited it.

Mr. PROXMIRE. The Senator is absolutely correct. I think that is a legitimate and proper point to make.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the time for the transaction of routine morning business be extended for 5 additional minutes, and that the able Senator from Wisconsin be recognized for 2 out of the 5 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. STENNIS. Mr. President, I have listened to most of the Senator's statement. The Senator has done a great deal of worthwhile work on this subject.

It is very difficult to get at all aspects of any contract. This is a new type of contract, and it deserves and must have the greatest scrutiny and examination.

Apparently the Air Force has done a good job in getting into the involved aspects of this C–5A matter, some of which frankly were not recognized in the beginning, as the Senator from Wisconsin knows.

I think that the contract major is the question involved in the pending bill so far as the C–5A is concerned.

I point out that the C–5A has proven to be an extraordinarily good plane, particularly at this stage in its development. They have had some setbacks, but certainly none that begin to indicate that it is a faulty plane.

On the whole, it appears to be a superior plane. It is a complicated freight train of the skies, if I may use that expression.

Mr. PROXMIRE. Mr. President, as I understand it, there may well be some question concerning at least two aspects of the C–5A. One is with regard to a structural weakness in a wing, and the other is with respect to the capacity to land within a certain area with a designated payload. However, again, this is just in the exploratory stage.

A question has been raised as to whether it reaches the initial specifications in this regard.

Mr. STENNIS. That is correct. However, this is by no means a conclusion because we have not gotten to the conclusion stage as yet. It is in the testing period of its life at this time.

For the benefit of the Senate, the committee will have all of the facts relating to the plane, the contract, and the questions of policy involved in this type of contract for future use. Frankly, I do not lean toward a contract of this type.

The PRESIDING OFFICER. The 2 minutes of the Senator from Wisconsin have expired.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senator from Wisconsin may have an additional 2 minutes out of the remaining 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. GOLDWATER. Mr. President, the Senator raises a very interesting point that I would like to clear up at this time.

The Senator mentioned a short while ago that the airplane had a structural problem. This occurred at 128 percent of stress. I point out that the Air Force calls for 150 percent. I believe that 128 percent is about as high as we have ever gotten out of any plane. The FAA calls for 200 percent. However, in the Air Force, the Army, and the Navy, they realize that 150 percent is far more than they will ever be asked to sustain. In fact, 100 percent is asking for more than a pilot can sustain.

So far as any structural defect is concerned, it is not of major importance, but I am told by the Air Force that they will continue to look into it.

I had not heard about the landing question. The day I flew the airplane it landed in 1,500 feet, which is an extremely short distance for such a mammoth plane to stop in and is in keeping with Air Force and company specifications.

I agree with what the chairman of the Armed Services Committee said, that it is a good plane. I also agree with what the Senator from Wisconsin said, that it is a very queer contract.

Mr. PROXMIRE. Mr. President, I point out that the order is for 58 of these planes. I can see no damage whatsoever since only five test models of the plane have been produced and it will take perhaps 1 year to finish the five that have been produced before we would go ahead with the authorization for the remainder of the planes.

REFERRAL TO THE COMMITTEE ON PUBLIC WORKS OF S. 2635—HARTWELL DAM PROJECT, SOUTH CAROLINA AND GEORGIA

Mr. BYRD of West Virginia. Mr. President, at the request of my senior colleague, Senator RANDOLPH, I ask unanimous consent that S. 2635, a bill to provide for adjustments in the lands or interests therein acquired for the Hartwell Dam project, South Carolina and Georgia, by the reconveyance of certain lands or interests therein to the former owners therein, which was referred to the Committee on Armed Services, be rereferred to the Committee on Public Works; and I ask unanimous consent that a statement by Senator RANDOLPH be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT OF SENATOR RANDOLPH

As the members of this body know, the Committee on Public Works is responsible for recommending legislative authorizations to the Senate for the comprehensive water resources development programs carried out under the jurisdiction of the various Federal Water resources agencies, including the Corps of Engineers of the United States Army.

The Hartwell Dam and Reservoir is a project under jurisdiction of the Corps of Engineers and was previously approved by the Committee on Public Works and construction subsequently authorized by the Congress. The project was completed in 1963 and is in operation for multiple water resource purposes.

During the 89th Congress, a measure similar to S. 2635 was referred to the Committee on Public Works for consideration.

PROF. HENRY ROSOVSKY, CHAIRMAN, DEPARTMENT OF ECONOMICS, HARVARD UNIVERSITY

Mr. BROOKE. Mr. President, on previous occasions some Senators have seen fit to place in the RECORD an article by the eminent cartoonist Al Capp regarding the disturbances at Harvard University earlier this year.

It is not my purpose here to take issue with the thrust of that article. However, I should like to help correct a misapprehension which has arisen as a result of that article regarding the role of Prof. Henry Rosovsky, chairman of the department of economics at Harvard. Mr. Capp raised questions regarding Professor Rosovsky's role in the campus disturbances and his continuing position at Harvard. An article written by Alan Barth, clarifying the professor's role, was published in the Boston Globe on Thursday, June 26. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROF. ROSOVSKY'S ROLE AT HARVARD

(By Alan Barth)

Depicted by Al Capp as the villain in Harvard University's recent student uprising, Prof. Henry Rosovsky turns out to have been one of its authentic heroes—and most of all, it would appear, from Al Capp's own point of view. In an article which appeared in the Globe Wednesday morning Mr. Capp made some harsh and completely mistaken statements concerning the Harvard professor. Two indignant letters appearing elsewhere on this page today set the record straight.

In a lengthy telephone interview, Rosovsky talked in detail about his part in the Harvard confrontation and about his views regarding the Black Studies Program which was an important aspect of that confrontation.

An economist by inclination and training—far from having any intention of quitting the University, he is going to become chairman of the Economics Department at Harvard on July 1—he was asked a year ago to serve on a committee created to survey the possibilities for an Afro-American Studies program at Harvard. After a year of intensive investigation, this committee came forward with a considered and comprehensive proposal to make Afro-American studies an integrated part of the Harvard curriculum.

Rosovsky has a strong feeling that Negro contributions to music, literature, the social sciences and other aspects of contemporary culture have been accorded altogether inadequate attention. He believes, however, that they cannot advantageously be treated as a separate discipline. Like area studies which have engaged the interest of a variety of the conventional disciplines, black studies, in his view, should draw to them historians, economists, sociologists and others—white no less than black—who want to focus on problems relating to black people in the United States.

Thus the committee on which he played a leading role, proposed that black studies should be not a distinct department at Harvard but a "combined major" working through small group colloquia in which students who had developed at least minimum competence in one of the standard fields could apply their knowledge to, say, the economic problems relating to ghetto real estate.

"We have a lot to learn," Rosovsky said. The relatively uncharted ocean of black studies gives it an appeal to students; at the same time, it creates a personnel problem which Rosovsky characterized as "hair-raising." He wants the field of study to be in every respect up to Harvard's standards and even better, if possible, than the conventional fields. But it is extremely hard to find really competent instructors. As a practical matter, the head of the program has to be a black man; but the most eminent black scholars are already engaged elsewhere and, interestingly enough, most of the contemporary Africanists are white.

Black studies programs in some institutions have been devised hastily, and sometimes cynically, as a sop to Negro aspirations. Often they embrace courses which have no relevance to the mainstreams of American life and which promise no future to those who may choose to pursue them. Too frequently they embrace courses, such as "black math" which defy definition even by their sponsors. While amorphous programs of this sort avoid what black militants look upon as the vice of providing "a ticket to Whitey's world," the trouble with them is that they provide a ticket to nowhere.

"I want you to know," Bayard Rustin said recently in indignation, "it is very cheap to turn to young Negroes who are in internal agony about the difference between their aspirations and their poor equipment for achieving and give them the hope of black studies that they can easily pass. It is unfair." Rosovsky was determined that no such unfairness should be perpetrated on black students at Harvard.

In the aftermath of the occupation of University Hall in the Harvard Yard and the forcible expulsion of the occupiers by the police, black militants presented demands for much more than the Rosovsky Committee recommended. And the Faculty of Arts and Sciences voted in favor of major concessions to these demands. Specifically, it gave its approval to putting Afro-American studies under an independent department, abandoning the concept of a "combined major," and, most serious of all, giving to students representatives chosen by a black student political organization on the campus equal voting power with faculty members in passing upon faculty appointments and tenure and on curriculum decisions.

Rosovsky regarded this rejection of his committee's recommendations as a vote of "no confidence" and, accordingly, resigned from the committee in protest—apparently just what Al Capp would have wanted him to do.

In Rosovsky's view, the essence of the problem of enhancing Negro opportunities at the great universities lies in recruitment. He has not the slightest doubt that plenty of thoroughly qualified Negro students are available around the country. But they have to be sought out, in his judgment, and "selected on a basis of merit." The idea of taking black students at random from urban ghettos as an act of expiation for past injustices to their race, spells, as he sees it, "absolute disaster."

He is particularly interested in the encouragement of qualified black students to stay on at Harvard for graduate work because such work, as he puts it in the jargon of economists, "has an enormous multiplier." He is convinced that at this level, too, "there

is no shortage of qualified black talent for the major universities."

These are the views of a man who believes at once in equality and in excellence, who seeks opportunity for every student to reach the limit of his potentialities without seeking any relaxation of scholarly standards. If this is conservatism, it is aimed at the conservation of ancient academic values.

THE HIGH COST OF CUTTING BACK ON BASIC RESEARCH

Mr. DODD. Mr. President, this is an economy-minded Congress, and rightly so. We have become increasingly aware of the fact that our revenues are limited and that there is a limit to how high we can push the rate of taxation. Meanwhile, there appears to be virtually no limit to the increasing roster of problems clamoring for Federal attention.

We are going to have to do more than we have been doing in the fields of poverty, housing, urban blight, water pollution, and air pollution, to list only some of the growing problems that confront us.

But where are the funds for these expanded programs to come from? Clearly, we are going to have to be far more frugal than we have been in the past; we are going to have to submit each item in the Federal budget to the most painstaking examination, with a view to keeping our expenditures in each area to the minimum realistic level.

The trouble is, that, when we start cutting, we frequently find that there is far less fat in our various programs then we had imagined. The process of cutting, therefore, sometimes becomes a very painful one. But the pressure to cut back on Federal expenditures is so great, that in several areas the administration and Congress seemed disposed to make cuts that are not prudent and for which our society may have to pay a heavy future penalty.

One such area is that of basic research. The budget now before Congress cuts back sharply on the appropriation to the National Science Foundation for the support of such research.

I have received from a Connecticut resident, Mr. Neal E. Miller, an eloquent letter dealing with this subject. Mr. Miller is a scientist of some note who has been awarded the President's National Medal of Science. In his letter he makes this point:

> Now that we have used up our Western frontier, and are exhausting our unusual bounty of national resources, such as the Mesabi iron ore range, we can maintain our position as a powerful "have" nation only by exploiting the momentum of scientific and technological superiority that we have built on these resources. Once we let our leadership in science and technology slip, we are on the road downhill like England, and it will be practically impossible to pull ourselves back up.

Because of the importance I attach to Mr. Miller's letter, I ask unanimous consent that the entire letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

GUILFORD, CONN.,
July 8, 1969.

Senator THOMAS J. DODD,
U.S. Senate,
Washington, D.C.

DEAR SENATOR DODD: As one who has been awarded the President's National Medal of Science, I urge you to correct the folly of the House of Representatives and the Nixon administration. In order to save an utterly insignificant proportion of the federal budget (compared, for example, with an overrun of several billion on a single plane of weapons system) they are cutting down on the appropriation to the National Science Foundation for the support of basic research. This is going to undermine the scientific leadership on which our national strength depends.

Basic research is the growing edge of science, like the thin growing cambium layer of the bark of a great tree, where shaving off a small girdle can cause great damage. The essentially standstill budget for the NSF and the NIH, which in time of inflation means that basic science is getting decreasing amounts of our increasing gross national productivity, has already in my own personal experience been observed to inflict much more harm than most people realize.

[Now that we have used up our Western frontier, and are exhausting our unusual bounty of national resources, such as the Mesabi iron ore range, we can maintain our position as a powerful "have" nation only by exploiting the momentum of scientific and technological superiority that we have built on these resources. Once we let our leadership in science and technology slip, we are on the road downhill like England, and it will be practically impossible to pull ourselves back up.] Our present superiority is built to a far greater extent than we like to admit on unusual conditions which produced a massive immigration to us of the best scientific brains from Europe and other countries. When you cut back on basic research, you discourage the brightest minds of our own younger generation from going into science and narrow their opportunities for learning by apprenticeship in such research. You slow down the discovery of new knowledge which is becoming increasingly essential for advances in the increasingly sophisticated technology that is becoming ever more important in the modern world. And when you have a shrinking purchasing power, it is the newest and most important developments that are likely to be the hardest hit, since each University and even each individual scientist is likely to have certain commitments to fixed expenses for ongoing activity which must be maintained at least for a while, so that it is the chance to go ahead with the most important lines of new development that is likely to be hardest hit. I personally know of two leading scientists who, because of reduced ceilings that were imposed on their Universities by the NSF when its budget was cut, have had to use all of their funds for the salaries of personnel to whom they were committed, so that they had nothing left over to buy new equipment and not nearly enough to spend on supplies—an extremely inefficient situation which greatly reduced their scientific productivity. I personally have had to spend an inordinately inefficient amount of time beating the bushes for funds to make up for the relatively small cuts that have prevented me from having the freedom to follow up important new leads. And I have been unusually fortunate.

Furthermore, there is a great lack of balance in the actions. The Nixon administration is recommending an 8.5 million reduction in the NIH but 85 million more to put extra men on the moon to do tasks that are less vital than health and could be done much more efficiently by instruments.

I cannot overemphasize the folly of trying to save money by cutting back on basic research. It is like burning your seed corn on a cold winter day; at the moment it may give you a trivial increase in heat. There are no immediate ill effects, but the results of the next winter are disastrous. By the time we realize that we are losing our scientific leadership, it will be too late. Technological superiority, which is becoming increasingly dependent on basic research, will, in the future, make the difference between our being a "have" and a "have-not" nation. I urge you to have the foresight to prevent us from taking the fatal turn toward the road that leads downhill.

Sincerely,

NEAL E. MILLER.

THE ABM

Mr. HATFIELD. Mr. President, at a time when arguments are heavily weighted in favor of or in opposition to the proposed deployment of an anti-ballistic-missile system, it is difficult for the public to find objective reporting designed to educate rather than persuade. The recent July 24 editorial which appeared in the Oregon Statesman was evidence of the educational function the press can serve during times when evaluation demands recognition of both sides of an issue. It is with praise of the Statesman's journalism and its public-minded approach to national, as well as local, issues that I ask unanimous consent that the "ABM Offers New Victory for Fear" be inserted in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ABM OFFERS NEW VICTORY FOR FEAR

The debate on the anti-ballistic missile sounds like a sequel to "Dr. Strangelove." In that satirical movie of a decade ago, American leaders wildly speculate about the numbers of people which will be killed in a nuclear holocaust and the possibility of sustaining human life underground for 100 years as the nuclear bombs begin to burst.

The concepts of counter-missiles erasing nuclear warheads in the skies above America and the speculation as to how many millions of lives would be lost sound like the musings of mad scientists. But such speculation is not a nightmare. It is real. It is now. Take this paragraph from a recent Business Week Magazine:

Soon, however, the MIRV and the ABM could make it feasible for one of the superpowers to launch the first blow without the risk of being devastated in return. Though some retaliatory warheads might slip through, the nation which struck first might calculate that it would survive while its victim would be shattered.

In the ABM debate we are forced to attempt to think about the unthinkable and imagine the unimaginable.

The information about the ABM system is confusing and contradictory. Expert opinions are available both for and against. Sen. Ted Kennedy commissioned a study which rejected the ABM as unsound. Arthur Goldberg heads a committee concerned about its deployment.

Former Sec. of State Dean Acheson heads another committee vigorously favoring the ABM. Dr. Henry Kissinger, the President's chief foreign policy adviser, endorses it.

The United States Senate is split almost exactly down the middle on the issue and Oregon's two senators are on opposite sides of the fence.

Such friends of the military as Sen. Stuart Symington, former secretary of the Air Force, oppose the ABM.

If the Vietnam War has proved anything, it is that America cannot afford guns and enough butter. Dare we risk diverting more multi-billions from the pressing domestic problems here at home? If we solve the ABM riddle, won't the Soviet find new means of circumventing it and leave us faced with spending multi-multi-billions to counter the new threat?

On the other hand, do we dare remain without a defense against Red Chinese missiles as that nation develops the potential of dropping nuclear weapons on our cities? Chinese leaders often have expressed the willingness to sacrifice hundreds of millions of their people.

Dare we wrench the policy-making decision from the hands of the President in this matter? He and his advisers are in possession of the top-secret information which is not available even to the 100 U.S. Senators.

Cost estimates for such defenses run a tremendous gamut. Whom are we to believe? The original figure for a limited Safeguard ABM missile program was $4 billion. In recent weeks, it is estimated at anywhere from $7 billion to $13 billion.

The ABM system would comprise the most complex computerized structure ever devised, and there would be no way of testing its effectiveness until fights of enemy nuclear missiles were descending on this country.

At this distance, without benefit of precise technical information and accurate enemy intelligence, we cannot make a definitive statement about the ABM.

We can say this, however, with complete assurance. If it is found necessary to invoke the anti-ballistic missile system, it will be another victory for fear.

Ultimately we must lead by example, not shield ourselves against a hostile world. We cannot build walls high enough or create enough ABMs to keep out the enemy when the real enemy is fear.

It is the enemy within, the fear, the insecurity, which is the ultimate foe. We are doomed to unceasing rounds of defense built upon defense, each more costly and more ghastly than its predecessor, until we are able to create a world in which we can live in peace.

ADDRESS BY CAPT. J. EMMETT SEBRELL BEFORE COMMODORE CLUB, LAKE WYLIE, S.C.

Mr. HOLLINGS. Mr. President, on July 4, 1969, a superb address was given by Capt. J. Emmett Sebrell, U.S. Navy, retired, before the Commodore Club in Lake Wylie, S.C. Captain Sebrell has had a distinguished military career participating in the South Pacific invasions from Guadalcanal to Bougainville, and he is a veteran of the Korean war. The thoughts presented in his speech are well reasoned and forceful, and I commend it to the attention of the Senate.

I ask unanimous consent that the speech be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY CAPT. J. EMMETT SEBRELL

Commodore Moore; Vice-Commodore Reed, distinguished guests, ladies and gentlemen—it is indeed a pleasure for me to be here today with you and participate in this wonderful occasion. As I look around your fine facility and take note of all the fine looking sea-going craft, I can't help but recall the words of John Paul Jones when he said, "I wish to have no connection with any ship that does not sail fast, for I intend to go in harm's way". Were he here today I know he would feel safe in sailing with you good people.

Freedom *is* our heritage. And every citizen owes a great debt to the many Americans who worked, and fought, and died to preserve it.

We might recall the authors of our Declaration of Independence who gathered nearly two centuries ago. These courageous men had faith in the principles of freedom. They were patroits; and they were revolutionaries. In his Inaugural Address, President Kennedy warned that, "we dare not forget—that we are the heirs of that first revolution." And he also reminded us that, "the same revolutionary beliefs for which our forefathers fought, are still at issue around the globe."

And indeed we should call to mind the struggle which set *our* nation free. We should often remind ourselves of those gallant rebels who demonstrated what a few staunch men *can accomplish*. For the *same* beliefs which sustained the Revolutionary Army at Valley Forge, are being tested once more throughout the world, and even in our own hemisphere. Those ragged soldiers, huddled around their fires in that snow-covered encampment, proved, as future Americans would prove again, in muddy trenches, in remote foxholes, in steaming jungles, and on stormy seas, that there is *no* convenient time, *no* comfortable place, to stand up for freedom.

Today freedom has been challenged anew. Once again, free men must be willing to stand up for their freedom—or risk its loss.

The Free World is faced with the grim challenge of godless communism, a challenge that extends to every area of human endeavor. As a nation, and as individuals, we find our heritage of liberty and justice threatened by those who have sworn to topple free civilization. The communists seek to degrade the dignity and the integrity, of the individual. As free men throughout the world face this relentless communist challenge, there can be no doubt that freedom is in jeopardy. Nor can there be any doubt as to the important stake of the United States in the crises, the disorders, which rack our troubled world. That is why we as a nation must strive to maintain our strength; why we must increase our national strength in every form, moral, political, economic, and military.

The military's primary responsibility is to preserve our freedom; and that is why the United States has developed the most powerful military force in the world. Our mighty Air Force, our modern Army, our fighting Marines, and our versatile, powerful Navy, stand ready to safeguard the rights of the individual to liberty and justice, wherever and whenever they are threatened.

As a military man, it is my job to understand the uses of military power; to evaluate the dangers of a military threat. But as a citizen, I must express my belief that the greatest danger that confronts our heritage of liberty—is not military. Rather, it is the possiblity that we may fail to recognize the grave obligations that our freedom imposes upon us; that we may fail to grasp the real meaning of freedom. For while the rights and privileges of freedom must be respected and safeguarded, we must remember that freedom involves responsibilities as well as rights, obligations as well as privileges.

Perhaps the blessings of freedom, and the passage of time, have concealed the two sides of freedom. Perhaps we have placed too much emphasis on privileges—on rights. Every day we hear of someone defending *his* right of free speech—*his* right to trial by jury—*his* right to equal opportunities. But how often do we hear someone insist on *his* right to carry out *his* responsibilities to their neighbors, to their community, to their country. Yet without a balance between rights and responsibilities, without a balance between privileges and obligations, freedom is a meaningless goal. Freedom in the abstract, freedom of and by itself, never made a society. Nor has freedom, all by itself, ever saved one. Rather—freedom is an opportunity.

As free men, living in a free society, we Americans have the opportunity to work out our individual destinies. We are able to live our lives in human dignity. Freedom furnishes the framework in which we can most effectively carry out our responsibilities. And that is why the vital issue in a free society is how *we* use our freedom. The vital question is whether or not *we*, we the people of the United States, will seize the opportunities that our freedom provides.

We live in a complex world, a world beset by increasingly complex problems. Very often, the vital role of the individual is obscured in a maze of pressing and intricate tasks. Yet, the individual *is* still the central figure. Our problems, world problems, national problems, domestic problems, are created by individuals. And these same problems will have to be solved by individuals.

The future of our nation, of all free society, depends upon the efforts of the individual citizen; upon the efforts of individual men and women, acting with a strong, courageous, and personal sense of responsibility. A strong, responsible community; a strong, responsible nation; is the direct product of strong and responsible citizens. The prime movers of history have not been blind force—but rather, stout-hearted men.

We have heard a great deal in the past decade of the common man. But the real achievements, the lasting achievements, spring from the uncommon man. Achievements spring from the man who sees his responsibilities; who accepts them, and who is willing to put forth the extra effort to discharge his responsibilities.

As responsible members of society, our first effort must be to understand the problems which we face. As citizens, we have to keep informed; we have to stay alert to the vital and pressing issues of local, national, and international significance. For a democracy begins with informed people. In a democracy, the government represents the will of the people. Yet even though we ought to understand our problems; to talk about them; to discuss them; all the talk, all the speeches in the world, can *never* be a substitute for action. Talk is only a prelude to action—to hard work.

People often hear so much about a problem they're apt to believe something is being done about it; if not by themselves, at least by someone else. But life doesn't work that way. Everyone here wants *our* country to be strong. We want *our* nation to be virile and dynamic. But if we want these things, you and I, as individuals, must do something about them. We have to act.

We must place greater emphasis on plain, old-fashioned, hard work. We must recognize the distinction between the excellent and the mediocre. We must be willing to discipline ourselves to achieve excellence, and to accept nothing less.

We expect our country to be an example of honesty, of justice, and of integrity. We expect the United States to furnish a moral image to other nations. But again if *we* expect our nation to set the standard, *you and I*, as individuals, must meet our own commitments. *We* must be honest and fair in our dealings with our friends, with our neighbors, with our business assaociates. As individuals, *we* must stand up and be counted wherever and whenever our principles are at stake. We must insure that our own image is not tarnished by lowering our standards, by evasion, or by moral cowardice.

We expect our country to lead the Free World with vigor and decisiveness. But if the United States is to lead, you and I, as individuals, must likewise accept the responsibilities of leadership whenever we have the opportunity. We worry a great deal about

the uncommitted nations of the world, but perhaps our greatest concern should be the—uncommitted Americans; Americans who fail to accept their responsibilities, who fail to use their freedom.

What we have today, what we are today, is primarily the result of what has been done in the past; the result of the hard-won achievements of our ancestors. What we will have tomorrow, what we will be tomorrow, depends on what we *do* today; the results of the decisions we make, the actions we take, as individuals, as citizens, and as a nation.

The United States was founded on faith in the individual, and that faith will be fulfilled in the accomplishments of the individual. I share that faith. I am confident we will use the opportunities our freedom provides.

DEFENSE OF ABM ADVERTISEMENT PUBLISHED BY MALCOLM E. SMITH, JR.

Mr. GOLDWATER. Mr. President, recently on the floor of the Senate, in his usual forceful and forthright manner, the senior Senator from Ohio (Mr. YOUNG) addressed some remarks against an ad which appeared in the Evening Star on Tuesday, May 27. This advertisement was bought and paid for by Malcolm E. Smith, Jr., of New York City. The chief assertions made by Senator YOUNG were to the effect that the ad contains lies.

Mr. President, I have read this advertisement very carefully and, while the Senator from Ohio may disagree with statements like "the Soviets are going for a first-strike capability and there is no question about it," made by Secretary of Defense Laird, the fact that the statement was made cannot be categorized as a lie. I am privileged to sit with the senior Senator from Ohio on the Armed Services Committee, and, after thoroughly reading this ad, can find nothing in it that I would categorize as a falsehood. I might not have said that Russia "is vastly ahead of the United States in numbers of missiles," but "vastly" is a term of explanation and, whether it is right or wrong, the Russians are ahead of us in missiles, and in the size of missiles. There might be some misconstruction of whether or not Russia has exploded a 100-megaton bomb, but there are those who say she has, and there are those who say it was 60 megatons. Regardless of what it was, it was big.

I defend the right of any Senator to say anything he wants on the floor of the Senate, or anywhere else, but I think we should be very careful in mustering our words to make sure that disagreement with a statement, whether it be printed or spoken, conveys the fact that we disagree, but that we do not disagree because statements made were lies.

Mr. Smith is a patriotic American who feels very deeply about the ABM; so deeply that he spent his own money to insert this ad. We who favor the ABM have not used the floor of the Senate to criticize full-page ads opposing it, the financing for which has never been discussed, nor do I think any one on our side every will, so I do hope that in the course of debate we can be very cautious about the explanation of our feelings.

COOPERATIVE PROGRAM IN TEACHER EDUCATION

Mr. MONTOYA. Mr. President, a unique educational program is being conducted at present at New Mexico State University.

The cooperative program in teacher education at New Mexico State University is the first of its kind in the United States. The program, approved in 1965, was put into effect in August 1965 with 20 students from New Mexico and Texas. The program, currently directed by Dr. Donald Ferguson, was proposed by Dr. Donald Roush and was implemented by Dr. Jack O. L. Saunders. The advantages of the cooperative program are threefold: First, it provides people with high academic potential who would ordinarily be unable to attend an institution of higher education an opportunity to do so by enabling them to earn their own way through college; second, it gives these students 2 years of experience in the school systems as teacher aides and instructors; third, the students are able to help present teachers be more effective by alleviating the heavy loads of large classrooms and time-consuming tasks.

The aim of the program is to produce experienced, devoted teachers. This is achieved through a 4-year program. The students participate in four work phases, one each year, and attend school as regular students the remainder of the time, including summer school.

In the first work phase, all students work in an elementary school. Their responsibilities consist of such tasks as grading papers, typing tests, and study guides, making bulletin boards, collecting milk money, and tutoring children.

In the second work phase, the students work in junior high schools as teacher aides. Tutoring has proved to be of special benefit to all concerned and at this level small group instruction takes place. The third year co-op is considered somewhat analogous to regular student teaching. Students work at the level of their choice where they teach a 6- to 8-week block in addition to the regular duties performed.

The final work phase is the most rewarding. Classified as "co-teachers," co-ops engage in a diverse program consisting mainly of teacher duties under the supervision of a cooperating teacher. The co-teacher is more on his own in the classroom.

One weekly seminar is required for all co-op students during each of the work phases to enable them to discuss experiences as well as to receive instruction from a variety of university professors in the content of professional education.

The pay scale for work phase is graduated starting at $2 an hour at the freshman level on up to $2.65 in the senior year. These earnings are supplemented by scholarships and student loans depending upon individual needs. Eighty percent of the program is financed by the work-study program of the Higher Education Act. The remaining 20 percent is provided by the State of New Mexico.

The study phases are one semester and two 6-week summer sessions annually. The student pursues his general education requirements and a depth preparation in his teaching fields during the study phases.

The requirements for receipt of a B.S. degree are similar to those of regular students. A special professional education curriculum taken during work phase replaces the typical professional courses taken by regular students.

Mrs. Mary Lou DiMarzio, senior group, informs me that the program is continually seeking to improve itself. A council composed of elected representatives from each group of co-ops meets periodically to discuss problems and new ideas.

It is hoped that the program will serve as a guide for future programs with similar goals: the preparation of experienced beginners in the field of education.

Mr. President, I commend Dr. Roush, Dr. Ferguson, Dr. Saunders, and others who are responsible for this most outstanding program and I ask unanimous consent that the names of the co-op students be printed in the RECORD.

There being no objection, the names were ordered to be printed in the RECORD, as follows:

SENIOR GROUP

Terry Allman, Lovington, New Mexico.
M. Estella Avalos, Hatch, New Mexico.
Mary Lou DiMarzio, Truth or Consequences, New Mexico.
Jack Durkin, Hatch, New Mexico.
Kathleen Grijalva, El Paso, Texas.
M. Kathleen Hening, Albuquerque, New Mexico.
Grace Juarez, El Paso, Texas.
Danny Martinez, Hatch, New Mexico.
Susan Pickett, Las Cruces, New Mexico.
Luis Rodriguez, Anthony, New Mexico.
M. Lesette Smith, Tucumcari, New Mexico.

JUNIOR GROUP

Kenneth Aigner, Farmington, New Mexico.
Lucille Apodaca, Garfield, New Mexico.
Romolo Arellano, Arroyo Hondo, New Mexico.
Joe Avalos, Hatch, New Mexico.
Dolores Borrego, Santa Fe, New Mexico.
Ray Brito, Albuquerque, New Mexico.
Frances Cardoza, El Paso, Texas.
Kathy Cobb, Deming, New Mexico.
Irma Esparza, El Paso, Texas.
Rosemary Estrada, Las Cruces, New Mexico.
Celeste Faison, Las Vegas, New Mexico.
Cynthia Gomez, Las Cruces, New Mexico.
Virginia Gomez, Artesia, New Mexico.
Agapito Griego, Ranchos de Taos, New Mexico.
Linda R. Hackler, Hatch, New Mexico.
Judy Hanover, Alamogordo, New Mexico.
Linda Johnson, Roswell, New Mexico.
Antonio Lara, Berno, New Mexico.
Irene Martinez, Hatch, New Mexico.
Janet H. Morgan, Artesia, New Mexico.
Jane Ellen Neal, Clovis, New Mexico.
Carolyn Russell, Artesia, New Mexico.
Kathleen Weckel, Roswell, New Mexico.
Steve Wilkerson, Hobbs, New Mexico.

SOPHOMORE GROUP

Vonda Allman, Roswell, New Mexico.
Sylvia V. Alvarez, Santa Fe, New Mexico.
Antonette Archuleta, Valdez, New Mexico.
A. Gloria Atencio, Aztec, New Mexico.
Boydette Barnett, Roswell, New Mexico.
Anita Canul, Van Nuys, California.
Linda Doyal, Roswell, New Mexico.
Bonnie Hosie, Visalia, California.
Geraldine M. Jackson, West Nyack, New York.
Beverly Knight, Albuquerque, New Mexico.

Catherine Martinez, Espanola, New Mexico.
Emilia Medina, Lordsburg, New Mexico.
Nancy Mixon, Hobbs, New Mexico.
Emma Murillo, Anthony, New Mexico.
Manuel Palacios, Anthony, New Mexico.
Gloria Rios, El Paso, Texas.
M. Guadalupe Rios, Mesilla, New Mexico.
Mary Ann Robinson, Artesia, New Mexico.
Raul Salcido, Deming, New Mexico.
Sharon Smith, Artesia, New Mexico.
Barbara B. Spencer, Roswell, New Mexico.
Rose Marie T. Struck, Truth or Consequences, New Mexico.
Estella M. Torrez, Las Cruces, New Mexico.
C. Pat Trujillo, Sante Fe, New Mexico.
Kathleen Williams, Las Cruces, New Mexico.

FRESHMEN GROUP

Candace Bannerman, Grants, New Mexico.
Carolyn Byas, Santa Fe, New Mexico.
Linda H. Coaker, Albuquerque, New Mexico.
Carol Cox, Las Cruces, New Mexico.
Gloria Cruz, Albuquerque, New Mexico.
George Dodson, Hagerman, New Mexico.
Mary Dorey, Carlsbad, New Mexico.
Janice Dorris, Roswell, New Mexico.
Gwenetta Dunn, Roswell, New Mexico.
Nancy Garvey, Roswell, New Mexico.
Carmen Hernandez, Carlsbad, New Mexico.
Linda Hight, Alamogordo, New Mexico.
Renee Huber, Clovis, New Mexico.
Kathryn Jackson, Las Cruces, New Mexico.
Mary Jackson, Deming, New Mexico.
Dianne Johnson, Truth or Consequences, New Mexico.
Frutoso Lopez, Ranchos de Taos, New Mexico.
Carolyn Maddox, Clovis, New Mexico.
Susan Mehigan, Albuquerque, New Mexico.
Maria Orozco, Jal, New Mexico.
Teresa Romero, Tucumcari, New Mexico.
Yolanda Romero, Ranchos de Taos, New Mexico.
Terry Lyn Rosandich, Albuquerque, New Mexico.
Nancy Sanchez, Roswell, New Mexico.
Lynette Schultz, Deming, New Mexico.
Cynthia Shaw, Roswell, New Mexico.
Guadalupe Silva, Las Cruces, New Mexico.
Carol Singleton, Las Cruces, New Mexico.
Alice Thompson, Hatch, New Mexico.
Martha Valdez, Lordsburg, New Mexico.
Manuel Yanez, Mesilla, New Mexico.

INCOMING FRESHMEN GROUP

Mary Allen, Bayard, New Mexico.
Teresa Ann Augustinos, Clovis, New Mexico.
Charles L. Boyle, Espanola, New Mexico.
Debra Burnett, Clovis, New Mexico.
Maria Chavira, Lordsburg, New Mexico.
J. Dale Clark, Las Cruces, New Mexico.
Frances K. Doyal, Roswell, New Mexico.
Sandra Draper, Albuquerque, New Mexico.
Kathryn Eby, Clayton, New Mexico.
Diana Espinoza, Belen, New Mexico.
Marcie Eyer, Clovis, New Mexico.
John E. Farrell, Bricktown, New Jersey.
Magdalena Gandara, Lordsburg, New Mexico.
Bernice Garay, Hatch, New Mexico.
Yolanda Gomez, Artesia, New Mexico.
Lenora Gonzales, Carlsbad, New Mexico.
Patsy Harris, Farmington, New Mexico.
Henry Hudson, Deming, New Mexico.
Anita Kay Logan, Las Cruces, New Mexico.
Yolanda Martinez, Deming, New Mexico.
Susan Matkovich, Grants, New Mexico.
Linda Sue McBrayer, Roswell, New Mexico.
Alice McDonald, Clovis, New Mexico.
Wilma McHalffey, Lordsburg, New Mexico.
Joy D. Mehigan, Albuquerque, New Mexico.
Kathy Molina, Grants, New Mexico.
Dorothy Oliver, Hatch, New Mexico.
Franklin J. Pacheco, Santa Fe, New Mexico.
Blenda Carol Patton, Cuba, New Mexico.
Joyce Perry, Aztec, New Mexico.
Jonathan Phillips, Silver City, New Mexico.
Margarita Ramirez, Anthony, New Mexico.
Steve Rinehart, Albuquerque, New Mexico.
Debbie G. Sales, Las Cruces, New Mexico.
Steven C. Singleton, Las Cruces, New Mexico.
Nancy Sullins, Las Cruces, New Mexico.
Pamela S. Townsend, Roswell, New Mexico.
Laura Ann Wallace, Bayard, New Mexico.
Lynell G. Widner, Melrose, New Mexico.
Bonnie Yocom, Ft. Sumner, New Mexico.

STUDENT UNREST

Mr. PEARSON. Mr. President, the Senator from Ohio, Mr. SAXBE, has prepared a most perceptive article on student unrest for the current issue of the Cleveland State Law Review. He has investigated the causes of the unrest and laid down some very helpful recommendations for remedies.

Senator SAXBE served three terms as Ohio attorney general and is highly qualified to deal with the issues surrounding student unrest. This article is well-founded in legal knowledge and enlightening in terms of its perceptions of today's students and the issues which concern them. The article serves to stimulate positive consideration of the student viewpoint on these issues, which is certainly a step toward better adult-student communication.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STUDENT UNREST

(By Senator WILLIAM B. SAXBE*)

Many people have recently expressed alarm about the student unrest in our universities and on our college campuses. I am delighted to have this opportunity to submit an article to The Cleveland State Law Review, for it provides a forum for me to express my views on the subject.

By student unrest I do not mean anarchy. As Justice Thurgood Marshall said in a commencement address at Dillard College in New Orleans, "Anarchy is anarchy and it makes no difference who practices it. It is bad, it is punishable, and it should be punished."

In trying to understand the unrest in our land today, we must not confuse activism with violence; nor dissent with conspiracy. Therefore, I refer to unrest of the spirit and soul—not violence. The Gallup Poll reported on May 24 that a majority of students agree with the basic goals of the militants, but not their tactics. Students are genuinely concerned with the way things are on campus and the community and they want these things changed. Students are no longer concerned with a standard of living, but with a way of life—one that is just and moral.

Anyone who is past that time of life which is said to divide the young from the old, the trustworthy from the untrustworthy—the age of 30—may find it difficult to relate to many of the grievances which appear to activate many in our student population.

The temptation is strong to denounce vigorously the hair, the clothes, the morals, the living habits and never listen to what they say. Perhaps an equal danger but one only a few have succumbed to is to become a camp follower of the young, eagerly chiming in assent to anything they say or do.

It seems to me, however, that it is manifestly important that we not fall into either position. We must recognize that many serious and troubled young people are dissatisfied today with our society and our culture. That dissatisfaction has its roots not only in the way these young people perceive that society and culture but in a number of wrongs objectively part of that society and culture.

We can learn from this new generation, just as they can and must learn from us. "The present generation of young people in our universities is the best informed, the most intelligent, and the most idealistic this country has ever known. . . . The ability, social consciousness and conscience, political sensitivity, and honest realism of today's students are a prime cause of student disturbances." [1]

Learning requires communication, but the impasse between the generations more often than not involves a failure to communicate. Although both groups may harbor the same ideas, they express them in a slightly different manner. President Nixon said in his Inaugural address, "We cannot learn from one another until we stop shouting at one another—until we speak quietly enough so that our words can be heard as well as our voices." Simon and Garfunkel, folksingers and spokesmen for the young, expressed similar thoughts in the "Sounds of Silence," [2] one of the most popular songs of the younger generation in 1968.

For a mutual interchange to be even moderately successful, however, requires that we drop some of the slogans and habits of thought that block the way. Let us lower our voices and look at the problem as we see it today.

A major premise in the condemnation of violence on campus is that "our colleges and universities cannot perform their vital functions in an atmosphere that exalts the struggle for power over the search for truth, the rule of passion over the rule of reason, physical confrontation over rational discourse." [3] Professor Nisbet has stated that this is true because "The university is the institution that is, by its delicate balance of function, authority and liberty and its normal absence of power, the least able of all institutions to withstand the fury of revolutionary violence." [4]

College administrators must make very clear that they will not shrink from the normal disciplinary sanction of suspension and expulsion to preserve and protect the institutions of learning which they serve. Furthermore, "advance plans should be made to determine, insofar as possible, the circumstances under which the university will use (1) campus disciplinary procedures (2) campus police, (3) court injunctions (4) other court sanctions and (5) the civil police." [5] A successful university administrator is not different than a successful bartender who must be able and willing to throw out a ruffian in order to stay in business and keep his place of business from being destroyed.

Repression, however, by itself is not enough. Suppression of legitimate grievances may precipitate reaction outside of the peaceful avenues of change as it already has in some instances. Because a majority of students are in sympathy with the goal of the militants, but not their tactics, we must as responsible citizens and I must as a responsible legislator attempt to define these goals. We then can redirect the idealism of youth to constructive action rather than destructive despair.

THE CAUSES

The source of student discontent has been analyzed by many and the conclusions range from immediate definitive explanations to others which are less immediate and more esoteric.

"Students are unwilling to accept the gaps between professed ideals and actual performance. . . . Today's intelligent, idealistic students see a nation which has achieved the physical ability to provide food, shelter, and education for all, but has not yet devised social institutions that do so." [6]

The loneliness, emptiness, and frustration that students feel in their everyday lives have led to the rise of the antihero. For example, many of you are undoubtedly aware that Dustin Hoffman has become something

Footnotes at end of article.

of a hero of the younger generation by virtue of his confrontation with life's hypocrisy in the movie, "The Graduate."

Today's youth does not reject authority as such, but the hypocrisy which it finds inextricably intertwined with it. It finds this hypocrisy in a war which it cannot understand, a draft which it finds unfair, and a set of national priorities which are poorly structured.

We are in the midst of a worldwide revolution. In trying to better understand it, I think it is helpful to examine what has been said by men like Professor George Wald, the Nobel laureate from Harvard. Professor Wald believes that much of the restlessness manifesting itself on our campuses and in our cities can be traced to the realization by this generation that it is by no means assured of its future.

Today's young people grew up in the post World War II period, an era where we have always had a Pentagon, an increasingly large army, a draft, and now the war in Vietnam. They are further confronted with the threat of a nuclear holocaust, chemical and biological warfare, and the population explosion. The youth today see the future in terms of nuclear destruction or famine resulting from the population explosion. Is it any wonder that Professor Wald calls today's generation "a generation in search of a future?" [7]

It seems to me that the purpose of a democratic form of government is to institutionalize change through a peaceful political process. Yet, how do we explain to youth that violence is not an effective means of change when it has been used effectively to institute change, both at home and abroad. This group has witnessed in short order the assassination of President Kennedy, Medgar Evers, Martin Luther King, and Senator Robert Kennedy. The United States has enunciated ideals of peace and economic development, but has reacted violently abroad by sending troops to the Dominican Republic because we did not like what was going on there and dispatching over half a million troops to Vietnam to solve that problem.

Therefore, this present generation of students has come of age in one of the most turbulent eras of change we have known. Past generations have borne the marks of their formative years—the generation that came of age during the Depression probably made its mark in Postwar America's desire for stability and assurance against unsettling change. Characterizations could be made of many such generations. It should not be surprising that our students reflect much of their formative years and these years as I have shown have increasingly been characterized by violence.

I would like to set out another factor which appears to me to have stimulated and fed campus unrest. It has almost become a cliche, but there is much truth in the observation that relations between the student body and teachers and between each of these groups and administrators have grown increasingly strained. Where once there was a sense of community, a coming together of scholars, this was replaced by an olympian administration cut off from student contact, busily raising funds and promoting the development of increasingly close ties with business and the military; this was also replaced by an ever growing number of teachers so pressed for time in which to conduct research, often for government, and to prepare material for publication, on which advancement in teaching ranks is so dependent, that their personal contact with students decreased to a minimum. College administrators, by isolating themselves from the student body and fostering a system in which the teachers became more isolated, failed to provide what the students had a right to expect.[8] Let us not forget, teaching is the primary purpose of a university.

As Secretary of Health, Education and Welfare, Robert Finch, recently said, "I think we need to have a long hard look at what is behind this student unrest. It is not simply the Vietnam War. In my opinion, it is a failure of the governance of education, the governing bodies, the institutional apparatus to respond. Probably they have been more rigid than almost any other institution in our whole society . . . in the face of very fast changing conditions." [9]

There is another factor adding to the unrest, one that I believe cannot be overlooked in trying to understand our youth and its troubles. That factor is boredom. The role of boredom in today's unsettled world was discussed in a recent essay by Professor Robert A. Nisbet of the University of California. He noted that between boredom and brute violence there is as close an affinity historically as there is between boredom and insanity, boredom and cruelty, and boredom and nihilism.

"Youth is beyond question idealistic. But in our present society, youth is also bored. And it is from boredom that so much of the intellectual character of radical political action today is derived . . ."

"It is boredom born of natural authority dissolved, of too long exposure to the void; boredom inherited from parents uneasy in their middle-class affluence and who mistake failure of parental nerve for liberality of rearing; boredom acquired from university instructors grown intellectually impotent and contemptuous of a calling that explains the mindless purposeless depredations today by the young on that most precious and distinctive Western institution: the University." [10]

THE LAW

The law of the land is reasonably clear. It protects speech. Not only verbal speech but a wide range of "symbolic" speech is to remain free from government restraint. And we have long since resolved the argument in *Gitlow* v. *United States*, 268 U.S. 652 (1925), between Justice Sanford, who thought apparently that only discussion which was a "mere academic and harmless discussion" was entitled to claim the protection of the First Amendment, *supra*, 665, and Justice Holmes, who readily conceded that "[e]very idea is an incitement." *Supra*, 673. As Justice Brennan put it in *New York Times* v. *Sullivan*, 376 U.S. 254, 270 (1964), we have "a profound national commitment to the principle that debate on public issues should be uninhibited, robust, and wide open."

Strangely enough, however, it was not until the present Term of the United States Supreme Court that it was unequivocally established that we were as committed to the principle when it was exercised by our student population as when we expressed our ideas and our grievances.

In *Tinker* v. *Des Moines Independent Community School District*, 393 U.S. 503 (1969), the Court held protected the wearing by high school students of black arm bands to signify distress at our Vietnam policy. "It can hardly be argued that either students or teachers shed their constitutional rights to freedom of speech or expression at the schoolhouse gate." *Supra*, 506. Because the operation of the educational institution demands a great deal of order, conduct of students, in or out of class and stemming from the time, place, or type of behavior, which "materially disrupts classwork or involves substantial disorder or invasion of the rights of others," *supra*, 513, is subject to restriction by the authorities. Violence on campus is not immunized. See, *Barker* v. *Hardway*, 283 F. Supp. 228 (S.D.W.Va. 1968), *aff'd per curiam* 399 F. 2d 638 (C.A. 4, 1968), *cert. den* 37 Law Week 3335 (1969)

The line thus drawn seems to me reasonable enough. It will afford the student, college and high school, room in which to develop and make known his views, on both those academic matters which directly affect him and those wider public issues which may directly affect him or which may interest him as any other good citizen would be interested. We tend to restrict our thinking on this subject by our references to "children" or "kids" and this restriction operates to comfort us by its image of immaturity. But when the age at which most male students graduate from high school is the age at which they have to register for the draft and when male college students are confronted with the question of the draft during their entire college careers, it cannot be said that their interest not only in the mechanics of the Selective Service System but in the broader policy issues of war and peace is a "mere" academic one.

But even were the overriding issue of Vietnam and its satellite issues to fade tomorrow, we must recognize, I think, that the youthful student of today is bound to have a greater interest in, knowledge of, and desire to change the world about himself. Our children do mature earlier. The pervasive effect of television makes clear to them what a great, big complicated world there is out there. And their sense of morality and idealism, not yet blunted by too much contact with the "realities" we take for granted, is rightfully appalled at the gap between the ideals we profess and the lives we lead.

If it was once the province of the newspapers, in Mencken's phrase, "to comfort the afflicted and to afflict the comfortable," a province largely abandoned, we may, if we are willing to listen, find our youth assuming that role. That prospect, it seems to me, is more than sufficient to justify and rationalize the granting of greater freedom of expression to young people than most adults have been willing to consider. In the exercise of that freedom much will be said that is nonsense, or unfair, or trite, or simply wrong, but in those respects comparison with adult discourse would certainly reveal no great difference. But I remain confident that the remainder of the discourse would reveal fresh thought, insight, and perspective, for which we should be most grateful.

Unfortunately, there has appeared in the ranks of our student protestors some whose primary commitment seems to be to violence and senseless disruption. Whereas the great majority of student dissidents have been and are concerned with the quality of education offered at their institutions and with changing through the available political processes and local, state, and national policies with which they disagree, there is a significant minority about which it can only be said that the suspicion exists they prefer chaos for the sake of chaos. These people advocate freedom of speech for everyone expressing their particular views; those in disagreement will be hounded off the platform or out of the classroom. These people not only condone but advocate the use of violence. They constitute a danger to the academic community and a danger to the public at large.

There is very little that the Federal Government can or ought to do about this danger. The answer lies in adequate law enforcement at the local level; but perhaps more important than that, it lies in the ability of the dissidents among the students and the faculty at each of these institutions making clear that tolerance of violence has ended, that the "crazies," as they have been colloquially dubbed, are endangering not only the reforms that are sought but that they are perceived to be a menace by the peaceful dissidents. Until the campus revulsion drives the violent minority out, heavy-handed federal reaction will only add fuel to the flame.

Some fuel is already there, but it may be the minimum which the Federal Govern-

Footnotes at end of article.

ment should undertake to apply. I refer to § 504 of the Higher Education Amendments Act of 1968, P.L. 90–575, which is a fund cut-off provision authorizing school authorities to terminate financial assistance to any student engaging in conduct which works a "substantial disruption" of the orderly administration of the institution. It seems to me that the Government interest in not funding students addicted to violent conduct is adequately protected by vesting in the authorities administering the institutional affairs of colleges and universities the power to terminate funds.[11]

An inclination to be more harsh is revealed by § 411 of P.L. 90–557, the HEW appropriations act for fiscal 1969, and thus a temporary provision, which directs the termination of all federal funds to anyone convicted of any crime which "involves the use of or the assistance to others in the use of force, trespass or the seizure of property" of an educational institution. This provision removed any discretion from local administrators but on the other hand it did base termination on a criminal conviction.

In this Congress, however, the inclination to be tougher is stronger and, I am afraid, irresistible to the majority. A very prominent bill which has already been the subject of hearings is H.R. 10074, which would require the suspension of federal aid to colleges and universities which experience disorders and which fail to take unlisted appropriate corrective measures within a reasonable time to put down disturbances. A whole series of bills modeled on this one would apparently take away the discretion of college administrators with regard to the type of response appropriate to quell unlawful disturbances.

I can appreciate, of course, the frustration which many feel at the continued illegal disorders on many campuses. I too feel that some administrators have displayed less than valor in dealing with some disorders. But it seems that this early hesitation, understandable in view of the prevailing feeling on most campuses that the police should not be called in, is giving way to more firm and thoughtful handling, which should increase in effectiveness as experience accumulates. But it is simply not true that each crisis can or should be handled by summoning the police and the national guard at the first moment. As the experience in California indicates, this may only prolong and exacerbate the situation.

Thus, it seems clear that a federal measure which would compel college administrators to pull out all the stops in every crisis or pre-crisis period, or face the prospect of losing all federal financial assistance, is an overly harsh and ultimately ineffective response, akin to using a cannon where a rapier is more appropriate.

Still more disturbing is a bill like S. 1929, which would make it a federal criminal offense to disrupt the operation of federally assisted colleges and universities. The bill is disturbing in two respects. First, any act which it would make criminal is already covered by a host of state laws. We simply have no evidence that these laws are not being enforced, that they are inadequate, or that we need to clutter up the already burdened federal courts with hundreds of new offenses ranging from throwing a rock at the dean to arson. I wonder what value making these matters a federal case could possibly have over the present situation.

Second, the power of the Federal Government to reach these offenses is premised on the fact that of some federal financial assistance, whether directly to the college in the form of grants, loans, or contracts, or indirectly in the form of students paying tuition out of federal grants or loans. Very few institutions of higher education would not be reached this way. The premise is a tenuous one, however, and the precedent it would set for federal interference in and control over the day-to-day operations of these institutions is unnerving. If federal jurisdiction is so easily asserted, then we may be closer to the unitary form of government throughout the nation than many of us had thought.

These two proposals are only the forerunners of others that can be seen down the road we are traveling if the disturbances continue. And that prospect can only please the so-called militant minority which wishes to provoke the ultimate "confrontation" of government and dissidents.

A criminal jurisdiction the United States Government might well exercise, however, in a productive and helpful way, lies in the enforcement of sections of the 1968 Civil Rights Act. 18 U.S.C. §§ 2101, 2102. These sections prohibit the utilization of the facilities of interstate commerce in order to foment or to incite or to abet in fomenting or inciting a riot or to commit any act of violence in furthering a riot. If indeed there are people in this country who are planning and encouraging violence on our campuses, if indeed there are ringleaders of chaos, then it seems to me that the Federal Government ought to prosecute.

These sections are not directed at peaceful advocacy or peaceful protest. They do not reach marching and picketing protected by the First Amendment. They cannot restrain legitimate assembly and speech in the pursuit of change. What they can penalize is the advocates of destruction for destruction's sake, the misguided followers of Mao and Fanon, the eager insurgents who want to polarize our society.

There have been all sorts of allegations about planning and fomenting on a nationwide basis, if there is sufficient evidence, the Attorney General should cause the convening of a grand jury to consider indictments. Whichever way such a case turned out it might well clear the air and take from the shoulders of those pressing for needed change the suspicion that they are implicated in illegality and the burden of guarding their flanks from the disrupters.

THE FUTURE

I believe that student unrest is symptomatic of the current malaise confronting our country. It has been referred to as "the revolt of the diminished man." Archibald MacLeish believes that the younger generation has conceived a "new humanism."

"It is an angry generation, yes, but its resentment is not the disgust of the generation for which Beckett speaks. Its resentment is not a resentment of our human life but a resentment on behalf of human life; not an indignation that we exist on Earth but that we permit ourselves to exist in a selfishness and wretchedness and squalor which we have the means to abolish. Resentment of this kind is founded, can only be founded on belief in man, and belief in man—a return to a belief in man—is the reality on which a new age can be built." [12]

I came to Washington with a mandate from the citizens of Ohio to seek alternatives to our present dilemmas. We are currently faced with the revolt of the student and the revolt of the taxpayer. The two are related. Since the end of World War II, we have spent approximately one trillion dollars on armaments and armed forces. Today our Federal expenditures for defense and defense related costs are greater than all Federal, state and local outlays for social security, health, education, housing, and agriculture, and yet the military budget continues to grow, spurred by a seemingly self-propelled mechanism which operates with little or no attention to merit or national needs.[13]

We are presently in the midst of a missile gap scare—the third such scare since 1960. All three have been groundless. Nevertheless, we are on the brink of a new round in the arms race—more costly and more dangerous than any which preceded it. What, then, have we purchased with our money? How will the next generation of college students react when they are raised in an era of "first strike capability," Anti-Ballistic Missile Systems (ABM) and Multiple Independently Targetable Reentry Vehicles (MIRV)? To maintain our current foreign policy is, to me, a ticket on the Titanic!

Therefore, I have continually spoken out against the ABM and proposed a moratorium on MIRV testing, expressing my doubts about military effectiveness, enormous cost, and adverse effect on possible disarmament talks. I believe we should immediately proceed with strategic armament talks with the Soviet Union.

We cannot be the policemen for the entire world. Gunboat diplomacy ended with the creation of nuclear weapons. An arms race in a nuclear age is unthinkable. A halt to the nuclear arms race does not require unilateral disarmaments. We can maintain our nuclear deterrent provided by our Intercontinental Ballistic Missiles (ICBM), bombers, and Polaris submarines while we negotiate in good faith with the Soviet Union. This is what I mean when I say that we must confront the assumption of risk and turn it from a risk of war to a gamble for peace. This decision need not be irrevocable. It is a calculated risk—one that can be reversed if conditions or events change.

Because the present generation of students has come of age in one of the most turbulent eras in world history—an era marked by foreign and domestic violence, I believe that the elimination of a foreign policy characterized by violence may reduce the level of domestic discord.

Furthermore, I will continue to listen to the grievances of students. Many have refreshingly constructive ideas. Others have nothing to say. You can only learn what they have to say by listening to them. Maybe then, they will realize that our democratic form of government does institutionalize a process of change in a peaceful political manner.

FOOTNOTES

*William B. Saxbe, Ohio Republican, was elected to his first term in Nov. 5, 1968, after long service at the state level. Before moving to Washington, Saxbe served four terms in the Ohio House of Representatives and three terms as Attorney General.

Saxbe was majority leader of the Ohio House at age 34 and was speaker at 37. He also served as Attorney General longer than any man in Ohio history.

Saxbe was born June 24, 1916, in Mechanicsburg, Ohio, and still make his home there. He is a graduate of Ohio State University and the Ohio State University Law School and had been a lawyer since 1948.

The Senator and his wife, Dolly, have three children—sons William Jr. and Charles, and daughter, Juli, and one grandchild.

Saxbe is an Army veteran of World War II and Korea. His Senate committee assignments are Aeronautical and Space Sciences, and Labor and Public Welfare. He also serves on the Special Senate Committee on Aging.

[1] ". . . within the sounds of silence . . . And in the naked light I saw 10,000 people maybe more—people talking without speaking; people hearing without listening; people writing songs that voices never share; No one dare disturb the sound of silence . . . Hear my words and I might teach you. Take my arms and I might reach you. But my words like silent rain drops fell, but echoed in the well of silence."

[10] Professor Nisbet, supra 4.

[11] "Existing laws already withdraw financial aid from students who engage in disruptive acts. Additional laws along the same lines would not accomplish any useful purpose. Such efforts are likely to spread, not reduce the difficulty. More than seven million young Americans are enrolled in the Nation's colleges and universities; the vast majority neither participate in nor sympathize with campus violence. If aid is withdrawn from even a few students in a manner that the * * * views as unjust, the result may be to radicalize a much larger number by convincing them that existing governmental institutions are as inhumane as the revolutionaries claim. If the law unjustly forces the university to cut off financial aid or expel a student the university as well may come under widespread campus condemnation." Interim statement on campus disorder, supra 3.

SENATOR RANDOLPH SUPPORTS SURTAX EXTENSION COUPLED WITH TAX REFORM

Mr. RANDOLPH. Mr. President, on Friday the distinguished majority leader, Mr. MANSFIELD, spoke on the proposed extension of the surtax and tax reform and outlined the compromise position determined by the Democratic Policy Committee and the majority members of the Senate Finance Committee. The statement of the senior Senator from Montana, together with the statement of the able minority leader, Mr. DIRKSEN, has received my careful study.

I commend the majority leader and the capable Chairman of the Committee on Finance, Mr. LONG, for placing before the administration and Congress a reasonable and responsible compromise. I am encouraged by the response of the minority leader, indicating that the proposal "is open for negotiation" and that it has not been rejected as reported in speculative news stories.

It is my genuine hope that the administration will accept this schedule and procedure on Senate consideration of the surtax and tax reform. The proposal to temporarily extend the surtax through November, by which time there will be an opportunity to vote on a tax-reform package, is, in my thinking, a commitment to press for the extension of the surtax and for enactment of tax reform. I am convinced that the surtax is necessary. It is my belief that we cannot take the chance of rejecting the extension urged by the administration. Nevertheless, I do not believe that it is essential—as argued by supporters of the surtax—that it be enacted immediately. I agree with the New York Times editorial of Saturday, July 26:

> So long as current income withholding tax rates remain in force, there is danger neither of budgetary deficit nor of a return to an inflationary monetary policy.

I reject the argument that our failure to enact the permanent surtax extension leaves open to question the determination of our Government to combat inflation. Such arguments appear to place the entire burden of an anti-inflation program on the surtax. Senators well know that the problem is more complex than the simple proposition of a surtax.

Mr. President, the policy committee statement is a firm indication that the Members of this body are committed to a comprehensive tax-reform package. The coupling of surtax and tax reform should be equitable and just for the people who bear heavy tax burdens. Tax reform is just as urgent as the surtax. And certainly in the interest of long-term benefits it is more urgent. In the final analysis, it may well be that the tax-reform package will be needed to carry through a surtax extension. This remains to be decided. But on one issue there is no doubt. The citizens of this Nation want tax reform. It is our responsibility to assure that this issue is brought into focus and that reforms are carried forward. The arrangement advocated by the policy committee provides this needed assurance.

Tax reform will not be left to come as it may. It will not be left to chance. I am convinced, despite considerable disagreement among the experts, that the temporary extension of the surtax, and final action coupled with tax reform will be supported by the overwhelming majority of our citizens.

The Democratic policy committee proposal is reasonable and responsive. It should be accepted by the administration. This will do more in the long run to stem the fears of what might happen to our economy and to avert the possibility of a defeat.

SENATOR EDWARD KENNEDY

Mr. RIBICOFF. Mr. President, Senator EDWARD KENNEDY is an outstanding Senator and an effective majority whip. I am sure that all of us recognize his ability and dedication to his duties as a U.S. Senator. Senator KENNEDY has many more years of constructive service to give to the people of this country and of Massachusetts, and I know that he will continue to have their support.

Much has been written these past days about the recent tragedy involving Senator KENNEDY. Of all the reports and insights provided, however, I believe that a column written by David S. Broader and published in this morning's Washington Post is among the best. It reminds us of our role in the lives of those around us. I ask unanimous consent that it be printed in the RECORD with the hope that it will be read by all thoughtful and concerned Americans.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POLITICIANS, PUNDITS PLAYED GOD WITH EDWARD KENNEDY'S LIFE

(By David S. Broader)

The power of genuine tragedy, as defined by Aristotle and understood by every generation since, lies in its demonstration that all men, even the powerful and the mighty, can be judged and found wanting just because we are all mortal and all have flaws.

It is tragedy's demonstration of our common susceptibility to Fate which Aristotle said must move any man to pity and terror. And it is this which unites the audience and the actors in any of the great dramas of literature or life.

Yet, in all that has been written this past week about the latest adversity in the life of Sen. Edward M. Kennedy, little has been said about the significance of the tragedy for those of us who have been caught up in its unfolding.

Honesty requires that the effort be made. For whatever fault may be attributed to Kennedy in the events surrounding the accidental death of his passenger, the reaction in the political-journalistic world of Washington shows unmistakably how far those of us who inhabit that world have succumbed to the sin of pride—the very sin for which the heroes of so many Greek tragedies were rebuked by the gods.

Our shock at what has happened is based, not just on our sympathy for the victim and her family and for Kennedy, but on our hurt that the future we had arranged for him—in our own minds—is now altered.

In this sense, the incident at the Poucha Pond bridge brings a rebuke to all of us—the politicians in both parties who were calculating how his 1972 presidential campaign could be made to serve their interests, the journalists who were anticipating the excitment and rewards of another Kennedy-Nixon contest—to all of us who in the arrogance of our pride had arranged his life in advance for him.

This reporter has no intimate acquaintance with Edward Kennedy, but I have seen him in a variety of circumstances since our first meeting at a coal mine outside Beckley, W. Va., in 1960. He impresses me as a man of some talent, of great industry and dedication and, most of all, of continued capacity for growth.

I would assert now, as I did before last week's accident, only one strong conviction about Ted Kennedy: Whatever his capacity for service to his country, Kennedy ten years from now—at 47—will have more to offer in the way of leadership than he does in 1969.

Yet there were many in politics and journalism who had determined in their superior wisdom that he must run for President in 1972. Kennedy has lived with this knowledge and the pressure it entails. Whatever his own wishes, he has known that, with every passing day, the choice was being taken out of his hands and being forced on him by politicians and pundits who—at minimal risk to their own careers—were recklessly brave in dictating what his course should be.

Ultimately, every man must set his own course and accept the consequences. In my lifetime, I have seen two very different men—

Adlai Stevenson and Barry Goldwater—persuaded to run for President, against their own best judgment. Neither case ended happily.

Yet, before Kennedy's accident, there were men in Washington with enough self-confidence (or whatever) to assert that of all the men in public office, only this one 37-year-old Senator had the capacity to "unite the Democratic Party." Even now, some have the temerity to argue that Kennedy's reputation must be rescued—not for its own sake, but so that he can run in 1972.

Some of these men are politicians and journalists who came to power and prominence with John Kennedy. Just 18 months ago, some of them were exerting a similar kind of pressure on Robert Kennedy to run.

But these counselors do not control the fates of the men they seek to manipulate. That must be clear now even to them.

All their planning and charting were for naught when the lives of the three famous Kennedy brothers crossed those of three obscure fellow-citizens, Lee Harvey Oswald, Sirhan Bishara Sirhan and Mary Jo Kopechne.

Two of the brothers are dead; the third's future is in doubt. Two of those Fate placed in their paths are dead; the third is under sentence of death.

Does it not behoove us all to stop playing God with other men's lives?

A VERY GOODLY BAY

Mr. TYDINGS. Mr. President, the Chesapeake Bay is the great natural treasure of Maryland. Its blue waters make up the most fertile marine pastures in this hemisphere. Its history is an integral part of our State's past. Its recreational potential is a prime reason why Maryland is known as the land of pleasant living.

As one who lives on the Chesapeake, I can only agree with Capt. John Smith's 1607 description of the bay as "a very goodly bay."

Like every body of water in America today, however, the bay is threatened by pollution. From industry and towns, from ships and nuclear powerplants, pollutants contaminate the bay, impairing its beauty and threatening its marine productivity. The latter is particularly disturbing for the bay provides most of the Nation's supply of bluecrabs and oysters.

Until recently this country did not recognize the importance of the bay and our other estuaries. By and large, they were ignored by many public officials and studied in depth by only a few scientists. Maryland provided an exception to this rule but even here the effort was not equal to the need. Our lack of knowledge reflected a lack of concern over our estuaries. This led to neglect which in turn has endangered these valuable bodies of water.

In order to fill this gap in our knowledge, I wrote the National Estuarine Pollution Study into the Clean Water Restoration Act of 1966. This study was carefully drafted so as to provide us with a comprehensive analysis of our estuaries as well as recommendations to protect them.

I also helped pass in 1965 legislation authorizing the Corps of Engineers to build a hydraulic scale model of the Chesapeake Bay. This would enable marine scientists to study the estuary and learn more about its currents, salinity levels, and tides. The model will be built on the Eastern Shore of Maryland and will provide us with the means to increase our knowledge of this great estuary.

In the June issue of Oceans, John O. Ludwigson presents an excellent article on the Chesapeake Bay. He writes of the great productivity of the bay and warns of the increasing threat from pollution. I regret that it is not possible to reproduce the lovely pictures which accompany Mr. Ludwigson's article, but I recommend his words to all concerned with the preservation and proper development of our marine resources. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHESAPEAKE BAY

(By John O. Ludwigson)

Among countless tales of the seven seas, very rarely do you hear of the eighth sea, a landlocked micro-ocean that splits the state of Maryland and, with a little help from the U.S. Army Corps of Engineers, makes an island of most of Delaware.

Yet the Chesapeake Bay is, in many respects, a minor sea. It can claim its own unique internal circulation patterns, cultural variations that make the east and west shores virtually different countries, a thriving waterborne commerce and an increasingly flourishing tourist industry. Pirates once plied its waters, and the last shot in the recurring local wars has not yet been fired.

It is a peaceful sea, sheltered from the full force of the storms that howl over the other seven, but tricky enough sailing for anyone's stomach when the wind whistles up its 290-kilometer (180-mile) reach.

Perhaps most important for its future, Chesapeake Bay is a shallow sea, hardly more than 9 meters (30 feet) deep except in its central channel where only 37 meters (120 feet) of water cover its deepest spot. You can visualize this by imagining that the width of this sheet of paper corresponds to the width of the Bay. The average depth would then be one-third the thickness of the page.

This shallowness has been both the blessing and the principal weakness of the Bay—blessing, because it is a major factor in the Bay's remarkable biological productivity—weakness, because it makes the Bay especially vulnerable to pollution. Chesapeake Bay, today, is literally fighting for its life.

HISTORY OF THE BAY

It was a different story when Captain John Smith, freshly arrived from England, viewed it in 1607:

"There is but one entrance by Sea into this Country, and that is at the mouth of a very goodly Bay, 18 or 20 myles broad . . . within is a country that may have the prerogative over the most pleasant places knowne, for the large and pleasant navigable Rivers, heaven & earth never agreed better to frame a place for man's habitation."

He sailed up and down the "Chisapeack" Bay (dining, undoubtedly, on oysters), apparently delighted with all that he found. Captain Smith's diary contains the account of one fishing experiment on the Potomac River where the party found "that aboundance of fish, lying so thick with their heads above the water as for want of nets . . . we attempted to catch them with a frying pan . . . neither better fish, nor more variety of small fish had any of us ever seen in any place. . ."

There were Indians, too. Assateagues, Nanticokes, Susquehannocks, and Choptanks, all of Algonquian stock, and also found the Bay a pleasant place to live. Most of its geographic features today are named for them. Chesapeake, for example, may be a derivation of Tschiswapeki—"highly salty body of water"—or K'che-sepiack—"country on a great river."

On his way along the eastern shore of the Bay, Captain Smith encountered a series of islands first charted by Bartholomew Gilbert in 1587 and named the Russell Isles for that expedition's surgeon. On one of the largest, Captain Smith's diary says, "there was a myle or two of fresh water ponds [though the islands are almost at sea level]; fish and fowl, and the kindness of the soil makes it a nice place to live." He named the island Smith Island, for himself.

From the first settlement at Jamestown, Virginia, the colonists slowly moved up both shores of the Bay. One of the earliest settlements, in 1634, was a colony at St. Mary's City sponsored by Cecil Calvert, the second Lord Baltimore and first proprietor of Maryland. The town, near the mouth of the Potomac River, now has a population of about 200. The state capital was moved to Annapolis in 1694.

In the meantime, however, a band of dissidents—their complaint is lost to history—had left the colony and headed across Chesapeake Bay to form their own colony. They landed on Smith Island in 1657, liked it and stayed, dropping out of the mainstream of American history for 300 years.

For a time, in fact, Smith Island was a "kingdom." Though nominally a part of the United States, two of its leading citizens, Richard and Solomon Evans, ran the Island and were known as King Richard and King Solomon.

THE BAY TODAY

This brand of sturdy, isolation-fostered independence is still characteristic of the Bay's eastern shore watermen. Until 1958, when the eleven-kilometer (seven-mile) Chesapeake Bay Bridge opened, linking the eastern shore with Annapolis and the rest of the nation, they had almost no dealings with the outside world. Oysters, fish and good farming land supported them quite comfortably in an affluent Appalachian-like culture.

Smith Islanders and, especially, their neighbors on Tangier Island, a few miles to the south in Virginia, still speak an English that is very much akin to seventeenth century usage, though modern communications are introducing twentieth century American.

Like other such water-oriented communities along the Bay's shores, the Islanders depend on their "micro-ocean's" resources for a living. Yet, they and other watermen have been extremely reluctant in the past to accept sound management of conservation practices.

"God put the oysters there and when He doesn't want us to have 'em anymore, He'll take them away," was the prevailing philosophy. It would have been quite adequate if it were not for the outside world. Steady and largely uncontrolled dredging of the oyster bars ("rocks" in Virginia), for example, has resulted in a steady decline in the crop. Oystermen produced more than 53 metric tons (58 tons) of the delectable bivalves in 1880; the 1967 crop was only about 11 metric tons (12 tons).

Where the oysters went is suggested in a passage from an oyster culture booklet published by the Virginia Institute of Marine Sciences:

"In 1865 the citizens of New York City, which then had a population of less than 900,000, consumed 7,000,000 bushels of oysters. If this rate of consumption had persisted until today, about 61,000,000 bushels of oysters would be required by that city each year, many times the present oyster production of the entire United States."

Oysters are not, of course, the only product

extracted from the Bay, but they are the biggest moneymaker. Some other products, in order of their landed value in Maryland are blue crabs, clams (mostly soft shell), striped bass (known locally as rockfish or just "rock") and white perch.

The crabs are sold both as standard hard shells and soft shells. Soft shell crabs are a Tangier and Smith Islands speciality, though they are produced all along the shore. The crabber collects hard crabs from the Bay and sorts them into floating crab pens according to his estimate of how soon they are likely to shed. The day the crabs shed their shells they are scooped up and sold.

Crab conservation has proved to be unexpectedly difficult. It seems that, as a result of the unusually low crab harvest in 1968 (after years of bumper crops), an examination was made of the relationship between the number of spawning crabs and the subsequent population levels. The relationship turned out to be almost inverse! Large numbers of spawners never produced many off-spring, while small spawning populations always tended to produce great numbers of crabs. Within those general conditions, the annual crab populations fluctuated wildly, a phenomenon not yet explained satisfactorily.

Besides producing most of the nation's supply of blue crabs and oysters, Chesapeake Bay residents are also avid consumers. A favorite local institution is the crab feast. About five large, healthy crabs per person are steamed in a huge pot for 20 minutes over a pungent mixture of vinegar, pepper, salt, mustard and Tabasco sauce. Crab-eating fans and a generous supply of beer are arranged around long tables covered with multiple layers of newspaper. When the crabs have turned bright red, they are piled on trays and set in the middle of the tables. Then it's every man for himself!

Oyster production has been a different story. While the blue crab population seems to be almost independent of Man's actions, the oysters would soon be wiped out without help. The oyster bars were, in fact, rapidly being cleaned off when both Maryland and Virginia began to act to preserve this valuable resource. Maryland, especially, has plowed state money into rehabilitation of the bars that are the watermen's main source of income.

While many modern oyster collection and farming practices are still almost nonexistent—oyster dredgers must use sailboats, and private growing areas are difficult to obtain—production is rising. Since 1961, Maryland has spent about one and one-third million dollars a year on improvement and mangement of its natural oyster bars.

Even more significant, legislation enacted in 1967 and 1968 now provides a basis for putting the public oyster fishery on a self-sustaining, nonsubsidized basis. The sale of seed oysters, marine-related taxes, license fees and fines support a Fisheries Research and Development Fund, created in 1967 and administered by the state's Department of Chesapeake Bay Affairs.

Most important, and an indication of the way the state is moving, in 1967 the Department was authorized to sell to private oyster growers, at a fair market price, up to 50 percent of all seed oysters produced annually in excess of 35,240,000 liters (one million bushels). In 1967, that amounted to 4,903,750 liters (139,153 bushels).

That is not a lot of seed oysters, but it does represent a revolution on the Bay. For years, the watermen have defended their exclusive rights to the Bay's bounty. Lease of oyster bottoms, even presently nonproductive areas, to private planters would soon concentrate the industry in a few hands, they argued, and the hands would not be those of the traditional oyster harvesters.

However, as Joseph Manning, director of the Department, observed last fall, "A remarkable change in attitude of the oystermen has accompanied the State's successful efforts toward repletion of the oyster resource.

"It has been demonstrated," he added, "that an increase of more than 150 percent in production has had no significant effect on the unit price received by the public oystermen for their catch." A few private planters have existed for some time, Mr. Manning revealed, producing a bit under 10 percent of the annual oyster crop.

Virginia has taken the opposite policy, leasing nonpublic Bay and river bottom land freely. Though the private lands are naturally less favorable and less extensive than the 85,000 hectares (210,000 acres) reserved by the state, they have consistently outproduced the public areas in both quantity and value. Virginia, too, has permitted powerboats to dredge oysters, while Maryland has, until recently, stuck to sail.

Differences between the states' laws have not always been purely governmental matters. Oystermen, seeking to protect their rights, have occasionally employed bullets as persuaders. Poachers, like the pirates who plied the Bay before them, have shown little respect for rights, boundaries or the law.

Things have quieted down somewhat recently, but there was a time when the Maryland Department of Tidewater Fisheries' inspectors thought it prudent to mount one-pound guns on the decks of their ships.

They had in mind, no doubt, such incidents as the "Battle of the Choptank River," fought in 1888. In this encounter, the two steamers of the Inspector Force found themselves greatly outnumbered by illegal dredging schooners they surprised in the Choptank, which flows by Cambridge in the central eastern shore.

The battle seemed lost for sure when ten of the dredgers lashed their boats together and ambushed the steamer Governor McLane, floating silently to within rifle range. Defeat turned into victory, however, when the McLane's captain ordered his ship to ram the oncoming schooners, sinking two and taking two others captive.

Just after World War II, oyster poachers from the Virginia shore became a problem in the Potomac River, which is entirely Maryland waters. By this time, poaching technology had escalated and the illegal oystermen had equipped themselves with modern, fast powerboats, some with three large engines. The police countered by buying a war surplus PT boat which they armed with a .30 caliber (7.62 mm) machine gun. On one occasion this battleship of the Potomac rammed a fleeing poacher, slicing the boat in half. More often, the machine gun was used to shoot out the offenders' engines, thus sparing both men and boats.

In the last few years, technology has escalated again. Now it's citizens' band radios that make the waterborne culprits nearly invincible. With lookouts posted up and down a waterway, they turn into "peaceful sport fishermen" long before the Marine Police, as the force is now called, can reach them. This has forced the police to adopt guerrilla tactics.

One young policeman described an operation against some clam dredgers who were tearing up an oyster bar: "There wasn't any use trying to sneak up on 'em by water. We could hear them on the radio—they had friends on the dock even to tell them when we cast off!

"What we did, we tied up the boat down the river and got into my friend's car we'd left there. We took off our hats and slouched down so as not to attract any notice and drove up to a farm on a point opposite where they were dredging. Then we sneaked up on them, running from bush to bush and crawling along the ground to keep out of sight. We stayed there about an hour, copying down their numbers [registration numbers on the boats] and making a record of their activities.

"Then we drove back to the boat, cast off and went over to their dock and tied up and waited. About dark, here they came loaded down with clams. We were just lounging there, looking unconcerned, until they tied up so they wouldn't dump the clams overboard. Boy, were they surprised when we walked over and told them they were under arrest!"

Even crabs have not been safe. The Marine Police found it necessary late last year to issue a warning to would-be "crab snatchers" that they faced fines of $100 when arrested. (A crab-snatcher is one who empties other people's crab pots without, of course, their permission.) The police attributed a minor boom in that particular crime to the high prices paid for crabs in a year of lean harvest.

POLLUTION PROBLEMS

Chesapeake Bay, however, faces a greater danger than crab-snatching or oyster-poaching. In a variety of ways, some so subtle they are hardly noticeable at first, it is being slowly poisoned.

In some cases, such as Baltimore harbor, the upper Potomac River and a number of other, smaller tributaries, the process is not so slow. When Paul McKee, Maryland's Water Resources Director, asserted that the Bay is not yet polluted before a State Senate committee he ran head-on into an irate Senator and yachtsman.

"When I go out into the Bay in my boat and go in swimming," observed the lawmaker, "I'm a different color when I come up than when I went in. If the Bay is so good, why are we spending so much on research into its pollution problem?"

The answer, of course, is that there are stages and degrees of pollution and all the Bay is not yet as bad as he described. Nonetheless, Eugene Jensen, regional director for the Federal Water Pollution Control Administration, estimates that total annual fishery losses from pollution in the Bay and its tributaries amount to $3 million—and that is dockside value of the fish and shellfish. The total loss to the area's communities might be ten times as much, he guesses.

"Chesapeake Bay has a definite carrying capacity of people and activities, communities and industries," observes Dr. William Hargis, director of the Virginia Institute of Marine Science (VIMS). "If we're willing to have the Bay become an open sewer, there's no question that we can pack a lot more people and industry around it.

"But it's also pretty obvious that if we expect Chesapeake Bay to afford those uses and esthetic values that people seem attracted to, then the carrying capacity is going to be less."

VIMS is one of the three major academically oriented oceanographic institutions associated with the Bay. The others are the University of Maryland's Chesapeake Biological Laboratory at Solomons in the central western shore and Johns Hopkins University's Chesapeake Bay Institute which works out of Annapolis where its unique catamaran research ship ties up. VIMS is located at Gloucester Point, Virginia, at the mouth of the Bay. Together, the institutions comprise the Chesapeake Research Council, perhaps the largest grouping of estuarine scientists in the world.

In addition to providing a forum for exchange of scientific ideas and findings, the Council has undertaken a program of cooperative research on the Bay. Each of the three institutions regularly visits its portion of a pattern of oceanographic station sites that cover the entire Bay. When the data from all the points are assembled, they give a good picture of just what is going on in the Bay at any given moment.

Besides the Research Council institutions, the Federal Water Pollution Control Administration (FWPCA) and the Bureau of Commercial Fisheries—both a part of the U.S. Department of the Interior—maintain labo-

ratories at Annapolis and Oxford, Maryland, respectively.

FWPCA scientists also regularly occupy a similar series of oceanographic stations in the Bay, though there are necessarily fewer than in the Council's study. The pollution experts are looking for such things as the oxygen content of the water, bacterial counts and algal blooms that signal the onset of serious pollution problems. (One algal bloom in the Potomac last year actually reached the consistency of very thick green pea soup.)

One of the most interesting results of this intensive study of the "eighth sea" has been the discovery of a unique, two-layer internal circulation pattern. At the surface, everything seems normal. Water from the Susquehanna and Potomac Rivers flows into the Bay and on out to the Atlantic Ocean, just as expected. About three meters (ten feet) down, however, the flow comes to a halt. Farther down, the water is relatively salty and moving north very slowly, into the Bay.

The Bay's physical oceanography has been most intensively studied at the Chesapeake Bay Institute, headed by Dr. Donald Pritchard. Institute scientists have found that Baltimore harbor, a growing major national seaport, and most of the minor tributary creeks surrounding the Bay also have unique circulation patterns of their own.

At Baltimore, the harbor receives almost no freshwater inflow, yet there is complete flushing of its waters roughly every ten days. The reason is that a three-layered circulation exists, driven by salinity differences at various levels in the Bay and harbor. Bay water flows into the harbor at both surface and bottom while the third, intermediate layer, flows from harbor to Bay. The layers flow steadily at a rate of about 482,000 liters (630 cubic yards) a second throughout the year.

In the shallower tributaries, still another pattern prevails. Again due to salinity variations, which change seasonally, there is a two-layer flow. This reverses twice a year, however. In winter and early spring, the less saline Bay waters flows in over the saltier tributary waters which flow out along the bottom. During the rest of the year, salinity in the Bay increases, and the flow is in at the bottom and out at the top.

All this would hardly interest anyone but crabs and scientists if it were not for the growing problems of handling the sewage outflow from towns along the shore. In the Bay and Baltimore harbor there is the additional problem of disposing of silt and sediment dredged up in ship channel maintenance projects.

Obviously, it makes a great deal of difference where the sewage effluent is introduced into the Bay. Theoretically, it is quite possible for sewage poured in near the mouth of the Bay to wind up washing through Baltimore harbor, which already has enough pollution of its own to cope with.

Worse, there are the oysters. An oyster gets its food by filtering large quantities of water. Thus, it not only will pick up any pollutants in the water, it will concentrate them. Fortunately, oysters will clean themselves in from two to six weeks if transferred to clean water, but this adds expense. Several oyster areas in both Maryland and Virginia have already been closed because of pollution.

A major new worry for the conservationists is the nuclear electric power plant now being built for the Baltimore Gas and Electric Company on the Calvert Cliffs along the central western shore.

The Calvert Cliffs are one of the world's finest hunting grounds for Miocene fossils. The 30-meter-high (hundred-foot) cliffs stretch for about 48 kilometers (30 miles) along the shore, where they are continuously eroded by waves, exposing fossils by the thousands. At least one complete whale skeleton has been dug from the face.

At the power plant site, scientists followed the bulldozers leveling the cliffs in a project sponsored by the Maryland Academy of Science. Dr. Lincoln Dryden, director of the program, noted that it is the first thorough study of the rich fossil bed since the turn of the century.

What is worrying people, though, is not the fossils but the unknown and largely unpredictable effects of the plant's warm cooling water effluent. In full operation, the nuclear plant will pump a reported 11.4 billion liters (three billion gallons) of Bay water a day through its cooling system.

In trying to fathom the effects of this on the Bay and all it contains, the estuarine scientists are planning on the use of a hydraulic model of Chesapeake Bay. In 1965, the United States Congress authorized the U.S. Army Corps of Engineers to build such a model. Preliminary studies are being carried on now, and Maryland has donated a site near the eastern end of the Bay Bridge. The need to cut the Federal budget, however, has kept Congress from appropriating the funds for construction.

The model, presumably, would be constructed in the same manner as a similar facility, simulating the James River, run by VIMS and the Corps at Vicksburg, Mississippi. This large concrete model of the river includes every jetty, tributary, obstruction and meander. Metal "roughness strips" embedded in the bottom make it possible to "tune" the model to simulate exactly the river's flow conditions.

The Chesapeake model would cover almost four hectares (nine acres), surrounded by an additional nearly three hectares (seven acres) of shops, instrument labs and pumping facilities. It will contain about 1,840,000 liters (65,000 cubic feet) of water. A complete 12-hour and 25-minute tidal cycle will be simulated in about seven and a half minutes.

Is it worth it? United States Representative Rogers Morton (R., Md.) thinks so. "Let us just capitalize the fishery only on a 50-year basis at a conservative estimate of $100 million a year. Under this simple formula, we have an astronomical economic stake of $5 billion. The cost of the model and center is less than one-fourth of one percent."

There is more at stake than that, however. Maryland bills Chesapeake Bay as "the land of pleasant living." And so it is. There are 8,166 registered sailboats in that state alone, as well as 54,368 powerboats. Annapolis is the finest sailing harbor between New England and the Bahamas, as well as the home of the United States Naval Academy. Private homes now stand shoulder-to-shoulder along the shores where there were only farms a few years ago.

Public access to the water, in fact, is another of the current problems. You might say the Bay is in danger of being loved to death!

To protect the Bay, even from its friends, a group of concerned conservationists set up the Chesapeake Bay Foundation in 1966. From its Annapolis office, executive director Jess W. Malcolm quietly goes about his task of educating the public and urging the governments involved to action.

"People look at an industrial plant, as in Baltimore harbor, and they are offended. They're not inspired by it," he observes.

"Once the Bay is eroded so people no longer look on it as a thing of beauty, they'll no longer care about it."

They care now, though, and the fight is on to preserve the Bay.

OPPOSITION TO POPULAR VOTE FOR PRESIDENT

Mr. GOLDWATER. Mr. President, it is no secret that I come from Arizona, and it is also no secret that I want to see the more lightly populated States protected. Arizona falls into that category. We who live in these States, which are far, far more numerous than the more heavily populated ones, have no desire to see our Presidential elections controlled by nine or 10 of the larger States.

Even if we felt that all elections in large cities were always honestly conducted, we would still be opposed to the idea of a popular election vote for our President. This concept is wrong, wrong, wrong, and the Senate would be making probably the major mistake in the history of our Government if we ever voted to offer this to the American people in the form of an amendment. Changes are needed in the electoral college system. I have testified before the committee on the changes that I feel should be accepted, but I also testified, in as strong language as I could muster, against the popular vote concept.

The Indianapolis Star has published two very intelligent editorials on this subject. I ask unanimous consent that they be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

DO YOU WANT YOUR STATE DISENFRANCHISED?

WHY DISENFRANCHISE SO MANY STATES?

If the proposal to replace the electoral college with direct presidential elections succeeds, Arizona will be one of a number of states whose voters could in effect be disenfranchised.

There are, according to the 1969 national census, more people in New York State than in 19 other states combined. Theoretically, this means that the New York electorate could, under the so-called "popular" presidential election system, outvote the electorate of the following states:

Arizona, Alaska, Nevada, Wyoming, Vermont, Delaware, New Hampshire, North Dakota, Hawaii, Idaho, Montana, South Dakota, Rhode Island, Utah, New Mexico, Maine, Nebraska, Colorado and Oregon.

(Under the electoral college system, the worst that can happen is that New York's electoral vote can offset the electoral vote of 10 states.)

An election victory in New York and California could count more than an election victory in 26 other states combined.

Obviously, such a system could be disastrous in a nation which prides itself on its unique regional and geographical differences. Yet, the proposal for such a system has already been approved by the House Judiciary Committee.

In our earlier series of editorials, we explained the need for electoral reform. The present electoral college system is outmoded and in part downright unfair. But the proposed remedy, the one which is currently fashionable, would be far worse.

It would invite tampering with the ballot boxes in the large cities and states, thereby encouraging boss politics and political corruption. . . .

It would encourage the proliferation of splinter parties . . .

It would obviate the need for a genuine national consensus, in place of a momentary and perhaps temporary majority mandate . . .

It would undermine our federalist system, which helps restrain unchecked federal ambition by requiring that political actions be conducted through the machinery of the states. Thus it would replace our representative form of government with a so-called "popular" form . . .

And as noted, it could in effect disenfranchise a sizable number of states whose voters have just as great a stake in the presidency as do voters in the larger cities and states.

It is interesting that Indiana Sen. Birch Bayh is leading the drive for popular election of the President, when only two years ago he made a fiery, convincing speech opposing just such a proposal. It is also interesting that Sen. Ted Kennedy would be so strongly in favor of popular presidential elections, when his brother, the late President John F. Kennedy, delivered one of the most lucid arguments ever made against that so-called "reform."

It is true that there can be no progress without change. But it is also true that change, indiscriminate change, does not automatically lead to progress.

The changes proposed by the popular presidential election are a good example of the sort of change that could lead to calamity.

TO AVOID BOSS CONTROL

In the Senate lies the best hope for initiating a step toward sensible revision of the Electoral College, since it has in its Judiciary Committee a bill which would allot electoral votes on a district-by-district basis.

The House Judiciary Committee has reported out a bill which would abolish the Electoral College and substitute direct popular election of the president and vice-president. This would be the wrong way to go for a number of compelling reasons.

One is that direct popular election would make a fundamental change in the structure of the government. In 1956 Senator John F. Kennedy (D-Mass.), later President, pointed to this in defending the Electoral College against similar proposals. Direct popular election, he said, "while purporting to be more democratic, would increase the power of and encourage splinter parties, and I believe it would break down the federal system under which most states entered the Union, which provides a system of checks and balances to insure that no one area or one group shall obtain too much power."

The point Mr. Kennedy made about splinter parties is another of the reasons direct popular election would be wrong. We have seen in the recent example of the French election how proliferation of splinter parties can confuse the issues of an election, dilute the strength of major parties and cast doubt on the mandate of the vote. Under the Electoral College system splinter parties are inconseqeuntial. In direct popular election they can be spoilers.

A handful of states could control the election of the president and vice-president by direct popular vote, and this is a point which many Americans seem to miss. This may have been what was in John Kennedy's mind when he referred to "a system of checks and balances to insure that no one area or one group shall obtain too much power."

Under the present Electoral College system with the practice of casting each state's electoral vote in a bloc, a handful of the most populous states are regarded as pivotal. It is almost impossible to be elected without winning most of them. But they are only *pivotal*—winning all of them by whatever margin is not enough. It is still necessary to win in a substantial number of the rest of the states.

In a nationwide direct popular election a handful of states could *elect* the president and vice-president, regardless of what happened in the rest of the country.

This was pointed out in a recent article by Dr. George Comfort, professor of political science at Butler University. He noted that in the 1968 election 54.6 per cent of all the votes were cast in nine states embracing 12 of the largest cities. These states were California, Illinois, Massachusetts, Michigan, Missouri, New Jersey, New York, Ohio and Pennsylvania.

The vote in these states was largely determined by the vote in the 12 big cities. In Illinois, for example, more than half of the total state vote usually is cast in Cook County alone.

The significance of this is that political machines in 12 cities in 9 heavily populated states can pile up pluralities so big that the votes in the rest of the country would not matter in a nation-wide popular election.

Under the Electoral College system this does not happen because the influence of the big city vote stops at the state line. The candidates who seriously hope to be elected must pay attention to virtually all of the states. In a direct popular election they could concentrate their attention on the few most populous ones with the biggest cities. The rest would not matter.

"Today, we have a system which—in all but one instance throughout our history—has given us presidents elected by plurality of the popular vote," said John Kennedy in his 1956 Senate statement. "Nevertheless, it is proposed to exchange this system—under which we have, on the whole, obtained able presidents capable of meeting the increased demands upon our executive—for an unknown, untried, but obviously precarious system which was abandoned in this country long ago, which previous Congresses have rejected, and which has been thoroughly discredited in Europe."

That statement is just as pertinent and just as true in 1969.

The Electoral College system which we have is a sound and successful system. It could be improved by doing away with state bloc voting, which the district-by-district bill would accomplish. This is what should be done.

DISENFRANCHISED

One aspect of the popular vote amendment proposed by Sen. Birch Bayh of this state is the question of what such an approach would mean to the voters of Indiana.

The answer is that, depending on the variables of any given election, the voting strength of this state could be swallowed up by the population power of the largest states in the union. Equally to the point, votes cast honestly by citizens of this state could be nullified by dishonest votes in New York or Chicago or Kansas City.

This is an ironic development in view of the fact that one argument urged in behalf of the popular vote approach is that it would "equalize" election results, and that mathematical arguments have been brought forward to suggest Indiana and other states would gain proportionally if the popular vote went through. But these arguments, although interesting as arithmetic, ignore the hard realities of politics.

These realities include the fact that some nine large states, of which Indiana is not one, encompass some 51.9 per cent of the nation's population and could theoretically control the election. Moreover, within these states themselves a great part of the population is included in cities with a million or more inhabitants—cities which Indiana does not possess.

Under these circumstances, it seems apparent that electoral efforts would have to be focused heavily on these cities and these states, where the most voters counted by the head can be reached the most directly. It is therefore likely that the big cities and the big-city states would in point of fact wield as much influence or more than under the present system, even if their impact on the election is supposed to be reduced in theory.

The problem becomes more serious when we reflect that these cities are also the areas in which fraudulent votes are most chronic, and that the popular vote approach would create maximum incentives for such fraud. Without far stricter vote policing than has occurred so far or is presently contemplated, the quantum of fraud in these areas is almost certain to increase with the popular vote. This will accentuate the power of the big-city states still further.

Under this proposal, in short, we believe the citizens of Indiana, whatever the theoretical benefits being extended to them, stand in danger of being doubly disenfranchised. First, by the emphasis the popular vote system would place on the big-city states. And second, by the heightened incentive the system would give to fraudulent voting and the heightened impact of such voting on the final outcome.

MILITARY WASTE

Mr. MONDALE. Mr. President, over the past few weeks we have been focusing on the administration's ABM proposal as we consider the military procurement authorization for fiscal 1970. Although the issues involved in this debate are of the utmost importance, we must not forget that a number of other programs authorized by the bill deserve the most penetrating scrutiny if we are to come up with a lean, effective defense budget. Clearly, Congress has the duty to eliminate military waste wherever it can be detected.

In this regard I wish to draw the Senate's attention to an editorial recently published in the Waukesha, Wis., Freeman. The editorial touches on the contribution being made by the distinguished Senator from Wisconsin (Mr. PROXMIRE) and quotes at some length from his July newsletter to his constituents. As the editorial points out, reducing military spending not essential to the defense of the United States can sharply reduce inflationary pressures. In a sense, this sort of reduction may be said to contribute in substantial measure to the Nation's defense by strengthening our economic power. We cannot expect to maintain our position of power and influence among the nations of the free world if we continue to be wracked internally by soaring prices and faced with strong discontent on the part of a growing segment of our society.

Mr. President, I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PUBLIC HAS BIG STAKE IN MILITARY WASTE

The knack U.S. Senator Bill Proxmire has for reducing complex issues to their simplest denominator is illustrated in his July letter to Wisconsin constituents. In discussing what he alleges to be a $10 billion waste in this year's military budget, Proxmire claims every American family has a $200 stake in what he and some of his Senate colleagues are attempting to do. In short, they have organized to make a meaningful attack to reduce military procurement.

"For years," he states, "there has been talk of reducing military waste and occasionally an amendment on the floor of the senate would succeed in actually shaving it a little. But this year for the first time we are organizing to really do something about it."

He recalls that last year the Joint Economic Committee held an increasing number of hearings on the military budget and "we uncovered case after case of waste. This year we intensified our hearings. We have the best documented case against military waste we have ever had."

Proxmire then goes into an item after item recitation to substantiate the committee's claims, including the colossal weapons system failure (XB-70) of which two craft were built at a cost of $1.5 billion. One crashed and the other was placed in the Air Force

museum—a costly exhibit which we wouldn't believe the military is proud to display.

An even more serious indictment is the Wisconsin senator's allegation the committee has "repeated testimony by high Pentagon officials that defense contractors and the Pentagon deliberately lied to congress about the cost of weapons systems so that congress would authorize them."

This is the kind of arrogance which unchallenged power breeds. For far too many years members of congress have sheepishly and silently sat by while the Defense Department was given everything it asked for amid plaudits from those who simply assumed the money requests were honest and necessary.

Proxmire pledges he and the group supporting him as chairman, have a plan of action during forthcoming debates calculated to reduce the 80 billion defense budget and "greatly ease inflationary pressures that are pushing up both prices and interest rates. It could also be the most realistic way of giving you relief from the crushing federal tax burden."

The senior senator has built a reputation as an able critic of the establishment. He is making his presence felt in Washington and deserves the support of everyone interested in bringing a degree of sanity back into federal budget-making.

We wish him well.

FUTURE SPACE GOALS

Mr. ANDERSON. Mr. President, on July 27, the Washington Sunday Star published an editorial entitled "After Apollo—Time To Return to Earth," which I ask unanimous consent to have printed in the RECORD at the end of my remarks. While the title is somewhat misleading, several points are raised upon which I would like to comment.

First of all, I agree that now is not the time to commit ourselves to the goal of a manned mission to Mars. Without a doubt, men from the planet Earth will someday set foot on Mars, but it is too early to set a hard and fast time table for the project for the simple reason that the technology is not available and there are many intermediate steps that must be mastered before a reasonable schedule could be established. Furthermore, there is much knowledge that will be gained in the next few years in the various additional Apollo flights to the Moon and in the near-earth-orbit operations in the Apollo applications program. Also, our unmanned Mariner and Viking missions will greatly increase our knowledge of Mars in this period. The gathering and digesting of this information will be essential in planning an intelligence strategy for space exploration for the remainder of the century. We may find, for example, that establishment of a permanent lunar scientific base will be a more attractive intermediate goal.

Second, the fact that we have landed men on the Moon should allow use to exert greater effort to solve our earthly problems, but it would be folly to contend that the way to solve these problems would be to cut back on the space program. Rather, our magnificent Apollo achievement should inspire us to solve other problems, and a vigorous space program should be pursued in order to keep our technology, and hence our economy, strong.

Third, the Apollo program has not been a crash program, despite what some people think. It has been a fast-paced program with tight schedules. Despite the fact that sometimes these schedules have had to be altered, or slipped, they have been realistic and are essential to the efficient execution of the program. Whatever our future space goals, they should be done within a framework of careful scheduling lest they become inefficient and, therefore, more costly than need be.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AFTER APOLLO—TIME TO RETURN TO EARTH

The Apollo 11 mission is safely and gloriously completed. The trio that reshaped the world have come back to earth. It is time for the rest of us to do the same.

While Armstrong, Aldrin and Collins were on their historic mission, euphoria was the order of the day. Man had made good on his ancient dream. He had traveled to a world beyond his own. There he was, before the eyes of a disbelieving world, walking, running, hopping, working on the surface of the moon. Small wonder that men on earth—most of them—felt their horizons expanding as they began searching for a new dream to replace the one that had suddenly become a reality.

While Apollo 11 was still in the midst of its fantastic voyage, the visionaries went to work. Next stop, Mars. Then the rest of the planets. Then, of course, the stars of our galaxy in search for undiscovered worlds. Man was on his way, and the frontier was without limit.

These soul-stirring plans for the future were not being offered by the space planners whose function it is to conjure up visions of man's destiny in space. They were not the product of the science-fiction writers, who must move on to new far-flung pastures now that man has invaded their principal domain. They were set forward as desirable—almost inevitable—national goals by those whose duty it is to establish such goals: A senator, the vice president, and, by unmistakable implication, the President of the United States.

We agree that man has a destiny in space; that he has, in fact, a biological drive to extend his reach and to expand his life just as far as his capability permits. Apollo 11 has shown that space travel is a practical reality, that man can indeed land on worlds other than his own and that he can work and live, for a time at least, in strange and hostile environments. We have little patience with those who see the moon mission only as a waste of time and money, or with those who argue that it was nothing more than a bread-and-circus act calculated to divert attention from problems on earth.

But man is an animal that can and should respond to more than the basic urges that impel him to carry life as far as he can go. His instincts can be tempered and altered by his intellect. And the time has come for man to curb the excitement, the enthusiasm and euphoria that were the inevitable fallout from the moon mission, and to think very carefully about where we go from here.

Vice President Agnew, who heads the task force charged with setting future United States space objectives, was quite specific. We should, he said, go to Mars. We should land men on that neighboring planet by the end of the century. Senator Charles Percy went the vice president about a decade better. The President, in addition to his almost uncontrolled enthusiasm over the Apollo 11 mission, spoke to visiting foreign students about far-flung space explorations of the near future and of the assurance of finding life on unspecified planets.

This is not, in our opinion, a time to commit the nation to any hard timetable for another space spectacular, or to launch a crash program for a Martian landing comparable to the convulsive effort that has put us on the moon.

In the first place, a manned flight to Mars would require an expenditure of treasure that would make the $24 billion tab for the moon voyage seem like the fabled nickel ferry ride to Staten Island. A new generation of boosters would have to be developed. A vastly improved technology in guidance, spacecraft and life support would be required for the mission which, at the highest speeds attainable today, would take nine months for the 10-million-mile round trip.

Even with these drawbacks, Mars is the most inviting target in the solar system. Indeed, it may be our sun's only planet—besides our own—that is worth dropping in on. Venus, our closest neighbor, has a dense atmosphere of carbon dioxide and a surface temperature of 800 degrees. Jupiter, by today's standards, requires a four-year round trip. The other planets are simply too far, and for the most part, too hostile to life to make a visit worth while considering. As for the stars, even given a new rocket that could push man along at 100 times the present speed it would take 1,000 years to reach our nearest neighbor, Alpha Centauri. Assuming a real breakthrough would permit man to travel at the ultimate speed of 186,000 miles per second—the speed of light—it would still take nine years to get to Alpha Centauri and back again, with no time out for sight-seeing along the way or for exploring any planets that might be found.

But it would be a mistake, surely, to dismiss the possibility of vastly extended space flight on the basis that it is beyond the technical capability of man. The brief history of man's venture into space so far has demonstrated that yesterday's impossibility is today's commonplace. The plans for Mars and beyond should not be dismissed at all. But neither should they be approached at a fever pitch.

For the period immediately ahead—for the next decade at least—the focus of this country's attention should be on the domestic challenges that face us, and on the problems of environment, over population, disease, hunger and war that threaten the future of this fragile speck of matter that is our home. The excitement, the broadened vision, the proven ability of man to do what he sets out to do should be utilized to mount an attack on these long-neglected problems. Apollo 11 has cast a harsh light on life on earth, showing man's failures in sharp contrast to his breathtaking technical achievements. It is a vision that should not be blotted out. It should be exploited as an incentive to get the vitally needed jobs done on earth.

At the same time, the United States cannot withdraw from space. The huge investment in Cape Kennedy and Houston must not be let go to ruin. The vast aerospace industry must continue to function. The army of technicians and scientists must not be demobilized.

The complete Apollo program, calling for nine more flights over the next three years, should be funded. Beyond that, serious consideration should be given to the establishment of permanent manned stations on the moon so that we may truly explore and perhaps exploit the new world that we have already conquered. The manned orbiting station that NASA has proposed should be provided to test the ability of men to live and work for long periods in weightlessness. And far more emphasis should be placed, in the years immediately ahead, on unmanned probes of the planets—probes that can answer many of the questions at a fraction of the cost of manned flights.

None of these projects should proceed on an inflexible schedule as a top national priority. The minimum requirement should be enough momentum in the space program to prevent the structure from falling apart through disuse.

And always, during the decades ahead, every effort should be made by the United States to enlist the cooperation, the technical help and the financial support of any nation that is willing to contribute to the adventure that must finally be seen as the collective achievement of all mankind.

THE BANK CREDIT SQUEEZE

Mr. GOODELL. Mr. President, I urge the Federal Reserve Board to take prompt remedial action to deal with disturbing indications of an unusual stringency of credit in the large commercial banks.

The Federal Reserve Board has been pressing forward with its tight money policy to combat inflation.

One indication of tight money may be seen in the decline of the banking community's free reserves. These have declined since the end of last year by 27 times, to a present figure of minus $1.35 billion.

Another indication of tight money may be seen in the decline in the ratio of banks' liquid assets to total liabilities—less capital accounts. This ratio has declined by 21 percent since the end of 1968.

Vigorous monetary and fiscal measures are clearly needed to combat the inflation that now threatens our economy.

We must accept the fact that these measures, to be effective, cannot be wholly painless.

We must equally be aware, however, of the risks of putting on all the monetary brakes at once. The effects of monetary actions may take anywhere from 6 months to 2 years before they are fully felt. Monetary policy is a powerful and useful instrument, but we must be careful not to overdo its use.

I would like to call particular attention to the fact that the present condition of tight money is hitting one sector of the economy—the major banking institutions and their customers—particularly hard.

There have been disturbing indications of an unusual stringency of credit in the larger commercial banks. David Rockefeller, chairman of the Chase Manhattan Bank, in testimony before the House Banking and Currency Committee this June, spoke of the potential dangers of the current situation. He cited a serious problem his own bank was facing in honoring its loan commitments while meeting minimum liquidity requirements. Other large banks are apparently experiencing the same difficulty.

This is a disturbing problem because so many businesses—many of them too small to borrow directly in the money market—depend upon the large commercial banks for their immediate credit needs to finance current operations.

This is a matter which has not received sufficient attention.

This is a matter on which the Federal Reserve Board should take prompt remedial action.

Various remedies have been proposed.

One is to relax the 6¼ percent interest ceiling set by Regulation Q for large denomination bank certificates of deposit. This, it has been suggested, would enable the large banks to compete more effectively for funds in the money market, without increasing the overall supply of credit.

Another suggested remedy is to infuse a small amount of additional credit on an emergency basis into the banking system, subject to appropriate restrictions.

It is up to the Board and the administration's monetary experts to determine which particular remedy would be the most workable.

My purpose is to point out the existence and seriousness of this problem, and to urge that a solution be promptly sought.

THE PESTICIDE PERIL—XXXIV

Mr. NELSON. Mr. President, an editorial published in the New Republic of July 19 describes one of the major difficulties in establishing effective pesticide regulations: "Political Sanguinity in Washington."

Regulations and controls on the use of persistent, toxic pesticides do exist, but as brought out in recent hearings before the House Subcommittee on Intergovernmental Relations, enforcement is all but nonexistent. Examples of negligence and abuse of Federal regulations included a cockroach killer whose label warned on one side to "use only in well ventilated rooms" and on the other side directions to "close all doors, windows, and transoms"; authorization for an insecticide pellet vaporizer for use in restaurant kitchens, although the danger of food contamination had been cited by the Public Health Service and the Food and Drug Administration; and the continued presence of thallium rodenticides in some retail stores despite the cancellation of its registration in 1965.

Some States have already dealt with the pesticide threat by placing their own bans on the use of DDT, and many other States, in agreement that State action is necessary in the absence of Federal leadership, are currently considering measures to control DDT and other persistent pesticides.

I ask unanimous consent that the New Republic editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BALD EAGLES AND PEOPLE

The gradual extinction of the bald eagle and debilitating convulsions common among California grape pickers have a common cause—pesticides. The seven-year-old prophecies of Rachel Carson's *Silent Spring* are becoming realities as the billion-dollar pesticide industry goes on to peddle its wares unperturbed by actual or proposed federal regulation.

Two venerable Southern-agricultural institutions—the Senate Agriculture Committee and the Agriculture Department—are responsible for the industry's political sanguinity in Washington. Together they have successfully stymied any federal moves to control the sale and use of pesticides which, along with fertilizers, are responsible for the production of bumper crops on the limited acreage set by the farm subsidies program—another sacred cow of Southern agriculture. Year after year, the Senate Agriculture committee has killed Senator Gaylord Nelson's (D., Wis.) proposed ban on the interstate sale of DDT.

For a quarter of a century, the Agricultural Research Service of the Agriculture Department has vitiated the federal Insecticide, Fungicide and Rodenticide Act, which empowers it to register, prescribe labels for, and if dangerous, seize pesticides. Recent hearings before Rep. L. H. Fountain's (D., N.C.) subcommittee on Intergovernmental Relations have uncovered evidence of what is, at best, negligence and, at worst, venality. Some small samples:

A cockroach killer with a warning on one side of "use only in well ventilated rooms" and directions on the reverse side beginning with "close all doors, windows and transoms. . . ."

Insecticide pellet vaporizers being authorized for use in restaurant kitchens, despite the danger of food contamination pointed out to the ARS by the Public Health Service, the Food and Drug Administration and other federal, state and private agencies.

The dearth of ARS initiative, implementing its legal power to check company sales records and initiate multiple seizures of dangerous pesticides. For 22 years ARS has persisted in seizing only the lethal stocks in one or two individual stores. Despite 400 reported cases (with perhaps ten times that number going unreported) of thallium poisoning in 1962–63 (mostly of children), and their own cancellation of thallium's registration in 1965, thallium rodenticides may still be purchased in many retail stores.

A propensity to favor the products and complaints of certain companies. For example, Shell Oil company has registered, among 48 separate pesticide products, a "no pest strip" which only after several years of prodding by the Public Health Service, was finally required by ARS to carry a warning against its use in rooms where elderly people or infants are present. But it took only four days for ARS, upon receiving a complaint from Shell, to cancel the registration of a competing strip produced by a smaller company.

The coincidence of interests between the pesticide manufacturers (Shell, Dow Chemical, Union Carbide and American Cyanimid are among the major ones) and pertinent regulatory agencies of the federal government has only made state action that much more inevitable as the specter of ecological disaster becomes more visible.

DDT, the best known (its developer won a Nobel Prize for his feat) and most prevalent form of pesticide, has been singled out for special attention. New York stopped using it in city parks when its Director of Horticulture found natural predators, including the ladybug and the praying mantis, capable of doing a better, safer and cheaper job of controlling insect pests. Michigan, Arizona and California, finding their milk, fish and other food stuffs contaminated have placed controls on the use of DDT. Wisconsin has just completed several months of nationally audited hearings on pesticides. Their final report should encourage a number of other states to take action.

The focus of concern for pesticide regulation, however, may soon return to the federal level. The seizure of 4,000 pounds of DDT-contaminated salmon in Michigan last April prompted HEW Secretary Finch to appoint a commission to inquire into the benefits and dangers of various pesticides. Its final report is due next November. Meanwhile, the Department of Agriculture last week suspended the use of DDT and 8 other similar compounds for 30 days, pending another "review."

TIME IS SHORT FOR STUDENT FINANCIAL HELP

Mr. MONDALE. Mr. President, the need for full funding of the Federal student financial aid programs has never

been more serious than at the present time. The crisis that is presently before the students and their families is very simply stated: How to begin or continue a college education without the financial aid that, in effect, has been promised to them by the Federal Government.

Student motivation for a college education is not the issue. The problem that confronts the student who has planned for and committed himself to a college education is overwhelmingly one of finances.

The House of Representatives is at present considering the appropriations for the student financial aid programs in the overall 1970 fiscal year appropriations bill for the Department of Health, Education, and Welfare. I am particularly hopeful that, at the very least, the $16 million cut, by the Appropriations Committee, from the requested budget for the Educational Opportunity Grants program will be retored. The effect of this cut would be to reduce further the aid available to low-income freshmen.

Mr. President, I further call the attention of Senators to an article written by Eric Wentworth, and published in the Washington Post of July 26, relating to the financial aid programs and the special circumstances facing applicants for Insured Student Loans.

I should hope that we in Congress can better fulfill our commitment to students and their families by more adequately responding to their needs for higher education financial aid.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAPITAL EDUCATION: U.S. AID SQUEEZE HITS CAMPUS

(By Eric Wentworth)

Countless young Americans confident Uncle Sam would help them through college are getting a lesson they weren't bargaining for.

Call it Fiscal Botany 1A: The Government money tree, blighted by inflation, bears little fruit.

Needier students expecting Federal grants and direct low-interest loans are finding the funds in critically short supply. When they and their better-heeled brethren try the much-touted program of Government-guaranteed bank loans, they run into shortages there as well.

With less than two months before the fall term starts, Congress is deluged with demands to keep the faith and find the means to bail these students out. But there's no assurance at this point the lawmakers can turn the trick.

The first big test should come next week when the House is scheduled to debate the Health, Education and Welfare Department's money bill.

The House Appropriations Committee has increased the outlay for direct Federal loans to $188.2 million from the $161.9 million asked by the Nixon Administration, placing the funds available at roughly last year's level. The increase, however, comes to only about two-thirds the colleges' certified needs.

Furthermore, the committee has made it largely at the expense of money for direct Federal grants to low-income freshmen in the 1970–71 year. Money for such grants this year, appropriated earlier, falls far short of the sum of a year ago.

Prodded by hard-lobbying education groups, House liberals will likely try to boost the direct-loan funds as well as other outlays during the floor debate. If they fail, the often more-generous Senate may add some money when it gets around to the bill. But time is short.

Time is short, too, for efforts to resuscitate the guaranteed bank loan program which the Nixon team, like its predecessor, has counted on to make up for skimpiness in direct Federal aid. With its interest rate ceiling at 7 per cent while the commercial prime lending rate has soared to 8.5 per cent, this scheme is drawing at best a lukewarm reception from most bankers.

A House Education subcommittee chaired by Rep. Edith Green (D-Ore.) has been groping through meager statistics and sometimes conflicting advice for the best approach to this problem. The Administration, for its part, has wallowed in tedious internal debate on what it should recommend.

Meanwhile, the National Council of Higher Education Loan Programs warned Mrs. Green's panel Thursday that about one-third the students seeking guaranteed loans for the first time this fall could expect to be turned down. In round numbers, that could mean up to 200,000.

The District of Columbia, with a $2.4-million pool of guaranteed-loan money from 10 of the city's 14 banks, is in better shape than some locales, though director Robert A. McCormick complains the savings and loan associations have yet to kick in.

McCormick reckons, however, that the 1 million in the pool for first-time borrowers may have to meet a demand more than double that amount.

Requests for the higher-interest guaranteed loans are flooding in, naturally enough, from young people facing little or no chance of getting direct Federal grants, loans or work-study help. Locally, McCormick reports, many are low-income students.

The whole spectrum of student-aid resources, moreover, is being stretched as never before because an ever-larger number of needy students has been persuaded to pursue higher education. And they are heading for college at a time when tuition rates and other charges—reflecting the institutions' own efforts to make ends meet in the face of higher costs—are mounting anew.

Locally, tuition at George Washington University will be up $100 to $1800 this fall; at Georgetown University, up $200 to $2100; at Catholic University, up $200 to $1900. The University of Maryland is raising tuition and basic fees by some 25 per cent to $506, and boosting its charge to out-of-staters by $50 to $500.

Most deserving students who fail to receive the direct or indirect Federal aid they seek will probably attend college anyway this fall. They'll require greater sacrifice by their families, they'll look harder for part-time jobs, they'll be more Spartan in what they wear and eat.

But that's hardly the point. What counts is what they'll think about a Government which may well have led their hopes too high in the first place but in any event is failing to fulfill them. Their thoughts, undoubtedly, will be one more ingredient in the bubbling brew of student unrest that has already brought many campuses near the brink of breakdown.

WILLA MAE THOMAS: PEOPLE HELPER

Mr. HARTKE. Mr. President, from time to time we hear about the unusual efforts of an individual to make the world a happier home for all of us. Miss Willa Mae Thomas, of Indianapolis, is such a person. For the past 16 years she has worked tirelessly to foster a spirit of international good will. This she has done by helping approximately 3,000 high school and college students from foreign countries to find homes while they pursue their studies in Indiana schools. Her work has inspired those around her. I believe that her story, published in the Indianapolis Star, will prove similarly inspirational to a national audience. I therefore ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"WILLA THOMAS DAY" TO HONOR STUDENTS' FRIEND

(By Dennis J. Hoffman)

Miss Willa Mae Thomas could be called Indianapolis' ambassador to the world.

During the last 16 years she has helped approximately 3,000 high school pupils and college and post-gradate students from foreign countries find homes while they pursue their studies in Indiana colleges and universities.

Although she receives no pay for her work, Miss Thomas meets the students at the airport, makes certain they have proper clothing for Hoosier weather, and answers any questions they may have about life in this country, in addition to finding housing for them.

In an attempt to repay her for her years of services Mayor Richard G. Lugar has proclaimed July 20 as "Willa Thomas Day" and some of her friends are planning a testimonial dinner in her honor at 3 p.m. that day in the Atkinson Hotel.

For the four students who died during their stay here, she was left with the responsibility of making burial arrangements.

Miss Thomas also arranges for complimentary tickets for her students to see a fair, circus, sporting event or musical concert, if a student cannot afford the price of the ticket.

She has persuaded Mayor Lugar to present honorary citizenship certificates to her students.

"I tell the students I can help them with any problem they have except money," Miss Thomas said. "I don't have any and I don't expect any."

Miss Thomas has a scrapbook of letters from grateful students who remember how she made them feel welcome here. Many send her cards at Christmas while others have mailed gifts.

The students, from Japan, Southeast Asia, the Philippines, Europe, Africa and Latin America, phone her at all hours of the day and night with their problems and, like a dutiful mother, she offers common-sense solutions to her adopted family.

Miss Thomas sends letters of welcome to the foreign visitors before they arrive and gives going-away dinners when their student days are over. She helps those who want them, to find jobs and has been instrumental in getting scholarships for others.

She visits those who are sick or hospitalized, taking them a rose which is "all I can afford." She sends them birthday cards, attends their weddings and graduations, throws wedding and baby showers when appropriate On holidays such as Christmas and Thanksgiving she finds for those living in dormitories, homes where they can have a home-cooked meal.

As a child, Miss Thomas considered leaving her home in Mississippi to become a Baptist missioner to Africa. Today she still is very active in church affairs. She is religion editor of the weekly Indianapolis Recorder and she frequently checks up on her student family to make sure they're attending their respective churches regularly.

Miss Thomas decided to work with the foreign students after she received a warm welcome while attending a religious conference in Europe.

"The people I met in every country I

traveled in were so nice to me, speaking and helping in every way," she said. "So when I returned home I thought I should try to be nice to people of other countries when they come to ours."

She discussed this with friends who aided her in establishing the International Welcome Committee of Indianapolis.

This organization has sponsored 15 fund raising dinners to help the students, organized welcomes by city, state or church officials and helped set up an International Club for the students and other central Indiana residents from foreign countries.

The International Club sponsors two picnics, one each in the spring and fall, for members and friends.

"My purpose," she explained, "is to spread good will and understanding among all men to help build God's Kingdom of Peace on earth for men, that there may be love with harmony, and that all may live together."

Miss Thomas receives no money for her work but she has been honored by the Church Federation of Greater Indianapolis and other groups interested in international relations.

Some day Miss Thomas hopes to write a book on her experiences with the students. Proceeds from the book would go toward construction of an International House which would feature living space for exchange students as well as a soundproof music study room, a library, swimming pool and a spacious yard.

Miss Thomas' concern for her students leaves her little time to worry about her own problems. Two days after her testimonial dinner she is scheduled to enter the hospital to have a large tumor removed.

"I hope I'm recovered before Sept. 1," Miss Thomas said: "I have to attend a church convention in Florida then."

THE BOOK LOVERS' STUDY CLUB OF ALICE, TEX., URGES ESTABLISHMENT OF 100,000-ACRE BIG THICKET NATIONAL PARK

Mr. YARBOROUGH. Mr. President, I am pleased to announce that the Book Lovers' Study Club of Alice, Tex., has joined the growing list of supporters for a 100,000-acre Big Thicket National Park in southeast Texas.

The members of the Book Lovers' Study Club realize that we must take immediate action if we are to rescue the Big Thicket from its desperate reduction toward destruction. The Big Thicket has already been reduced from its original size of 3.5 million acres to about 300,000 acres. The ivory-billed woodpecker is rapidly becoming extinct because of the endless cutting of large trees in the bottomlands from which it gets its food. As thoughtful, intelligent, and responsible citizens, the members of the Book Lovers' Study Club and the many other organizations who join them in supporting a 100,000-acre Big Thicket National Park are doing everything they can to protect these invaluable natural resources.

Mr. President, I ask unanimous consent that the Book Lovers' Study Club's resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION

Whereas the Big Thicket of Texas is a meeting place for eastern, western and northern ecological elements; and

Whereas this is the last stand in Texas of the nearly extinct Ivory-billed Woodpecker; and

Whereas this beautiful and unique area is rapidly being destroyed by bulldozer and chain saw; therefore be it

Resolved, That The Book Lovers' Study Club of Alice, Texas urges the preservation of at least 100,000 acres containing the most unique areas of the Big Thicket, these areas to be connected by environmental corridors; and be it further

Resolved, That the Interior and Insular Affairs Committee of the Senate of the United States be requested to set immediate hearings of S4 which would create a Big Thicket National Area.

THE HIGH COST OF ENVIRONMENTAL QUALITY

Mr. TYDINGS. Mr. President, it is ironic that on man's first mission to the moon he discarded some of the baggage brought along on the trip. Along with the glory evidently comes the garbage. While in this instance it was no doubt necessary, one cannot help but reflect that man seems inherently incapable of treating the land, sea, and air in which he lives with the respect they deserve.

Wherever he goes, man pollutes. I hope that in the decades ahead he will treat his space environment better than he has his environment on earth.

The May issue of News Front contains an article entitled "The Destruction of Earth." Its explanatory subtitle provides a clue to its content:

Men have polluted this planet to beyond the point of tolerance, and still they continue.

I do not think that anyone familiar with the quality of our environment would dispute this statement.

The article contains a number of well taken points: That the United States will soon face a basic choice between cleaning up the pollution and disturbing the present conditions of our economy or endangering the environment and maintaining these conditions; that "what makes the problem critical now is sheer massiveness;" and that it has been difficult so far to prove a direct causal relationship between certain pollutants and injury to health.

There is one statement, however, with which I take issue. Speaking of the costs of preventing pollution, the article states:

For, to put it bluntly, in the 1970's it still will be far cheaper to contaminate the environment than to set up preventive systems.

I do not think this is the case at all. In the first place, it ignores the long-term cumulative efforts of pollution. The further buildup of contaminants now means it will cost more later on to remove them. More importantly, the statement refers only to economic costs. But there are other kinds to consider. They can be summed up in that admittedly imprecise term "environmental quality." Contrary to Marx, man is more than an economic animal. The scope of his life is broad and decisions must reflect values other than dollars and cents. Only then can man achieve a quality environment. Economic factors are important, but they must not so predominate as to exclude other considerations.

The article is nevertheless well worth reading by anyone concerned with conservation. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE DESTRUCTION OF EARTH—MEN HAVE POLLUTED THIS PLANET TO BEYOND THE POINT OF TOLERANCE, AND STILL THEY CONTINUE

Man's flight to the moon could not be more timely—for he is now wearing out his welcome on earth.

After centuries of poisoning, the environment is finally getting "fed up." Air, water, land, which conveniently served as the cheap dispose-alls of pre-industrial society, are just not up to the task of continuously absorbing the vast and complex wastes created by today's military and industrial technologies, high productivity and widespread affluence.

If man persists in his reckless intrusions on the environment, say the experts, he will clash with nature and will eventually destroy the capacity of this planet to sustain life. But if he veers sharply onto the road of effective pollution control, there's a chance he may severely jar the economy and curb individual freedoms.

Sometime in the '70's, the U.S., as the nation where the problem is posed in its most acute form, will make a choice. That it will be for somewhat more stringent controls is certain. But many scientists doubt that the measures acceptable to the economy will be drastic enough to maintain the intricate balance of nature.

There's good reason for their scepticism. Except in moments of spectacular intrusion, as when an off-shore oil well recently dumped 21,000 gallons of raw oil daily for 12 days into the Pacific near Santa Barbara, Calif., it's difficult to arouse public concern, particularly when the full peril of the hazards may not be realized for generations.

Then there's the dearth of cost-accountable cause-and-effect information on specific pollutants. It's one thing to say that pollution is an important factor in lung cancer, emphysema, bronchitis and asthma—and quite another to name the specific villain and impose equitable legislative controls.

TOKEN LEGISLATION TO COMBAT AN EVERPOWERING PROBLEM IS ALMOST FARCICAL

The history of past programs is not encouraging. Congress first authorized a Federal program of research in air pollution and technical assistance to state and local governments in 1955. Eight years later, after few achievements, it passed the Clean Air Act, calling for expanded aid to states and more Federal research. This was amended in 1965, when standards for new motor vehicles were set up for initial application in the 1968 model year.

Then in 1968, the Air Quality Act was passed which called for a systematic regional effort to combat air pollution and the establishment of a 15-member Presidential Air Quality Advisory Board.

Concern about pollution is not new. To protect their drinking water from the wastes of 11 million inhabitants, the Romans built the Cloaca Maxima, one of the first major municipal sewers in history. In 1306, King Edward I prohibited the use of coal fires in London to help clear the air while Parliament was in session. And some 300 years later, John Evelyn voiced a familiar complaint in his diary when he exclaimed against the "hellish and dismal cloud" that enveloped London, producing "catarrhs, phthisicks, coughs and consumption."

What makes the problem critical now is its sheer massiveness. The motor vehicle, called by HEW the single worst source of air pollution, emits some 350,000 tons of carbon

monoxide, hydrocarbons and nitrogen dioxide gas into the atmosphere daily. Autos, factories and heating plants dump 3 million tons of contaminants into New York alone each year.

By the mid-'70's, oxides of sulphur from fuel combustion, the second biggest factor in air pollution, is expected to reach 40 million tons a year, some 10 million above the present level; while pollution from the destruction of solid waste from domestic, commercial and agricultural operations will climb from 170 million tons in 1966 to 230 million in 1976.

Escaping to the countryside won't help much, because the pollution is expected to extend at least 500 miles from the city, where the haze will diminish the solar energy reaching the farmlands.

Under a comparable assault, the surface waters of the U.S. are becoming so contaminated "as to lose their biological capability for purification within the next 20 years," according to a report by the National Academy of Sciences.

Lake Erie has already in effect died, overcome by a lethal dose of sewage, industrial wastes and the chemical runoff from heavily fertilized farmlands. Elsewhere, marine life in bays, inlets and coastal waters dwells in constant danger of extinction from malfunctioning of passing ships and off-shore wells.

The early '70's will bring a new threat. Nuclear power plants will discharge an estimated 50 trillion tons of heated water into U.S. rivers and streams. By the end of the decade, this thermal pollution is expected to double, at which time, according to some fish and game departments, it will seriously endanger the nation's fisheries.

Recently, man has attempted to divert dangerous chemical and nuclear wastes from water to land by building deep wells to serve as underground containers. There are over 100 of these now in use and about 300 are predicted by 1972. Some experts view them as hidden hazards, pointing out that if the wastes break out of their steel casings (and it has happened), there's no telling what effect they may have on plant and animal life—and ultimately on man.

IN SPITE OF COMMON SENSE, THE LACK OF SPECIFIC FACTS HINDERS ACTION

Air, water, land are all being contaminated at the level of "great worldwide danger" by DDT, according to one molecular ecologist. Another suspects the pesticide of threatening the supply of the world's oxygen. A third charges it may be inducing sex organ changes and interfering with the body's ability to respond to drugs.

Only a few scientists have really clashed head-on with the pesticide industry, illustrating what continues to be one of the big roadblocks to effective pollution control: the scarcity of hard facts.

"The general case is pretty well supported to show that pollution is bad for you," comments Dr. Richard Morse, chairman of the Commerce Department's Panel on Electrically Powered Vehicles. "But we can't say that X number of people died from nitric acid, or X number of people died from carbon monoxide; we don't have reliable information."

FEAR OF POLLUTION MUST BE STRONGER THAN FEAR OF ANTI-POLLUTION COSTS

Scientists do not interpret this admission as a warrant for indifference or inaction. By continuing to massively intervene in the environment without being aware of the harmful consequences until they are upon us warns Barry Commoner, chairman of the Department of Botany at Washington University, "we are conducting a huge experiment on ourselves." Thus he sees an urgent need for the scientific community to establish "some means of estimating and reporting on the expected benefits and hazards of proposed environmental intervention *in advance.*"

Some new tools for prediction and control may emerge from the report of the 55-nation International Biological Program on "Man's Survival in a Changing World," due in 1972. The American Association for the Advancement of Science is now studying "Unauthorized Environmental Hazards from Technological Intrusion." And there's a proposal afoot to set up a National Institute of Ecological Research, along with an agency to advise Congress on environmental change.

Skeptics shrug their shoulders and say while information-gathering of this kind is necessary, its only practical effect will be to confirm the scientists in their attitudes and leave the public where it is today:—momentarily outraged when pollution is publicized, yet hostile to legislation which would interfere with its autumnal rite of back-yard leaf-burning.

To mount popular support for tough control laws, say these observers, the "hard facts" will need to be clear and frightening enough to defeat the logic of cost. For, to put it bluntly, in the '70's it still will be far cheaper to contaminate the environment than to set up preventive systems.

Sophisticated incineration equipment will mean more taxes. To provide adequate sewers nationwide will cost $10 billion, plus $20 billion more to separate steam and wastes sewers, as will eventually be necessary. Higher rentals on apartments and steeper prices on homes will follow the control of sulphur oxide pollution from fossil fuels. And *used* cars owners will need to spend from $100 to $200 on devices to control carbon monoxide if the requirements for new cars are to make sense.

This leaves the responsibility for initiating programs with industry and government. The former has the option of developing technologies for cleaning up the air, water, land, or of facing legislative controls which may unsettle the balance of the economy while they restore the balance of nature. Either way the price is high.

A TECHNOLOGICAL REVOLUTION MAY BE NECESSARY TO INSURE MAN'S SURVIVAL

Some experts see the first step in an industry program consisting of research on causes and cost studies on effects. With specific causes isolated and measured, presumably systems and equipment could be invented to control effects. The last step would entail complete technological change-over. Instead of trying to clean up the combustion engine, for example, the automotive industry might switch to a reciprocating steam engine. Or combustion and nuclear plants might be supplanted by installations using the sun's energy to produce electrical power.

The shape of regulation and legislative controls would depend upon the political climate at the time. A nuclear accident, the final contamination of a national heritage, might bring about stringent measures, and the public might not think a limitation on its freedom too high a price to pay for protection against "ultimate intrusions."

More likely are the steps outlined by Edwin S. Mills of Johns Hopkins University in "The Economics of Air Pollution," which would entail direct regulation of pollution, with licenses, compulsory standards and zoning; payments, with subsidies for control devices and tax credits for investment in equipment; and fees for discharge of specific pollutants. Even these measures imply Federal intervention in the affairs of business and local communities on a big scale.

Predictions point to action by both industry and government in the early '70's, with one watching the other for significant moves. Thus the time announcement of a control innovation by industry may deflect the force of a control bill, while planned legislation may prompt the announcement of a technological break-through.

Somewhere behind the discussions of pollution and contamination the big payoff for effective control tends to disappear from view: it's no less than the survival of man on this planet. But there's another way of keeping the payoff in focus, and that's in terms of a particular town or city or region, where it means healthier people, better property values, new industries.

And for some it's a chance to reverse a downward trend, which is what Pittsburgh did in the '40's when, industralists, bankers and concerned citizens banding together, it fought its way out from under a choking cloud of smoke and discovered a new vitality.

To develop an ecological conscience may be too slow and arduous a process for man to attempt at this late date. But on a day when the smog bites into his eyes and he reaches fearfully for his next breath, he may decide once and for all to relinquish burning his leaves. It would be one step in the direction of where the air is clear.

So in the past 15 years, various laws and committees have been established to combat pollution. But they have made little real progress.

THE IMMINENT INCREASE IN ANTIPOLLUTION SPENDING WILL NOT BE ENOUGH

More money is forthcoming. In 1970, Federal funds allocated for pollution research will top $63 million, an increase of 17 percent over the previous year. Within a few months, the Department of Health, Education and Welfare—which has Federal responsibility for prevention and control—is expected to release the first detailed study of overall cost to government and industry of combined air pollution controls. Reliable sources estimate that the figure will be approximately $4 billion for the next decade.

There's little doubt the sum will be allocated. But all that money still won't clean the air.

OIL INDUSTRY SUBSIDIES

Mr. McINTYRE. Mr. President, our present tax laws have long been shameful in the magnitude and variety of special handouts from the public treasury to the oil industry. Now that Congress is talking seriously of putting an end to these longstanding subsidies, the industry has begun to marshal some counter-arguments. One of the more specious of these industry arguments was recently advanced by the Petroleum Industry Research Foundation.

According to the foundation, any reduction in the present depletion allowance available to the industry would be followed immediately by a hike in petroleum prices. And, since low-income families spend a higher percentage of their incomes on gasoline than the well-to-do, any such price hike would have a decidedly regressive effect. Thus, the foundation concludes, legislators concerned with the needs of the Nation's poor have no alternative but to support the present allowance.

An excellent appraisal of this curious line of thought was published recently in the form of an editorial in the Wall Street Journal. I ask unanimous consent that this trenchant editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN UNPERSUASIVE OIL ARGUMENT

Now that Congress is talking of cutting the oil depletion allowance, the industry

naturally is mustering counter-arguments. Some of its points, however, seem singularly unpersuasive.

Under present law a producer can deduct 27.5% of the gross income from each well, up to 50% of the net income of that well. The House Ways and Means Committee has proposed a reduction in the allowance to 20%, and the idea has considerable support elsewhere in Congress.

Industry officials claim the companies could not absorb the added tax and would have to pass it along to consumers in higher prices, particularly for gasoline. The Petroleum Industry Research Foundation, Inc. estimates retail gasoline prices might rise by one cent a gallon.

It's perfectly true that corporate taxes are often passed along to consumers, if competition does not prevent it. And the oil industry is to some extent sheltered from competition by the oil import quotas, which raise domestic prices by limiting the inflow of less-expensive foreign petroleum. The industry's concern for consumers would be a bit more believable if it were also arguing for removal of quotas.

The Petroleum Industry Research Foundation stresses that a gasoline-price increase would hit the poor especially hard. Families with less than $3,000 in annual income spend 6.2% of their earnings on gasoline, the foundation says, compared with 1.5% for families earning $15,000 a year. By this argument, of course, the poor suffer most from the quotas and would gain the most from their elimination.

What's needed is a less emotional approach to the industry's economics. There's no question that petroleum producers, as they draw oil from the ground, are depleting their assets. The depletion allowance serves much the same purpose that depreciation deductions serve for other industries. Perhaps the allowance needs to be redesigned but its principle is sound.

In any case, the depletion allowance debate should be decided on the true economic issues. Not many legislators are likely to be swayed by the argument that, in supporting the allowance, they will be helping the nation's poor.

HISTORY OF THE GENEVA PROTOCOL OF 1925

Mr. PROXMIRE. Mr. President, I would like today to summarize briefly the history of the Geneva Protocol of 1925.

In 1921, at the Washington Conference on Limitation of Naval Armaments, a treaty was proposed that contained a prohibition on the use of poison gas in warfare. The United States signed the treaty, and the Senate ratified it unanimously, but it never went into effect because of France's failure to ratify it.

The Geneva Conference of 1925 was originally intended to restrict, if not to abolish private trade in arms. Though the conference made little headway in this area, the United States saw in it a chance to limit chemical warfare. To this end, the U.S. delegation introduced a proposal to prohibit international trade in poisonous gases for use in war.

This proposal ran aground on the arguments that it was impossible to distinguish gases intended for peaceful purposes from those intended for war, and that non-gas-producing countries' military preparedness would suffer if they could not import gases. Unable to find a midway point between unrestricted use and total prohibition, the conference decided on full prohibition, and drafted a protocol banning gases and bacteriological weapons that was very similar to the Treaty of Washington.

The United States, in keeping with its stand at the Washington Conference, signed the protocol on June 17, 1925, along with 37 other nations. Proponents of the treaty saw little obstacles to its ratification, particularly in view of the Senate's speedy action on the Treaty of Washington.

The protocol encountered considerable opposition in the Senate, however. The Senate Foreign Relations Committee considered the treaty in executive session, and reported it favorably more than a year after its signing, on June 26, 1926. The Protocol was vigorously opposed by veterans organizations, parts of the Military Establishment and the chemical industry. It became obvious that the treaty did not have enough support to be ratified, and it was sent back to committee on December 13, 1926.

For the nations that had signed it, the Treaty came into force on February 8, 1928. On April 8, 1928, the Soviet Union, which had not signed the treaty originally, acceded to its restrictions. By 1939, 42 countries had ratified the treaty. Though President Roosevelt reaffirmed our policy of using chemical and biological weapons only when attacked with them first, the Geneva Protocol remained in committee, unratified.

In 1947, President Truman removed the treaty from Senate consideration along with a number of treaties that had become obsolete. At this time about 60 nations, including all of NATO and the Warsaw Pact, have ratified the agreement.

RESIDENT ALIEN RADIO AMATEURS

Mr. GOLDWATER. Mr. President, 5 years ago legislation which I had introduced pertaining to certain aliens became law. This act permitted visiting aliens, who were practicing amateur radio operators, to operate radios within the United States. They could do this only if their countries offered reciprocal agreements and only after a careful review indicated that the national security would not be imperiled through this privilege. During fiscal years 1967 and 1968, 336 and 441 aliens received this authorization. I am pleased to say that in the opinion of all concerned, including administrators and beneficiaries, this program has been very successful.

Mr. President, after the inauguration of this program, we found that a most important group of aliens were excluded from the opportunity to use amateur radio equipment. This group consists of resident aliens who are attracted enough by our country to want to give up citizenship in their own native lands and to declare their interest in becoming U.S. citizens. These alien hams have fallen into a wide legislative gap which, on one side, benefits the visiting alien and, on the other side, the U.S. citizen. In March of this year, I attempted to close this gap through the introduction of S. 1466.

This measure would permit the Federal Communications Commission to issue a license for the operation of amateur radio stations to aliens admitted to the United States for permanent residence who have filed under section 334(f) of the Immigration and Nationality Act a declaration of intention to become a citizen of the United States. Like the visiting alien, the applicant under this bill would be subject to review by the appropriate Federal agencies to insure that the national security would be protected; and like the visting alien, the applicant can be summarily denied a license for security reasons. Unlike the visting alien, however, the declared alien would have to submit to the same examination and licensing procedures as those required for an American citizen.

During the past 5 years approximately 66,000 aliens have formally declared their intentions of becoming U.S. citizens. I mention this period because it is the usual waiting time imposed on resident aliens before they become eligible to petition for U.S. citizenship. While no accurate figures are available, it is estimated that a score or two of these declared aliens are radio amateurs. So you see, Mr. President, that this legislation will benefit only a few very important people. I fully appreciate the relative priorities of congressional concern. Within these priorities currently are such monumental matters as appropriations for space exploration versus those for poverty, decisions on the ABM system, and extension of the surtax and tax reform. Among these legislative behemoths, the problems of a very small and uninfluential minority are likely to be lost. I do not intend to let this happen. I believe that a quality Congress can deal effectively with large and small issues, and that this is a quality Congress.

Mr. President, were any of us to decide to change our citizenship, we can imagine some of the practical and emotional concerns that would be generated. There is no reason to add to these, in the case of foreign citizens admitted to our shores, by denying the amateur radio enthusiasts among these aliens the practice of this activity for a 5-year period while they await their American citizenship. It is interesting to conceive that we might enrich their motivation, dedication, and American patriotism by granting radio licenses to those who qualify. It may be that these new "voices of America" can do much to enhance our reputation abroad as many of our 265,000 amateur radio operators have already done.

Incidentally, I am pleased to announce that the American Radio Relay League, the nonprofit organization which represents most of the members of the ham fraternity in this country, has endorsed this proposal without qualification.

Mr. President, after working out the administrative details and procedures for security, opposition to the 1964 law enabling alien visitors to operate amateur radio equipment was almost nil. Opposition to legislation granting a similar privilege to alien residents devoted enough to the United States to announce their intent to become citizens should be completely nonexistent. I urge action at the earliest possible time to accommodate the interests of this very important group of

future citizens. In this regard, I ask unanimous consent to have printed in the RECORD several letters and articles pertinent to this effort.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

ZERO BIAS

Once again, in 1969, the Congress of the United States will attempt to rectify an error in the original "Reciprocal Licensing" measure passed in 1964. The error—or ommission—allowed amateur operation by foreign nationals visiting the U.S. (when proper applications were made, and when proper reciprocal agreements existed between the U.S. and the particular foreign government), but did not permit similar privileges for individuals who had emmigrated to the U.S. and were applying for U.S. Citizenship.

Last year, Representative Theodore R. Kupferman of New York took the first step in that direction with the drafting of a Bill (H.R. 16764) designed to permit such operation. Predictably, H.R. 16764 died in committee, but with the recent re-election to the Senate of K7UGA, Barry Goldwater, the hopes of immigrant would-be operators rose once again. Also, predictably, Senator Goldwater has taken the bull by the horns, and introduced in the 91st Congress a Joint Resolution "To amend the Communications Act of 1934 to provide that certain aliens admitted to the United States for permanent residence shall be eligible to operate amateur radio stations in the United States and to hold licenses for their stations."

The Joint Resolution labeled S.J. Res. 27 was introduced January 23, 1969, read twice and referred to the Committee on Commerce for study.

We sincerely hope that the efforts of Mr. Kupferman, Mr. Goldwater, and the firebrand behind the whole situation, George Pataki, ex-YO2BO, will not be in vain, and that we'll see the amendment become law during this session of Congress. Amateurs can help assure the success of the measure by making their feelings known to their state's Representative and Senators. A Post Card, Radiogram, Telegram or letter stating your desires may not move mountains, but when it comes time for a vote, Joint Resolution number 27 may sound familiar to *your* Congressman because of *your* letter. Please write today.

S.J. RES. 27

EDITOR, *CQ:* Please accept my thanks and appreciation for your second recent article (ZERO BIAS, March 69) regarding licensing of immigrants in the U.S.

As an immigrant (now citizen) and an amateur radio operator in Israel and now in the U.S., I can only hope that the thousands of immigrants from all over the world who will follow me, and many in this country at present, will not have to wait five full years to obtain amateur radio licenses.

I was an active ham operator before leaving for the U.S., and believe me, the waiting period was not easy. I had the means, the know how and the experience to obtain and operate a ham radio station but was not permitted to do so because of the existing laws.

I believe that many hams, after such a long period away from their sets may never return to them, and the loss is also ours. I know of many such cases.

I would like to remind all my fellow hams in the U.S. about S.J. Res. 27 and urge all to show their support by writing their congressman to support that resolution in the 91st Congress.

I hope that our medieval laws regarding licensing of immigrants will be changed and thereby enable us to accept many excellent hams and old timers into our growing society.

Thanks again, Dick, for your support, your fine article, the use of your editorial column and the pages of your magazine for such a good cause.

DAN B. LIEBRECHT,
WA2CRD/ex-4X4JS.

RIVERDALE, N.Y.

EDITOR, *CQ:* I like to thank you for taking a stand in favor of Senate Joint Resolution 27, in your ZERO BIAS editorial, March 1969. This bill, introduced by Senator Barry Goldwater, K7UGA, would amend the Communications Act of 1934, allowing immigrant radio amateurs with permanent resident status, to apply for a W license.

I have talked to many radio amateurs about this problem. All agreed with this proposed legislation but few of them took time to do something about it.

Hearings will soon begin on S.J. Res. 27. I wrote to the United States Senate, Committee on Commerce, in Washington, D.C., and to my U.S. Senators, in favor of this bill, but this is not enough. I urge American radio amateurs to write now to their Senators expressing strong support for this bill.

We former DX stations, now living in the United States and future citizens of this country, sincerely hope that the American amateurs will help us in getting S.J. Res. 27 passed.

GEORGE PATAKI,
ex YO2BO.

NEW YORK CITY, N.Y.

EDITOR, *CQ:* Like most hams, I heard of the Goldwater bill, Senate Joint Resolution 27, which would allow immigrants to this country the privilege of obtaining an American license, a privilege they are currently denied. Since many foreign nationals may operate here under reciprocal licensing agreements, it seemed only logical that immigrants who have applied for permanent residence in the United States be allowed the same privilege. Like most hams, I agreed with the idea of this bill and promptly forgot it.

Unlike many hams, however, I came in contact with several foreign hams who have actually been forced to give up their hobby because of the current regulations and whose only hope for operating is the passage of this bill. I have now written my Congressman urging support of Senate Joint Resolution 27 but my one letter will not do any good without support from others.

Will you be like most hams and forget the plea of the number of future Americans who are now denied operating privileges or will you take the few minutes required to write your Congressman and urge his support? Help someone else enjoy the privilege we have and send your letter today.

DENNIS MCALPINE,
W1DYE/2.

NEW YORK, N.Y.

IMMIGRANT OPERATORS

EDITOR, *CQ:* I am one of those people who has left his country to realize his dreams and is at the point of touching his life ideals. I am soon going to arrive in the USA as an immigrant with permanent residence and I hope to get US citizenship as soon as possible.

I am convinced that my dreams will soon become reality for in the USA—in the middle of American society where I shall live and work—it is easier than in any other country to bring those dreams into being.

Only one of those dreams, one to which I have devoted all my time, seems to be more difficult to touch.

I have been an active radio amateur in my former country (Romania) from 1954 to March 1969, and had a first class license to operate all categories of radio amateur stations, being one of the operators of Central Radio Club station, YO3RCC. My call was YO3LM. I am also a graduate electronics and telecommunication engineer.

I know that at this time in the USA it isn't possible, if you are an immigrant, to obtain a license for amateur radio; it's possible only after you get US citizenship. Amateur radio was all my life and it's very hard for me to be kept away from it. Dozens of American radio amateurs may remember our first contacts in two way single sideband and other contacts during ARRL or *CQ* World-Wide DX contests. I was always pleased to establish contacts with American stations.

Many immigrant ex-amateur radio operators with licenses are looking forward to becoming owners of a U.S. License.

I am one of them.

I ask that all United States radio amateurs help to support Senator Barry Goldwater's bill S.J. Res. 27 concerning the amendment to the Communications Act so as to provide aliens with permanent residence in the USA permission to operate amateur radio stations in the U.S. and to hold licenses for their stations.

Please write as soon as possible to the appropriate persons: Congressmen, Senators and let them know your feelings. It will make it easier for the amendment to become law.

SERGE COSTIN,
ex-YO3LM.

BAD DREUZEN, AUSTRIA.

GOLDWATER BILL FOR IMMIGRANTS

Senator Barry Goldwater has introduced S.J. Resolution 27 which would allow immigrants with permanent resident status, who have filed "first papers" for citizenship, to acquire amateur radio operator and station licenses. His earlier bill allowed visitors to operate here on a reciprocal basis; this did nothing for refugees whose licenses would have been cancelled by their former country, nor for immigrants who found an interest in radio after arriving here. The bill has been assigned to the Commerce Committee. (A similar bill was introduced in the House last year, but was not acted upon before Congress adjourned; such bills do not carry over into the next Congress, but must be reintroduced.)

LICENSE FOR IMMIGRANTS

Coming to the U.S. I was hoping to apply for a W call but here I realized that getting a U.S. license means to me a full 5 years waiting period. That is because the present law permits issuing of amateur radio licenses only for American citizens.

Senator Goldwater (KUGA) has introduced a bill in the Congress which, if passed, would allow foreign amateurs to get American licenses after they have received their "first papers."

A lot of other foreign amateurs are in the same situation. Now, I ask every W/K to express his support for this bill, called Senate Joint Resolution 27, sending a letter to the Chairman of the Committee on Commerce; Senator Warren G. Magnuson, Washington, D.C. 20510.

The American amateurs have been always friendly and helpful to me during thousands of QSOs and I sincerely hope they will give me now the necessary support to get a W call.—*Illie Nuculae, ex-YO4AAC, New York, N.Y.*

NO CITIZENSHIP REQUIREMENT?

The Communications Act permits foreign nationals who are neither citizens nor permanent residents of U.S. and probably never will be, to own and operate an amateur radio station but does not give the same right to the legally admitted immigrants who are permanent residents of United States and future citizens.

I feel that this particular regulations of Federal Communications Commission against which I am complaining is unfair

and discriminatory against of a group of new Americans and I am asking you to start an action to change it. I understand this can be done by an amendment passed by Congress.—*George Palaki, New York City, New York.*

I agree completely with Mr. Pataki's letter in the February issue concerning the citizenship requirement for a radio amateur license. Before I came to the United States I was holding a ham license in Germany. Here I cannot get a license because of the citizenship requirement. I was told that I could operate under my German license, but this license was revoked when I left Germany, because that country has a residence, rather than citizenship requirement. In the U.S. army I was entrusted with official communications, but "on the outside" an immigrant is not trustworthy enough to go on the air. Surely there are many others in the same boat and cannot wait until the 5 years required for US citizenship are up. I hope that soon the FCC will remember this forgotten group, maybe with the aid of the ARRL.—*Wolfgang Pfeifer, Inglewood, California.*

ZERO BIAS

A few years ago, in 1964, amateur radio in the US enthusiastically greeted the news that the US Congress had passed, and President Johnson had signed into law, PL 88–313, legislation permitting the US State Dept. to enter into negotiations and agreements with foreign governments for the purpose of allowing foreign amateurs to operate while in the US and possessions. In the years since the passage of PL 88–313, the US has negotiated "reciprocal privilege" agreements with 32 foreign governments, and amateurs from both sides of the borders have begun to enjoy new freedoms which had previously been denied. But a few flaws seem to exist in the law.

There seems to be no provision in the law covering the special case of political refugees and immigrants to the US, although alien operators *are* permitted to operate after proper application and authorization. There also is no provision for an alien applicant who has been denied an operating permit to find out *why* it has been denied.

Cases which have been brought to light recently involve political refugees from eastern European countries. These refugees have brought with them to the US great enthusiasm for the American way of life, enthusiasm for amateur radio, and great technological know-how. They have also signed written declarations of their intention to become citizens of the US, and have begun the long and arduous task of becoming naturalized citizens of the US. But a quirk of US law prevents these individuals from holding an amateur license until they are actually citizens, perhaps five years from now.

Are these political refugees a greater risk to US national security then, let us say, another alien here on vacation? Obviously not, so that line of reasoning for the laws is invalid. Then are they any less likely to be enthusiastic and law-abiding amateurs than a native born or naturalized citizen? No, the prime reason for this situation is legal laxity and oversight. No one has cared enough about the existence of the problem to say anything about it except, perhaps, the immigrants involved, and lacking a vote, they lack the tool of "constituent pressure" that a citizen can frequently bring to bear.

REFUGEE AND IMMIGRANT AMATEURS

DEAR OM: Having read your ZERO BIAS in January *CQ*, I wish to make a few comments on the subject. Having been a native of Germany and immigrated to the U.S. in 1961, I think I am qualified to speak on the matter of licensing immigrants and fully support your view in letting immigrants become radio amateurs in the U.S. However, if eligible for citizenship they should become citizens or else lose their license. This is the way our neighbors in the north (Canada) handle it. To wait 5 years is a long time and to me it seemed unfair to let foreigners operate while visiting U.S. just because they were hams in their own country. Thank you very much for your support and outspoken opinion on this matter, Dick. You most certainly have my support and let's hope our law makers can see it the same way.

HAL KOSTLIN,
WN6YNG.

ONTARIO, CALIF.

EDITOR, *CQ:* I am a holder of Telephone 1st, Telegraph 1st and Advanced amateur licenses and I wish to state that I am in favor of amateur license for permanent residents of our country.

Your editorial in January *CQ* certainly points up a problem which has been neglected or overlooked so far.

CARL H. PAULSON.

PEARL RIVER, N.Y.

DEAR DICK: As a reader and subscriber to *CQ*, I would like to congratulate you for your January 1968 editorial and for bringing to the attention of your readers a problem which has unfortunately received all too little care.

I know of one particular case of an Eastern European refugee who was an active amateur in his home country and who fled his native land in order to find new opportunity and a new future in the United States. Although he has declared his intentions to become a U.S. citizen and has filed the necessary papers to that effect, he is prevented from obtaining even a temporary amateur license. There is no logical reason for this injustice and I would hope that legislation can be passed to remedy the situation.

I, for one, am writing to my Senator in Washington in the hope that other amateurs may feel inclined to do likewise, and so bring this situation to the attention of our legislators. U.S. amateurs are, for the most part, extremely well treated when they visit foreign lands; there is no reason why we cannot at least extend some sort of courtesy to those who seek new homes in our country.

Thanks again for bringing up a timely and important topic in your editorial column.

IVES A. FEDER,
W1EOX.

CHESTER, CONN.

DEAR MR. ROSS: I am writing to you to commend you on your stand in ZERO BIAS concerning political refugees. I happened to know one of these fellows . . . and I am not surprised to realize how lucky they feel we are! The point he made was, we have so many people (inactive hams), who don't exercise their privilege! I'm afraid I had to agree with him . . . not only that, his dedication to the hobby was intense rather than a fly by night attitude.

After reading your article, I can't see where a temporary license could not be issued. It seems the least we can do under the circumstances.

Besides, these amateurs can offer a wealth of exchange information concerning all gear used. This country became great by the very acceptance of people like this and we should continue to be the one country in the world who make no conditions on citizens of the future.

WARREN JARVIS,
K2LUE.

BAYSIDE, N.Y.

ALIEN OPERATORS

EDITOR, CQ: In connection with your ZERO BIAS editorial from January 1968, I would like to make a few remarks:

I am one of those amateurs who came in United States as an immigrant and started with great hopes for a new life. Being a graduate of electronic and telecommunications engineer, I got a very good job and I work for CBS Television network in New York City. I have all the reasons to be very happy in this wonderful country, but I happened to be an enthusiastic radio-amateur and the Communications Act of 1934 prohibits me as a permanent resident of the United States, but not yet a citizen, to have my own station. In my native country, Romania, I had a license, my own call was YO2BO and I was the chief operator of YO2KAC club station. Only a ham can understand what means to me to wait 5 years to get citizenship and a license. It seems unbelievable that I can operate a professional broadcasting equipment for one of the biggest television net—of the world, but I can not operate my own amateur radio station. It is interesting to mention that many countries give amateur licenses to their immigrants, for example Canada does it. Other countries grant licenses not only to their citizens and residents but to all visitors interested in amateur radio. The Communications Act, based on Reciprocal Operating Agreements, permits to citizens of 33 foreign countries to operate their own amateur radio station here in U.S. but does not permit the same thing to the permanent residents of United States, people who live constantly in United States, work in United States and support the United States.

Here in the United States there are many immigrants from different countries who are also amateur radio operators and they all dream the "impossible dream" to get a W license.

I understand that only an amendment of the Communications Act by action of the Congress can offer a solution to our problem. For this we need the support of American amateurs, citizens will—to write to their Congressman, urging for support.

GEORGE PATAKI,
ex-YO2BO.

NEW YORK, N.Y.

WE NEED TO REDUCE THE MAXIMUM WORKING HOURS ON RAILROADS FROM 16 TO 12

Mr. YARBOROUGH. Mr. President, as a cosponsor of S. 1938, an amendment designed to revise the hours of service law to reduce the maximum number of working hours in a 24-hour period from 16 to 12 hours per day, I stress the importance of this piece of legislation.

Since its enactment in 1907, over 60 years ago, the hours of service law has not been amended in any material respect. At that time, the maximum number of hours that employees of a railroad could work per day was set at 16. In the years since that important act, machinery and railroading have changed vastly, and it is now recognized by all parties that it is not safe for a man to work on a railroad for such an extended length of time. The Post Office Department, for example, requires that a worker stop work if he has been on the clock for 12 hours in 1 day. There are numerous other measures which, in the interest of the workers and of public safety, limit the number of hours a man may work in a day.

This matter is especially pressing in light of recent developments in the railroad industry. Safety on the railroads has been deteriorating. Average weekly hours on duty for railroad engineers on passenger trains has risen from 30.5

hours in 1964 to 40.1 in September 1968. On local freight trains, the rise is from 55.5 to 62.5 hours per week. There is no reason why men should be subjected to such long hours of toil week after week. The hours on duty are so far out of line with the normal hours worked by other categories of employees in the various industries that immediate rectification thereof is required for reasons of social justice.

In far too many cases, workers have complained that they have been required to work during their vacation, that their relief or release periods were not sufficient to provide adequate rest, and that many of them felt that they were at the physical breaking point.

Mr. President, in other transportation industries in the United States as well as in the railroad industry in other countries, it has been recognized that limiting hours of work at a point below the maximum presently prescribed for railroad operating employees is necessary in providing those employees with adequate, unbroken rest from their tasks. Testimony presented by the railroads to the House Subcommittee on Transportation and Aeronautics in regard to the 1966 bills to amend the hours of service law reveals that over 9 percent of all engineers in the various classes of service for October 1965 worked on an average of 12 or more hours per trip or tour of duty. The material submitted also proved that about 30 percent of those engineers in local and way freight worked 12 or more hours per trip or tour of duty in the same period.

We have waited long enough to correct this dangerous situation. In this day and age, I know of no justification for a law which allows a man to work 16 consecutive hours without rest. It is inconsistent with every other principle in our society. I urge the Senate to effect the prompt approval of the bill.

ON THE SELECTION OF WINTHROP C. LIBBY AS PRESIDENT OF THE UNIVERSITY OF MAINE AT ORONO

Mr. MUSKIE. Mr. President, these are challenging times on American campuses. From what we frequently read in our daily newspapers, administrators and students appear incompatible and irreparably estranged.

This, of course, does not represent the situation on a majority of American college campuses. My belief is that where there is harmony on campus, there is an administration which listens to its students and trusts them.

Such an administrator is Winthrop C. Libby, the new president of the University of Maine, at Orono. At the time of his selection, Mr. Bill Caldwell, of the Maine Sunday Telegram, wrote an editorial page feature on President Libby, and the feature has been reprinted in the Maine Alumnus magazine.

I ask unanimous consent that Mr. Caldwell's article on President Libby be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIBBY IS APPOINTED PRESIDENT

(By Bill Caldwell)

(EDITOR'S NOTE.—Winthrop C. Libby, 57, was named the 11th president of the University of Maine at Orono April 16 by the university's board of trustees at an executive session. President Libby has served for the past 10 months as acting president. His salary was set at $30,000 per year. A member of the university faculty and staff for 35 years, he became acting president of the University last July when Dr. Edwin Young resigned to return to the University of Wisconsin. A native of Caribou, President Libby was graduated from the University of Maine in 1932 and received his M.S. degree in agricultural economics from the university in 1933. He has also done graduate work in agronomy at Rutgers and Cornell Universities. He was awarded an honorary Doctor of Laws degree by Ricker College in 1968. Appointed to the staff of the department of agronomy in 1934, was made head of the department in 1943. He served as associate dean of the College of Agriculture in charge of resident instruction from 1950–57. He was named to succeed the late Dean Arthur L. Deerling as dean of agriculture in 1957. In this position he directed the work of the College of Life Sciences and Agriculture, Cooperative Extension Service, and Maine Agricultural Experiment Station. He was named vice president for public services in 1968. During his years at the university he has been engaged in research activities, extension programs, and many public service activities. In 1966 he was named to the President's Committee on Rural Poverty, a select group comprised largely of cabinet officers and administrative officials. The committee later made a report to the President on their findings. He is married to the former Elizabeth Tryon and the couple has a son and two daughters.

(Bill Caldwell, editorial editor of the Marine Sunday Telegram, in his weekly Downstreet column, described Libby as "The Spirit of Orono." The Alumnus, with Caldwell's permission, reprinted most of that column.)

Given bio-data like this, an IBM computer, programmed to choose a modern-day college president, would probably choke on Winthrop C. Libby's punch-card. Yet, few at Orono would doubt that among 7,500 students and 450 faculty, he is the best-liked, most trusted man-on-campus.

The reason is not because he is a Maine-bred and Maine-raised man from Caribou. Or because he is an agronomist. Or because he has been around the Orono campus for over 37 years. Those characteristics should, by rights, make Libby old-hat, hidebound, backward glancing at a 'golden age' of education which is dead and gone. This background should put Libby on a wave-length of thinking in collision and clash with the ideas and outlooks of today's students.

But, in an old-shoe way, Libby is a perverse contradiction of himself.

Instead of being 'old guard,' he is almost avantegarde. But, like a deer in the forest, Libby's Caribou exterior camouflages his attunement to the times.

"The Major Mission of the University of Maine," says Libby (talking 'Caribou'), "is the education of men and women." Libby's simplicity is no simpleness. He adds: "But the U of M, like any University worthy of the name, is a proving ground for ideas as well as a transmission belt of knowledge . . . It must be a place where different viewpoints can be discussed freely and openly in an atmosphere of candor . . ." Quietly preaching his gospel of openmindedness, Libby goes a long step further, saying "Experience convinces me that student disagreement is preferable to student apathy; that student commitment even to false gods is preferable to no commitment whatsoever; that students who believe in their own maturity and wisdom are preferable to those who expect the University to function as their parent."

The pomp and prerequisites of a university presidency hang loosely on Libby, almost unused. He has never moved into the President's house on campus. Instead he lives in his old home in downtown Orono and walks two miles to work in all weather, arriving at 7:30 a.m. in the President's office, first man on duty. At night his wife picks him up. He barely uses the President's car. When he takes a visitor to lunch, Libby takes his place in the cafeteria line. When he invites a visitor for a cup of coffee, he takes you to the undergraduates' Bear Den, where his table fills up with students. When President Libby drops you at the SAE fraternity house to change your shirt, he waits downstairs and in two minutes he is surrounded by 30 'brothers.' "I'm Libby," he says, stretching out a handshake to the counsellor on duty, when he carries your bag into the Gannett Hall dorm where you are spending a night. There is no "side" to this man.

Libby is proving to be an ideal conduit between the sometimes opposite poles of Trustees and Students. Trustees rely upon Libby because after almost 40 years on campus Libby knows more about Orono than any man living. Students trust Libby for the best of all reasons; he trusts them.

In the brief span of two years under Libby, Orono students have won and are exercising a bigger and more responsible voice than ever before in changing and improving student life.

For example, an excellent and new Disciplinary Code, enforced jointly by students and faculty (without administrators), now governs student conduct; student recommendations have resulted in liberalizing girl-boy visiting rules in the dormitories; a current student-faculty committee, with carte blanche from Libby, has just completed a thorough investigatve report into all phases of Student Activities, including such holy-of-holies at the Deans' Office, the office of the Director of Student Activities, the Student Union, Counselling and Placement Services. It will recommend major overhauls in many phases of university administration. And Libby hopes to move promptly on putting them in effect, wherever feasible.

Dialogue, frequent, meaningful, mutually respectful, between President and students is today part of the fabric of Orono. It happens half a dozen times a day. This is the kind of an interchange which minimizes the need of student revolt or administrative repression.

The relationship on campus at Orono might be an eye-opener for other troubled universities. And it all occurs in a natural, normal way, without the pressure of crisis pushing it or the fishbowl glare of publicity which follows after a campus collision between Students and Administration.

PSYCHOLOGICAL ASPECTS OF AMERICAN FOREIGN POLICY

Mr. FULBRIGHT. Mr. President, the Committee on Foreign Relations held a short but most interesting series of hearings earlier this year on the subject of the psychological aspects of foreign policy—a subject which both the public and the bureaucracy tend to ignore.

Miss Elizabeth Wharton, of the United Press International, wrote a brief but perceptive article on those hearings. The article has been printed rather widely.

In view of its succinct summary of the hearings and the fact that it focuses on some of the fundamental problems nations have in communicating with each

other, I ask unanimous consent that the article be printed in the CONGRESSIONAL RECORD. The article appeared in the Tampa Tribune-Times of Sunday, July 20, 1969.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BEHAVIORAL SCIENCES AS TOOL OF DIPLOMACY

(By Elizabeth Wharton)

WASHINGTON.—An American is brought up to look a man in the eye when talking to him. He also is conditioned by his culture to keep a certain distance from a person with whom he's conversing.

An Arab is taught from childhood that looking a man in the eye during conversation is extremely rude. He also is accustomed to stand quite close to a person with whom he's talking.

If an American meets an Arab, and neither is aware of the other's cultural conditioning, any conversation between them is likely to produce serious misunderstanding and mutual irritation. The American thinks the Arab is crowding in too close, so he steps back, which insults the Arab. The American thinks the Arab is shifty because he won't look him in the eye, and the Arab thinks the American is trying to stare him down.

Social scientists, particularly in the so-called behavioral fields of anthropology and psychology, recognize these cultural differences and understand how important they can be as a cause of friction.

Governments—and most people—do not.

In an effort to determine what insights social science studies might offer to smooth the path of international relations, Chairman J. William Fulbright of the Senate Foreign Relations Committee held a series of hearings on the subject of "anthropological and psychological aspects of U.S. foreign policy."

Witnesses were Dr. Margaret Mead, anthropologist, writer, and curator for ethnology at the American Museum of Natural History in New York; Dr. Karl Menninger, noted psychiatrist, founder and president of the Menninger Clinic and Menninger Foundation in Kansas; and Dr. Edward T. Hall, author and professor of anthropology at Northwestern University.

All three believe behavioral science could make a significant contribution to the quest for peace and international amity.

They cited the experience of World War II, when intensive U.S. research on Japanese culture yielded two outstanding successes and many minor ones.

The first achievement concerned treatment of Japanese prisoners of war. When American military commanders began taking their first prisoners in the Pacific islands, the Japanese not only freely discussed military secrets but even offered to help their captors track down installations and ammunition dumps.

"The Americans didn't trust the prisoners, of course, since Americans are conditioned not to give such information to their captors. We told them the prisoners could be trusted because the Japanese had never been conditioned to being taken prisoner," Dr. Hall explained. "Their culture decreed that they be good soldiers, and to them being good soldiers also meant being good prisoners. We were right, and the information proved very useful."

The second great success was in persuading the U.S. Government to permit the Japanese to retain the Emperor after the war—a recommendation made by the behavioral scientists within months after the attack on Pearl Harbor.

If the Emperor had been forced to abdicate, Dr. Mead said, Japanese society would have taken generations, instead of just a few years, to recover from the war.

Government-sponsored behavioral studies tapered off after the war, and the entire field of social science fell into dispute during what Dr. Menninger called the "rampant know-nothingism" of the late 40s' and early 50s'.

The three experts suggested that a number of national crises since then could have been averted, or, at least, ameliorated, if such research were still being done as a guide to government policy. Dr. Mead cited two examples:

The first was the Pueblo incident. To North Koreans, truth is an elastic concept in which bare facts are less important than the interpretation one chooses to place upon them. They knew the Pueblo was off-shore spying on them, and whether the ship was a few miles inside or a few miles outside an invisible line on the water simply didn't have anything to do with it.

But Americans rely on facts, and our instruments proved the ship was a certain number of miles outside the invisible line.

The final settlement, under which the United States agreed to sign a "confession" of invading North Korean territory—and promptly repudiated it—might have been reached much sooner than it was if the behavioral scientists had been consulted, Dr. Mead said.

Her second example was the violent disruption which resulted from the Supreme Court's school desegregation decision of 1954. Behavioral scientists had warned in advance, she said, that such a drastic change must be effected rapidly.

"To the human mind, anticipated change is frightening, while accomplished change is accepted," she explained. Therefore, she feels it was the clause in the decision which allowed local governments to move "with all deliberate speed" which caused all the trouble.

Hall said the practice of sending American representatives abroad without preparation on the mores of the society to which they were going subjected them to a "culture shock" from which they might never recover enough to do the job they set out to do.

He used time as an example. The United States, he said, is a "monochronic" culture which times everything to the minute and in which the people, the industry and the government function on a set schedule.

Latin America, on the other hand, is a "polychronic" society in which people set little store by schedules, and consider times set for appointments to be only an approximation.

"Both time systems work, but they work in different ways," he said. "What is more, they do not mix.

"I have observed a number of Americans . . . fail in their mission because they never learned to read the local time customs."

At the same time, Hall continued, Americans feel a terrible need to be loved, cannot tolerate criticism from others and don't think much of self-criticism either.

"We have to feel we are doing well all the time," he said. "It's a real problem, because it is self-defeating to be complacent."

All three witnesses agreed that consulting social scientists on national policy would give the United States an enormous advantage over the Communist world whose inflexible ideological framework has no room for unfettered social research.

Fulbright agrees, but says he has not yet decided how to go about trying to convince a U.S. bureaucracy which has a certain inflexibility of its own.

"We spend an enormous amount of money collecting information about the Russians," the Senator explained. "I should think it would be a very good investment to spend even a little money hiring behavioral scientists to interpret the information and draw conclusions from it."

TAX SURCHARGE PASSAGE

Mr. FANNIN. Mr. President, each day this body delays action on the extension of the surcharge, our Nation drifts farther down the road to fiscal irresponsibility. At the domestic level, fuel is added to the fire of inflation with our deficit spending continuing because our revenue does not equal our expenditures.

The grocery bag for the welfare recipient, or those on a fixed income, shrinks in size as prices continue to skyrocket. This results from many circumstances prevalent in our economy today, not the least of which is the loss of confidence in the American dollar.

Our dollar is also in jeopardy in the world money market if we do not stabilize our economy with a more favorable balance of payments. To improve our balance-of-payments position we must increase our exports, decrease our imports, or improve our dollar flow. Of course it could be a combination of these corrections that could result in a favorable fiscal position. We must convince the other nations of the world of our willingness to get our financial house in order. No one knows whether the economy might break during this critical waiting period while we await the passage of the surtax extension. It has happened before when circumstances did not seem any more threatening.

Because of inflation, we are losing the ability to compete; other countries are winning a greater percentage of world trade. The trend is starting to rapidly increase in their direction. Whether we talk about steel, motor vehicles, or a vast number of other products including sophisticated electronic equipment, we are losing the battle.

In recent years we have become net importers of iron and steel mill products and the gap is still increasing. We are net importers of paper, yarns, fabrics, and man-made fibers. Our trade position has swung to the deficit side with Canada since 1967, a deficit with Japan since 1964, and a deficit with Germany since 1965.

In a 5-year outlook, published in April of 1969, the U.S. Department of Commerce says this:

> Moderating U.S. inflationary pressures . . . is a basic prerequisite for improving the trade balance . . .

Millions of jobs are being lost to American workers by our loss of industry because we cannot compete with foreign manufacturers.

For years our finished products were our main sources of exports and finished products were a limited percentage of imports. Each day this is changing with a much larger percentage of finished goods included in our imports.

Just a few examples will illustrate what I mean. In radios, TV sets, and radio-photograph units our exports have remained at roughly the same dollar level—around $25 million. Our imports, on the other hand, have been steadily rising. U.S. Department of Commerce

figures show imports of radios, TV's, and phonographs at slightly over $100 million in 1962. By 1967 they had jumped to nearly $400 million and are still climbing. This cost Americans thousands of jobs.

Our apparel industry has been suffering. Exports have risen since 1962 from slightly below $100 million to slightly above $100 million in 1967—the latest year for which complete information is available. At the same time, imports of wearing apparel has risen from a 1962 level of $300 million to almost $600 million. The volume of imports has thus almost doubled while our exports have remained at almost the same level. The imports of foreign footwear shows a similar situation.

Perhaps the sharpest dollar increase has come in the automotive field. While the United States is still a net exporter of automotive products outside the field of new automobiles, our imports have far outstripped our exports in new automobiles in dollar amounts as well as rate of increase. In the 1962–67 period, foreign car imports jumped from around $425 million to more than $1,700 million. On the other hand, our exports have jumped from a level of less than $300 million to a level of around $800 million. Thus we are still a net importer of new automobiles by about $900 million per year and the gap is growing.

In the past few years we have gone from one monetary crisis to another with several shocking problems that could have proven disastrous. The next could be upon us with the least warning and coming during this critical waiting period now projected by some on this legislation could leave us without the financial strength to again weather the storm.

This is not a partisan matter since the collecting of taxes and spending the money is everybody's responsibility. Yes, and we all have the responsibility to do everything within our power to give relief to those people of limited income who are suffering most from our higher prices.

The Secretary of the Treasury has continuously outlined, over the past few weeks, the hazardous situation our Nation faces and the absolute necessity of passing this legislation. He has emphasized the sensitive situation involving inflation, sky-high interest rates, the difficulty of Government borrowing in addition to the problems that hinge on this measure in our financial dealings with foreign countries.

Psychology is a word little used in the realm of taxation and economics. It has become a prime aspect of the current fight to stem the inflationary tide. Too many people have resigned themselves to what they feel is the inevitability of inflation, and are advancing their expected purchases to avoid higher prices—the result is even higher prices.

We, as Members of the Senate, must recognize the cyclical effect of this inflationary psychology and try to break the cycle. If we do not, our senior citizens and low-income groups will bear a disproportionate burden of prior economic mistakes.

To delay passage of the surcharge, and engender accompanying doubts of its fate will only incite more frenzied anticipatory buying. To the extent that our inflation is of the demand-pull type, where the demand pulls prices higher due to limited supply, a delay would be very costly.

The rate of consumer prices has risen faster than last year's rate of 4.2 percent. It is also possible that unless inflation is checked it may reduce every dollar earned or saved by 6 cents in this year. In 1 year the dollar could drop to 94 cents. Every attempt must be made to assure a stable dollar.

I dislike heavy taxes as much as any Member of this Senate. But, I dislike rampant inflation even more. The surcharge is not destined to make anyone very popular—neither is the painful vaccination needle. For our personal well-being we will accept the pain. We must do the same for economic well-being.

We must coordinate and complement our economic policies in order to combat inflation. A good start has been made. There is a ceiling on Government spending and monetary policies are restrictive. The missing ingredient is the surcharge. Until the tremendous inflationary psychology has been brought under control it will be imperative to pursue restrictive fiscal and monetary policies.

The slowdown in real growth of the economy indicates that we are making progress against inflation. The 6-plus percent rate of growth in the second quarter of last year has been reduced to less than 3 percent in the first quarter of this year. To sacrifice this opportunity in order to wield pressure for tax reform is a case of doubtful priorities. The balance of revenues forthcoming from tax reform does not approach the amounts generated by the surcharge. Thus, even with tax reform the surcharge would be needed.

To expand on the problem, inflation is not only a problem within our domestic economic system but also with respect to foreign trade. Our balance of payments and especially our balance-of-trade account has been deteriorating. One prime reason is inflation. Much of this inflation is being caused by an ever accelerating series of wage demands. In the next 18 months an estimated 7 million workers in important industries will be up for contract renewals. This situation must be watched carefully to avoid a complete switch over from demand-pull inflation to the cost-push type.

The other aspect of course is the effect that higher wages have on our international competitiveness as I have already stated. Imports have risen 1½ times as fast as our exports over the last 6 years, and this rate is rising.

The question is, What do we do? It is quite evident that we will not be able to reduce wages or many of the other cost factors in production—at least in the near future. But, we can do something to thwart some of the current demand for goods and services. By convincing the American people and those abroad that the United States is determined to reduce inflation. We will remove much of the impetus to buy.

We cannot wait for tax reform. Action must be taken as soon as possible. Reform will not abate the need for the surcharge, but the delay required for reform will aggravate inflation. Bipartisan support is necessary to put our fiscal house in order and political machinations should be avoided where the sake of the Nation is involved.

To sum up, Mr. President, I would like to deal with several questions. First, extention of the tax surcharge, some argue, should await enactment of tax reform.

The President of the United States, the chairman, ranking minority member, and a majority of other members of the Ways and Means Committee, all have pledged their efforts for a good tax reform bill this year. The best way to get that reform is to pass the current Ways and Means package and let that committee return to its tax reform deliberations—much progress has already been made—then put a good reform bill through.

Extention of the surcharge could now be delayed only at the risk of seriously jeopardizing the anti-inflationary program and strongly bolstering inflationary expectations.

Second, some people ask why taxes should be continued at present levels if it is true that the budget is in surplus. Because failure to enact the tax package would throw the budget into deficit, even when measured on the basis of the new unified budget. The projected $5.2 billion surplus would be converted into a $4.0 billion deficit.

Third, with interest rates at their highest level in a century, some Members say they will refuse to vote for tax extension until something is done to bring them down again.

Nobody likes the high interest rates, not even the banker who is caught in the middle between record loan demands and a very tight monetary policy. To meet these demands, he is paying 10 percent or more for new money—in Federal funds and Eurodollars—and lending it out at a prime rate of 8½ percent.

The surest way to drive interest rates up even further is to kill the tax bill; the best way to bring them back down is to cool off the economy through continued fiscal and monetary restraint.

The previously stated desire of the distinguished majority leader to have tax reform legislation passed in this session is almost unanimously agreed upon. I do not intend to indicate all agree on every change that should be legislated. Many of the considerations are in the tax reform bill now under study in the House and will be sent over to the Senate for hearings in the Finance Committee.

In our discussions of the need for the surtax, no doubt a great deal will now be said about the surplus that has just been reported by the administration for the period ending June 30 of this year. Although it is not a very big surplus, around 1½ percent of the total spending, I will agree it is very important since it is the first surplus since the 1960 fiscal year.

The President, I am sure, is pleasantly surprised and gives thanks to the taxpayers for paying into the Government $2.8 billion more in taxes last year than even the Government had been predict-

ing. The prediction to which I refer includes both the Johnson and Nixon administrations. But, now lets realize we still face a very serious situation since even with a rosie prediction of a surplus in 1970 of $5.8 billion including the surcharge, we would have a deficit if the surcharge under consideration is not adopted.

In our elation that we finally seem to have our financial structure pointed in the right direction, let us not lose sight of the fantastically large deficits that have been with us over the last few years.

Let us realize that with the tax reform measures now under consideration in both the House and Senate, we will have both decreases as well as increases in the amount of taxes that will be added to the Treasury. There is just as much a chance that our tax collections will be reduced as there is that they will be increased.

Mr. President, the single most important factor affecting domestic and international confidence in the dollar today is the status of the tax surcharge. Failure to extend it could have disastrous consequences at home and abroad. I urge prompt passage of the bill we have under consideration.

A VIETNAM APPRAISAL

Mr. HATFIELD. Mr. President, as the Vietnam conflict continues I would like to reaffirm my position in regard to our involvement in this war and to state to the best of my ability the reasoning behind the stance which I have found necessary to take on this issue. All too often the events of the moment tend to make us forget the enduring problems which our Nation is facing. It is for this reason that at this time I wish to offer an appraisal of our involvement in South Vietnam and to reaffirm my efforts toward finding a lasting peace to this tragic war.

EVOLUTION OF A POSITION

Vietnam became an issue with me in 1945 when I found myself in Haiphong, Indo-China, as part of our naval forces there. Since that time I have revisited Southeast Asia many times in my memories and have followed closely the developments in that area of the world. From my initial experience with the Vietnamese people plus my continuing research into the present situation, it has remained my conclusion that the Vietnamese people have been fighting for over 30 years for the basic cause of nationalism. The desire of these people has been to rid their land of all forms of foreign domination—first the Chinese, then the French, then the Japanese, and now the United States—and not primarily a desire to spread communism. The indifference of the battle of ideology is mirrored today in South Vietnam, where the cause of anticommunism has largely failed to inspire the South Vietnamese. The distinctions of ideology are luxuries that only a well-fed, stable nation can afford to make. To the impoverished, hungry people of Vietnam, the primary consideration is to obtain a situation in their country in which they can support their families with food and a safe place to live. The present conflict makes that an impossible situation to obtain.

COMMITMENTS AS A SENATOR

On January 10, 1967, I took my oath as a Senator. Before that time my opposition to or polices in Southeast Asia had come from the privileged position of an onlooker—someone with a legitimate concern in the issue but no responsibility to resolve it. As a Senator my relationship to the Vietnam issue changed radically. In the office of Senator I had for the first time a legislative responsibility in foreign policy. Although my opposition to our involvement continued, I supported military appropriation bills under the conviction that our first duty was to support the men committed to Vietnam with all the material they needed. After seeking the advice of my more experienced colleagues I found that it is impossible to distinguish between those sums assigned to support troops already there and those intended to escalate the war or to finance other aspects of our defense effort. I, therefore, could not in good conscience oppose these apppropriation bills.

I did, however, utilize my speaking engagements to inform the people of the United States that the issue of Vietnam was not quite as simple as the administration sought to portray it. Only through the voices of the American people is this war to be ended. I intended, therefore, that my remarks would give people further information and therefore a new perspective on this issue. I hoped they would cause my listeners to examine critically the things they were told about Vietnam, encourage them to reevaluate their own thinking on this subject, and, hopefully, encourage them to reject our policies in Vietnam.

THE RESPONSIBILITY OF DISSENT

The responsible dissentors of our policies in Vietnam, whom I know, are sincerely convinced that those policies are wrong and that they must be corrected if the best interest of the United States are to be served. To argue that such dissent is prolonging the war and encouraging the enemy is fallacious. The entire reasoning behind this charge is based on the assumption that the enemy is demoralized, desperate, and hangs on only out of hope that American public opinion will demand an American withdrawal. I have seen no evidence that Hanoi or the NLF is either demoralized or desperate. In fact, the continuing aggressiveness and determination of these people only demonstrates that they are capable of pursuing the war indefinitely and determined to do so, irrespective of what critics may be saying in the United States. Yes, we do owe our men fighting and dying in Vietnam all the support and material they need, but we owe them more still. We owe them an uncompromising promise and total effort directed to extricating them from this war, to finding alternatives to futile policies that have failed for 20 years. This, to me, is the highest duty of those in positions to have their voices heard and their influence felt. This is why I, and others, have dissented from our present course in Vietnam.

But under this statement on the obligations which we have to the men in Vietnam special mention should be made of the over 13,000 men who are listed as prisoners of war or as missing in action. It is often very easy for us to forget these men when we are concentrating on peace overtures and the protection of the men now involved in fighting in Vietnam, but to thousands of families across the Nation the Vietnam war spells nothing but uncertainty and waiting. Thousands of women have banded together in the hope that their concerted actions will produce long awaited results in obtaining news of their loved ones. Some of these women have had to wait over 5 years without news of their husbands, sons, or brothers. For these families we owe a sincere dedication to supporting the recent administrative efforts to check on the treatment of these servicemen and to obtain a full list of names of those being held. In addition we need to support strong requests that North Vietnam respect the rules set out under the Geneva Convention. There is no way that the North Vietnamese Government can be forced to observe these rules except through repeated pressure by the United States at the negotiation table and though direct approaches to the Government in Hanoi. It is therefore our obligation to pledge our full support to such measures and to exert what pressure we are able to see the most expedient realization of this important issue.

GULF OF TONKIN RESOLUTION

There was and is one final role I could play as a Senator in attempting to guide our policies in Vietnam. I could vote on legislation affecting this conflict. Constitutionally, this should be a Senator's primary function, but through years of neglecting its role in foreign policy determination, Congress now finds itself in a position of virtual impotence. Congress was told by the Johnson administration that declarations of war are obsolete and that the President does not need the approval of Congress to send U.S. troops anywhere in the world he chooses and at any time he chooses.

In reference to the Gulf of Tonkin resolution of 1964, President Johnson said:

> It is just an expression and [Congress] just approved our position that we were taking.

To me this was and is a dangerous assumption in regard to the necessary checks and balances of our democratic Nation. Although the Gulf of Tonkin resolution was interpreted as granting a blank check of power to the President for conduct of the Vietnam war, this does not seem to have been the intent of Congress when the resolution was passed with only two dissenting votes.

The erosion of congressional power that seems to have begun with the Tonkin resolution will only be regained through a careful hold on the reins of Presidential power.

In February of 1968, I introduced a resolution that was not antagonistic to the President's policies in Vietnam but emphasized the need for Congress to participate in any decisions made that would alter the scope of the war and of our commitment. This resolution never came to the floor for vote. Today, Congress is still unsure of its position in foreign policy although attempts are being made to

seek a redefinition of that role. I support these attempts as an extremely necessary step toward reestablishing the important balance between the legislative and executive branches of our Government.

HISTORY

Numerous officials of the Johnson administration sought to portray the Vietnam war as a simple matter of aggression from the North. A 1967 State Department publication "Why We Fight in Vietnam" concludes:

If there had been no violation by North Vietnam of article 10 of the Geneva Agreement, calling for total cessation of hostilities there would be no war in Vietnam today.

The publication goes on to represent that since 1954 the North Vietnamese have been the sole cause of the conflict and that since that time Ho Chi Minh has organized and directed the struggle in the south.

To anyone who has seriously studied the historical circumstances of this conflict, these assertions must stand as a blatant distortion of fact. It is not necessary to trace in detail the evolution of the Vietnam conflict when there are numerous articles and books—by such outstanding Southeast Asian experts as George Kahn and John Lewis, Bernard Fall, Joseph Buttinger, Phillippe Devillers, et al.—that provide very thorough analyses of the history of this crisis. But I do want to emphasize certain points that are crucial to understanding the true nature of the Vietnam war.

The Vietnamese people have for centuries struggled to be independent of foreign domination. Since before the birth of Christ, the Vietnamese have feared and resisted domination by the Chinese. In this century they have openly fought the French, the Japanese, and now the Americans. Their struggle has always been primarily "nationalistic" for independence from foreign rule and exploitation. Since the 1920's this movement for independence has been lead by Ho Chi Minh. Although Ho is a Communist, his primary thrust and appeal to the Vietnamese people have been on the basis of nationalism.

Prior to the Second World War, Ho emerged as a nationalistic leader determined to drive out the French. During Japan's occupation of Indo-China in World War II, Ho organized the Vietminh to fight the Japanese and received American help in this effort. As evidence of his appeal to the Vietnamese as a nationalist, the Vietminh was a united front of both the non-Communist and the Communist elements.

After the Japanese surrender, the Vietminh selected a National Liberation Committee headed by Ho Chi Minh, the Emperor Bao Dai, a non-Communist, becoming its "Supreme Political Adviser." They called their country the Democratic Republic of Vietnam and eventually reached an agreement with the French that recognized this republic as a free state belonging to the Indochinese Federation and the French Union. But disagreements developed at to Vietnam's status as a free state, and by the end of 1946 the war for complete independence from the French had begun. According to Bernard Fall, the highly respected authority on Vietnam, Ho fought because he felt that Vietnam must be a single state, because it was not viable as a divided one, and because the French were trampling upon Vietnamese national dignity. We began aiding the French in 1950, spending over $1 billion abetting the French attempt to establish colonial status on a nation which wanted freedom. The French were defeated and withdrew with a list of casualties which numbered over 100,000.

The Second Indo-China War, as the current conflict is often called, began to fester shortly after the First Indo-China War was concluded with the 1954 Geneva Accords. Following the accords, Ngo Dinh Diem—a nationalist, anti-French, anti-Communist—came to power in South Vietnam with American backing. Diem was initially very successful in uniting the South, but as months wore on, his policies became repressive. In violation of a section of the Geneva Accords, he suppressed all forms of political opposition. With U.S. support, he violated another section of the accords, that called for a national plebiscite in Vietnam by July 1956. He refused to allow the elections to be held as it was obvious that Ho Chi Minh would easily win a popularity contest. President Eisenhower had estimated that Ho would have recevied 80 percent of the vote.

Perhaps the policy that most clearly and inevitably led to the initiation of revolutionary guerrilla activity was Diem's decision in June 1956 to replace the traditionally elected village chiefs or headmen with appointees, and by 1958 over 400 had been assassinated by the guerrillas. As the South Vietnamese people lost hope that the promised economic and social reforms would be undertaken, and as the corruption of the Diem regime multiplied, more and more people accepted the Vietcong as the only hope for change.

By 1967, when the United States committed military forces in an attempt to shore up the Diem regime, a major insurrection was already taking place in South Vietnam. South Vietnamese were fighting South Vietnamese, Communists fighting non-Communists, the landless fighting the landowners. It was a civil war then and remains basically a civil war today. The Geneva Accords did not divide Vietnam into two separate countries but provided for two "zones" that were to be reunited through elections. Can we legitimately call it a case of external aggression when the adversaries speak the same language, share the same cultural backgrounds and were raised in the same cities and villages? Can we really call it anything but a civil war when leaders in the government in the South were born in the North and vice versa?

To recognize that this conflict is a civil war is not to deny that Ho Chi Minh is aiding and encouraging the insurgency in the South. He clearly is. But this in no way makes valid the fantasy that the conflict was initiated, organized, and controlled from the start by Hanoi. The North Vietnamese were in no way the cause of Diem's outrageously repressive tactics. The refusal of the South Vietnamese leaders to provide the people with the kind of government they wanted was the cause of the conflict.

AMERICAN INVOLVEMENT IN VIETNAM

But if this is correct about Vietnam being basically a civil war, why did we ever get involved? At this point comes the plethora of reasons which lumped together produced the ugly phrase "credibility gap." Let me review a few of these stated reasons.

President Eisenhower: President Johnson used the ploy that he merely carried out the policies of his Republican predecessor. However, facts prove that in 1954 Eisenhower merely promised economic aid to South Vietnam with the understanding that Diem would institute the reforms necessary to gain the support of his people. When Eisenhower left office in 1961 there were only a few hundred U.S. military advisers in South Vietnam.

SEATO: Another reason for our involvement has been to state that we had to comply with out commitments under the SEATO Treaty. Again, the facts do not bear this out. The only specific act to which the operative section of this treaty commits us is to "consult immediately—with other parties to the treaty—in order to agree on the measures which should be taken for the common defense." The treaty in no way compels us to take the action which we are taking in Vietnam.

Honor our commitments: The Johnson administration also justified our involvement in Vietnam on the basis that if we do not stand by our commitments there "no nation can ever again have the same confidence in American promises or in American protection." Our involvement in South Vietnam breaks our commitment to respect the Geneva Accords which provide that no foreign armies would be based in Vietnam. And what about our commitment to the Charter of the United Nations, which provides that only the Security Council may determine the measures to be taken to maintain or restore international peace and which bars members from any unilateral resort to force? Third, our deepening involvement in Vietnam has reached such proportions that we are not in a position to offer any future assistance should a crisis arise in a country closed to our shores. And, finally, when other nations observe how we have literally destroyed South Vietnam in our zealous efforts to defend it, are they likely to want our help?

Defending freedom: This would be a legitimate reason for our involvement were it true. However, the South Vietnamese do not have freedom of the press; they only have limited religious freedom; they are denied freedom of speech and freedom to assemble and petition their government for a redress of grievances. Last, I suppose the ultimate freedom the South Vietnamese are denied is the one most required for a free society—honest elections. During the last elections there was no real choice for the South Vietnamese at the ballot box. The prerequisite to free elections was canceled in South Vietnam when the two candidates

who were likely to defeat the Thieu-Ky ticket were not allowed to run by decree of the military junta. Today Thieu and Ky follow the same repressive policies as Diem once did.

Containment of China and the domino theory: There are several unstated hypotheses in the so-called containment theory that must be proven before the argument has any validity. Some of these presuppositions are: First, that the conflict in Vietnam is truly a case of "aggression from the North;" second, that if South Vietnam goes to the Communists, other Asian countries will inevitably fall under China's power—the "domino theory," and third, that our willingness to fight in Vietnam will discourage China from interfering in the affairs of other nations.

First. I hope that I have pretty well established that this is not the case and that in fact a civil war exists in Southeast Asia. In recognizing this primary nature of the conflict, the Chinese are not likely to reach the distorted interpretation that a Vietcong success is proof that genuine, externally initiated wars of liberation will be victorious.

Second. The second presupposition is the so-called domino theory and it rests on the assumption that the Communist threat is primarily military in nature. It is not. The Communist challenge is basically political. I disagree with the domino theory on two bases: First, it is not logical to assert that what thrives in the political environment of one country will necessarily survive in the climate of another; and second, when the biggest domino of them all fell —that is China—this did not usher the fall of all the rest of the Asian nations to communism.

Third. China's capacity and inclination to aggravate unrest in its neighbors are not going to be retarded by our willingness to fight in Vietnam. If anything, our commitment in Vietnam is likely to encourage China to try to involve us in other conflicts. For one reason China is delighted to watch the Americans "bleed themselves dry" in a number of involvements. Second, to maintain support of hard-line orthodox Communist theory, Communists need enemies. By supplying this need in our role of "foreign imperialist devils," as they call us, the United States has helped the Communist countries more than harmed them. Finally, the Achilles' heel of communism is prosperity and plenty. Under conditions of abundance, the economic theories of communism are unworkable. If we want to forestall the spread of communism, therefore, we should direct our efforts and aid toward reducing the oppressive conditions that breed rebellion. We should redirect our policies toward correcting the social, political, and economic injustices, toward feeding starving people and improving living conditions. To accomplish such ends under combat conditions is virtually impossible.

SOLUTIONS TO THE VIETNAM CONFLICT

In view of all these reasons given as justification for our involvement in Vietnam, I find them inadequate in justifying the terrible price we are paying to wage this war.

Escalation: To believe that a declaration and implementation of "all-out war" will reduce the problems of this conflict is to ignore the conditions of the struggle that is taking place. Even if military victory were possible—which under humanitarian and moral reasons is not—the South Vietnamese people would still be vulnerable due to the lack of support of their own government. When we were pursuing a heavy bombing policy there was not a significant effect in reducing infiltration or supplies nor did it impair the North Vietnamese capacity to wage war. What the bombing of the North accomplished was a vast loss of lives, both military and civilian, and a loss of international good will and sympathy and perhaps a naive but growing fear by emerging nations that we were being colonial in our actions. The entire handling of accounts of "military progress" has left nothing but doubts in the minds of the American public. If we followed the Johnson administration's statements we were to have "won" years ago, but the present situation only established the Vietnam war as the longest and one of the most costly in history. Where we have failed in our battle is to attract the allegiance of the South Vietnamese people. As long as this is ignored there remains no possibility of genuine "victory."

But, let us imagine that we have an "all out war." What options are left to us? We could drop more bombs but on what targets? Military targets in North Vietnam are nearly nonexistent. We could destroy the Haiphong Harbor, destroying Russian and Chinese ships and, therefore, risking war with these two nations. If we increase ground activity, the draft calls are enlarged, fewer student deferments granted, taxes substantially increased, economic controls instituted, and the unrest at home may reach breaking point. The number of military and civilian casualties will increase sharply. We could adopt a policy of "hot pursuit" into Cambodia and Laos, thereby bringing these countries under fire and destruction. We could launch a successful and expensive invasion of North Vietnam, risking high casualties due to the prepardness of the North Vietnamese for just such an invasion, risking Chinese and Russian reaction and a vast growth in the scope and tragedy of the war. Should we win such an invasion, and assuming China accepts such action, there would still be hundreds of thousands of Vietcong nationalists in South Vietnam with which to contend.

No; escalation is not the answer. Escalation is far from a rational policy. As an article in the Bulletin of the Atomic Scientists pointed out:

> For both sides, the fact that the rising toll of human life still leads to no resolution of the conflict inevitably begets a sense of frustration.

This produces a wide sentiment for the Government to "do something" to break through the impasse. The sacrifices already made appear to justify an even greater escalation. The administration in the past sought to justify the policy of increasing military pressure on the grounds that this is the best way to achieve an honorable, negotiated settlement of the war. But the more we escalate, the more we sacrifice and the more difficult it becomes to accept compromise solution. And, only a negotiated peace can give meaning to these sacrifices because only a compromise solution—a peace without victory—can be lasting. Until we realize this, more lives will be lost as have over 13,000 Americans since the beginning of negotiations on May 13, 1968.

De-Americanization of the conflict: What must we do to bring about a solution to this conflict? As our main objective we must win the allegiance of the South Vietnamese people and to do this we must place our emphasis on seeing that the South Vietnamese Government prove worthy of allegiance and establish a concerned, meaningful relationship with the people. Currently, the NLF political workers represent the only effective force for economic reform and social justice for the people of South Vietnam. In addition we must abandon our Americanization of this war which has in essence made the South Vietnamese but spectators to their own conflict. How independent are a people which we are asking to fight for independence when we so dominate their government that it would collapse in days if we ceased to suport it? The complete dominance of South Vietnam by the United States further harms the development of self-sufficiency of the South Vietnamese in the political, economic, and social realms. The Johnson administration ambition in Vietnam was to establish an anti-Communist, democratic, self-sufficient, pro-American, anti-Chinese strong central government in Saigon. The South Vietnamese peasant wants something less grand and much more tangible. The loyalty of the people in rural areas of South Vietnam has never been to a central government but to their local hamlets and ethnic groups. They want reform, they want food. We must direct our policies to conform to the ambitions of the South Vietnamese people.

Troop withdrawal: Last, I am convinced that the possibility of negotiating a political solution to the war would be enhanced if the major adversaries in the conflict were Asian. For this reason I have for some time maintained that the first thing to be negotiated in Paris or elsewhere is the time and implementation of our military withdrawal from the Asian mainland. This would greatly enhance the possibility of finding a just solution to Vietnam within the framework of an Asian diplomatic offensive. For this reason I look with hope to President Nixon's promise of troop withdrawals over the next year.

COST

Vietnam is now the longest and one of the most costly in history. Despite peace negotiations, more than 600,000 Americans are still based in Southeast Asia. The greatest loss in the war is that of our young men. Every day young and promising men die in Vietnam as the result of trying to fight a war which cannot be won militarily—a toll of over 36,000 since the beginning of hostilities. Our young men are dying and yet we subsidize such senseless deaths. For every man, woman, and child in the United States our Government is spending $142.45 per year for the war in Vietnam. For every $100 of

your tax dollars expended by the Federal Government, only $1.26 is devoted to the protection and utilization of our natural resources; $1.84 for community housing and development; $2.49 for international assistance including foreign aid, food for freedom, and the Peace Corps. Education receives $4.04; health, $8.63; but the Defense Department receives $52.96, $19.50 of which goes to the war in Vietnam.

In another perspective, we spend $82 million per day for Vietnam. The total model cities program for a year affecting over 140 urban areas could be paid within 8 days of the cost of the Vietnam war. The Federal Water Pollution Control Administration receives for a year what the Government spends in Vietnam in 3 days. And, yet, we have over 11,000,000 units of substandard housing, and pollution is of such magnitude that it has become a health hazard. One thousand workers are forced into early retirement each month because of lung disorders and the economic losses resulting from dirty air exceed $11 billion a year. In spite of these costs, our Federal investment in air pollution abatement is only $78 million per year, less than 1 day of the cost of the war in Vietnam.

The 1960's began with bright hopes for the future, but these have dimmed during the decade due to the nagging problems of international rivalry and nuclear threats. Our dreams for a "great society" have been undermined by our apparent inability to use our economic and technological resources to solve the age-old problems of ignorance, disease, hunger, and poverty.

We have reached a point in the history of our country in which power politics, nationalism, and stringent ideologies can no longer play a part. The vast unrest across our Nation brings to mind a quote by the prophet Hosea:

> You have plowed iniquity, you have reaped injustice, you have eaten of the fruit of lies. Because you have trusted in your chariots and in the multitude of your warriors, therefore the tumult of war shall be among your people.

Security, like charity, begins at home. Yet, there is a grave imbalance between our needs and our priorities. Crime costs between $20 and $50 billion each year—in lost earnings, property damage and uncollected public revenues—and yet we invest but $5 billion on every aspect of crime prevention, enforcement, detention, and rehabilitation—about the same we spend on toiletries.

Twenty-two million Americans live in poverty despite 100 months of unprecedented economic growth and expansion. The cost of 4 months of the Vietnam war is about $10 billion—10 times the total combined cost of the war on poverty and the Teacher Corps.

Today, 28 percent of our young people are not graduating from high school and out of those children who entered the fifth grade in 1961, and would have graduated in 1969, more than 750,000 dropped out before obtaining their high school diplomas. The Federal Government spends but 4 percent of our tax dollar on education—perhaps the single most important force in developing a progressive and rational nation. This compares, again, with the 19.5 percent of our tax dollar spent in Vietnam.

The needs at home and the cost of the war: the disparity is too great to pursue such futile policies which reap nothing but tragic results. The war is not being won—the Defense Department already has over 50 percent of the Federal budget—our domestic crisis has reached a breaking point.

Because of these reasons I am opposed to our continuing involvement in Vietnam. I say with a clear conscience that the first thing to be negotiated is the immediate withdrawal of our military presence from the Asian mainland. President Nixon's moves in this direction are a very positive step in the right direction, and I look with hope to the complete withdrawal of troops in the near future. I also sincerely believe that we must see the day when a government will emerge in South Vietnam which truly reflects all of the political components of the country and proves responsive to the needs of all the people. Such move must be achieved before the long overdue peace will be accomplished for Vietnam.

EAST-WEST CENTER

Mr. INOUYE. Mr. President, I invite the attention of Senators to a recent press release from the East-West Center. I believe the story it has to tell exemplifies so well what we have to gain from international cooperation and specifically from the activities of the East-West Center. The contributions of Dr. Furusato Kazuo, a Japanese botanist, will long benefit the people of Hawaii and our many visitors from throughout the United States.

I ask unanimous consent that the press release be printed in the RECORD.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

HONOLULU, HAWAII.—A Japanese botanist who participated in an East-West Center sponsored training program held in Hawaii in 1968 has repaid his Hawaiian hosts by developing a carnation specially suited for making leis and a hybrid strawberry that will grow in Hawaii.

While in Hawaii to study local plant life, Dr. Furusato Kazuo, director of the Shizuoka Prefectural Useful Botanical Garden, noticed that the calyx (green base) of the carnation flowers had to be broken in order to string them for making leis.

The process seemed inefficient to Dr. Kazuo. So when he returned to Japan, he cross-bred various carnations until he created a flower with a much shorter calyx—hence, no need to break it.

Dr. Horace Clay, the director of the training program which brought Dr. Kazuo to Hawaii, passed through Japan recently and was given seed samples of the new carnation by his former student.

Perhaps it won't be long before Hawaiian lei-makers will be able to increase their lei-making production due to Dr. Kazuo's initiative.

Very few people have ever heard of Hawaiian strawberries, but they can be found growing on the side of Mt. Haleakala on Maui. Admittedly they are white in color and don't taste very good, but they are stawberries.

Dr. Kazuo also took seeds of these strawberries back to Japan determined to improve their color and taste. After crossing the seeds with a Japanese red strawberry, he succeeded in producing a good-tasting, hardier strawberry that looked like a strawberry should.

Dr. Clay also brought some of these hybrid seeds back with him so residents of Hawaii may soon be able to enjoy home grown strawberries.

For Dr. Clay, a senior program officer for the East-West Center's Institute for Technical Interchange, there is an important lesson to be learned from these seeds.

"We Americans assume that technical interchange is a one way street," he stated.

"To many of us, the United States is the expert teacher and the countries of Asia and the Pacific are the untrained students seeking our help. We often forget that the East can provide us with valuable technical knowledge as well."

He concluded by saying, "The East-West Center's basic goal is the interchange of knowledge between East and West to increase mutual understanding. This exchange of knowledge also applies to technical matters."

POLLUTION ATTENTION

Mr. NELSON. Mr. President, I am very much heartened to see the increased interest on the part of the news media in coverage of the Nation's environmental quality problems. With both hard-hitting daily newsstories and comprehensive, perceptive special pieces, they are bringing to the public attention, as never before, the facts about air and water pollution, and the myriad other problems we face in our relationship with our environment.

As an instance, Life magazine for August 1, devotes special attention to environmental quality concerns, and in an excellent editorial points out that the threats to our environment—and to us—are serious, that the potential losses are critical, and that the need for action is urgent.

It is my deep conviction that the great question which is facing man in America and worldwide in the last third of the 20th century is whether he can and will take the steps necessary to assure that he will survive in reasonable compatibility with his surroundings on earth. We can destroy ourselves; we can destroy earth as we know it today. As Pogo said:

> We have met the enemy, and they is us.

Hopefully, the Nation is beginning to address itself to the grave dangers we are creating for ourselves in a century of unsurpassed technological achievement and population growth.

I commend the news media for taking the lead in stating the problems and increasing our awareness of them. I ask unanimous consent that the Life editorial and essay in the August 1 issue be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

LIFE EDITORIAL

The story on the following pages shows a part of America that is threatened by our spreading civilization and growing population—the wilderness lands. These lands—10 million acres now under protection, almost all west of the Mississippi—have always held a magic. F. Scott Fitzgerald wrote of the early settlers arriving at the new world three centuries ago: "For a transitory enchanted moment man must have held his breath in

the presence of this continent, compelled into an esthetic contemplation he neither understood nor desired, face to face for the last time in history with something commensurate to his capacity for wonder."

That enchanted moment is long past. The continental wilderness has largely vanished, and what remains of it is threatened by our own increasing needs. Our capacity for wonder survives but less survives to be wondered at.

Vanishing wilderness is, however, only one aspect of the deteriorating quality of American life today, both in the countryside and in our cities. There are many others: pollution, endangered wildlife, smog, urban sprawl and that new catch-all term, "uglification." In later issues LIFE will show this deterioration and recommend ways to prevent it.

Change, of course, is inevitable; and progress, which is intelligently conceived change, is desirable. There must indeed be more jet airports, highways, housing and power plants, and it is foolish to maintain—as some conservationists do—that their encroachment must be prevented everywhere and at all costs. But too often the cost is too high. We are a rich country, but as Jean Mayer, a population expert and Special Consultant to the President, writes in *Columbia Forum:* "Rich people occupy much more space, consume more of each natural resource, disturb the ecology more, and create more land, air, water, chemical, thermal and radioactive pollution than poor people."

The population of the U.S. is headed toward 300 million in the next quarter of a century; our GNP will reach a trillion dollars in the next two years. This explosive combination of people and money will produce ever greater demands for more cars, dams, lumber, fuel, food, roads, land. These demands will lead, unless checked, to more pollution, garbage, trash, noise, desecration—and leave much less beauty to evoke our capacity for wonder.

What we now require is an intelligent and continuing weighing of the demands of "progress" against what might be sacrificed to them. Fortunately, some momentum in this direction already exists. Both government and industry have shown awareness—though not yet enough—of the environmental side effects of their activities. The Wilderness Act of 1964 set aside vital acreage for protection and provides a method for setting aside much more. Two months ago President Nixon established an Environmental Quality Council at Cabinet level, with himself as chairman and his scientific adviser Dr. Lee DuBridge as executive secretary. The same executive order set up a Citizens' Advisory Committee on Environmental Quality, with Laurance Rockefeller as its chairman. Both groups have a broad charter but have yet to show what they can do. Such industries as chemicals, oil and utilities have recently shown a greater responsibility toward the environment in which they flourish.

Public concern has also increased. The destruction of rivers by chemicals and detergents, the destruction of wildlife by insecticides, the destruction of landscape by indiscriminate and ruthless "development"—all are now less likely to occur without protest than was possible 10 years ago.

Nevertheless, not nearly enough information exists to enable government, industry and the public to determine whether or not specific projects should be approved. The Santa Barbara oil-drilling leases, granted by the U.S. Department of the Interior, might not have been granted if the full extent of the threat had been known. The use of DDT, a successful chemical against insects, is either being questioned or has been banned in 17 states because its damage to other forms of life is finally recognized. Marshlands that have been filled in and gobbled up by industry and housing might well have been protected if more people had realized that one acre of marshland potentially can produce 10 times as much animal protein (fish, oysters, clams, crabs) as one acre of farmland.

Quite aside from the purely physical destruction involved in careless exploitation are the esthetic losses. Even when no ecological damage is committed, we constantly afflict the eye with shoddy excrescences of bad design, ugly and haphazard travesties of modernity spattered across the landscape in the name of expansion.

Life will undertake to treat these themes in pictures and words. We will report the threats and attempt to show how they can be opposed and, if possible, defeated. We believe that the threats are serious, that the potential losses are critical and that the need for action is urgent.

WE HAVE MET THE ENEMY, AND THEY ARE US

The sight of a bear track on an Alaskan island, intimidatingly huge, a miniature amphitheater filled with three inches of water . . . the smell of spring in Hells Canyon, sweet and soft and fresh . . . the sound of a full and violent river, a ceaseless fast freight smacking along to some midnight rendezvous . . . a sudden stillness in a place vivid with life . . . the feeling of oneness with your tribal past, the ease of letting years blow away like blossoms in the wind . . . an echo off a cedar swamp . . . the suprising gentleness of nature . . . fear . . . wonder . . . solitude . . . mystery. "Wilderness," wrote one connoisseur, "holds answers to questions man has not yet learned how to ask."

Our history was written in prairies and mountains, not castles and cathedrals, and the raw spectacle confronted by the first Europeans on this shore had no equal in the Old World. Americans still live so close to the wilderness, figuratively if not often in fact, that it's difficult for many to see that it is practically gone. It doesn't *look* that way, flying over the country at 28,000 feet, but almost all that land down there is spoken for—it's being used to graze cattle or sheep, it's part of a military base or a testing site, it's been leased to a lumber company. Excluding Alaska, only between two and three percent of the U.S. qualifies for the federal definition of wilderness: "An area where the earth and its community of life are untrammeled by man, where man himself is a visitor who does not remain . . . [an area] without permanent improvement or human habitation." Most of that slender remnant has either been picked over once, or is about to be. The Wilderness Act of 1964 set aside nine million acres for permanent preservation (a million more acres have been added since then), but left the remaining *de facto* wilderness as a shrinking arena where the final scenes of an old American drama are being played—the conflict between the developers and the conservationists.

In the past the fight has never been even. From the beginning, when the last Conestoga was put on blocks and the boosters fanned into the countryside, building the dam has had clear precedence over listening to the river, clearing the woods has had the edge on getting lost in them. There have been isolated victories for the conservationists through the years—it comes as a revelation to learn that Yellowstone Park was set aside as a "public park or pleasuring ground" *97 years ago*—but those were exceptions.

The American creed was and is foursquare for growth; growth is seen to have a sort of *a priori* goodness, a moral value, and against that force the tender arguments of the wilderness lovers ("deep breathers" and "kissers of the wind," one developer calls them) were feeble indeed. Still, there was an ambivalence in the American mind: if conquest of the wilderness seemed necessary and therefore Christian and laudable, it was gradually subverted by the idea of wilderness as sanctuary, as escape, as the resting place of truth and beauty. It's a tough one: both ideas are wholly American, both impulses beat in the American breast, and thus the conflict is not so much a clash of two opposing groups as it is a collision of two ideas within the mind of each of us. "We have met the enemy," Pogo said, "and they are us."

Both sides indulge in what might be called the "last great" syndrome. In Hells Canyon on the Idaho-Oregon border, for example, private and public power companies have hankered to build a dam for half a generation, claiming that the middle Snake River represents the "last great source of hydroelectric power in the Pacific Northwest." The Sierra Club, a late-arriving but fiercely effective foe of any dam in the canyon, ripostes with the charge that the Snake is the "last great free-flowing river in the West." Both contentions are wrong, and both sides, in moments when candor gets the better of combat, will admit it.

But now the fight is a lot closer to even than it ever was. The reason, probably the only reason that could explain it, is that the public, or at least large segments of it measurable regularly in election returns, has become conservation-minded.

Nothing like reliable statistics are available to document this phenomenon, but its existence is conceded by both dam builders and river preservers, the former with a sour mutter that "the pendulum has swung too far the other way," and the latter with the kind of raucous victory shout peculiar to long-time losers.

Nirvana for the deep breathers is still beyond the sunset, however. David Brower, the eloquent conservationist recently ousted from leadership of the Sierra Club, explains that "there's plenty of power when the public gets excited about a specific issue like Grand Canyon or the redwoods, but there's still not enough day-in day-out support."

Brower's examples are not random; preservation of the Grand Canyon (from a dam which would have backed reservoir water into the canyon) and the redwoods (from the lumber industry) were victories for an army he commanded. Through dogged energy and charismatic flair, Brower built the Sierra Club to its present strength and letter-writing clout. In April he was voted out of office. Critics charged that he was authoritarian, spent too freely and acted without the consent of the club's board of directors. As a result, the conservationists are floundering momentarily for lack of strong leadership. The two most significant and visible leaders of the last decade, Brower and former Interior Secretary Stewart Udall, are currently without portfolio.

The best illustration of the growing strength of the wilderness forces is the sunburst of conservation legislation that emerged from Congress during the Johnson years. The Wilderness Act was only one of dozens that reflected an increasing environmental uneasiness—the scenic rivers bill, antipollution laws, establishment of new parks and others.

In the courts as well, the values of wilderness have begun to get a hearing. A federal appeals court ruled in 1965 that scenic, historic and recreational values had to be taken into account by the Consolidated Edison Company in its proposal to build a nuclear power plant on the Hudson River. A 1967 U.S. Supreme Court decision on the Hells Canyon dam issue introduced the same ideas into an order remanding the question to the Federal Power Commission, where it remains.

Industry itself has begun to show some long-absent sensitivity to conservation. Public relations men go to elaborate lengths to avoid offending the wind-kissers. Some firms have subsidized conservation studies, others have donated parks or wild land to local governments. This kind of thing cuts no ice with Brower, however. He calls it "cosmetics for rape." He is, of course, incorrigible.

Along with the growing power of the conservationists has come a change in the char-

acter of the movement. The wind-kissers, in fact, are in decline. The scientists, more specifically the ecologists, are increasingly important. Nowadays a stand of trees or a piece of sageland is worth preserving not necessarily for its beauty or its opportunity for solitude; it is more likely defended as vital to the balance of nature, the "chain of life" in a given area, or as a natural laboratory containing potentially valuable secrets. The ecologists talk less about the romance of wilderness and more about "ecosystems," distinctive networks of relationships between land and water, vegetation and wildlife.

This has led to some peculiar gyrations. Some scientists are trying to "quantify," in the good new American way, the values of wilderness. This is a ploy born in desperation. For decades developers have been able to show, in dreary charts of "cost-benefit ratios," what *specifically* might be gained from whatever project they have in mind—read: dollars. In reply the conservationists have fiddled with their fingernails and talked about beauty. Now they are groping for figures to fight the developers on their own terms; hence graphs that measure "scale of valley character" and assign numerical values to a view of a mountain or the presence of a bear.

"What it comes down to is this," says Brower. "If you can't measure a thing, measure it anyway for those who won't know anything about it unless you do."

The ecologists are running the palace, all right, but the troubadours are still skulking around outside in the high grass, practicing birdsongs, comparing backpacks, listening, frowning when they hear an airplane. Udall thinks the two sides, conservationists and developers, now have "a kind of parity of influence," but most conservationists disagree. "There's very little conservation legislation coming forward these days," says one congressman. "The logging and power interests are still damned strong. I'm pessimistic."

The one huge, dark fact dominating the entire question of land preservation is continued population growth. Any question of conserving space leads ultimately to a question of limiting the people with claims on that space. Most defenders of the wilderness are, at bottom, pessimistic about their chances, and spiraling population is the reason. It seems the final, ironic fruition of the "more is better" philosophy—to simply outgrow our resources. Nothing riles conservationists more than the celebration of growth for its own sake—ceremonies saluting the arrival of the 200 millionth American, the National Park Service's breathless releases on rising attendance figures. A Sierra Club poster is only about 20% facetious when it suggests that man, like the bald eagle or the flamingo, is now an "endangered species."

Another dark shadow on the future of wilderness is the state of public ignorance. Despite the growth of interest in the outdoors, most Americans remain urban, motorized and oblivious to the physical and spiritual wonders of the wild. The major recreation phenomenon of the past few years is the growth of trailers and camper trucks, motel rooms on wheels with names like Teardrop, Week-N-Der, Six-Pac, Rolls Royal and CharAkee. Most camper drivers get no closer to the wild than a national park campground.

On the other hand, though most Americans may personally feel no urge to tramp the back country, they are enchanted by the idea of its existence. The camper truck may become an outdoors teaser: as he sees a little of raw, splendid America, the driver may want to see more; he may even recognize that the easiest way is not necessarily the best way—but that's getting giddy.

For the men who draw up "master plans" and "long-range policy," then, there is this difficult series of questions: what does the majority want, open country or scenic overlooks? Do you strike a balance between tourist development and wilderness preservation and, if so, how? Is *everything* that remains worth saving, or just some of it? (When conservation pioneer Bob Marshall was asked how much wilderness was enough, he replied. "How many Brahms symphonies are enough?" He was incorrigible too.) How do we develop an ecological conscience in America? Through education, but why haven't we done so? Why aren't children taught to respect all living things? Wilderness is peculiar among American possessions in that it is not susceptible to compromise. To take some wilderness is still to take wilderness. Roads cannot be unbuilt.

The men who worry about these questions have come up with a few suggestions. (No ideas or initiatives have come from the new Administration, except for the President's creation of an Environmental Quality Council. "We're trying to steer clear of the controversial ones right at the start," says a high Interior Department official.) Here are the proposals:

The National Park Service is considering eliminating cars from some parks and operating campgrounds on a reservation system, as opposed to the present first-come, first-served method.

Some conservationists have urged that tax relief be granted to encourage the prevervation of open space. Pay landowners, in effect, not to develop their land.

Udall suggests that "environmental mediators" could arbitrate disputes between developers and conservationists in the manner of labor mediators.

Brower would like to see a sort of Fair Conservation Practices Commission, an independent nongovernmental agency with authority to review projects before and after construction.

Biologist Garrett Hardin proposes that access to wilderness be limited to those "of great physical vigor," willing and able to walk and to take the risks of the wild, and that wilderness and park areas be established at graded levels of difficulty according to ability.

Hardin's intriguing idea recognizes the final paradox: as more people learn to know and appreciate wilderness, more will want to experience it. Ultimately, their numbers might destroy it just as effectively as would highways or snack bars. It could be cherished to death.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The PRESIDING OFFICER. The time for morning business having expired, the Chair lays before the Senate the unfinished business, which will be stated.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The Senate proceeded to consider the bill.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McCARTHY. Mr. President, I commend the efforts of the Senator from Michigan (Mr. HART) and the Senator from Kentucky (Mr. COOPER) and those who have worked with them over the last year in carrying the issue of the antiballistic-missile system to the Senate, and, beyond that, to the American people.

The matter of antiballistic missiles is one that has been before the country and before the Senate for nearly 10 years. Presidents Eisenhower and Kennedy both considered anti-ballistic-missile systems. They both decided against the deployment of the Nike-Zeus, although subsequently President Kennedy initiated development of the Nike-X system, which was never recommended for deployment, but from it developed the Sentinel and, more recently, what is called the Safeguard system.

Nearly 2 years ago, in September 1967, former Defense Secretary McNamara announced that the United States would deploy an anti-ballistic-missile system. Since the September 1967 announcement, the reasons given for the deployment have continually been changed.

At one time, in the first presentation by Secretary McNamara, we were told that we needed it because of the Chinese threat. Secretary of Defense Laird, the current Secretary, now stresses the Russian threat.

The Defense Department's public report of a new and expanded Russian threat followed the decision to deploy the ABM rather than preceded it. We were told, also, that it would provide protection in case of an accidental launch of missiles, and other incidental arguments were given.

It was also argued that deployment would not have a significant impact on the strategic arms race with the Soviet Union or upon our efforts to control that race. This was in 1967. Now we are told that deployment would have a significant effect upon the effort to bring about some kind of disarmament, in almost direct contradiction to the arguments which were made roughly 2 years ago, when the first presentation was made.

We have also changed the name of the system. The Nixon administration, having concluded that the Sentinel evidently was unacceptable, revised the name, changed its mission to some extent and offered it to us again as the Safeguard system. But, it is pretty much a matter of old wine in new bottles and old programs under new titles.

As I see it, the case against the deployment of this system is based on at least four points, all of which have been discussed at some length in recent debate in the Senate and, of course, developed over the years.

The first is the scientific and technical challenge. Repeatedly, scientific and technical witnesses have challenged the

capability of the Safeguard system to perform under attack or, indeed, of any ABM system to add very much to our security. The best examination of this point that I have seen is that of Prof. Robert Axelrod, of the University of California at Berkeley, who raises these three points:

First, he says the argument that the Soviet's deployment of the new SS–9 missile is a threat to American security is only true if the worst of a range of possibilities comes true on each of seven factors. These factors are the size of the payload of the SS–9, the accuracy of the missile, the yield/weight ratios the Soviets can achieve, the number of warheads on each booster, the number of boosters deployed, the Soviet political intent, and the vulnerability of both the Polaris system and our B–52 force. He says that if any of these factors are not as bad as Secretary Laird has been assuming, then the SS–9 is not a serious threat, and its existence and deployment would not justify the deployment of the ABM system. Professor Axelrod states:

I believe none of them are probably as bad as he has been supposing they just possibly might be.

Second, Professor Axelrod says that the Safeguard system in its first stage of deployment is meant to protect Minuteman missiles from a sophisticated attack. Yet, the components of the system were specifically designed to protect cities against an unsophisticated Chinese attack. At least, this was the explanation 2 years ago. As far as we know, the major components, such as the Spartan missile and the radar, have not been changed, and therefore we must assume that, if what we were told 2 years ago was true and accurate, they are not suitable to the new and sophisticated mission for which or against which they supposedly are now directed.

The third point he raises is that the second phase of the Safeguard system is meant to protect cities. If this mission is to be taken seriously, extensive civil defense preparations would have to be undertaken to protect against fallout. The Defense Department has chosen to tell Congress and the public about this need later rather than sooner, and no significant effort is being recommended or carried out in the area of civil defense.

The second general consideration, I think, is an economic one and one which should be considered as we attempt to deal with the question of the surtax. This has now become the great point at issue, through which inflation is to be controlled and the economy put back in balance.

The fact is that we anticipate a $2 billion surplus in the Federal budget, but that is not particularly important; it is not a question of a balanced budget or a $1 or $2 billion difference but, rather, a question of whether or not Government expenditures are for productive purposes. We could raise another $9 billion and have the surplus run to $10 or $11 billion; but if we are going to spend $30 or $40 billion on wasteful military expenitures which contribute nothing to the balance in the economy between consumption and production, pouring purchasing power in through salaries and payments on contracts, but do not produce anything on the other side to meet that real and effective demand, then we are going to have inflation and we are going to have, along with it, a kind of depression.

So to say that the surtax is the great issue relating to stability of the economy in this country, without taking into account the actual purposes of Federal expenditures, is, it seems to me, to oversimplify greatly the judgments that have to be made with reference to our economy.

In the last few years we have seen a kind of maturity in our own economic and capitalistic system. The old idea that Marx pronounced, that you had to have war in order to stimulate economic growth, is no longer true in this country. Every time there is now a rumor of peace, the stock market improves and all the indicators tend to lead up; whereas, if there is a rumor of expansion of the war—which was not true in Korea, in World War I, or in World War II—the indicators all go down.

In 1967 we had the automobile strike. It used to be that if you had an automobile strike, the stock market would drop, but in that case it went up. The only explanation is that the automobile industry was competing for the same materials, the same financing, and the same manpower that the war was competing for. I suppose if Marx were to write another book, he would add a chapter in which he would say that to keep the economy going, you have to have either war or the automobile industry; and from the economic point of view, there would be some substance to it.

We need to look, therefore, not only at the military aspect, which is subject to severe question, but also at the economic aspect of the ABM.

Dr. George Kistiakowsky of Harvard pointed out to the Foreign Relations Subcommittee chaired by Senator GORE:

. . . had the deployment of the Nike-Zeus been authorized in 1960–61, we would have just about now the full system in operational readiness, after spending what was then estimated as $20 billion and could have been, judging by analogy with other large weapon systems, twice as much.

I think his projection was on the conservative side.

Considering the current numbers and sophistication of offensive missiles now being deployed by the super powers, it is technically certain that the Nike-Zeus ABM system would now be of little value. It would be obsolescent or even obsolete, judging by the fact that the probably somewhat more modern Soviet ABM defenses around Moscow are rated of little value to the Soviet Union by our competent military experts.

The eventual cost of a "thick" ABM system has been estimated, for example by Dr. Herbert York, former member of President Eisenhower's Science Advisory Committee, at up to $100 billion.

The third consideration is psychological. To seek to deter aggression and at the same time prepare to limit damage at home is inconsistent. As Dr. George Rathjens of Massachusetts Institute of Technology stated in the April 1969 issue of Scientific American:

To the extent that one accepts the action-reaction view of the arms race, one is forced to conclude that virtually anything we might attempt in order to reduce damage to ourselves in the event of war is likely to provoke an escalation in the race. Moreover, many of the choices we might make with damage-limitation in mind are likely to make preemptive attack more attractive and war therefore more probable. The concurrent development of MIRV's and ABM systems is a particularly good example. . . . Hard choices must be made between attempting to minimize the chance of war's occuring in a time of crisis and attempting to minimize the consequences if it does occur.

The danger of the action-reaction phenomenon and the chain of escalation it produces has, in my judgment, been repeatedly demonstrated. For example, when the United States thought that the Soviet Union was going to install some 70 ABM's, even though they had not yet done so, we made the decision to proceed with MIRV's which, if continued, will give us some 7,000 warheads.

We are witnessing today, in the case being made for the ABM system, a demonstration of the rule that when one thinks defensively the threat always rises to the level of the deterrent and then surpasses it.

One observer has said that we are the first nation to have a Department of Defense. It might be better to call it the War Department. Or perhaps we might have two platoons, the Department of Offense and the Department of Defense. However, once you begin to think about the limits needed to be secure, a situation is arrived at where no matter how many preparations are made, it is like the Kafka animal in the burrow that is always apprehensive because he hears the scratching sound.

Secretary Laird says that our military policies and programs should not be based on what our intelligence indicates the enemy is doing, but should be designed to offset their capacity to do all that they can do. The next step, of course, would be to build a defense of sufficient strength not only to offset all that they can do, but to offset all they would do if they could. Thus we are approaching a complete reversal of the classical Clausewitz theory that war is an extension of politics, and in its place we will have a theory that politics is an extension of military program.

Finally, the argument comes down to the diplomatic and political which I think is most important and it is that aspect I wish to emphasize today.

No matter what the technicians or scientists may say about how good or bad the ABM system would be—it might be better if it did not work, and that might be the best argument for it. But whether it does or does not work, the diplomatic consideration is most important.

We have been told that we must approve the Safeguard system because the President needs it for a "card in his hand" in any forthcoming arms limitation talks with the Soviet Union. We are told that we must go into such talks with strength if they are to be successful.

But the whole history of arms control negotiations since World War II refutes this claim. The Soviet Union has never been willing to enter into discussions,

much less agreements, except in a situation of approximate equality. As far back as the days of the Baruch plan, when we alone had nuclear weapons and were willing to give them up if agreements could be reached, the Russians were unwilling to talk. They agreed to meet only when they, too, had developed nuclear weapons.

There has never been any evidence that the Soviet Union could be forced to the conference table or to agreements by the superiority of our force. In fact, the contrary appears to be the case. We tried, for example, to initate strategic arms limitation talks with the Soviet Union at the end of 1966, at which time we had a considerable superiority in weaponry over the Russians. They agreed to talk only in July 1968, when they had reached a position of relative equality. The idea of "superiority" is meaningless in a situation where each side has the capacity to destroy the other several times over.

In connection with the Soviet agreement to enter the arms limitation talks, it has been claimed several times that the vote in the Senate last year on the Sentinel system influenced the Soviet decision. This is unproven and, in my judgment, unprovable. The joint U.S.-U.S.S.R. announcement was made 3 days after the Senate vote, but we are all aware that joint announcements by the United States and the Soviet Union do not materialize overnight. The joint announcement had actually been the subject of discussion for some time prior to the Senate vote and, although the fact was not yet public, it was known during the debate that the Russians were willing to go into talks.

Finally, we cannot ignore the evidence from the history of the arms race that it is much more difficult to stop a development once it is started than to head it off. It seems clear that ABM deployment by the United States now, as well as continued MIRV development, will make it much more difficult to reach any worthwhile agreement with the Soviet Union on arms control.

Rather than Safeguard being helpful to the President, I believe that the President would be much more free to negotiate if we do not agree to deploy the ABM system.

I, therefore, hope that the Senate will vote against the deployment of this system and support the amendment offered by the Senate from Michigan (Mr. HART) and the Senator from Kentucky (Mr. COOPER).

(A this point Mr. HUGHES assumed the chair.)

Mr. HART. Mr. President, will the Senator yield?

Mr. McCARTHY. I yield.

Mr. HART. Mr. President, this is my first opportunity to state on the RECORD my regret that my seatmate and good friend has concluded he will not seek to return to the Senate at the conclusion of his term. Let me get that on the RECORD first.

His remarks this afternoon, I think, are an indication of why I am sure all of us have that feeling of disappointment. He is talking about a rather technical subject, and yet he has been able in the course of a very few minutes to highlight some of the arguments that I have heard made before in a fashion and style that have distinguised him and brought him to the attention of the Nation.

He commented, as an example, that Safeguard is old wine in a new bottle. My impression has always been that old wine is good wine. Is that correct? That is not necessarily correct? My impression is that somehow or other old wine in new bottles is as good as old wine in an old bottle. It was good wine, whether in a new bottle or old, it would not hurt it. The point I make is that——

Mr. McCARTHY. We will straighten that out later. [Laughter.]

Mr. HART. What I mean is that it would not work in an old bottle labeled "Sentinel."

Mr. McCARTHY. That is right.

Mr. HART. Or in a new bottle labeled "Safeguard." The only thing we could be sure of is that it will cost an awful lot of money, whichever bottle is used.

In the style of the Senator from Minnesota, he has made that point so vividly that I rise to thank him.

Mr. STENNIS. Mr. President, will the Senator from Minnesota yield?

Mr. McCARTHY. I yield.

Mr. STENNIS. Mr. President, with reference to the observation made by the Senator from Michigan about the recently announced intentions of the Senator from Minnesota——

Mr. McCARTHY. I think I should warn the Senator that he does not want to say too many good things about me because I might have to reconsider and I may use anything said about me, but with restraint, of course. I am glad to yield to him on that basis.

Mr. STENNIS. I was going to say that I am not happy about that announcement. It does recall some very pleasant and delightful experiences that I have had with the Senator from Minnesota, as well as the valuable counsel, advice, and assistance which he has given me over the years. I am glad to tell him again that I appreciate it.

Mr. McCARTHY. I thank the Senator very much.

Mr. STENNIS. Wait a minute now—just yield to me a little further now—[laughter]—with all deference to the two Senators and their allusion to the biblical quotation, I do not want to make any bad suggestions but I hope that the Senators are not so tangled up regarding the missiles and the ABM as they were on that quotation. I know that the Senators from Michigan and Minnesota are experts in this field or they would not have ventured out into it.

Mr. McCARTHY. The question is whether new wine in old bottles is any worse than old wine in new bottles. It all depends on the wine.

Mr. STENNIS. Anyway, the reference here that the Senator makes, in all sincerity, I know, to the diplomatic or to the international implications of the ABM, the exclusion or the inclusion of the items in the bill, I do think that is a highly important point. It seems to me just the commonsense of it and the ordinary reasoning, that if the President of the United States—having determined that he wants this defensive weapon in his arsenal, and having determined that he is going to negotiate about the whole subject matter of arms—is sent over there stripped of one of his main positions, with his left hand at least tied behind him——

Mr. McCARTHY. I hope that the whole box of——

Mr. STENNIS. It would decrease his effectiveness and his position at that conference. I may be wrong. Will the Senator point out where I am wrong?

Mr. McCARTHY. I would hope that the whole box of moon rocks which the President is taking with him would be more helpful to him than the missiles, would not the Senator think? We would have to see how effective they are. The President has promised one to President Suharto in Indonesia. Apparently, he is going to give them out as he goes about his trip. This is a new weapon in the arsenal that he did not have when he proposed the Safeguard. He might use them to negotiate with the Russians.

Mr. STENNIS. I venture to say that the best thing that could happen to both the Soviets and the United States is to have an effective ABM system. If each country knew the other had it, they would come nearer to the stage——

Mr. McCARTHY. I think I quite agree. If we were to develop an effective ABM system and give it to the Russians, we would both have an effective ABM system. Then we would both have Maginot Lines and we could be certain that we were at about the same level. The projection of it now is that it would give us an advantage, since the Russians could not be effective against us. That seems to me to create a continuing imbalance which could only make the Russians suspicious and intensify both their defensive effort and their offensive effort.

As I recently have been challenging the President, I have some reservations about how much power Presidents should have. In another 3 or 4 months, I may have that same respect for the executive department that the Senator from Mississippi has just spoken of. I am in a transition phase right now.

Mr. STENNIS. I thank the Senator for yielding to me and appreciate his further discussion of this subject.

Mr. GORE. Mr. President, will the Sentor from Minnesota yield?

Mr. McCARTHY. I yield.

Mr. GORE. Does not the Senator recall how quick the Pentagon was to give assurance to the Senate, upon learning that the Soviets were deploying an ABM system around Moscow, that they could quickly saturate it, that it provided no real defense of Moscow and no major interference with the offensive capability?

Mr. McCARTHY. I recall that.

Mr. GORE. Or could it be that the Russians have stopped deployment of the ABM around Moscow because they, too, have discovered that it could easily be saturated and was really ineffective?

Mr. McCARTHY. I think that is quite possible.

Mr. GORE. Could it be that the French would have saved themselves from a false sense of security and an ineffective defense system had they realized that the maginot line could be flanked?

Mr. McCARTHY. There is no question.

Mr. DOMINICK. Mr. President, will

the Senator from Minnesota yield on the point the Senator from Tennessee just brought up again?

Mr. McCARTHY. I yield.

Mr. DOMINICK. I think that we have already shown, both in the closed session and the open session which is not secret, that the Soviets have not stopped the construction of their ABM system, but they are still continuing. I think that point should be made clear.

Mr. GORE. Mr. President, will the Senator from Minnesota yield?

Mr. McCARTHY. I yield.

Mr. GORE. I invite the Senator from Colorado to come to the committee room of the Foreign Relations Committee, and I will be glad to go with him and show him the testimony.

Mr. DOMINICK. I have already seen the testimony in our own Armed Services Committee.

Mr. HART. Mr. President, I notice that the Senator from Mississippi has left the Chamber for a moment. I wanted to ask the Senator from Minnesota to develop a little more fully his theory with respect to the suggestion that the Senator from Mississippi made; namely, that the President of the United States has told us he wants this system. In addressing the Senator from Minnesota, the Senator from Mississippi made that point. It occurred to me that, for the record, either now or later, all of us would be benefited by having the thoughts of the Senator from Minnesota with respect to the infallibility of Presidents.

Mr. McCARTHY. I did, in somewhat an indirect and theoretical way, talk about this in the course of the campaign last year, not just about military weapons but other powers. It is necessary to have a proper distribution of these powers and some control over all the powers of Government that the Constitution attempts to distribute among the three branches of Government. They are at least reasonably well distributed. Congress, and the Senate generally, accepts that we should not give the President everything he wants in the domestic field. For example, there is no real disposition to say that we should give him whatever tax program he wants, but we should review it. There is no disposition that we should give him whatever he wants in the way of a foreign aid program. All of these are instruments of administrative and Presidential power, to some extent, but are shared with the Senate and with the House.

It seems to me that when we move into the important area of military action and defense, it is even more important. It involves the largest item in the budget and actions which are likely to have the greatest bearing on the welfare of this country and its influence on the world. At that point we ought to do even more and be more restrictive and harsher in our judgments of the President's requests which come to us and also more willing to fulfill our responsibility under the Constitution.

I think in the case of the ABM we have what is not really a basic military question; it is a question not as much of military policy as it is a question of diplomatic or foreign policy. It is a question of how we want to deal with other nations in the world.

For those reasons, leaving out all considerations of science and technology, the Senate ought to put a "hold" on this by its action in the next few weeks.

CONGRESS MUST RECONCILE MILITARY SPENDING WITH DOMESTIC NEEDS

Mr. PROXMIRE. Mr. President, the great concern over the size of the military budget has at least reached the level of a full-fledged congressional debate. Most encouraging is the fact that the discussions are being conducted in the context of competing nonmilitary priorities. I consider this to be the most significant debate of public policy in my career as a U.S. Senator.

For years the shibboleth of "national security" has served to obscure the real military needs of this country while at the same time sacrificing its domestic needs. The common assumption has been that any increase in military spending represented an increase in national security. The enormous size of the military budget today—almost $80 billion—is a testament to the success of the purveyors of this assumption. Yet recent disclosures suggest that we would have more national security if we spent less on defense.

MILITARY INEFFICIENCY

For one thing, we have learned about the enormous inefficiencies within the military establishment. There is inefficiency in procurement, in the purchase of weapons systems. There is inefficiency in defense production. There is inefficiency in the management of Government-owned property. There is inefficiency in the use of manpower. Many are asking why these inefficiencies should be allowed to continue.

Why should the taxpayer have to foot the bill for huge cost overruns such as the $2-billion overrun on the C–5A and the more than $3-billion overrun on the Minuteman program? Why should we be spending billions of dollars on weapons systems which are canceled before they are ever deployed because they do not work or for other reasons? The Manned Orbiting Lab is only the most recent example of this kind of boondoggle. Why is the military allowed to spend $1.2 billion on the Sheridan/Shillelagh tank, hundreds of which are now in storage because they are defective?

Mr. TOWER. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. TOWER. The Senator is aware, is he not, that NASA has announced it is going to orbit a laboratory, and therefore there might have been duplication in that effort? Probably the NASA-sponsored effort would accomplish the same thing. I am sure the technology gained is of some value to NASA.

Mr. PROXMIRE. I presume that proposal by NASA will be reviewed by the Congress. I hope we look it over very carefully.

Mr. TOWER. I meant to say "proposal."

Mr. PROXMIRE. No doubt there are many benefits from any kind of proposal by NASA or the Defense Department, but we have to put it in the context of other demands, including our economy and the inflated budget and that we need to cut back spending wherever we can without serious consequences. I think this is one area where we can and should.

In addition, serious questions have been raised about the basic assumptions underlying our military policy. These questions range from the definition of American vital interests and the nature of our foreign commitments, to the size of our general purpose forces, to the need for individual weapons systems. Perhaps the most basic of all assumptions now being questioned is the assumption that this Nation must be prepared to fight in two major wars and one minor war simultaneously. This is the so-called 2½-war contingency, and I must say, judging from discussions with my colleagues, the very existence of this assumption came as a revelation to some of the most distinguished and knowledgeable Members of the Senate when it was first discussed publicly a few months ago. Obviously, the 2½-war contingency has tremendous budgetary implications.

NO CHALLENGE OF MILITARY SPENDING

The unhappy fact is, however, that while inefficiencies and military policies are being questioned today, they have been allowed to develop in the past without serious challenge from those outside the Military Establishment.

A number of factors have enabled the military planners and the military spenders to claim their inordinate share of the public purse. The Nation as a whole, aware of the frequency of war and the possibility of foreign aggression, has generally supported requests for funds for the purposes of deterrence and defense. Unfortunately, however, modern technology and modern organizational techniques have made it extremely difficult for the average citizen and for the average Member of Congress to discern the difference between necessary military spending and unnecessary military spending.

In theory the Government functions in such a way as to minimize unnecessary spending. In the executive branch, the budgetary process is designed to coordinate and scrutinize the spending needs of the various agencies. With the aid of the Bureau of the Budget and the Council of Economic Advisers, the President is supposed to be able to make decisions about the size of the budget, including the military portion, and its impact on the national economy.

BUREAU OF THE BUDGET OUT OF ACT

We have learned that this theory is not working. The Bureau of the Budget, for example, went out of the business of conducting independent reviews of the defense budget several years ago. It has simply not effectively scrutinized the military budget. Its relations with the Department of Defense are vastly different from its relations with other agencies. It conducts independent reviews and thoroughly scrutinizes the budget requests of all agencies except one, the Department of Defense. As a result, the Military Establishment has created a

special relationship with the President and has successfully subverted the role of the Bureau of the Budget.

In April of this year the Joint Economic Committee urged that the Bureau of the Budget increase substantially its efforts to analyze and evaluate issues related to defense spending. The Committee made this recommendation because after its annual hearings on the economic report of the President it concluded that the Bureau of the Budget was not doing its job adequately. There have been indications that the BOB wants to more effectively exercise its responsibilities in this area. I sincerely hope that it is successful. We will know soon enough after we are able to evaluate its efforts with regard to the budget for next year.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. PROXMIRE. I am happy to yield to the distinguished Senator from Colorado.

Mr. DOMINICK. Would the Senator not agree that the revision of the budget by President Nixon when he came into office to reduce military defense spending was good?

Mr. PROXMIRE. Yes, indeed; and I would say the emphasis that the President, or that Budget Director Mayo, put on military budget review, and the assignment by Mr. Mayo of Mr. Schlesinger to that area are good indications. As I say, it is going to take some time to see whether or not they are going to get results.

Mr. DOMINICK. Would the Senator not also agree that the action of the Armed Services Committee in cutting almost $2 billion from the proposed budget, as it came to us, was good?

Mr. PROXMIRE. Absolutely. I think the Armed Services Committee deserves great credit for taking that action. I was delighted with it. I am not surprised, because the Senator from Mississippi (Mr. STENNIS) has been very careful in scrutinizing military spending. He was in charge of the miltary construction appropriation for many years. That was the one appropriation bill which, year after year, was under the House level. In all other areas the Senate figure was over the House figure. I speak of the time I was on the Appropriations Committee and the Senator from Mississippi was in charge of that particular appropriation.

Mr. DOMINICK. I wanted that to be clear for the RECORD, because I was afraid that, as the speech was made and delivered, it would look as if it were an overall attack of the way the administration and the Armed Services Committee have worked.

Mr. PROXMIRE. It is not. I am sure the Senator recognizes that this is one area where we can dispense with partisanship, because it is an enormous responsibility for all of us, and it crosses party lines.

But the important point is that the Bureau of the Budget has not operated effectively with regard to military spending for many years. Its failure has deprived the Nation of one of the instrumentalities on which it has relied to check excessive military spending.

COUNCIL OF ECONOMIC ADVISERS IGNORES MILITARY

Similarly, the Council of Economic Advisers has been completely inadequate as a source of analysis and evaluation of the economic impact of military spending. The Joint Economic Committee in its annual report was sharply critical of the Council on these grounds. The report states:

> We have had little concrete analysis of the defense budget or guidance from the administration—

And, frankly, this does apply to the previous administration——

> of the important question of the allocation of our resources between military and civilian programs. This committee urges the Administration to focus attention on assessment of our nation's requirements and goals, the definition of long-range objectives of economic policy, and development of more realistic means of establishing priorities in public expenditure. We would expect the Council of Economic Advisers and the Bureau of the Budget to play a key role in conducting this effort. We feel that there are some limitations in the analysis of defense spending, in the report submitted to Congress. The annual report of the Council of Economic Advisers, for example, confines its analysis of defense spending to less than two pages.

And that was a report of well over 100 pages.

> We urge that the Executive Office of the President undertake on-going and comprehensive investigations of defense procurement matters and submit their findings to this Committee as part of the Annual Economic Report.

On June 12, 1969, the Chairman of the Council of Economic Advisers, Paul W. McCracken, testified before the Subcommittee on Economy in Government in the hearings on "The Military Budget and National Economic Priorities." In view of the annual report of the Joint Economic Committee and other criticism of the Council, I looked forward to Mr. McCracken's appearance to see if there had been any shift in emphasis by the Council toward the area of military spending. Frankly, I was most disappointed.

Specifically, I asked the Chairman whether the Council of Economic Advisers has undertaken a study of the manpower demand of defense spending or whether such a study is planned. The response: No specific study is underway now. I asked whether the Council was studying the impact of the high demands of defense contractors on the limited supply of engineers and technical personnel or whether such a study is planned. The response:

> Only in general as we are concerned with Labor-Management Council.

I asked whether the Council had undertaken a study of the enormous rise in defense prices for the past few years or whether such a study is planned. The response: "No." I asked whether the Council had undertaken a study of the economics of military procurement with the view toward eliminating the national economic inefficiencies. The response: "No."

The situation is deplorable. There seems little hope at this time that the Council of Economic Advisers is even contemplating a study of the impact on the national economy of defense spending. Apparently, where the CEA is concerned, the President can expect no counsel on matters relating to the defense budget and its impact. Perhaps we ought to rename this body "The Council of Economic Advisers for Civilian Affairs" and create a new "Council of Economic Advisers for Military Affairs."

For, in my opinion, the Council is keeping only one eye on the economy. It is using only half its vision to study fiscal policy, inflation, employment, poverty, and the other problems it concerns itself with. As far as military spending is concerned it has had and continues to have a serious blind spot.

MILITARY BUDGET UNDER CONTROL

The inadequacy of the Bureau of the Budget and the Council of Economic Advisers reflects a general pattern within the executive branch. None of the powerful or influential groups in the executive branch have had very much to say about military spending. The Department of Defense has been able to frame its own requests for funds and submit them directly to the President. The President has not had the benefit of expert, critical, and independent advice on the military budget. The forces that act as countervailing and balancing influences on most of the budget within the executive branch simply do not exist or do not operate with respect to the military portion.

In the recent hearings on "The Military Budget and National Economic Priorities," the former Secretary of the Interior, Stewart Udall, gave us an important though disturbing insight into the operation of the executive at its highest level. Mr. Udall spoke of a serious imbalance between military and civilian spending and between the manner in which military problems and civilian problems are approached in this country. I asked him whether, during the time he served with such great distinction, there was any opportunity to argue the civilian case for Federal funds within the administration, for example, at Cabinet meetings or other high-level conferences.

Mr. Udall responded:

> No, neither of the Presidents that I served under had any systematic institutional way whereby there was a forum where you could argue domestic priorities against military priorities. It just was not a subject that was discussed.

The question of domestic priorities versus military priorities has not been a subject for discussion in the highest councils of the National Government. This is one of the primary reasons the American people today face what Stewart Udall calls the military juggernaut.

CONGRESS ALSO FAILS TO CHALLENGE MILITARY

The situation in the legislative branch has been equally as bad and, in some respects, worse. The legislative branch has not developed even the appearance of a rational decisionmaking process. The executive branch and particularly the Department of Defense has at least formally adopted a system of analysis and evaluation for spending programs.

The executive decisionmakers are able to take advantage of comparisons of benefits and costs to be anticipated from a decision. They are able to weigh quantitative evaluations not only of the economic costs of programs but also of a variety of alternative ways of reaching similar goals.

Congress has lagged far behind the executive in this regard. While there is much evidence, in my judgment, that the decisionmaking process for military policy is distorted by irrational and self-interested influences in the executive branch, Congress does not even go through the motions of systematic analysis and evaluation.

The problems of congressional decisionmaking are not often discussed in Congress. It is a taboo here and the committee structure with all its inadequacies and shortcomings is regarded by many as some sort of a holy cow.

Yet the vast majority of us know that the authorization and the appropriation process often does not produce rational or good decisions and this is especially true in the area of military spending. I have stated before and I repeat today that the congressional appropriation process is a classic example of an inexplicit, closed, and uninformed decision process.

A congressional committee does not normally have the opportunity to compare alternative programs for obtaining objectives. It does not normally understand the benefits and costs of programs, particularly with regard to future costs.

Usually the executive comes before Congress with a single budget and a single set of programs. The committees might change the budget somewhat, and sometimes programs are modified. But changes and modifications are relatively slight. The executive knows it will get from Congress more or less what it requests.

Especially in the area of defense spending, the congressional committees have played a passive, noncritical, and overly permissive role.

At this point, however, I make the exception which the distinguished Senator from Colorado has already made. This year the Committee on Armed Services has done, I think, a very good job. They have made a good start in discriminatingly handling that budget. But I think my criticism has been true over the years, and of course that is what I am aiming at.

As John Kenneth Galbraith pointed out in the hearings on "The Military Budget and National Economic Priorities," Congress has sorely neglected the economics of defense.

The Pentagon and defense contractors have used fear, secrecy, propaganda, and monopolization to obtain fat budgets and fat contracts. Congress, up to this year, has acquiesced.

CONGRESS CAN AND SHOULD DO JOB

We have all heard the excuse that military affairs are so technical and complicated that decisions about weapons systems and military policy are best left to the experts. Of course, according to this logic, the experts reside only in the executive branch and in the Pentagon. I personally reject this argument for the abdication by Congress of its constitutional responsibility to provide for the common defense. For many years, Congress has succombed to the temptation of delegating its authority to the executive branch. The technical expertise argument has been used to rationalize this delegation of authority. I have even heard it said that Congress is not supposed to sort facts and technical arguments. Rather, according to this view, Congress should simply rely upon the knowledge of the experts in the executive branch, and exercise only commonsense judgments about the broader policy questions with the aid of its own wisdom and the political pressures it perceives. This, in my judgment, is ridiculous.

The function of the legislative branch is to make decisions on matters of public policy within its jurisdiction. National defense under the Constitution is clearly within the jurisdiction of Congress. In order to make intelligent decisions about these matters, however, Congress must be informed. It is precisely the lack of information about military affairs that forms the main obstacle to intelligent decisionmaking in Congress today.

Congress, in fact, is badly informed and often misinformed by the Pentagon. The numerous and shocking cases of large cost overruns, poor performance, and late delivery of weapons systems reflects very poorly on the ability of Congress has succumbed to the temptation breakdowns of military procurement, of course, also reflect very poorly on the Pentagon's ability to manage the affairs entrusted to it.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. DOMINICK. Mr. President, I once again repeat what I said before. The Senator will recall that one of the principal areas of the fight against the so-called TFX arose out of committee. And, despite all we could do, it was a civilian, Secretary of Defense McNamara, who pushed this through under the Johnson administration.

The committee was trying to stop it because it did not think it was going to work. We were unable to get enough support to do that until last year, not this year. Last year the committee took the steps to cut out totally the FB–111, the Navy version of the TFX.

I should think the distinguished Senator would agree that this was a good move.

Mr. PROXMIRE. Yes, indeed; and I think that over the years there are unquestionable examples—unfortunately, they are isolated and occasional—in which this kind of action has taken place. And it is highly commendable.

My point is that Congress by and large—and I think there were exceptions—has not been systematically informed. Congress has not conducted the kind of supervision it should have. Congress has not really compared alternatives and has not considered priorities, other than the military priority, with sufficient concern, so that we have not really had a basis for making a decision.

The Senator is correct, and I think the point he makes underlies and emphasizes the point I am trying to make. There are cases, and the TFX is a good example, where Congress has done a good job and has caught a mistake made by the Defense Department.

It is true that this has still cost the Federal Government and the taxpayers an enormous amount of money.

My point is that until we are much better staffed and informed and until the GAO does a much more comprehensive job than it has done in the past, we will not be able to stay on top of the problem the way we should.

Mr. DOMINICK. Mr. President, I would agree. We can certainly go along with having a more detailed analysis.

As the Senator knows, I have been involved in some of the procurement contracts myself and have managed to get some changes made because they were mostly noncompetitive, and they were expensive.

The Senator referred to the fact that the military put in the TFX. That is not quite so. The military was against the TFX. It was the Secretary of Defense that put in the TFX on his say so. And no one else did it. The Secretary of Defense was able to do it under his power as a civilian, as the Secretary of Defense, which is a civilian office.

As far as the Appropriations Committee is concerned—and, unfortunately, I do not serve on that committee, but my colleague from Colorado does—the committee when it starts to consider the bill cannot consider alternatives, because they are bound by what is in the authorization bill. So they cannot consider the alternatives under our system unless they are to be faced with the question of a point of order on the appropriations bill when it gets to the floor.

They are required by the method under which Congress and the Senate has worked for these many years to work within the confines of a military procurement bill.

I think that what the distinguished Senator from Mississippi (Mr. STENNIS) has done this year and what the Armed Services Committee has done in previous years has been pretty effective in trying to analyze the proposals.

We were not sure whether this was the right way in which to proceed. We did not have enough manpower to be able to investigate it fully, as the Senator has pointed out.

We have kept a lot of these projects in the research and development stage, and then when it seems that they are not working properly, we cut them out. We have done this over and over again.

I think that we can do something more and should do something more, as the Senator has said. However, I do not think it is fair to say that the total blame is on the military.

The military has to work on the policy that is given to them and they have to decide under that policy what weaponry they need to perform the job.

Mr. PROXMIRE. Yes, indeed. I would say that, far from the total blame being placed on the military, very little of it should be on the military. The military is doing its job.

If I were in the military or if the Senator from Colorado were in the military, our job would be to come to the executive department first and then go before a congressional committee and do the best possible job of trying to convince Congress or the Budget Bureau or the Secretary of Defense that in our judgment the weapon involved was desirable and workable.

The Senator is exactly correct.

My criticism has been directed at the executive branch and the Secretary of Defense and at the whole Pentagon operation. I am talking about the civilian part of the Pentagon, and also the Council of Economic Advisers, the Budget Bureau, and those of us in Congress.

I agree that the military itself cannot be held to blame.

We cannot expect the military to come in with a balanced program and consider all of the priorities. That is our job.

Mr. DOMINICK. Mr. President, I am glad the Senator has pointed that out.

We get carried away with a fervor and blame everything on the military because we do not like the war in Southeast Asia.

I do not like the war in Southeast Asia either. To make a personal reference, I have a son in that war. I do not like it a hoot, but he is there.

The question concerns whether this is the fault of the military. Some people say it is and some people say it is not. However, the ultimate policy decision has to be made by civilians. That is the point that we should keep in mind.

Mr. PROXMIRE. The Senator is exactly right. That is the thrust of my speech.

FEDERAL GOVERNMENT FAILURE ACROSS BOARD

In short, the Federal, Government is not doing a good job of controlling military spending.

The cost to the American taxpayer of this poor performance has been enormous. On the one hand the enormous increase in the defense budget from approximately $50 billion in 1965 to $80 billion last year has been a major contributing factor to the high rate of inflation during this period.

It is recognized that no one factor can be singled out as the sole cause of inflation, but it is also recognized that Government spending can be a major cause. Because defense expenditures make up such a large part of total Federal outlays, and because defense expenditures constitute an even greater share of relatively controllable Federal expenditures, they can have a profound impact on the national economy. Indeed, the defense budget today comprises approximately 80 percent of relatively controllable Federal expenditures. Obviously the defense budget since 1965 has had a profound impact on the economy.

In a study submitted to the Subcommittee on Economy in Government, Assistant Secretary of the Treasury Murray L. Weidenbaum analyzed the controllability of Federal budget requests for fiscal year 1969. He broke down budget requests for each department or agency, using data from the current budget document, to show which funds are relatively uncontrollable and which relatively controllable.

I make that point because when people talk about cutting Federal spending they seem to think that they can cut the entire $192 billion. Obviously we cannot cut the interest on the national debt or the pension paid to people on social security or to the veterans. Only about one-half of the budget is controllable.

According to Secretary Weidenbaum's analysis, of the $104 billion in relatively controllable budget requests last year, $77 billion was for the Department of Defense.

I ask unanimous consent that the table constructed by Secretary Weidenbaum illustrating this point be printed in the RECORD at the end of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. PROXMIRE. Mr. President, obviously the Defense budget has a profound impact on the economy.

INFLATIONARY IMPACT OF MILITARY SPENDING

In my judgment, the failure of those of us who occupy responsible positions in the Federal Government to adequately control the defense budget has been the single greatest cause of inflation in the past 5 years. The surtax enacted last year was made necessary by the high rate of defense spending. It should be recalled that the surtax in the final analysis was and is a tax to support military spending. Its supporters have advocated it as an anti-inflationary device, but the inflationary pressures which this tax is supposed to relieve have been to a large extent produced by high military spending.

In my judgment it is more important to remove this primary cause of inflation—excessive military spending—than it is to deal with the symptoms of inflation through taxation. The surtax by itself may only be a prescription for recession. If military spending is not reduced in the near future, no amount of taxes piled upon taxes piled upon the shoulders of the taxpayers can have a salutary effect on the national economy.

The pending bill offers an excellent chance to start in that direction.

At the same time that inflation has brought about a de facto devaluation of the American dollar, reducing the value of savings and fixed income, excessive military expenditures have also brought into sharp contrast our failure to confront domestic nonmilitary problems. This failure, in the long run, may be the most disastrous of all.

DOMESTIC NEEDS IGNORED

Professor Galbraith, in his testimony before the Subcommittee on Economy in Government, said:

> By starving our public services, failing to live up to the goals that we have proclaimed and that we put before the younger members of the community, failing to make the kind of attack on housing, poverty, educational deficiency, environment—the things that we have talked about but have not accomplished—we have contributed substantially to the alienation of the younger generation from our Government.

The fact is that whether or not we agree with those who would shift resources from the defense budget into public services, the great difference in our attitudes toward military needs and civilian needs gives cause for great concern. In addition, we not only approach the two kinds of problems differently; we carry out our commitments in these areas in entirely different and contradictory ways.

Joseph A. Califano, Jr., whom almost all Members of the Senate know, was one of the ablest men working for President Johnson. Mr. Califano, former special assistant to President Johnson, has articulated this important distinction. Testifying in the hearings on the military budget and national economic priorities, he pointed out repeatedly that the Nation is urged to fulfill its military commitments. Needless to say, these commitments, whether to purchase weapons systems or spend blood for allies, are religiously kept.

FAILURE TO MEET COMMITMENTS

But how well do we keep our nonmilitary commitments to the American people? Mr. Califano made the following statement:

> I believe that we hear too much about these commitments and not enough about our commitments at home—about our commitments to the pressing needs of the American People. It is essential to consider our domestic commitments and weigh them against our military commitments.
>
> Because we have never hesitated to provide the resources or make the sacrifices that were considered necessary to protect our national security from foreign dangers, yet time after time we have failed to provide the resources and make the sacrifices necessary for all Americans to live at some minimal level of human dignity and spiritual tranquility.
>
> I believe that any one who reads the daily newspapers must realize that our domestic commitments involve the national security at least as much as do our military commitments abroad.

The Joint Economic Committee in its annual report discussed two of the national domestic commitments which the Federal Government has failed to keep. Housing is the most outstanding example of the Government's failure to fulfill its domestic commitments. In 1949 the Federal Government committed itself to helping every American family obtain a decent home and suitable living environment. Only last year, in the 1968 Housing and Urban Development Act, Congress recognized that this promise has not been kept and reaffirmed the 20-year-old housing goal.

In 1964 the Federal Government, through the Economic Opportunity Act, committed itself to the elimination of poverty. The Joint Economic Committee has reported that since 1964 we have not advanced beyond the stage of recognizing the problem, developing creative new responses, and raising the expectations of the poor. In my view, we have made some progress in the war against poverty, but not nearly enough. One can only wonder whether the Federal Government will renege on this promise too.

Similarly national commitments can be found in areas of education, transportation, pollution, and many other

areas of urgent and critical need. These obligations go unfulfilled while tens of billions of dollars are spent in the defense industry and in our far-flung network of foreign military bases.

It was with these facts and these imbalances in mind that the Joint Economic Committee reported:

The Committee believes present and past allocations of public and private resources to the economic development of our urban and rural areas have been inadequate. The place of economic development in our agenda of priorities should supersede less essential programs contained in the defense budget, space exploration, the supersonic transport, and certain public works projects.

I do not mean to say that an absolute transfer of funds from the military budget to the civilian budget will automatically bring us closer to our national goals. In my judgment, there is at least as much inefficiency and mismanagement in the administration of some portions of the civilian budget as there is in the military budget. In addition, even under ideal circumstances of Federal administration, there is no assurance that the expenditure of public funds alone will solve problems. In some instances, the expenditure of Federal funds have created more problems than they have solved. For example, according to the report of the Douglas Commission, in the past two decades we have demolished more housing by public action through such programs as highways and urban renewal than has been built under all federally aided programs.

BIG JOB: CUT MILITARY BUDGET

The reallocation of natural resources will be a difficult job in the years to come. But the immediate task must be to reduce the size of the military budget. Excessive military expenditures are frustrating the efforts of those who would like to see a reallocation of resources, as well as creating distortions and stresses in the national economy.

We would do well, before continuing our uncritical support of the military budget, to ask the questions raised by Senator WILLIAM FULBRIGHT in his testimony on "The Military Budget and National Economic Priorities":

What do we want our Nation to be?
Do we place a greater value on trying to mold foreign society than we do on eliminating the inequities of our own society?
What does the budget for defense mean in terms of dividing up the pie?

The budget, as Senator FULBRIGHT succinctly put it, tells the story. Our system of priorities is cockeyed. The way we allocate our resources is the fundamental barometer of our values as a civilized society.

What kind of a country do we wish America to be?

In the past Congress has shied away from these hard questions. Instead there has been a tendency for Congress to allow itself to become the tool of the military planners.

There are encouraging signs that Congress is breaking away from these bad habits and that it is beginning to assert its independence and exercise its responsibilities as a co-equal branch of the Government. The question is whether it is too late, whether too much damage has been done, whether we have either been terrorized or lulled into submission to the Military Establishment.

EXHIBIT 1

TABLE 1.—CONTROLLABILITY OF FEDERAL GOVERNMENT BUDGET REQUESTS, FISCAL YEAR 1969

[In millions of dollars]

Department or agency	Relatively uncontrollable				Relatively controllable	Total
	Trust funds	Permanents, indefinites	Fixed charges	Ongoing projects		
Funds appropriated to the President	1,324				4,819	6,143
Agriculture	68	735	3,831		2,896	7,530
Commerce	134	214			679	1,027
Defense—military	7		2,313		76,796	79,116
Defense—civil	9	4		950	344	1,307
Health, Education, and Welfare	37,670	41	7,456	13	6,190	51,370
Housing and Urban Development	159	1,821	358		3,004	5,342
Interior	97	268		180	312	857
Justice					542	542
Labor	4,095		145		596	4,836
Post Office		920				920
State	12	2			414	428
Transportation	4,703	70	51		1,701	6,525
Treasury	39	15,425			−54	15,410
Civil Service Commission	3,626		42		131	3,799
General Services Administration		1	2		327	330
Railroad Retirement Board	1,064		18			1,082
Veterans' Administration	746	12	4,664		2,368	7,790
NASA	1			2,133	2,235	4,369
Export-Import Bank		608				608
Farm Credit Administration	535					535
All other	773	97	91		896	1,857
Total	55,062	20,218	18,971	3,276	104,196	201,723

Note: Includes requested new obligational authority and loan authority.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. PROXMIRE. I am happy to yield.

Mr. STENNIS. Mr. President, the Senator from Wisconsin has done a great deal of fine work in this field. He is always constructive and quite energetic.

The first part of his speech was a rather severe attack on the military budget, on the military bill before the Senate. I have a suspicion that he is digging up some atmosphere as a prelude to some of the far-reaching amendments he is going to have soon. I do not blame him for his amendments. However, I do want to point out to him and others that this committee has brought in a bill because we were selected by the Senate to put in writing the weaponry and other things that go with the military program which we think are most probably necessary for our security.

With all deference to the economists and the large number of other people whom the Senator from Wisconsin quoted, they do not have the responsibility of getting down to the nub of these problems and being specific. They do not have the responsibility of providing for a weapon or leaving it out of a bill. When we begin to write a bill and men are still dying every day in Vietnam, and a request is made for more helicopters, we might be doubtful on some point, but we are not going to decide the doubt by leaving helicopters out of the bill; we are going to include them. The Senator from Wisconsin would do the same thing, I feel certain.

Mr. PROXMIRE. I would; I agree to that.

Mr. STENNIS. That is an example of some of our problems. It is not a far-fetched illustration. We not only have to delineate a weapon specifically, whether to leave it in or leave it out, but we also have to put a dollar amount on it. That is under a mandate of the Senate that there must be an authorization bill which specifies amounts—at least, the top amounts. That is not an easy job. Often there is doubt about the figures. Where can we get accurate figures? None may be available.

Take a relatively simple item such as the cost of sending a son to college for 4 years and then to professional school for 3 years, 7 years in all. Many of the contracts for these items in the bill will run for 5, 6, or 7 years. How can we estimate accurately the cost of a relatively simple item to provide for 7 years of college? The Senator knows that that cannot be done. It may run from 10 to 20 or 30 or 40 percent. Is it an actual overrun of the estimate or value because of a shift or a change of circumstances due to inflation or other factors?

So, as the Senator knows, we cannot be specific about these things in the beginning. I think the word "overrun" is being abused. It is greatly overused because the contracts say on their face that they cannot be specific. Everyone in the trade recognizes that there is a target amount and then an ultimate amount.

I have already referred this afternoon to the contract for the C–5A. It was an experimental type plane. Perhaps because it was not being used in large numbers or for a long period of time, not much was known about it. The matter showed up as an illustration in the light of experience. I am illustrating merely what is involved.

We hear talk about a two and one-half war. That term has been kicked around longer than the Senator from Wisconsin might think. What really created these conditions was when we began to sign every proposed treaty guaranteeing every nation in the world its physical security and integrity.

It seems to be a situation of the more the merrier. I was in on it. I got tired of it and I stopped voting for some of those commitments. But that is the situation we are involved in and we cannot turn 180 degrees and get out. If we could renegotiate those agreements, we could cut down greatly on our commitment.

I hear talk like that from the President, but, Mr. President you cannot just stop in your tracks. Mr. President, what are you going to do with the Philippines and our guarantee as to them? They have not helped us much in Vietnam, it is true. However, we do have a definite promise, and until some substitute is given that promise must be met. What are we going to do about Japan. They have a constitutional provision there which we had put in and we told them we would take care of them. The Senator would not want us to walk out on that situation.

It is not enough to say we have piled up two and one-half wars. No one knows what may be involved. We have to protect ourselves first and, as best we can, carry out what is called for under those commitments. I want to reduce them as much as we can but I do not want to repudiate any of them because we would be laying the groundwork for more trouble later.

I am not being critical of the Senator but we have to keep both sides of the situation in view at the same time.

The Senator referred to the billions of dollars spent on missiles that were canceled before they were deployed. I want to point out that while we were writing up the bill, week after week and month after month, there was an indoor sport on the floor of the Senate talking about the billions and billions of dollars worth of waste that add up to $23.7 billion wasted—w-a-s-t-e-d. I do not think the Senator from Wisconsin used those words or referred to "wasted" with respect to missiles that are not now deployed.

The catch is in that word. Listed in that group was the old reliable Redstone missile, one of the finest missiles we ever had in the Army. It served a tremendous purpose. For one thing, it put us up with Sputnik. Then, the old Atlas is not remembered now. In time we have gotten a cheaper missile but for awhile it stood there as our sole deterrent in that field of possible intercontinental ballistic missile warfare which through God's good graces did not come. But we cannot charge that missile to waste any more than we could charge to waste the little old plane in which Charles Lindbergh flew to Paris, the first plane to cross the Atlantic Ocean.

I came to the Senate Chamber and undertook to answer that $23.7 billion charge. I showed where over $18 billion of that amount went for these useful missiles that did have a place and were deployed and did serve a time and a purpose. About $5 million of that amount was on missiles that did not turn out. They were like the automobile business. How many automobile businesses fell by the wayside because there was something the matter with them? That is particularly true in this new field of missiles.

The climax to all of the missiles is in the modern ones we have now. All of that money has been spent learning about missiles and is represented now in the better ones we have.

I point this out to the Senator and others with respect to the other side of the picture. The committee has to be specific and put down or leave out these items. It has to give an estimate as to what the approximate cost might be. We are trying to do a better job. We will not make headway in 1 or 2 years. I think the Senator has made a fine contribution by probing into these matters, but it takes time in this field as in other fields.

I thank the Senator for yielding.

Mr. PROXMIRE. Mr. President, I thank the distinguished Senator for his friendly and temperate remarks. They are characteristic of the distinguished Senator from Mississippi.

I would like to point out several things. Nothing I said indicates we can only make these cuts or should only make these cuts by foregoing some of our commitments or not meeting commitments.

As the Senator knows, Robert Benson, of the General Accounting Office, an able analyst, made a detailed and specific proposal arguing that we could meet our international commitments with $9 billion less in our military budget. The Congressional Quarterly last year made a similar analysis to the effect that we could save $10.8 billion without foregoing any of our commitments. Most recently, Fortune magazine—I noticed it in my office just before I came here—said that by 1972 we could cut $17 billion out of our military spending without betraying any of our international commitments.

I think it is possible here to argue that we do not have to reduce our commitments, although I think we should reduce some of them, and I think the Senator from Mississippi shares that view.

Mr. STENNIS. That is correct.

Mr. PROXMIRE. I think we could cut our expenditures sharply without walking away from any commitments we have made.

Mr. STENNIS. I think the Senator is correct. I am sure the estimates to which the Senator referred are not directed to the military bill we have before us now on military hardware. That estimate was out of the entire military budget.

Mr. PROXMIRE. The Senator is correct. In the Congressional Quarterly estimate, one-half of that amount was with regard to personnel.

This bill before us started out as a $23 billion procurement bill as the Johnson administration originally recommended; then the Nixon administration made it $22 billion; and the Senator's committee made it $20 billion. It made a substantial cut.

Mr. STENNIS. In round numbers that is correct, but in round numbers 60 percent of the military dollar goes for the salaries, personnel costs, operation and maintenance, general operations, upkeep, and they are not included in this bill at all. This bill represents research and development, testing and engineering and the weapons themselves, and it constitutes about 40 cents in round numbers out of the military dollar. As the Senator said, $3 billion has already been taken out for this year alone. When we add up the prospective cost of the new weapons we took out, it will run into many billions of dollars, because we just took out $20 million in one item that is a weapon system that would have cost $10 billion, we will say, in the course of the year.

One other illustration. Perhaps, when the shooting stops and after the adjustment period, I hope we can reduce the manpower personnel by 1 million men. I hope it would be back to what it was when the war started. If my arithmetic is correct, that would perhaps come to around $10 billion in savings right there.

Mr. PROXMIRE. I hope that we can reduce at least part, or part way in that direction, even before the shooting stops, although I think the Senator is correct that the big cut will have to come after the Vietnam cease-fire.

Mr. STENNIS. I agree. We cannot be certain about those things as long as the war is going on. It takes some time after.

Mr. PROXMIRE. I should like to make one other rebuttal to the Senator from Mississippi. I do not want to leave the impression that overruns are a result of inflation. The way a weapons system is designed, inflation and expectation of inflation is written into the contract and provision is made for that to begin with. In the second place, the inflation we have had in manufacturing in general, up until this year, has been modest over the past 10 years, at least substantially less than inflation in the consumer cost of living. Then, in the third place, the Pentagon itself, using its own figures, shows that a modest, relatively small proportion of the overruns can be accounted for, even based on their justification, on the basis of inflation. This is the result, by and large, of inefficiency, of very badly conceived plans, and many mistakes, and also of an extremely poor control system by the Pentagon and the executive branch generally, including the Budget Bureau, and I might also say the General Accounting Office.

Mr. STENNIS. Quite briefly, some of the contracts do have a sliding scale provision as to ordinary inflation, but some of them do not. Inflation, I think, has affected this picture. The Senator talks about inefficiency. That is the key word. We find it not only in defense contracts but also in contracts everywhere. I mean the workmen. Also the management; not just the workmen. We find it, according to my observation, in a lot of stores, service stations, and everywhere else, where the service is not up to what it used to be. The quality of the workmen is not up to what it used to be, either. That concerns me greatly, as I know it does the Senator from Wisconsin. I think we can improve on the contracts, too, a great deal. I believe that we will. I thank the Senator for yielding to me.

Mr. MURPHY. Mr. President, will the Senator from Wisconsin yield?

The PRESIDING OFFICER (Mr. PACKWOOD in the chair). Does the Senator from Wisconsin yield to the Senator from California?

Mr. PROXMIRE. I yield.

Mr. MURPHY. I have been most interested in the reports and comments of our distinguished chairman as he called attention to the many areas that need close scrutiny.

I join the chairman of the Armed Service Committee in his observations. I have had the privilege of serving on that committee this year for the first time. I have also had some experience in business methods. I was amazed at the thoroughness and care with which the chairman and the entire committee have approached their obligations in this matter. It is not just a matter of the Pentagon's sending down a request and everyone rubber stamping it. These things are gone over most carefully. They are questioned carefully. I am pleased that the distinguished chairman made the point clear.

I ask the distinguished Senator from Wisconsin, in the work of the committee, in looking for areas and different areas of concern where savings can be applied or arrived at, has he also looked into the matter of Government buildings?

I have been interested in one particular building that is supposed to have been finished, I think at least 12 months ago, and it is still not finished.

In the matter of overruns, which we hear generally applied to the military, I would be interested to know whether there has been any research or any examination into the matter of overruns in other areas, whether they are militarily so disproportionate, or whether they are some of the things that are brought on in the matter of Government buildings.

Mr. PROXMIRE. I just do not know of any in connection with overruns in this area. I would be shocked and surprised if there had been anything like that in another area that had not been called to the attention of Congress. The overruns go from $3.4 billion to $5.2 billion. An $1.8 billion overrun on one weapons system, one kind of ariplane, it seems to me is shocking and drastic. Think of it, $1.8 billion.

Mr. STENNIS. I agree.

Mr. PROXMIRE. There is nothing comparable to it in the civilian sector or in the nondefense govermental sector. I think the Senator knows that if anything like that occurred in private industry, whoever was responsible would be out of a job in a big hurry.

Mr. MURPHY. I was as shocked as he was when I heard it was being done. I must say that after listening to the questioning by the committee in public meeting of some of the people responsible, both civilian and military, in manufacturing, when I understood the conditions of their contract, when I understood the problems they were facing, and that the original contracts were all made on estimates, completely guessing estimates, because it was the type of operation that had never been conducte before, plus the fact that there had been no secret that Congress had been informed about the overruns as of a year ago, this really should not have come as such a surprise. Having seen the results of the contract, I think it is a shocking amount of money but I can easily understand how it was honestly and even carefully come by. I looked up the record on that same corporation that had the responsibility, and I must say that they have a good record of avoiding overruns in the past.

Mr. PROXMIRE. In April of 1968, the House Appropriations Committee was informed by the Air Force that the C–5A was in good shape, with no expectation of an overrun. It was in November of 1968 that the Economy in Government Subcommittee discovered the overrun and disclosed the overrun. Of course, the unfortunate aspect of this is that Boeing, which had been selected by the Air Force Selection Board as the best contractor, had been beaten on the bid by Lockheed, $300 million under Boeing's bid on the contract. But now the Lockheed contract is much more than $1½ billion over what Boeing had. So the Federal Government is out that much money on the basis of a commercial plane that Boeing has built, and we have no choice now but to spend a whale of a lot more money.

Mr. MURPHY. I agree with my distinguished colleague that in many areas unfortunate practices have grown up over the years in the matter of contracting. It is a difficult field. It is a complex field. It certainly needs as much scrutiny as the committee can give it. I am pleased that the chairman of the Armed Services Committee explained the care which was taken and, hopefully, these records on things which have happened in the past will be well served by the experience of this year and, hopefully, the committee will be able to do a much better and more efficient job in the future.

I thank the Senator from Wisconsin.

Mr. PROXMIRE. I thank the Senator.

S. 2727—INTRODUCTION OF A BILL TO PROVIDE FOR THE SHARING OF FEDERAL TAX RECEIPTS WITH STATES AND POLITICAL SUBDIVISIONS FOR PURPOSES OF EDUCATION

Mr. MILLER. Mr. President, I introduce and send to the desk for printing and appropriate reference a bill to provide for the sharing of Federal tax receipts with the States and their political subdivisions for purposes of education. I ask unanimous consent that the bill, along with a table prepared by the research staff of the Library of Congress showing the distribution of funds among the various States according to the formula in the bill, be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill and table will be printed in the RECORD.

(See exhibit 1.)

Mr. MILLER. Mr. President, for the citizens of this Nation today, the promise of America—of which novelist Thomas Wolfe once wrote—is in the development of our human resources through education.

Man is the shaper and the planner of his environment and his destiny. By his very nature, he must strive for the almost unlimited goals of the human spirit.

Education is an essential prerequisite to self-fulfillment of the individual and to social and economic progress of a nation. The National Education Association underscored these points when one of its writers in 1966 remarked:

> Education adds up to human dignity, to rational thinking, to a creative spirit, to self-reliance, to economic competence, to informed citizenship, and above all to lifelong opportunity for every American.

Our breakthroughs in space exploration and nuclear energy, our advances in health, social services, and in other areas are traceable to our citizens' enlightened view of education as a lifelong process. Our commitment to education is well known and is being emulated throughout the world.

Nevertheless, our schools and colleges face a financial crisis, born of the necessity and firm belief that every child should have the best education possible. Sources of money have been depleted by inflation while the needs continue to grow. The citizen-taxpayer is wondering when the demands on him will let up even as he knows we cannot afford to ignore our youth and our educational institutions.

As the financial problem becomes greater, we must reach out for innovative approaches to resolving it. We can no longer solely depend on present approaches to financing education, for a point of diminishing returns surely will confront us in the very near future.

We in Congress must share part of the responsibility, for the Federal Government has not measured up to its share of the burden of meeting our national commitment.

One of the problems in the educational field—and also in many other areas—is the proliferation of Federal programs of assistance to the States. In order to restore a healthy, viable Federal-State system, the present conglomeration of over 400 Federal grant programs should be consolidated. The cost of administration alone for education and all other Federal grant programs—estimated at $400 million annually—could be materially reduced. As an example, 21 of the Federal grants for education require the submission of separate State plans. An entire university could be operated with the manpower needed to prepare and review these plans.

Also, Federal aid, which logically should serve to strengthen our Federal system, in many cases actually undermines it. For example, of approximately 200 HEW grants, 146 are project grants, which are generally approved and administered solely by local government and private nonprofit community organizations. The resources of State government experts are ignored.

Many of these grants are so rigidly controlled by the bureaucracy in Washington that local initiative or enterprise in the administration of these grants is given little or no latitude. Thus, assistance from the Federal Government has too often been paid for by an unhealthy dependence on the Federal Government.

Many individuals, groups, and organizations have endorsed the approach of "block" grants to the States, particularly in the case of education, as opposed

to the so-called categorical grants-in-aid. Among these are the noted educator, Dr. James Bryant Conant, the Greater Cities Superintendents Association—comprising the 16 largest cities in the Nation—the American Association of School Administrators, the National Education Association, the Council of Chief State School Officers, the National School Boards Association, and the National Congress of Parents and Teachers.

One method is the sharing of Federal tax revenues for educational purposes with the States and also, through them, the local governments. This is the method set forth in the bill I am introducing today. In brief, my bill would return to the States and their political subdivisions 2 percent of total Federal tax collections for educational purposes. Based upon fiscal 1968 Federal tax collections of $153.6 billion, this would amount to some $3 billion. Federal tax sharing for education would avoid the problems associated with new and expanded categorical aid programs as well as help the States and local governments meet their growing fiscal crises. It is the best approach I know of to providing meaningful and sustained property tax relief.

The problem facing State and local governments is essentially one of steeply rising expenditures and inadequate resources with which to meet the growing demands for increased services, not only in the case of education but in all other areas of State and local activities as well. If our Federal system is to survive, the growing imbalance between the financial resources of the Federal Government and that of State and local governments must be corrected. The financial plight of the American system of government may be characterized as one of increased revenue at the national level but fiscal poverty at the State and local levels. Although somewhat overstating the case, John Kenneth Galbraith is essentially correct when he states:

> The great economic anachronism of our time is that economic growth gives the federal government the revenues while, along with the population increase, it gives the states and especially the cities, the problems. The one unit of government gets the money, the other gets the work.

Thus, while State and local governments have insufficient funds to embark upon new programs demanded by an increasingly sophisticated population, at the national level, the situation is reversed. The availability of funds at the national level oftentimes leads to approval of new programs and commitments without sufficient examination of the desirability or efficacy of such programs and commitments.

One only needs to contrast the Federal Government's vast income-gathering power with the growing income needs at the State and local levels to see the imbalance that has arisen. Between 1950 and 1968 Federal domestic—nondefense—spending rose 135 percent. In this same time, however, spending by State governments rose 295 percent and that of local governments 339 percent. Also, during this period, the national debt rose 35 percent while State government debt went up 578 percent, and local government debt rose 373 percent. Legal limits on debt and on tax rates are curtailing the local governments' ability to rely on existing revenue sources. Even without legal limits, however, more and more we are seeing State and local taxpayers voting against bond issues and higher taxes.

While this has been going on, State and local governments have not stood still in using their taxing powers. State and local tax revenues have increased from $17 billion in 1950 to $71 billion in 1968. As a practical matter, though, the National Government has preempted the graduated income tax as a major revenue source. According to 1966 figures, the Federal Government collected 67.5 percent of all tax revenues in the Nation while State governments collected only 17.5 percent and local governments 15 percent. The income tax, which is the tax most responsive to economic growth, is overwhelmingly dominated by the Federal Government, which collected 92.6 percent of all personal income taxes paid in the United States in 1966. The three major sources for the bulk of State and local revenue—property taxes, sales taxes, and income taxes of flat or only mildly progressive rates—have not kept pace with inflated prices and the mushrooming demands of a growing population for improved governmental services.

In the face of these facts, State, and local goevrnments have had to rely increasingly upon financial assistance from the Federal Government. Between 1950 and 1968, Federal aid to the States increased by 732 percent.

I ask unanimous consent to have printed in the RECORD at the end of my remarks a New York Times article which appeared in the Mason City, Iowa, Globe Gazette of Monday, July 14, 1969, entitled "State Taxes in U.S. Climb." This perceptive article shows the predicament the States are in and what some of them are doing about it.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Mr. MILLER. Mr. President, I have received numerous letters from concerned constituents in my State complaining of high property taxes. I have had to respond to such persons by pointing out that property taxes are levied by the State and local governments and, therefore, are not a direct responsibility of the Federal Government. The Federal Government could help property owners, however, by sharing its tax receipts so that the tax burden on the States would not be so great. The bill I am introducing today would do this because in most States property tax revenues are used to support the local schools.

Unless legislation is enacted whereby Federal tax revenues are shared with State and local governments with a minimum of strings attached, the trend will continue toward more grant-in-aid programs, with increasing Federal intrusion into decisionmaking which can best be made at the State and local levels.

A revenue-sharing measure such as I am proposing will significantly help the State and local governments to meet their growing responsibilities while, at the same time, retaining primary operational independence. Basic Federal laws, such as the Civil Rights Act of 1964, would naturally continue to be effective. With the percentage of Federal revenue approach, there would be less Federal bureaucracy, and thus the foundation for future possible control from this direction would be eliminated. A law which would simply allocate a percentage of the Federal revenue collections to the States "for education purposes" would, once put into effect, have a status not unlike the annually recurring appropriation to pay interest on the national debt, and would be in little danger of amendment or restriction by the Appropriations Committees. Thus, the percentage-of-Federal-revenue approach which I have advocated for 9 years now, with increasing support each year, would be a major step forward in helping the States and local communities meet their needs for education—some being improved teachers salaries, some being classrooms, some being laboratories, some being assistance for higher operating costs, and some being all of these items—without Federal administrative waste and control. Furthermore, achieving a better fiscal balance between Federal, State, and local governments will greatly strengthen our unique system of federalism.

I realize that several other revenue-sharing measures have already been introduced in the Congress. Some of them allow the shared funds to be used for any purposes that the State desires, while some limit them to various activities. I believe that since revenue sharing would be a new approach, and since education is so important to the future of this country, any revenue sharing that is authorized should be limited, at first, to educational purposes, and that is what I have done in my bill. It has been shown that much of the increase—more than 40 percent—in general expenditures by State governments between 1955 and 1966 went for education. Therefore, it could be argued that even if it were not specified that the funds could be used only for educational purposes most of them would be used for those purposes anyway. Nevertheless, I believe it wise to limit revenue sharing to educational purposes—to put first things first. After we have had some experience with such a program, the purposes for which the money could be used could be expanded as the revenues shared are increased.

The principal provisions of my bill are as follows: The bill would establish a tax-sharing fund in the Treasury and would appropriate to such fund for the fiscal year beginning July 1, 1971, and for each fiscal year thereafter, an amount equal to 2 percent of total Federal tax collections received during the preceding fiscal year. The Secretary of the Treasury would be directed to pay the State allotments from this fund at least quarterly.

The allotment to each State would be determined primarily on the basis of the population of each State between ages 5 and 20 inclusive. Each State's basic allotment would be increased or decreased by the percentage that the State's annual per capita income is lesser or greater, respectively, than the average annual per capita income of all the States. This for-

mula, while primarily distributing the funds on the basis of school age population, would assure that the lower income States would receive an added amount.

The bill contains a pass-through provision to assure that the local governmental units would receive a fair share of the State allotment. The amount passed through to each political subdivision would be determined by the ratio that expenditures of such subdivision for education—exclusive of State aid—bear to the total expenditures for education by the State and all of its political subdivisions.

The States and their political subdivisions could use their allotment under the bill only for activities, programs, and services in the field of education, including activities, programs, and services provided with respect to elementary and secondary schools, vocational and technical schools, and institutions of higher learning.

If a State uses any of its allotment for other than educational purposes or if it does not obligate its allotment within 2 years after it was made, the Secretary of the Treasury, after notice and opportunity for hearing, would be required to subtract such amount from subsequent allotments to that State. Also, the States must give the Secretary assurances and certify that they will use fiscal control and fund accounting procedures necessary to assure proper disbursement and accounting of their allotment, make accounting reports to the General Accounting Office, and comply with all applicable laws, including title VI of the Civil Rights Act of 1964. If the Secretary finds any State or political subdivision not in substantial compliance with these requirements he would be required to cancel any subsequent payments to that State and reallocate such amount to the other States. Determination by the Secretary would be subject to appeal to the U.S. District Court for the District of Columbia, as a matter of preventing hardship due to any arbitrary decisions by administrative officials.

The bill (S. 2727) to provide for the sharing of Federal tax receipts with the States and their political subdivisions for purposes of education, introduced by Mr. MILLER, was received, read twice by its title, referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

S. 2727

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Tax-Sharing Education Act of 1969".

SEC. 2. (a) There is hereby established in the Treasury of the United States a fund to be known as the tax-sharing fund. The tax-sharing fund shall consist of amounts appropriated to such fund as provided in this section.

(b) There is hereby appropriated to the tax-sharing fund, out of any money in the Treasury not otherwise appropriated, for the fiscal year beginning July 1, 1971, and for each fiscal year thereafter, an amount equal to 2 per centum of the total Federal tax collections received during the preceding fiscal year.

(c) The Secretary of the Treasury (hereinafter referred to as the "Secretary") shall, from time to time, but not less often than quarterly, transfer from the general fund of the Treasury to the tax-sharing fund the amounts appropriated by subsection (b). Such transfers shall, to the extent necessary, be made on the basis of estimates by the Secretary of the amounts referred to in subsection (b). Proper adjustments shall be made in the amounts subsequently transferred to the extent that prior estimates were in excess of or less than the amounts required to be transferred.

SEC. 3. (a) The Secretary shall, during the fiscal year beginning July 1, 1971, and during each fiscal year thereafter, pay to each State, from amounts appropriated to the tax-sharing fund for the fiscal year in which payments are to be made, a total amount equal to the allotment of such State in such fiscal year computed under this section. Such payments may be made in installments periodically during any fiscal year, but not less often than quarterly.

(b) (1) From the total sum of the amounts appropriated to the tax-sharing fund pursuant to section 2 for any fiscal year, the Secretary shall allot to each State in such fiscal year an amount which bears the same ratio to such total sum as the population of such State between the ages of five and twenty, inclusive, bears to the total population of all of the States between the ages of five and twenty, inclusive. The allotment of each State in any fiscal year so computed shall be reduced or increased in accordance with the provisions of paragraph (2) of this subsection.

(2) Each such allotment computed under paragraph (1) shall be increased in the case of those States whose annual per capita income is less than the average annual per capita income of all of the States and shall be reduced in the case of those States whose annual per capita income is greater than the average annual per capita income of all of the States. The amount of any such increase or reduction to be made with respect to the allotment of any State shall be computed by multiplying such allotment by the percentage by which the annual per capita income of such State is less or greater, as the case may be, than the average annual per capita income of all of the States.

(c) For purposes of this section—

(1) The population of a State between the ages of five and twenty and of all the States between the ages of five and twenty shall be determined by the Secretary on the basis of the most recent data available from the Department of Commerce.

(2) The per capita income of a State and of all the States shall be determined by the Secretary on the basis of the most recent data available from the Department of Commerce.

SEC. 4. (a) Except as provided in subsection (b), each State may use payments from its allotment in any fiscal year under section 3 for activities, programs, and services in the field of education, including activities, programs, and services provided with respect to elementary and secondary schools, vocational and technical schools, and institutions of higher learning.

(b) (1) Each State receiving an allotment under section 3 for any fiscal year shall in turn allot and pay from such allotment to each political subdivision of such State an amount which bears the same ratio to such allotment as the amount of expenditures by such political subdivision for activities, programs, and services described in subsection (a) during the preceding fiscal year (exclusive of expenditures made with funds received from the State or the United States), bears to the total amount of expenditures by the State and all of its political subdivisions for activities, programs, and services described in subsection (a) during the preceding fiscal year.

(2) Each political subdivision of a State may use payments from its allotment in any fiscal year under paragraph (1) for activities, programs, and services described in subsection (a).

(3) A State may, in order to comply with the provisions of subsection (c) or of section 5, subtract amounts from allotments, or cancel payments, to any of its political subdivisions.

(c) Whenever the Secretary, after giving reasonable notice and opportunity for a hearing to a State, finds that such State or a political subdivison of such State (1) has used any amount of such allotment for purposes not within the scope of subsection (a), or (2) has not obligated any amount of such allotment within two fiscal years immediately following the fiscal year in which such allotment was made, the Secretary shall give notice of his intention to subtract, from any subsequent allotment or allotments to such State, a total amount equal to the amount referred to in clause (1) or (2). The State may, within thirty days following notice of such intention, appeal the decision to the United States District Court for the District of Columbia. In the event of any reduction in the allotment of any State in any fiscal year under this subsection, the Secretary shall reallot and pay the amount of such reduction to other States in proportion to the original allotment to such States under subsection (b) of section 3 for such year.

SEC. 5. (a) (1) Any State desiring to receive its allotment in any fiscal year under this Act shall certify and provide satisfactory assurance to the Secretary that such State and its political subdivisions will—

(A) use such fiscal control and fund accounting procedures as may be necessary to assure proper disbursement of and accounting for any allotment paid to such State;

(B) make accounting reports to the Secretary and the Comptroller General, in such form and containing such information as the Secretary and Comptroller General may reasonable require to carry out their functions under this Act; and

(C) adhere to all applicable Federal laws in connection with any activity, program, or service provided solely or in part from such allotment.

(2) For purposes of this subsection, the provisions of title VI of the Civil Rights Act of 1964 shall be deemed to be applicable to any activity, program, or service provided solely or in part from any allotment received by a State or a political subdivision under this Act.

(b) Whenever in any fiscal year the Secretary, after giving reasonable notice and opportunity for hearing to a State, finds that such State or any of its political subdivisions are not in substantial compliance with subsection (a), the Secretary shall, subject to appeal as provided in subsection 4(c), cancel any subsequent payments to such State under this Act in such fiscal year and reallot any remainder of the allotment of such State for such fiscal year to other States in proportion to the original allotments to such States under subsection (b) of section 3 for such fiscal year.

SEC. 6. The Secretary shall report to the Congress not later than the first day of March of each year on the operation of the tax-sharing fund during the preceding fiscal year and on its expected operation during the current fiscal year. Each such report shall include a statement of the appropriation to, and the disbursements made from, the tax-sharing fund during the preceding fiscal year and an estimate of the expected appropriation to, and disbursements to be made from, the tax-sharing fund during the current fiscal year.

SEC. 7. As used in this Act, the term "State" includes any of the several States and the District of Columbia.

EXHIBIT 1

ESTIMATED DISTRIBUTION OF FUNDS BY STATE UNDER SENATOR MILLER'S FEDERAL TAX SHARING BILL

State	Population, 5 to 20 years, July 1, 1967		Col. 3 times $3,073 million (thousands)	Per capita personal income, calendar year 1968	$3,412 divided by col. 5	Unadjusted State allotment (col. 4 times col. 6) [1] (thousands)	Col. 7 times 3.641 percent [1] (thousands)	Total allotment (col. 7 minus col. 8) [1] (thousands)
	Number	Percent of total						
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
1. Alabama	1,173	1.9	$58,387	$2,329	1.465	$85,537	$3,115	$82,422
2. Alaska	106	.2	6,146	4,124	.827	5,083	185	4,898

41. South Carolina	924	1.5	46,095	2,339	1,459	67,253	2,449	64,804
42. South Dakota	222	.4	12,292	2,916	1,170	14,382	524	13,858
43. Tennessee	1,231	2.0	65,460	2,553	1,336	82,111	2,990	79,121
44. Texas	3,584	5.9	181,307	3,016	1,131	205,858	7,496	198,362
45. Utah	370	.6	18,438	2,810	1,214	22,384	815	21,569
46. Vermont	131	.2	6,146	3,017	1,131	6,951	253	6,698
47. Virginia	1,475	2.4	73,752	3,049	1.119	82,528	3,005	79,523
48. Washington	1,026	1.7	52,241	3,676	.928	48,480	1,765	46,715
49. West Virginia	567	.9	27,657	2,491	1.370	37,890	1,380	36,510
50. Wisconsin	1,346	2.2	67,606	3,407	1.001	67,674	2,464	65,210
51. Wyoming	107	.2	6,146	3,139	1.087	6,681	243	6,438
55. Total	62,057	100.0	3,073,000	[2] 3,412	1.000	3,189,131	116,131	3,073,000

[1] Under the formula given in this bill, it was impossible to arrive at a total distribution which coincided with the $3,073,000,000 available for allotment to the States. The total unadjusted State distribution amounted to $3,189,131,000 (col. 7) which is $116,131 000 more than the $3,073,000 000 available for distribution to the States. This $116,131,000 represented 3.641 percent of the $3,189,131,000 derived. We then multiplied this factor (3.641 percent) by each State's unadjusted allotment (col. 7) and derived the adjusted State distribution given in col.

[2] Average.

EXHIBIT 2

[From the Mason City (Iowa) Globe Gazette, July 14, 1969]

STATE TAXES IN U.S. CLIMB—21 STATES ADD OR HIKE LEVIES

NEW YORK.—The hands of state legislatures are probing deeper than ever this year into taxpayer pockets in a sometimes desperate search for funds to meet the mounting costs of modern life.

In at least 21 states new taxes have been imposed or old ones increased. Others are in prospect.

And in the heat of summer, some states—among them Massachusetts, California, Pennsylvania and Ohio—have been enmeshed in protracted struggles, sometimes in an atmosphere of crisis, about how state governments are to cope with their fiscal problems.

Other states have deferred the struggle, but only temporarily, and a rare handful have yet to face it at all.

"In terms of state tax efforts," said William G. Colman, executive director of the Advisory Commission on Inter-governmental Relations in Washington, "this is probably the most eventful year since World War II."

Events, some of them precedent-shattering abounded:

North Carolina enacted the largest program of new or increased taxes in its history, including its first tax on cigarettes.

Illinois and Maine introduced income taxes, bringing to 38 the number of states now imposing them.

Connceticut passed the largest tax increase program in its history.

New York raised its sales tax by 1 per cent, meaning that residents of New York City, which already imposed a 3 per cent sales tax, now pay a total of 6 percent in sales taxes.

South Carolina passed its first major tax increases in a decade, and many states raised taxes of such items as beer, liquor, cigarettes, gasoline, rooms and meals in efforts to bolster revenue.

OTHER STATES

Other states that have raised their taxes this year include Alabama, Colorado, Delaware, Maryland, Missouri, Montana, Nevada, New Hampshire, North Dakota, Oklahoma, Rhode Island, South Dakota, Tennessee, Vermont and Wyoming.

Iowans were not subjected to a general tax increase this year. The last big jump in Iowa taxes was in 1967.

In several instances, the revenue debates, continuing and resolved, were marked by acute awareness on the part of legislators than many taxpayers already regard themselves as taxed beyond endurance.

As some officials see it, the public clamors for more services—better schools, better transportation, improved welfare systems, upgraded housing and hospitals—and then squeals with rage at the thought of paying for it.

In Massachusetts, for example, Gov. Francis W. Sargent put before the legislature a tax program designed to raise $90 million. Earlier, he recommended pay rises for the state's 55,000 employees that would total $40 million.

PAY HIKE PROBLEM

But early this month, the legislature enacted a bill, retroactive to Jan. 1, to provide raises that would total $92.5 million, thus consuming all the new revenue the governor had sought and presumably facing him with the prospect of seeking additional taxes or reducing other programs.

The governor recently rejected the pay-rise package and offered a counterproposal calling for $64.7 million in raises retroactive to May 1. Presumably, with $90 million in new revenue in prospect, no other new levies would be needed.

Jack Flannery, the assistant to the Republican governor, says that the problem

illustrated by the pay rise "symbolizes perfectly the financial situation that the governor in particular, and most governors generally, are confronted with."

Flannery continues: "Law-making bodies, representing the people, freely vote money that they are not prepared to produce in the form of revenue programs. Nobody wants to pay the piper, yet everybody wants the piper to keep on playing."

States and localities are paying more for teachers, policemen, for welfare and for construction. And the demands on them are relatively larger, and more immediate, than those on the federal government.

Compounding the states' difficulties is the fact that, for the most part, their revenues do not increase in line with the growth in the economy, authorities say.

Federal revenues rely heavily on income taxes, which quickly reflect and outpace the climb in the gross national product, so the federal government can see its income growing steadily without raising the tax rate.

But state and local taxes are based largely on sales and real estate, values which grow more slowly. So state and city officials are more often forced to raise taxes to attain needed income.

Because of this, federal taxes now take only about 14 per cent of the gross national product against 16 per cent in 1946, Colman estimates. But state and local taxes in that time have risen from 5 per cent to more than 8 per cent of the gross national product.

And an increase in tax rates often leads to voter retribution, Colman, of the advisory commission, said.

"In most political situations, this (tax policy change) sets off a panic signal in the legislative halls and anxiety in politicians' hearts," said one tax authority.

"Citizens have underscored this aversion by defeating candidates for public office who venture to say candidly that higher taxes will be needed to support expenditure programs desired by the electorate," said a recent report by the Advisory Commission in Intergovernmental Relations.

THE NEED FOR THE SURTAX EXTENSION

Mr. COOPER. Mr. President, the Senate Finance Committee has reported favorably to the Senate H.R. 12290, the administration's tax bill.

This bill should be taken up by the Senate before the August recess. It is needed to provide necessary revenues to support the budget. It is needed as a fiscal measure to check our mounting inflation.

I would like to comment first on the importance of this bill as a revenue measure and its relationship to the 1970 budget and, second, on its importance as a means of relieving the inflationary pressures on our economy.

Upon taking office and after reviewing the proposed Johnson budget for fiscal 1970, President Nixon effected a reduction of $2.4 billion in outlays, the net result of $4 billion in cuts of controllable programs and a $1.6 billion upward adjustment in estimates for uncontrollable programs. Even with these reductions, the administration estimated its total outlays in 1970 to be $192.9 billion, some $7.3 billion higher than in 1969. This increase includes the following:

First, $3.4 billion for social security benefit increases;

Second, $2.8 billion for civilian and military pay raises, effective July 1, 1969;

Third, $1 billion increase in interest costs of the public debt; and

Fourth, $1.1 billion public-assistance grants to States, including medicaid and the removal of the aid to dependent familiies.

However, in signing the Second Supplemental Appropriations Act on July 22, the President commented on title IV, the "limitation on fiscal year 1970 budget outlays" section of the bill. That act by Congress limits expenditures in fiscal 1970 to $191.9 billion, $1 billion under the administration's estimated budget, at the same time giving the President authority to adjust the ceiling upward for social security, veterans' pensions, interest, and farm price supports. The President emphasized the need to hold expenditures to the administration's budget estimate of $192.9 billion and noted that since the April 15 estimates were made, he anticipates further increases totaling $2.5 billion in expenditures for uncontrollable items.

In addition, the President commented on the failure of Congress to act on the administration's recommendations for a postal rate increase to be effective July 1, 1969, and recent actions taken by the Congress which would increase expenditures over his 1970 budget and add at least a billion dollars net to Federal spending in 1970. Thus the total anticipated increases on spending would amount to $3.5 billion.

In view of these additions to Federal spending the President stated the policy that his administration would follow:

Given our commitment to hold Federal spending to the April figure of $192.9 billion there is only one course of action open to the Administration, and we are taking it. I am directing the heads of all Departments and agencies to reduce spending in the fiscal year just begun by an additional $3.5 billion, the amount necessary to bring current estimates back in line with the $192.9 billion target figure we set in April.

Mr. President, I ask unanimous consent that the President's statement of July 22 be included in the RECORD at this point:

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY THE PRESIDENT,
JULY 22, 1969

I have today signed into law the final supplemental appropriations bill for the fiscal year ended June 30. In addition to providing budget authority for the federal government's operations last year, the measure removes a restriction that had been placed on federal hiring by the Revenue and Expenditure Control Act of 1968.

Written into the law is another ceiling—on federal spending during the fiscal year 1970, the one we just entered. The ceiling is set at $191.9 billion—one billion dollars below my own expenditure recommendations of last April.

However, the Congress has made this new ceiling somewhat flexible. There are a number of categories in the federal budget—such as medicare, interest on the public debt, social insurance benefits and farm price supports—where costs can rise without new appropriation action. Congress has determined that increases in these items—up to $2 billion—will be exempt from the $191.9 billion ceiling.

There are other items such as military expenditures in Southeast Asia, public assistance, medicaid benefits and veterans benefits, where it is also very difficult to budget a precise figure. Any additional appropriations the Congress votes in these categories—above our 1970 revised budget estimates—will result in an upward adjustment of that $191.9 billion ceiling.

There is another side to the proposal. If, after voting this new lower ceiling, Congress fails to cut the budget to fit under it, the President must take over and finish the job. On the other hand, if Congress should cut the budget below the $191.9 billion—that new lower figure automatically becomes a new ceiling. The latter hypothesis does not appear at this point to be a strong probability.

In making the new ceiling somewhat flexible, the Congress has acted wisely. However, the new ceiling will be of little help in keeping federal spending under control—if the Congress that imposed it does not cooperate actively with the Administration in meeting it.

Last April I presented a revised 1970 budget to the Congress. That budget contained specific reductions totaling $4,000,000,000 from the budget left by the previous Administration. It brought the proposed federal spending figure for this fiscal year down to $192.9 billion, a figure I still believe reflects a responsible fiscal policy in our highly inflationary environment. If we hold the line on that spending figure, as I intend to, and if the requisite revenues are provided, this fiscal year will leave us the kind of budget surplus needed to cool off an economy that was dangerously overheated before we assumed office.

Three months have passed since the Administration's revised budget was sent to the Congress. We are already three weeks into the 1970 fiscal year—and the Congress has not completed its action on a single regular 1970 appropriations bill. It seems apparent that it will not be known until the late fall just how much of a contribution the Congress intends to make toward meeting the spending ceiling Congress itself has imposed.

In the meantime, since April, the budget picture has worsened. We now anticipate further increases of approximately $2.5 billion in expenditure for uncontrollable items in the budget such as interest on the public debt, Medicare, social security, civil service retirement benefits, reduced receipts from off-shore oil leases, public assistance, and veterans' benefits.

Congressional action to date has been inconsistent with a number of my proposals in April. For example, Congress has not acted on my recommendation for a postal rate increase effective July 1. Nor has it terminated the special milk and agriculture conservation programs as I recommended. Instead of reducing aid to schools in impacted areas, it is moving to increase such aid. These, and similar actions, could add at least another billion dollars net to Federal spending in 1970.

Thus our current estimate of fiscal 1970 spending has risen to $196.4 billion even though we in the Administration have done nothing in the way of discretionary action to add to our earlier $192.9 billion estimate.

Given our commitment to hold federal spending to the April figure of $192.9 billion there is only one course of action open to the Administration, and we are taking it. I am directing the heads of all Departments and agencies to reduce spending in the fiscal year just begun by an additional $3.5 billion, the amount necessary to bring current estimates back in line with the $192.9 billion target figure we set in April.

No federal program is above scrutiny. Some highly desirable programs will have to be

stretched out—others reduced. The dollar reductions will be accompanied by a further lowering of the personnel ceilings established last April.

I know Congress shares my determination to make the budget an effective instrument against the inflation that has wrought so much damage to the income and savings of millions of Americans. If Congress did not share that commitment, it would not have imposed this spending ceiling. However, this general expression of support for fiscal restraint must now be matched by specific acts of the Congress.

Congress should also recognize that if it approves further increases above the April Budget estimates, we cannot live within the $192.9 billion figure unless more off-setting cuts are made.

I would prefer that the Congress make these off-setting cuts in programs it considers of lesser priority, when and if it votes increases over my April budget for activities it considers essential. If it does not do so, the duty of making such cuts clearly becomes mine.

Mr. COOPER. Mr. President, these estimates are, of course, based on the assumption that Congress will enact H.R. 12290 which would provide some $9.3 billion in revenues. In his statement to the Senate Finance Committee on July 8, Secretary Kennedy estimated that first, the extension of the surcharge at 10 percent to December 31, 1969, and at 5 percent to June 30, 1970 would yield $7.6 billion in fiscal 1970; second, the postponement for 1 year the reduction in excise taxes on automobiles and telephone services would provide $540 million; third, the repeal of the investment credit tax, would produce a net revenue yield of $1.35 billion; and fourth, the low income allowance would result in a reduction in revenues of $270 million.

What, we may ask, would be the status of the budget if Congress did not enact H.R. 12290?

On a unified budget basis we would shift a projected budget surplus now estimated to be $5.2 billion to a deficit of $4 billion, and increase the projected deficit in the administrative budget from $5.1 billion to a deficit of $14.3 billion. Furthermore, these projected deficits would be increased by the amount of any additional expenditures, excepted from the limitations of the $191.9 billion ceiling contained in Public Law 91–47.

Mr. President, I ask unanimous consent that the statement by Secretary of the Treasury Kennedy, and Director of the Budget Mayo, before the Senate Finance Committee on July 8, in support of H.R. 12290 be included in the RECORD at this point.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT OF THE HONORABLE DAVID M. KENNEDY, SECRETARY OF THE TREASURY, BEFORE THE SENATE FINANCE COMMITTEE, TUESDAY, JULY 8, 1969

Mr. Chairman and members of the Committee, I am grateful for this opportunity to testify in behalf of H.R. 12290—a bill which contains the anti-inflation measures proposed by the President.

Specifically, H.R. 12290 would—

1. extend the surcharge at 10 percent to December 31, 1969, and at 5 percent thereafter to June 30, 1970, producing a revenue yield of $7.6 billion in fiscal year 1970.

2. defer for one year the reduction in the excise taxes on automobiles and on telephone and teletypewriter exchange services, producing a revenue increase of $540 million in fiscal year 1970.

3. repeal the investment credit, producing a revenue increase of $1.35 billion in fiscal year 1970 and more than $3 billion in annual revenue in later years. The House bill incorporates certain transition rules for repeal of the credit, similar generally to those used in the 1966 suspension of the credit, reducing the revenue yield in fiscal year 1970 from the President's recommendation by about $150 million.

In addition, the President had recommended as a part of his initial reform proposals the adoption of the Low Income Allowance to remove the burden of the income tax from persons with incomes below the poverty level and to reduce the tax burden on persons with incomes just above this level.

The Low Income Allowance was incorporated by the House in H.R. 12290 with minor changes, effective January 1, 1970. It involves a revenue reduction of $270 million for fiscal year 1970 and of $625 million for a full year. Since it had been recommended by the President as a reform measure and had been taken into account in revised budget estimates for fiscal year 1970, its insertion in the bill did not affect the revenue estimates.

Mr. Chairman, I submit that the economic case for speedy action on these tax proposals is overwhelming. During 1969 consumer prices—the significant shopping basket indicator—have risen at an annual rate of 6.1 percent and wholesale prices at a rate of 6.3 percent.

It is not necessary to point out to this panel the very real dangers our country faces if inflation is allowed to continue unchecked. Inflation of this magnitude could lead to a serious economic readjustment accompanied by a painful high level of unemployment.

Failure to extend the surcharge would amount to a cut in taxes at a time of accelerating inflation. The consequences of failing to pass this legislation are unthinkable.

Even delay poses serious risks.

Delay contributes to a loss of confidence by our people in the determination of government to bring an orderly halt to inflation.

Delay feeds inflationary expectations and thus makes inflation even more difficult to control.

Delay weakens our balance of payments and foreign confidence in the integrity of the dollar and contributes to unsettled conditions in the international monetary markets.

In view of the clear need to continue the fight against inflation, we must not contemplate delay.

Let me turn to an argument that many raise for opposing this bill. These people feel that passage of the tax surcharge must be linked with tax reform in order to insure enactment of significant reform.

I understand the sense of frustration of those who hold this position. However, we must remember that essentially there are two separate and distinct problems before us. One, the control of inflation, is immediate and urgent. The other, tax reform, is vitally important, highly complex, and requires careful action both by the Congress and the Executive branch.

Linking these two problems may mean that we fail in both of our objectives.

I agree with those who believe the wait for meaningful tax reform has been "too long." But I would point out that the Ways and Means Committee has met in lengthy public hearings and executive sessions to consider tax reforms. On May 27, the Committee announced tentative decisions on tax reform subjects, and the Chairman of the Committee has announced that reform would be before the House prior to the August recess.

Moreover, President Nixon fully supports these efforts and is determined to bring equity to our Federal tax system.

On April 21 the President submitted to the Congress a major tax reform package, including the low income allowance which has become a part of the bill before you. In addition, it contained these broad proposals:

A *limit on tax preferences,* which puts a limit of 50 percent on that portion of a person's income which could enjoy a preferred status, and an *allocation of deductions* proposal preventing double benefits from tax preferences. In addition to these proposals, the President's initial proposals include meaningful reforms dealing with mineral production payments, private foundations, charitable contribution deductions, business income of tax-exempt organizations, tax treatment of corporate securities frequently used by conglomerates, multiple corporate surtax exemptions, stock dividends, dividends out of accelerated depreciation reserves, restricted stock plans, farm losses, multiple trusts, moving expenses, and a number of other important items.

(With the consent of the Committee, I would like to ask that a summary of the Administration's interim tax reform proposals of April 22, 1969 be inserted in the record of the hearings at the conclusion of my statement.)

In that April 21 message, President Nixon said: "Fairness calls for tax reform now; beyond that, the American people need and deserve a simplified Federal tax system, and one that is attuned to the 1970's."

He has repeatedly pledged—and in a letter to the House of Representatives just last week stated again—that he supports and is determined that there shall be significant, meaningful, and fair tax reform.

In addition, House and Senate leaders on both sides of the aisle have pledged to themselves and to their constituents that there will be tax reform this year.

Gentlemen, there is no need to hold up the extension of the tax surcharge pending enactment of tax reform. The commitment to tax reform has been made to the American people, and I pledge to you that this Administration will honor that commitment. I feel confident that the Congress will respond in like spirit. I know that the American people will accept nothing less.

Before concluding, I would like to mention several areas where the House-passed bill differs from the President's recommendations. Then I would be happy to answer any questions you may have about those changes or any other aspect of the legislation.

First, as I noted earlier, the Low Income Allowance recommended by the President as a part of his interim tax reform proposals, has been included in this bill. Action on this measure should be recognized as a commitment to tax reform, and we endorse adding it to this bill on the assumption that reform will be enacted.

Secondly, the transition rules adopted by the House in connection with the repeal of the investment credit will reduce the revenue yield from repeal of the credit by about $150 million in fiscal year 1970 as compared with the rules initially recommended by the Treasury. The transition rules in the bill would allow the credit for certain expenditures after April 18, 1969, even though there was no binding contract on that date. They are, however, generally the same rules adopted in 1966 on suspension of the investment credit to deal with cases in which there is an economic commitment evidenced by expenditures constituting more than half the cost of a facility prior to the cut-off date. There are some extensions of the 1966 rules to cases of generally similar nature. However, any further extension beyond these rules would be a mistake. The binding contract rule and these additional rules provide equitable treatment in the most deserving

cases, and they represent the most reasonable cut-off point.

Finally, the House bill provides that certain capital facilities acquired to reduce air or water pollution may be amortized over five years instead of their normal useful lives. This acceleration of cost recovery will provide an incentive for installation of anti-pollution facilities. While we did not recommend it, it is reasonable if the Committee agrees that such an incentive is justified. However, we have serious reservations about the scope of the House provision, as I will indicate. The provision as contained in the House bill will result in no substantial short-term revenue loss but will result in a long-term revenue loss which will reach $300 to $400 million annually by 1975.

A revenue loss of this magnitude deserves careful scrutiny. We have concluded on further study of the House provision that the five-year amortization provision need not be made available to *new* plants constructed in the future which install anti-pollution control facilities. Technological advances which are occurring in the control of pollution will greatly reduce the burden on industry in designing new plants to meet anti-pollution standards. In these cases, a major tax concession to provide incentive and achieve cost-sharing is not nearly so important as in the case of existing plants where the burden is much clearer.

It is also our conclusion on further study of the provision as passed by the House that it provides too great a benefit to property which has a long useful life. Thus, anti-pollution property qualifying under the bill which has a useful life of 50 years would receive a tax concession equivalent to an investment credit of approximately 20 percent. The rapid amortization provision is intended to replace the investment credit for anti-pollution facilities, but an increased benefit of this magnitude is not warranted. The Treasury therefore proposes that a limitation be placed on the rapid writeoff so that its benefits would be available only for the first 15 years of the life of any property. Thus, property with a 50-year useful life could obtain the benefit of the rapid writeoff for 30 percent of the cost of the facility and use regular depreciation methods for the remaining cost of the property. Such a provision has precedent in the rapid amortization permitted for emergency facilities constructed during World War II.

Finally, the definition of a pollution control facility needs to be tightened so that the rapid amortization provisions will apply only to treatment facilities which are clearly identifiable as serving only anti-pollution purposes. Under the present broad definition, a smokestack or sewer pipe might qualify for the rapid writeoff, even though these facilities would be installed in any event and perform functions other than pollution abatement of the type this tax concession is designed to give special encouragement.

I urge this Committee to take prompt action on this bill. The existing 31-day temporary extension of current withholding rates will expire on July 31. As you know, business payrolls are a complicated matter. An enormous burden would be imposed upon American business—not to speak of the administrative nightmare for the Internal Revenue Service—if they were required to re-program their payroll systems to withhold at tax rates without a surcharge and then were required in a month or so to re-program again to include the surcharge.

STATEMENT OF ROBERT P. MAYO, DIRECTOR OF THE BUREAU OF THE BUDGET, BEFORE THE SENATE FINANCE COMMITTEE ON THE PRESIDENT'S TAX PROGRAM FOR FISCAL YEAR 1970

INTRODUCTION

Mr. Chairman and Members of the Committee: Secretary Kennedy's statement properly emphasizes the urgent need for passage of H.R. 12290 to help bring inflation under control.

Our current economic predicament—characterized by persistent inflation, exceedingly tight money markets, and historically high interest rates—reflects past miscalculations in managing the Nation's economic affairs. These miscalculations set in motion a series of events that produced a pervasive and deeply imbedded inflationary psychology, which makes continued and even increasing inflation a distinct possibly. This situation will not be changed easily. But change it we must. To do so, we need the economic restraint that would be provided by H.R. 12290, together with appropriate monetary restraint and previously announced spending reductions in the budget for fiscal year 1970.

Bringing inflation under control and restoring the economy to a balanced and sustainable rate of economic growth are, together, the primary domestic task of this Administration. We must bring inflation under control to eliminate the distortions that have developed in the economy. We must restore balanced and sustainable economic growth, or the infation will inevitably lead to painful economic consequences.

We can achieve our anti-inflationary objectives only if we maintain a restrictive fiscal policy in the year ahead. The consequences of relying on overly restrictive monetary policy, in the absence of an appropriate fiscal policy, should be clear to us now. The "credit crunch" of the late summer of 1966 forced housing to bear the brunt of economic restraint, but the swift run-up in interest rates during that period reflected more widespread dislocations in financial markets. The economy did not recover quickly from these disruptions. In short, we cannot leave the task of controlling inflation to monetary policy alone because this course compounds the task of achieving balanced and sustainable growth.

LESSONS OF THE RECENT PAST

Movements in the general price level are caused by many things, not the least of which is the Federal fiscal position. The delayed influence of fiscal policy on the behavior of prices during recent years is suggested by Table 1.

TABLE 1.—BUDGET TOTALS AND CHANGES IN THE GNP IMPLICIT DEFLATOR AND THE CONSUMER PRICE INDEX, FISCAL YEARS 1965–70

[Dollar amounts in billions]

Fiscal year	Budget receipts	Budget outlays	Budget surplus or deficit (—)	Percentage change in— GNP implicit deflator	Percentage change in— Consumer price index
1965	$116.8	$118.4	—$1.6	1.8	1.3
1966	130.9	134.7	—3.8	1.9	2.2
1967	149.6	158.4	—8.8	3.1	3.1
1968	153.7	178.9	—25.2	3.4	3.3
1969 (estimate)	186.5	185.6	.9	4.0	4.8
1970 (estimate)	199.2	192.9	6.3	(1)	(1)

[1] Not available.

Outlays for military programs increased sharply after the escalation of our activities in Vietnam in the summer of 1965. This increase was not offset by lower outlays for other programs. Nor was it offset by higher taxes until fiscal year 1969. The budget deficit rose from $1.6 billion in fiscal 1965 to $25.2 billion in fiscal year 1968, stoking an already overheated economy. Excessive demand was generated and price rises became progressively greater.

Modest fiscal restraint was exercised through changes in tax collection regulations, but the primary instrument of restraint was monetary policy. Increasingly restrictive monetary policy produced the credit crunch of 1966, gross inequities in the degree of restraint imposed on the economy, and a fear of "overkill" that led to subsequent errors of judgment.

Legislation imposing fiscal restraint—through an income tax surcharge and expenditure control—was adopted in June 1968, about two years after it was first needed. With it came a shift in expectations both at home and abroad. It was generally anticipated that the U.S. economy would experience a slowing in its rate of growth and that less stringent financial market conditions would result and would permit an easing of monetary policy. For a few weeks these expectations were borne out as interest rates declined. But prices did not slacken their pace. Moreover, in a short time, interest rates turned up again. By the end of the year, it was clear that the economy was still overheated. The fiscal restraint imposed in June of last year was partially offset by a monetary policy that became too accommodating—largely because of the fear of "overkill" and because the strength of the inflationary pressures was underestimated. Monetary policy shifted back toward restraint late in the year. Nevertheless, doubt lingered that fiscal and monetary policymakers meant business about curbing inflation. Consequently, a new surge of inflationary psychology developed. Our task today is difficult primarily because of the depth and strength of this psychology.

We should not be surprised or dismayed by the difficulties we are now having in bringing inflation under control. An extended inflationary period such as we are experiencing engenders expectations of further inflation and, therefore, has a major impact on wage and price setting. It also provides an incentive for not postponing buying for consumption or investment purposes. The resulting continued strong demand helps neutralize the influence of the restraining forces at work in the economy. For this reason, we need time to root out the inflation that has invaded our economy.

We need time and we need coordinated and complementary economic policies:

Continued restraint on demand, which would result from the President's tax program for fiscal year 1970,

Continued vigorous efforts by the Congress and by the Administration to control Federal spending, and

Appropriate monetary restraint.

Each is important in its own right, but none can be fully effective except as part of a coordinated set of policies.

THE BUDGET OUTLOOK

This Administration recognizes that rapid growth of Federal spending has been a major cause of inflation since 1965 and that expenditure control is essential to sound fiscal policy and responsible management of Government activities. Accordingly, soon after taking office, President Nixon directed his agency heads to undertake an intensive review of the January budget of the prior administration.

The Federal budget reflects the Nation's priorities as perceived by the President and by the Congress. At any point in time—and

for at least one year into the future—it consists largely of "uncontrollable" programs, whose levels are determined by existing laws and previous commitments. For this reason, substantial reductions in individual elements of the budget do not often occur from one budget to the next.

President Nixon knew the strength of this momentum in the budget when he took office in January. He did not expect major reductions in the 1969 budget but was determined to begin, with the 1970 budget, the difficult task of bringing Federal outlays under control and of trying to shift the course of Federal programs toward his Administration's objectives. These efforts did not cease when the April 15 Review of the 1970 Budget was published. Indeed, they are being intensified now that we have begun the 1971 budget process.

The intensive review of the January budget was concluded and a report summarizing the results was issued in April. Revised estimates for both 1969 and 1970 were contained in my May 20 testimony before the House Ways and Means Committee on the President's tax program.

Fiscal year 1969

For the year that ended a week ago yesterday, the budget published in January estimated receipts at $186.1 billion and outlays at $183.7 billion, with a surplus of $2.4 billion. Our May 20 estimate indicated receipts of $186.5 billion and outlays of $185.6 billion, reducing the projected surplus to $0.9 billion. Preliminary data on actual receipts and outlays for the year will be published in the *Monthly Treasury Statement* late this month. When those data are published, we expect them to show that both receipts and outlays will be somewhat higher than our May 20 estimates.

Fiscal year 1970

For the fiscal year we have just entered, the January budget estimated receipts to be $198.7 billion and outlays to be $195.3 billion, resulting in a projected surplus of $3.4 billion. On May 20, we estimated that receipts will be $199.2 billion and outlays will be $192.9 billion, with a surplus of $6.3 billion. Of course, a most important influence on the budget will be congressional action.

Receipts

The net increase of $0.5 billion in estimated receipts over the January budget figure—from $198.7 billion to $199.2 billion—results from: (a) a combined increase of $2.5 billion due to higher than anticipated tax yields and economic activity—and accompanying higher prices and wages, (b) a downward revision of $0.4 billion in estimated receipts from corporation income taxes and customs duties, and (c) a net decrease of $1.6 billion due to changes in proposed legislation and the anticipated dates of enactment, largely in proposed employment taxes associated with social security legislation. One of the reasons for being conservative about higher receipts in 1970 is that the January budget contemplated some receipts based on the assumption that the necessary legislation would become effective by June 30. No such legislation has yet cleared the Congress.

Outlays

As our May 20 statement indicated, increases in uncontrollable items raised January budget outlays for 1970 from $195.3 billion to $196.9 billion and budget authority from $210.1 billion to $211.4 billion. However, this Administration's review of the 1970 budget produced reductions in outlays from the corrected January budget totaling $4.0 billion. Budget authority was reduced $5.5 billion.

Since May 20, interest rates have risen even higher and the pace of rising costs under the Medicare program has been more rapid than anticipated. These and similar other factors will probably lift outlays at least $1 billion above the May 20 estimate. To be sure, there will be some offsetting decreases. On the other hand, the net effect of congressional action to date on fiscal year 1970 appropriations requests has been to increase estimated outlays. The House actions are expected to reduce Treasury, Post Office, and Executive Office spending by $36 million and Independent Offices and Housing and Urban Development outlays by $43 million, but to increase Agriculture outlays by $173 million—a net increase of nearly $95 million. Senate actions to date would reduce Treasury, Post Office, and Executive Office outlays by $31 million but increase Agriculture outlays by nearly $570 million—a net increase of nearly $540 million.

There are a number of uncertainties concerning 1970 outlays. These include the fact that congressional decisions on many appropriation requests and on a possible outlay limitation are yet to be made. For now, we are inclined to hold to the $192.9 billion estimate of May 20, but recognizing, for the moment at least, that pressures for higher outlays seem greater than prospects for additional reductions by the Congress.

Indeed, the $192.9 billion outlay estimate is a tight one, despite the fact that it will be about $7 billion higher than 1969 outlays. The $7 billion increase includes:

Social security benefit payment increases of $3.4 billion;

Civilian and military pay raises, effective July 1, 1969, under existing pay comparability legislation of $2.8 billion;

Interest on the public debt, reflecting refinancing at the currently higher rates of interest, amounting to about $1 billion; and

Public assistance grants to States, including Medicaid and the removal of the Aid to Dependent Families program freeze, of $1.1 billion.

The above four items account for more than the $7 billion increase in the total, which means that there is a net reduction for all other programs.

CONCLUSION

Our current economic situation is primarily the product of past decisions. Similarly, the future will be largely the product of what is done now.

It takes time for fiscal policy and monetary policy to take hold. We will need a period of balanced, reduced growth to turn the forces of inflation, for throughout much of the economy, supply factors (labor and material costs) keep pressure on prices for some time after demand pressures ease.

Economic restraint cannot be successful if it is applied only intermittently. This is the lesson of the recent past. We need now a further, gradual slowing of the rate of economic expansion in the months ahead if we are really to bring inflation under control. Failure by the Senate to act favorably and quickly on H.R. 12290 will result in either more inflation or too heavy reliance on monetary restraint—and a loss of confidence by persons at home and abroad in the seriousness of our Government's determination to bring an orderly halt to inflation.

It is crucial in the months ahead that we continue the coordination of monetary and fiscal policy that we have had since the first of this year. Only if a fiscal program is adopted that will keep these policies in concert for the curent fiscal year, are we likely to have a balanced and reasonably even slowing of growth rates across major sectors of the economy.

The question has been raised as to why the President's tax program is necessary in view of the projected budget surplus of $6.3 billion for fiscal year 1970. The answer is that there would be no surplus unless there is an extension of the surcharge, for the extension would produce $7.6 billion in receipts. Without the surcharge extension, we would shift from the surplus we are now running to a deficit—a strongly expansionary move that is clearly not appropriate in the current economic environment. It would also be inappropriate in that it would shift the Federal Government from being a net supplier of funds to being a net demander of funds during the full course of the fiscal year, which would put an additional burden on the Nation's financial markets at a time when they are already under heavy pressure. Thus, the President's tax program will provide the fiscal restraint that is synonymous with responsible economic policy.

This Administration has no desire that the income tax surcharge be extended a day longer than is necessary. The proposed reduction of the surcharge on January 1 is in line with the President's intention to propose complete elimination of the surcharge as soon as military and economic conditions permit.

In our budgetary planning for fiscal year 1971, we will take this intention into account. It will provide a brake on the growth of the budget in that year. The restraint that characterizes the 1970 budget cannot be regarded as transitory. It will also characterize the 1971 budget.

In coming years, the Nation will be facing a whole new set of problems and challenges. In that environment, we will be constantly reevaluating our priorities and reallocating resources. To have a healthy economy growing at a reasonable, sustainable, and noninflationary rate, and to protect the dollar at home and abroad, we must maintain prudent and responsible economic policies. The appropriate first step was taken in the coordination of fiscal and monetary policy toward the end of last year, and the second step was the $4 billion reduction of expenditures in the 1970 budget; the third step should be the passage of the President's tax program, including continuation of the surcharge. Only in this way, can we have a well balanced mix of monetary and fiscal policy.

Failure to adopt the President's tax program runs the risk of boom and bust at home and deterioration of the value of the dollar both here and abroad. Stop-and-go economic policy has never worked in the past—in this country or anywhere else; there is no reason to expect that it would work in the period ahead.

I urge your early support of H.R. 12290 to provide the restraint needed to return the economy to balanced and sustainable noninflationary growth.

Mr. COOPER. Mr. President, some oppose the extension of the surtax, arguing that since the inflationary trend has increased during the first 6 months of 1969 with the surtax in effect and, therefore, any continuation of the surtax could not attain the desired goal of arresting inflation.

The Senate Finance Committee report on H.R. 12290 attributes the slowness of effectiveness of the 1968 surcharge as due, in part, to the easing of monetary policy in the last half of 1968, which offset some of the restricting effects of the surcharge and, in part, to the buildup of inflationary pressures over a long period of time. The committee comments as follows:

1. RESTRAINT OF THE 1968 SURCHARGE

Reasons for slowness of effect.—While in the past the surcharge has exerted a useful restraint on the economy and prices, it is clear that it has not yet exerted the full impact intended at the time it was imposed. In part, this lack of effectiveness was due to the unfortunate easing of monetary policy in the last half of 1968 which offset some of the restraining effect of the surcharge. This policy

was reversed about the first of 1969, however, and should, therefore, no longer deter the effectiveness of the surcharge if it is continued until next June.

In part, the slowness of the effect of the surcharge has been attributable to the extent of the growth of inflationary pressures during the long period before it was possible to obtain sufficient expenditure restraint. These pressures increased the length of the time which otherwise would have elapsed before the effects of fiscal action are generally felt. In the case of the surcharge, the time lag in consumer response has been substantially longer than the one which followed the 1964 tax reduction. The impact of the surcharge was delayed because consumers did not initially reduce their spending as their disposable incomes decreased; instead their first response was to reduce their rate of saving.

Overall, I believe that a large part of these price increases may be due to what has been called an "inflation psychology."

I concur with the statement made by the distinguished chairman of the House Ways and Means Committee (Mr. MILLS) in the House debate on the bill, when he expressed his view that there is an "inflation psychology" prevalent in the country today.

So the American businessman buys today what he thinks he may need tomorrow, but that he will have to pay more for it. That is true of the individual in many respects in supplying all of his own individual needs. That is inflation psychology. I think that has been part of our trouble during the last year—the last half of 1968 and through the first part of 1969. * * * Yes, a lot of it is psychological, but if we do not pass this bill today—say what you want about continuing withholding for 31 days—you will have added oil to the flames of this inflationary psychology. Unfortunately this is a serious part of the total ingredients of our present situation. How serious it is none of us is certain but certainly it is a most important part.

In its report, the Senate Finance Committee makes this same observation:

It may also take time for the public to become convinced that it will work. It appears that we are at the point now where part of the public is convinced that there will be a lessening of price increases in the future and part of the public remains skeptical. If the surcharge is extended and the investment credit repealed, this should not only directly reduce inflationary pressures, but also gradually remove the inflationary psychology, as more and more people become convinced that inflation will be controlled. If workers and businesses do not believe that inflation will be controlled, they can be expected to act in ways that will make inflation far more difficult to control. In the absence of the surcharge extension, their expectations could become a self-fulfilling prophecy. But with extension of the surcharge, the committee is thoroughly convinced that there will be no basis for this inflationary psychology.

One provision of the bill that is designed to check inflation is the repeal of the investment credit tax, which is estimated to produce $1.35 billion in revenue for fiscal 1970, and $2.6 billion in later years.

In 1962, when we passed the investment tax credit, annual expenditures for new plant and equipment were $37.31 billion. In 1968, these expenditures totaled $64.08 billion and are estimated to reach $72.17 billion in 1969. The 1969 estimate indicates an increase over the prior year of 12.6 percent, a tremendous increase.

One consequence has been an excessive demand by the business community for bank funds to finance this expansion in plant and facilities. Since the demand for loans has been far greater than the supply of bank funds available banks have increased the prime interest rate as a mechanism for rationing funds among their customers. On December 2, 1968, the prime interest rate rose from 6 to 6½ percent. By June 10, 1969, the prime rate had risen to 8½ percent, the highest since the Civil War. And there is talk today of further increases. We are all aware of the consequences on all segments of the economy and in particular, on the supply of mortgage money to the housing industry.

With respect to the repeal of the investment credit tax, the House has added an amendment—which was not recommended by the administration—to cushion the economic impact that the repeal would have on the investment by industry in air and water pollution facilities.

In the past, I have supported and introduced bills similar to the House amendment. It would allow the cost of new pollution control facilities to be amortized over a 5-year period. Because these facilities often have a useful life of as much as 20 years or more, the usual depreciation deduction per year is inadequate.

Hearings held by the Public Works Committee, of which I am a member, over the past 6 years have established clearly the need for a financial incentive to industry to acquire and install air and water polution control equipment if the Nation is to make headway in meeting the ever-mounting problems of water and air pollution. I would like to see this particular amendment retained but, at this time, it is more important that the Congress make a decision with respect to the surtax.

I now turn to the present procedural situation in the Senate concerning the scheduling for Senate consideration of H.R. 12290 and a tax reform bill.

The distinguished majority leader (Mr. MANSFIELD) proposed on the floor of the Senate last Friday that the Senate extend the surtax for a 5-month period to November 30, 1969, by attaching this proposal as a Senate amendment to a House passed bill. The administration bill, H.R. 12290, would remain on the Senate Calendar until a tax reform bill is reported by the Senate Finance Committee. The chairman of the Finance Committee (Mr. LONG) has given assurances that a tax reform bill will be reported by the committee to the Senate on or before October 31, 1969. In addition, the proposal would retain April 18, 1969—the date specified in H.R. 12290—as the cutoff date for the repeal of the investment tax credit.

I find myself in agreement with the conclusions reached by the distinguished minority leader (Mr. DIRKSEN), minority members of the Senate Finance Committee, and the Secretary of the Treasury, Mr. Kennedy, when they say that a 5-month extension would not meet our country's fiscal problems and, at the same time, would not dispel the uncertainty among businessmen and all individuals and could create an unmanageable situation with respect to the fiscal 1970 budget. However, because the resolution continuing the withholding of the surtax will expire on Thursday midnight of this week, it may be that we will have no other alternative than to pass a 5-month extension.

I wholeheartedly support tax reform proposals that would provide a more equitable distribution of the tax burden among various categories of taxpayers. In this regard I would like to add that I would hope the committee would also consider ways and methods to simplify the present tax forms so that they may be more readily understood by the taxpayers. I think this one area deserves the committee's attention, and the committee could perform a great service to the American taxpayer by making recommendations for more simplified and more readily understood forms.

The President in a major tax message to Congress on April 21 has made tax reform recommendations and, in addition, the Treasury Department has added further recommendations. The distinguished chairman of the House Ways and Means Committee (Mr. MILLS) and the next ranking majority member of the committee and majority whip (Mr. BOGGS) and the ranking minority member of the committee (Mr. BYRNES) have given their assurances that a tax reform bill would be before the House before the August recess. The committee has taken testimony from over 600 witnesses to date on tax reform proposals. It has been meeting almost daily in executive session and has reached tentative agreement on many difficult and far-reaching amendments to present tax laws. I note that the Ways and Means Committee plans to have its tax reform bill completed by Friday of this week and to bring the bill before the House the following Wednesday, August 6.

I know from mail and from talks with constituents that there is a strong opinion in my State and in the country that our tax laws should be reformed and made more equitable and that Congress must act this year to do so. I have no doubt that Congress will act and act responsibly.

EXTENSION OF AUTHORITY OF THE COMMITTEE ON LABOR AND PUBLIC WELFARE TO INVESTIGATE PROBLEMS OF EDUCATION OF AMERICAN INDIANS

Mr. MONDALE. Mr. President, I am sending to the desk an original Senate resolution unanimously reported from the Committee on Labor and Public Welfare this morning which would extend the authority of the Committee on Labor and Public Welfare to investigate problems of education of American Indians, and ask unanimous consent for its immediate consideration.

I have cleared this matter with the majority and minority leaders and with the distinguished chairman of the Committee on Interior and Insular Affairs (Mr. JACKSON) and the Committee on

Rules and Administration (Mr. JORDAN of North Carolina).

The PRESIDING OFFICER. The resolution will be stated.

Mr. MONDALE. Mr. President, I ask unanimous consent that the reading of the resolution be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

Mr. MONDALE. Mr. President, this resolution will allow the Indian Education Subcommittee an additional 3 months within which to file its final report, and will allow the continued expenditure of the funds for the work of this subcommittee which have been previously authorized. This time is needed so that the Senators on the committee may themselves have the opportunity to fully consider and evaluate the record of hearings which have been held by the subcommittee and to arrive at such recommendations as may be appropriate to bring before the Senate.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 226) was agreed to, as follows:

S. RES. 226

Resolved, That Senate Resolution 80, Ninety-first Congress, approved February 17, 1969, is amended as follows:

(1) In section 2, strike "July 31, 1969" and insert in lieu thereof "November 1, 1969".

(2) In section 3, strike "July 31, 1969" and insert in lieu thereof "November 1, 1969".

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I had expected to be engaged in a colloquy at this time, but events over which I have no control have intervened; so I yield to the distinguished Senator from Colorado, and express the hope that when he completes his remarks, we can get underway.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. ALLOTT. Mr. President, there will be one virtue in my remarks. They will be on the subject which is the matter of debate on the Senate floor, the Safeguard anti-ballistic-missile system.

Mr. President, as with most Senators who are charged with the responsibility of making the final decision regarding the wisdom of deploying an ABM system at this time, I try to follow the debate as closely as I can here on the floor. When other responsibilities have kept me from the floor I read the RECORD of each day's debate with the closest of attention in order to fully inform myself with regard to the progress of the information which is being imparted for the benefit of the Senate, indeed, of the country.

Thus, it was with a great deal of interest that I read the statements contained in the colloquy between the Senator from Arkansas (Mr. FULBRIGHT) and the distinguished chairman of the Armed Services Committee on Friday, July 25, beginning at page 20826 and continuing over to 20827 in the CONGRESSIONAL RECORD. I noticed that the subject was mentioned again in yesterday's RECORD. They alluded to the possible effects of radiation upon radars, electrical communication systems, computers, and their mutual interaction in fulfilling the command and control function for Safeguard.

I believe that the distinguished Senator from Arkansas was referring to the effects of the electromagnetic pulse or, EMP. EMP is created when gamma rays and X-rays from an exploding thermonuclear warhead strike electrons in the air, causing them to rapidly move away from the burst. The overall effect is somewhat like that caused by a flow of electrons accelerating in only one direction.

I should like to point out that this phenomenon is not unique to the ABM. It is, in fact, probably much more relevant to offensive ICBM's and it relies on the same basic mechanism by which the Spartan missile neutralizes incoming warheads.

For many years the effects of radiation on missile systems have been openly discussed in the technical and nontechnical literature. For instance, the January 2, 1967 issue of Technology Week states:

> Growing concern over the vulnerability of U.S. missiles to X-rays from nuclear warheads of anti-missile missiles is leading to new specifications for ICBM guidance systems.

The May 26, 1967 issue of Time magazine stated:

> Nearly 80% of the energy released by the explosion of the new warheads, believed to be in the one-megaton range, is in the form of high-energy X-rays.

This article continues:

> Even if the shock wave fails to set off the warhead's conventional explosive, it can damage electronic components or cause sufficient changes in the critical shape of internal cavities within the warhead to prevent a nuclear explosion.

In addition to these radiation effects which are now well known, weapons designers recognized some time ago that they had to contend with the EMP phenomenon. Although EMP has not received the notoriety that has been accorded to X-rays, neutrons, and some other effects of thermonuclear explosions, it is extremely important. In its issue dated November 29, 1968, Time magazine stated further:

> EMP produces powerful currents in any electrical conductor it crosses . . . these induced currents are strong enough to blow fuses or melt wiring and other metallic components in ground installations and aircraft. They would probably have the same effect on the missile and guidance firing systems.

This article goes on to point out that electronic defenses and offensive missiles are susceptible to EMP.

Mr. President, I believe the Senator from Arkansas referred to the fact that under the Nuclear Test Ban Treaty, "it is not easy to conduct a nuclear explosion in the air to test its effect upon communications."

This is manifestly apparent, of course. As Senators will recall prior to the ratification of the nuclear Test Ban Treaty the Russians detonated their so-called superbomb with a yield in the neighborhood of 100 megatons. The argument was made then, not without a great deal of merit, I believe, that the United States should postpone ratification of the Test Ban Treaty until this country has had a chance to detonate a similar high-yield nuclear device. Such a detonation was suggested merely for the purpose of studying the myriad phenomena of such a high-yield nuclear explosion, including, of course, the EMP phenomenon.

Those Senators who argued against such a postponement carried the day, the treaty was ratified, and the United States has since been precluded from studying the radiation and EMP effects in an atmospheric environment.

Thus, Mr. President, it is not inconceivable to this Senator that the Russians may have learned a great deal more than we now know with regard to this EMP problem. It must be pointed out, of course, that our Minuteman sites and ICBM forces in their present silos depend on communications systems which were developed and tested 10 years ago, long before the EMP phenomenon was clearly understood. Perhaps this is not the case, but if it is a matter which is of an unclassified nature, I would like to have the Senate informed on this question. But, clearly the EMP problem raises some serious questions with regard to our assured second-strike capability.

Recognizing this danger to our missiles, the United States has developed large machines in order to realistically simulate the phenomena induced by electromagnetic radiation. It is well known from unclassified sources that the Defense Atomic Support Agency—DASA—views this as a critical problem about which more information is needed.

In summary, EMP is undoubtedly an important problem. It is not a new one; it is not one which has suddenly appeared with the ABM. It is probably most important, however, in its potential to degrade the second-strike capability of our offensive, land-based ICBM's. This is because many of our offensive missiles were deployed before the full importance of EMP was recognized and because there are many more offensive missiles than planned defensive ABM's. Last year Senator HENRY JACKSON stated that despite 5 years of research, EMP still poses a serious problem to the Nation's communications, radar, and the missile systems. I believe this, rather than mitigating

against ABM deployment, furnishes additional reasons for approval of Safeguard. Safeguard gives the defense one more option in keeping a credible second-strike capability, by providing one more way of protecting our missile sites from the EMP produced by thermonuclear explosions.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I understand that the distinguished Senator from New York (Mr. JAVITS) desires to speak for not to exceed 2 or 3 minutes.

PETITION FROM AD HOC COMMITTEE OF NEW YORKERS AGAINST ABM

Mr. JAVITS. Mr. President, there was presented to me today by Representative REID, of Westchester County, N.Y., and by Representative BINGHAM, of Bronx County, N.Y., a petition signed by 10,000 individuals throughout the State of New York, expressing from the depths of their being their conviction on the deployment of the anti-ballistic-missile system. It is so spontaneous a movement, so individual in its character and so profound in its conviction, that I wish to call it to the attention of the Senate. The petition, which is signed by these thousands of individuals, reads as follows:

> We the undersigned citizens, protest the Administration's recent decision to deploy an Anti-Ballistic Missile System for the following reasons:
>
> 1. Such deployment would waste many billions of dollars of the taxpayers money;
>
> 2. The ABM system is of unproven effectiveness. Most scientific testimony indicates that it probably would not work;
>
> 3. Deployment of the ABM would accelerate the nuclear arms race;
>
> 4. Deployment of the ABM would seriously endanger nuclear disarmament talks between the United States and Russia.
>
> We urge the Congress to take appropriate measures to insure that this unfortunate decision is not implemented.

The petition, signed with the names and addresses of 10,000 persons from all over the State of New York, was gathered by a highly responsible committee. Any Senator is invited to examine the petition.

Mr. GORE. Mr. President, will the Senator yield.

Mr. JAVITS. I yield.

Mr. GORE. Mr. President, I have not had the pleasure of examining the petition. It is indeed voluminous. The voice, through the signature of 10,000 citizens of the State of New York, is eloquent indeed.

I note that the petition expresses doubt as to the workability of the ABM, even if deployed and even if needed. Would not the senior Senator from New York agree that in the event that it should become necessary to detonate ABM's in an attempt to defend against incoming nuclear missiles, it would indicate our policy of deterrence would have already failed?

Mr. JAVITS. The Senator is correct. I think that is the deep feeling from their hearts that these thousands have expressed.

Mr. GORE. So the question of its workability, however fraught with doubt that is, is a secondary matter indeed. The real question for the country is what action it can take that would most likely lead to an agreement on nuclear arms limitation. This is true, because the only measure of security between the two major nuclear powers, each possessing the power to destroy the other, is the avoidance of nuclear war.

So the first question is whether ABM is necessary, whether it will contribute to an arms limitation agreement, or, conversely, whether it will interfere, hinder, make more difficult the achievement of an arms limitation.

Mr. JAVITS. I agree with the Senator.

Without imposing on the time so graciously granted by the Senator from Montana, I only say that this does not inhere in what the parties may momentarily think they will do. They will do a lot more if we do not deploy than if we do.

AMENDMENT OF FEDERAL AVIATION ACT OF 1958, AS AMENDED

Mr. MANSFIELD. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on S. 1373.

The PRESIDING OFFICER laid before the Senate the amendment of the House of Representatives to the bill (S. 1373) to amend the Federal Aviation Act of 1958, as amended, and for other purposes, which was to strike out all after the enacting clause, and insert:

That the Federal Aviation Act of 1958, as amended, is further amended as follows:

SECTION 1. Section 407(b) (49 U.S.C. 1377 (b)) is amended by adding the following additional sentence: "Any person owning, beneficially or as trustee, more than 5 per centum of any class of the capital stock or capital, as the case may be, of an air carrier shall submit annually, and at such other times as the Board may require, a description of the shares of stock or other interest owned by such person, and the amount thereof.".

SEC. 2. Section 408 (49 U.S.C. 1378) is amended by striking subsection 408(a)(5) in its entirety, and inserting in lieu thereof the following:

"(5) For any air carrier or person controlling an air carrier, any other common carrier, or any person engaged in any other phase of aeronautics, or any other person, to acquire control of any air carrier in any manner whatsoever: *Provided*, That the Board may by order exempt any such acquisition of a noncertificated air carrier from this requirement to the extent and for such periods as may be in the public interest;".

SEC. 3. (a) Section 408 is further amended by deleting the first sentence of subsection 408(b) and substituting in lieu thereof the following: "Any person seeking approval of a consolidation, merger, purchase, lease, operating contract, or acquisition of control, specified in subsection (a) of this section, shall present an application to the Board, and thereupon the Board shall notify the persons involved in the consolidation, merger, purchase, lease, operating contract, or acquisition of control, other persons known to have a substantial interest in the proceeding, and the Attorney General of the time and place of a public hearing."

(b) Section 408 is further amended by inserting in the third proviso of subsection 408(b) after the words "determines that no person disclosing a substantial interest" the following: "or the Attorney General".

SEC. 4. (a) Section 408 is further amended by adding the following new subsection 408 (f):

"Presumption of control

"(f) For the purposes of this section, any person owning beneficially 10 per centum or more of any class of the capital stock or capital of an air carrier shall be presumed to be in control of such air carrier unless the Board finds otherwise."

(b) That portion of the table of contents contained in the first section of the Federal Aviation Act of 1958 which appears under the heading "SEC. 408. Consolidation, merger, and acquisition of control." is amended by adding at the end thereof the following: "(f) Presumption of control."

SEC. 5. The provisions of this Act shall take effect on the date of the enactment of this Act.

Mr. MANSFIELD. I move that the Senate disagree to the amendment of the House to S. 1373, a bill to amend the Federal Aviation Act of 1958, and ask for a conference on the disagreeing votes of the two Houses, and that the Chair be authorized to appoint conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. MAGNUSON, Mr. CANNON, Mr. HART, Mr. COTTON, and Mr. PROUTY conferees on the part of the Senate.

EXTENSION OF THE SURTAX

Mr. MANSFIELD. Mr. President, today I was fortunate enough to have the opportunity to discuss on the telephone the situation in which the Senate, and I believe Congress, finds itself in relation to the extension of the surtax and its connection with meaningful tax reform.

I discussed possibilities with the Vice President this morning. I discussed possibilities later with the distinguished minority leader. Shortly after the Senate convened, I met, in the office of the Vice President, with the Vice President, the minority leader, and the distinguished senior Senator from Delaware (Mr. WILLIAMS). At that time they discussed the possibility—and these discussions were most friendly—of a 15-day extension of the withholding section of the surtax bill.

I stated that, in view of the action taken by the policy committee in conjunction with the Democratic members of the Committee on Finance, it was my opinion that the response would be negative so far as that joint membership was concerned. However, I did state that I would be most happy to call the policy committee together, with the chairman of the Committee on Finance and the Democratic members of that committee, to lay before them the questions which had been raised in the various conferences today and to find out what their judgment would be. I promised that once I found out what their judgment would

be, what their position was, I would notify the Vice President, the minority leader, and the senior Senator from Delaware.

So, at the conclusion of that meeting, which unanimously, without exception, agreed to hold fast to the stipulation which was unanimously agreed to on Thursday last, I dispatched a copy of the minutes of the meeting to the three members mentioned.

At the same time I sent a letter to my beloved friend the distinguished Senator from Illinois, the minority leader, which accompanied the statement which I made at that time. The letter reads as follows:

JULY 29, 1969.

Hon. EVERETT M. DIRKSEN,
Minority Leader, U.S. Senate, Washington, D.C.

DEAR EV: In an attempt to carry out my promise at our meeting this morning in the Vice President's office, I am sending this statement to you, the Vice President, and Senator Williams so that, if you desire, you can discuss it with your colleagues.

I have been instructed by the Policy-Finance Committee to make a public statement on this situation today. I will not do so, however, until you have completed your discussion and are on the floor.

With best personal wishes, I am,

Sincerely yours,

MIKE MANSFIELD.

Copies to: the Vice President; Senator JOHN J. WILLIAMS.

Mr. President, that is all I have to say, except that to keep the RECORD straight I shall ask unanimous consent that a copy of the statement which was delivered to the Vice President, the minority leader, and the Senator from Delaware (Mr. WILLIAMS) be printed in the RECORD.

Mr. President, I will read the statement. I had thought it was distributed. This is the unanimous finding of the policy-finance committee at its meeting today.

STATEMENT OF SENATOR MIKE MANSFIELD

The Democratic Policy Committee met with the Democratic members of the Finance Committee today. The joint membership agreed unanimously that a further 15-day extension of the withholding rates would not meet the problem of surtax-extension. Rather it would serve only to postpone a decision and create an unnecessary pall of uncertainty.

The group agreed further that the previous offer to the minority to support an extension of the surtax until November 30, 1969 on a separate House-passed bill—with the understanding that the general tax reform measure would be reported by October 31—should be renewed as offering the best prospect of passing a surtax-extension and still meeting the public demand for the removal of the inequities in the present tax structure.

The Democratic Policy Committee-Finance Committee group agreed unanimously to renew the effort to secure a five-months extension of the surtax provided, of course, that the approach receives the accord of the Administration and the minority leadership. This endorsement seems necessary to preclude the offering of extraneous amendments to the House-passed bill which would be used as a vehicle for effecting the extension of the surtax until November 30.

If the Administration and the Minority Leadership give the word on the acceptability of the compromise, the Leadership is prepared to move today—in an effort to bring the surtax extension before the Senate for prompt disposition. I would hope for the assistance of the distinguished Minority Leader and the ranking Republic member of the Finance Committee on this urgent and difficult matter.

The House-passed bill, H.R. 9951, which is on the calendar would provide the vehicle. The controversial amendment in this bill dealing with foundations would be removed—as per the earlier offer of Senator Williams—since this matter is being considered in the general tax reform package. The extension of the surtax—and nothing more—would be offered as a substitute for that committee amendment.

Without clearance all around, it is difficult to say how an extension of the surtax can be brought about at this time.

Mr. DIRKSEN. Mr. President, what the distinguished majority leader has said is quite correct.

It was on Thursday last, after meeting with the majority policy committee, that a statement had been prepared, but there was such a surge of newspaper, television, and radio people in the corridor at the time that the majority leader could not well make his way over to my office, and so he telephoned and delivered the statement that had been prepared. It was of sufficient moment I thought for me to convene the minority members of the Committee on Finance and, likewise, the Secretary of the Treasury because it contained two distinct proposals: One proposal dealt with the surtax, and the other proposal dealt with the investment tax credit. It dealt with the latter in rather meticulous detail so as to nail down the date and the circumstances so that there would be a full understanding as to what the majority policy committee had in mind. It contained also language about acceptability by the administration and by the minority leadership.

Before we finished our deliberation of the matter it was well into the evening, and so there was nothing more to be done that day. We did have some further discussion of the matter on Friday in one place or another, as I recall, but off and on I have been rather pursuing this matter, because I saw the uncertainty that was developing in the commercial channels of the country, and in the industries of the country, and I thought surely we cannot permit an impasse to prevent us from getting something done on this very vital matter. After all, on an annual basis, there is involved in that surtax something over $7.5 billion, and that is a lot of revenue under any circumstance. I thought, "How, then, do we get this thing done?"

I had occasion to speak with the distinguished majority leader about the prospect of intercepting the House bill when it was messaged to the Senate. The bill I refer to is the one that would extend the time for the withholding tables for a period of 15 days.

They undertook to call up that bill in the House yesterday. However, there was objection and the leadership found it necessary to go to the Rules Committee for a rule. I made inquiry. They said it would be the customary rule for 1 hour and they would probably ask for an hour's discussion on the resolution. Evidently they did not try to bring up the matter today, as I recall, so nothing will be done about the withholding table or the resolution relating thereto until tomorrow.

However, in the first sentence of this new resolution which came to light today the majority policy committee and the majority members of the Committee on Finance deal with this whole matter. As the majority leader has so well said, I called this morning and I know the Vice President called him; and at an appropriate moment we met in the office of the Vice President. There we had a discussion, and the Vice President raised the hope that they could convene the majority policy committee again and have a further discussion of this whole matter. The majority leader graciously agreed, and at about noontime or a little thereafter I noticed that members of the Committee on Finance were going into his office. So I assumed that the meeting was in progress about that time. This was the regular day for the minority to have its policy luncheon, attended by evey minority Senator. In the course of the luncheon meeting this noon, the majority leader was kind enough to send me the note that he read and a copy of the statement that was uttered with the approval of this joint committee, the Committee on Finance, and the Democratic policy committee.

Now, in the first paragraph there is this recital:

The Democratic Policy Committee met with the Democratic members of the Finance Committee today. The joint membership agreed unanimously that a further 15-day extension of the withholding rates would not meet the problem of surtax-extension. Rather it would serve only to postpone a decision and create an unnecessary pall of uncertainty.

In view of that estimate of what that 15-day bill would do—I thought I read that reasonably and fairly—that no action would be taken, that we could not intercept the bill when it came over and try to get immediate consideration, which I knew ran the hazard of an objection and, thereafter, it would have to go to the calendar. The majority leader contended that, properly speaking, it should go to the Finance Committee.

Certainly, I have no quarrel with that viewpoint, because that is what committees are for. When a matter that comes within the purview of their jurisdiction is sent here, it is quite the customary thing to send it to committee.

But I thought this sounded something of a death knell for that 15-day extension because of the general opinion uttered here that it would create an unnecessary pall of uncertainty.

The new statement deals only with the surtax extension. At first, it was proposed, on last Thursday, to have an extension until the 31st of October. That has been modified, and in the statement it would be an extension to the 30th of November. There is phraseology here that has given me some difficulty——

Mr. MANSFIELD. Will the Senator from Illinois yield right there?

Mr. DIRKSEN. I yield.

Mr. MANSFIELD. There has been no change, may I say most respectfully, in the date. Last Thursday it was November 30, and it still is.

Mr. DIRKSEN. The Senator is correct.

Mr. President, here is the language that offers difficulty:

If the administration and the minority leadership give the word on the acceptability of the compromise, the leadership is prepared to move without delay. It is prepared to move today.

I did not finish pointing out that in the earlier statement of last week, they did deal with the so-called investment tax credit. That, however, does not appear in today's statement. This deals only with keeping the surtax alive until the 30th of November.

Mr. President, I cannot arrogate to myself the authority actually to speak for the administration. The President must do that and, momentarily, he is out of the country. I did summon for our meeting today the Secretary of the Treasury, the Director of the Bureau of the Budget, and some White House staff; but, frankly, I presume they would have difficulty in speaking for the administration, also.

Now, a query: Could we get the President on the telephone and would that be the appropriate thing to do?

I had hoped that perhaps the whole matter could wait until the President returned; but, unfortunately, we are up against a deadline, not only with respect to the extension of the surtax tables, but also on a deadline so far as the surtax itself is concerned.

Obviously, there are only days available to us before some kind of action might be contrived. Consequently, I felt in duty bound, when the majority leader indicated that he would like, in fact, for me to indicate to him what the situation was, to be frank to say to him that actually I could not speak for the leadership.

If we formalize the leadership, it consists of five members of the minority. Well, I have not talked to them and, consequently, I could not feel that I should speak to them, not if there was one dissident viewpoint. Thus, I could not comply with that request of the minority leadership. I can speak for one member of that leadership, and no more.

I have some views that were not actually consonant with some views I have heard expressed today, nor can I speak for the administration. That was the reason for summoning those identified with the executive branch for whatever kind of statement they might be able to make.

Accordingly, under those circumstances, Mr. President, I cannot say that the proposal is rejected. I cannot say that it is accepted, because I am in a slightly awkward position and not quite able to say exactly that.

So that it would be pursuant to and also responsive to the very language of this statement from the joint committee that I explain the whole story.

I might add to it that, in my book, this is such an important thing, one cannot fail to consider what is happening in the markets today, the uncertainty in business and elsewhere, without feeling that it is that uncertainty that, somehow, beclouds business judgment. We see it in the trade markets and in the press: Exactly what is Congress going to do?

I had, of course, hoped if we could have done this for 6 months, it would seem a little more reasonable. One month may not seem so much. However, if we are dealing on a fiscal year basis, it takes us to the end of the first 6-month period. If we are dealing on a calendar year basis, it takes us to the end of the calendar year. It brings us up to the time when business begins to make its purchase plans, when it begins its inventories and when it determines the models and so many other things. So that the impact of taxes is so important in every one of those economic decisions which are made.

That is why, in my judgment, this is so extremely vital. I had hoped that it would come to certainly a better end than what appears at the moment.

So, now what happens at the other end of the Capitol, I cannot say.

Obviously, this must come to their attention and it could readily have some impact on how they feel about going ahead with that 15-day extension.

That was all that was involved this morning at the meeting in the Vice President's Office; namely, how quickly to get that 15-day extension, because there would be some maneuvering room and we could take a further look in the hope that out of sweet reason we might come to a satisfactory conclusion.

Mr. MANSFIELD. Mr. President, I can find very little fault with what the distinguished minority leader has said today and on previous occasions.

He has been most gracious and most considerate. He has tried to keep the door open and do what he could, and, based on the limits of his responsibility and authority, to bring this matter to a head.

All I can say, Mr. President, is that today's offer—that we are prepared to move without delay in an effort to bring the surtax extension before the Senate for prompt disposition—applies not only today, but it applies to tomorrow and it applies to Thursday. If it is necessary to call the President—and I understand that that has been done since he has left the country—to discuss matters of prime interest—no pun intended—I think that is the way it will have to be, that is the way it must be.

But I want to say on the part of the Democratic membership of this body—and I think I can speak for practically all of them—what we want to do is to extend the hand of accommodation to the President of the United States. We think that by extending this provision for 5 months, we are helping the President, getting out of a deadlock, living up to our responsibilities, and laying the groundwork for a tax reform bill, as well as a full 12-month surtax extension, with all its attributes, being considered in plenty of time.

That, I think, is a gesture which I hope would not be misinterpreted, because I have said this before—I will say it again—there is no politics involved in this accommodation, but I realize that politics will be charged and alleged. And that is the way it is. That is the way you have to go. There is nothing personal in this accommodation, and that statement I am sure will not be disagreed with.

As far as the Senator from Montana is concerned, there is nothing in the way of prestige connected with it. As I have said many times before, I could not care less about such things. But it is an honest attempt to try to reach an accommodation.

I want to thank the distinguished minority leader for the strenuous efforts he has made in this area. I want to thank the distinguished Senator from Delaware (Mr. WILLIAMS), the ranking minority member of the Finance Committee, for the strenuous and honest and respectable efforts he has made to try to reach an accommodation. All I can say is that what I have stated today bears the imprint of the approval of all the Democratic members of the Finance Committee and all the members of the Democratic policy committee.

I would hope that a solution to this matter could be found shortly, because, if nothing is done by midnight Thursday, it is a new ball game; and if something is attempted after that time, my guess would be that it would be very, very difficult to revive the surtax at that time.

It is a situation in which I can well understand the dilemma in which the distinguished minority leader finds himself. I may point out that we are in a dilemma as well.

But again I want to say to whoever calls the President of the United States and explains this situation to him that, let it be clear to the President that as far as the loyal opposition is concerned, we are extending the hand of accommodation. We think we are acting responsibly. We are quite sure that if this accommodation is accepted, the matter of surtax extension and tax reform of a meaningful nature will be complied with, in our opinion, in plently of time before the 30th of November.

Mr. LONG. Mr. President, the Senator from Louisiana has done the best he could, to bring together honorable men of differing opinions.

It took some time for us on the Finance Committee to understand what those on the policy committee had in mind. At one point the Senator from Louisiana undertook to invite the policy committee to meet with the Finance Committee so we could discuss the matter and see if we could reach some agreement as to just exactly what both groups were attempting to do and to see if there could be some kind of agreement as to procedure and also whether there was some condition as to what the committee was expected to do if the bill was to be called up.

The majority leader felt—and I am now convinced quite properly—that it would not be proper for the policy committee to sit with the Finance Committee, because the policy committee spoke for Democrats and did not speak for Republicans. He was quite willing to have the policy committee sit with the Democrats on the Finance Committee and discuss their position, because the policy committee represented Democrats. Accordingly, we did that, and we were able to come to an agreement as to the procedure that we thought would be appropriate to meet the conditions of all concerned.

Unfortunately, before we could do that,

a motion was made in the committee to report the surtax extension bill and the admendments to it precisely as it passed the House of Representatives. Two Democrats voted with seven Republicans, and it was voted out 9 to 8.

Since that time it was made clear that the leadership did not propose to call up that measure until we were in a position to vote on a rather sweeping type of tax reform bill, the type of measure which is being considered in the House of Representatives.

It was the point of view of the leadership that they were perfectly willing to move a measure which could carry an amendment to extend the surtax, which is the really unpopular provision in that bill, as far as October 31.

After we met, the majority leader was willing to go the extra mile, at my urging, to suggest that the date be November 30, and that we should have until October 31 to report out of committee our recommendations on reform.

As a practical matter, if I were trying to look after the President's business on the floor, I would look at the bill and say, "Here is a bill for $10 billion and the Democrats are offering us $4.9 billion on the surtax extension. They are telling us that they will help us get the other $1.3 billion on the investment tax credit by repealing that provision, and they are reserving judgment with regard to about $3 billion which will expire unless they are accorded the opportunity to vote on their amendments and have the kind of reform package that might be voted on by the committee or as sent by the House of Representatives."

As a practical matter, if this suggested compromise is agreed on, looking at it in terms of revenue, the administration will get nearly two-thirds of what it is asking for, as temporary matters, which is a generous offering the Democrats make when they insist on having an opportunity to offer their amendments and have an opportunity to vote on the reforms offered by the House of Representatives to the Senate.

If one expects those who take the view that there must be some consideration of tax reform, in connection with the surtax extension bill, to go any further than that, it seems to me it is unreasonable. The administration is getting more than half of what it would like to have as a part of this proposed compromise.

As one who has tried to help this administration get the revenue necessary to balance the budget and to stabilize the economy, it seems to me Members on this side of the aisle are asked to go as far as they can be expected to do to help the administration act responsibly, unless they are to prejudice their chance to prevail upon reform proposals.

If the 15-day extension took place, what bothers me is that in 15 days we certainly could not give due consideration to all the legislative representations made by the House. I have not even tried to understand them, feeling it would be well to wait until we got them here and had an opportunity to let people testify on them.

But the Senate wants to vote on that; at least the Democratic majority in the Senate wants to vote on those recommendations, and they do not want to let the administration get all its revenue bills through, to have its fiscal house completely in order, without having a chance to vote on the amendments Senators want.

That is not limited to this side of the aisle, to the Senator from Tennessee, or to any other Senator. As far as I am concerned, I have felt that the biggest loophole in the tax law at this point is the investment tax credit. It is my understanding that the Senator from Delaware has felt the same way. The Senator from Delaware, the Senator from Tennessee, and I would have joined to move for the repeal of the investment tax credit on the first big revenue bill that came to us.

The President foresaw that, and recommended its repeal himself, which I think was a very wise thing for him to do. The Senate Finance Committee has voted to do it. The Democratic policy committee, almost unanimously, with the votes of all committee members except one, went on record as favoring repeal of the investment tax credit, as did the House of Representatives.

So we are pretty much united as to everything except one thing: What are we going to do with the surtax as of November 30?

It would seem to me that the wisest thing to do and the best way to proceed to give the Government the revenue it needs would be to extend the surtax until November 30, and by that time we would expect to have a comprehensive revenue bill before the Senate—in fact, a month before that time—on which the Senate could work its will.

I think the leadership has gone about as far as it could be expected to go. It would seem to me that if the majority leader would make an effort to work this thing out with the minority leader, they could work something out within the general area on which there is agreement. It would seem to me further to serve no purpose at all to have a 15-day extension. What would that accomplish, except to make it necessary to ask for another extension? The House of Representatives did not want a 92-day extension, or a 60-day extension; they wanted only a 31-day extension. We gave them that. Now I would propose that, responsibly, we ask them for such time as we would require to act responsibly on a measure such as the Senate desires. That is only fair. It is difficult for me to understand how those statesmen in the House of Representatives can ask us for such time as they require, and then deny us 50 percent as much time as they have spent working on a revenue bill. That is about par for the course; we usually take half the time they take, but it does pose for us somewhat of a difficult task to have them send us a bill and expect us to make it law the day after they send it to us.

If they take 8 months on a bill, it would seem to me that the Senate would be entitled to take 4; or if they take 6 months, that the Senate would be entitled to 3. But for us to take their bill, on which they have spent 7 or 8 months, and when, in many instances, they wrote the bill after they had concluded their hearings, so no one had a chance to be heard on their ideas at all, and be asked to pass it the day after it gets here, is asking too much. It is also asking too much to ask us to do it in 15 days.

I have tried to be accommodating to the majority leader, the minority leader, the majority on the committee, and the minority on the committee; and if this suggested compromise, which the Democratic policy committee has proposed is accepted, no one will be denied the opportunity to be heard, we will provide the Government with the revenue it needs, and everyone will have a chance for a vote on his proposal.

If Senators want to have their amendments considered, if they can obtain a majority vote in connection with some legislation which the President feels some need to sign, they can do so. I do not think he can ask the Democrats who insist on tax reforms to go any farther than they have gone. So I would very much hope that a compromise can be worked out along the lines that have been suggested here.

Mr. WILLIAMS of Delaware. Mr. President, I appreciate the position of the majority leader, who is speaking for the Democratic policy committee, and as much as anyone else would I like to work out some agreement whereby we could proceed. But many of us, including the chairman of the committee, felt that an important part of this package was the repeal of the investment tax credit.

In all of the arguments that we heard in the testimony before our committee the testimony was that this investment credit was subsidizing the expansion of industry at a time when we did not need new plant capacity. It represents on an annual basis about a $3 billion subsidy for American industry, something which we as a committee felt was not desirable. As I recall the vote it was practically unanimous; there may have been one or two votes against the repeal of the investment credit, but I think it was nearly unanimous, as I believe the chairman will bear me out.

We felt this was a vital part of the measure in order to combat inflation at this time, because the repeal of this 7-percent investment credit has the double objective not only to repeal a $3 billion unwarranted subsidy for American industry, which we felt at this time was not justified in the light of the revenue condition of the Government, but also to stop encouraging expansion of plant capacity at a time when we do not need it. It puts an added drain on the financial markets to finance that new capacity at a time when money is short, thereby contributing to pushing interest rates still higher, and its retention places an added drain on materials, supplies, labor, and so forth, at a time when our economy is already overheated. Many of us are of the opinion and feel very strongly that the repeal of this investment credit is an important part of any inflation control package.

Yet at the same time I respect the position of the majority Members who want to make sure that we are going to get some meaningful tax reform later, and I am just as anxious on that point and have been working for a major re-

form of our tax laws as long as any other Senator. But I think there is a way that this objective can be met and satisfy both sides.

There is in the surtax extension bill that came over from the House of Representatives the proposed extension of excise taxes on telephones and automobiles, which represents, as I recall it, around $2.5 billion to $3 billion additional revenue. These do not expire until December 31, 1969, but they were to be extended another year. Certainly those excise taxes are an important part of the administration's package. To my knowledge there is not a single member of the committee who opposed the extension of those excise taxes, and they do not expire until December 31; but they will have to be acted upon prior to December 31.

Why could we not defer action on those excise taxes and leave them on the calendar? They would be a hostage, so to speak, something that the administration would be vitally interested in, with action on their extension to be acted on as a part of the major tax reform bill. Thus, we could proceed now to act on the surtax extension and the repeal of the investment credit. If we could reach such an agreement I would agree to withdraw the foundation amendment which I have on the bill now on the Senate Calendar, which is somewhat controversial—although it is not controversial as I examine it—and make that a part of the reform bill, to be acted on at a later date. That would give us a clean bill before the Senate that deals only with the accelerated payments on the withholding taxes, and I would be willing, as one Member and speaking only for myself, to enter in advance into a unanimous-consent agreement that when that bill was made the pending business it would be subject to only those amendments dealing with the question of extension of the surtax and the repeal of the investment tax credit, with the further understanding that no amendment relating to any other subject would be germane; that would give us a chance to work our will on these two proposals together. Then, if it is the will of the Senate to extend the surtax for 1 year, 6 months, 5 months, or 3 months, that could be worked out by rollcall votes in the Senate.

At the same time, the Senate would be taking final action on the repeal or nonrepeal of the 7-percent investment credit.

By this advance unanimous-consent agreement, the Senate leadership would be sure there would be no nongermane amendments other than those two subjects dealt with on that bill. I would be willing to enter into such an arrangement and I think this could be an area of agreement.

I do think, though, that those of us who do feel very strongly that this surcharge should be extended a little longer than the 5-month period should have the right to vote on it. I am perfectly willing to abide by the decision of the Senate. I might state that, as the majority leader knows, it is not unanimous on our side of the aisle either as to whether it should be extended the full year or whether it should be extended at all.

At the same time the Senate would be extended the privilege of voting and deciding the question as to whether the 7-percent investment credit will or will not be repealed and if repealed what exemptions will be made. In that manner American taxpayers would be in a position to make their plans with the knowledge of what the law would provide.

I am not trying to persuade any Senator as to how he should or should not vote. I do think, however, that when we vote on a matter as important as this we as individual Senators should be able to express our own opinions.

I hope that the majority leader will not close the door, but at least let the Senate have an opportunity to vote. As the minority leader has said he will talk further with those who speak for the administration.

I am only speaking for myself. However, I do think it is very important for the Senate to deal with the two subjects before any August recess. Certainly the Senate will not take a vacation and leave this tax bill in abeyance.

I mentioned this argument the other day, but I shall repeat it again if the Senate will bear with me. I point out that if we do not act on the investment tax credit and make a final decision now we will have a most confused situation. The 7-percent investment tax credit is the law of the land until Congress will have taken final action, whether it be in November or whatever date in the future it may be.

In the meantime those companies that operate on a fiscal year basis have no choice except to deduct the investment tax credit as they file their tax returns. Suppose they bought equipment after the April 18 date, which we generally accept as the ultimate date to be agreed on. They will continue to deduct the investment tax credit until the law is actually passed, and if this is the case it is estimated that by November this will amount to nearly $200 million. As one company official said, he will invest it in 60- or 90-day Treasury bills drawing 6 percent for the time that lapses until Congress is making its decision. The company could draw interest on the Treasury bills for 60 more days after Congress does act. The Treasury Department would have no choice, based on precedent, except to allow them adequate time after final congressional action, to file an amended return and pay the tax. The Department could not put a penalty on that company for a retroactive tax because the taxpayer would be paying the proper tax under the law as of the date his tax returns were filed.

I realize that there is a difference of opinion in the Senate as to whether Congress should or should not repeal the 7-percent investment tax credit. As the Senator from Louisiana knows, he and I suggested that we repeal it. However, let the Congress make its own decision either to repeal it or not to repeal it. I am willing to abide by the decision of the Senate. Why not enter into an agreement that we confine our actions to these two items alone and let the Senate work its will on the surtax and investment credit?

That is all we ask—just a chance to vote. Surely the nine Members comprising the Democratic policy committee are not going to try forcing their views on the remaining 91 Senators under the threat that either we agree in advance to vote as they dictate or they will deny the Senate an opportunity to vote at all.

Mr. LONG. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. LONG. Mr. President, the most urgent thing and the first question that should be settled is whether we will extend the surtax or not. If we bring the matter to a vote, it can be settled speedily. And I think that if there is any delay, it will not be on our side of the aisle. So far as I can determine, while some people want to vote against the measure, they are willing to vote and I think the votes will be there.

The second question comes on the investment tax credit. There are people who feel that there are two sets of problems involved.

In the first place, it can be pointed out that there are inequities in the bill the House sent us. There are Senators who are perfectly willing to go along with a repeal of the investment tax credit, but they are insisting that amendments be considered so as to clear up the inequities contained in the House bill.

Other Senators feel that the investment tax credit should not be repealed completely, at least insofar as the transportation industry is concerned.

Some feel that the railroads need rolling stock or that the airlines need additional aircraft which they must acquire. Some feel that shipping companies have signed contracts relying on the investment tax credit.

Many feel that there a special exception should be allowed.

It seems to me that we have the votes to repeal it. But we ought to separate the two matters and take some other revenue bill as a vehicle to repeal the investment tax credit.

One came over today, which I would like to have held on the calendar. If we could reach some agreement, some other bill could be amended to take care of the investment tax credit problem for the time being.

Then industry would have its answer and would know where it stands between now and November 30.

And as far as the investment tax credit is concerned, they would know where they stand forever in the future.

We could be in the position then of guaranteeing Senators that they would have an opportunity to vote with regard to a further extension of the surtax and with regard to an extension of the excise taxes, or with regard to whatever reform amendment they want to offer.

That is what the policy committee agreed to do, to go along with those of us on the Finance Committee in saying we were going to put the repeal of the investment tax credit on some bill, not specifying what bill, so that once we

get the first item settled, we would then have no difficulty in settling the second.

However, on something that should be passed by Thursday, if we try to put it all together, it is open for all amendments. Everyone has a different point of view. Even though we can agree on the matter of what we want to do, it is subject to Senators offering amendments in good faith and dragging the thing out for some time.

I certainly hope that the Senator will find it in his heart to go along with an extension of the surtax until November 30.

I would then be willing to cooperate with the Senator in finding some vehicle that may already be on the calendar by which we may repeal the investment tax credit.

When we get that big reform bill here, we can go to work on that part of it and see what we can do with respect to the big problem which will take many hours of work.

Mr. WILLIAMS of Delaware. When I said we could get a unanimous-consent agreement limited to amendments dealing with extension of the surtax and the repeal of the investment tax credit I meant that it should be limited to those two subjects. I did not mean that we would preclude the right of a Senator to offer an amendment dealing with a modification of either the investment tax credit or the surtax. For example, if someone wanted to change the formula for phasing out the investment tax credit as provided in the House bill, if someone wished to include an exemption for some industry that he felt was justified, if someone suggested an amendment to retain the credit with respect to a smaller business, and so forth, they would be in order. I had in mind considering those amendments on their merits on the basis that they were related to the issue. The same would be true of amendments relating to the period for which the surtax was to be extended or at what rate.

I think there was general agreement in the Finance Committee that the investment tax credit should be repealed in some form. However, uncertainty presently prevails in industry concerning the question, "Will I be one of the lucky ones to get exempted from the repeal?" That is what I would like to settle.

This uncertainty as to what action Congress will ultimately take on these two points is creating great disturbance in our financial markets. This delay is only adding fuel to the fires of inflation.

Mr. LONG. Mr. President, why should any Senator who wants to protect the transportation industry give unanimous consent to vote if it were to mean that he would be foreclosed from having an opportunity to protect the transportation industry?

Mr. WILLIAMS of Delaware. I did not say that. They would be protected under this proposed agreement.

Mr. LONG. Well, if we are going to follow this thing through and it means that the industry must carry the burden with respect to the investment tax credit of filing an amendment return and paying the money back, why would such a Senator give unanimous consent?

Mr. WILLIAMS of Delaware. The Senator misunderstood me.

I said that in the unanimous-consent agreement we could start with the language of the House bill as it deals with the surtax extension and the repeal of the investment credit.

That would be a good bill with which to start. Then let Senators who want to modify those sections offer their amendments. For example, some may wish to retain the investment tax credit for the transportation industry then they could offer such an amendment and have it voted up or down in the Senate on its merits.

It would be a germane amendment. It would relate to the subject under the agreement.

The nongermane amendments I was thinking of, for example, are the ones that are part of the reform package. There would be various amendments of that sort. I have a half dozen of my own that relate to correcting inequities in our tax laws. Those would be nongermane on this bill.

Certainly any amendments dealing with the investment tax credit or the surtax extension would be germane.

I have not made any survey; but why not try to get a unanimous-consent agreement to limit it to amendments germane to those two subjects? Why not get an agreement to limit the debate on each amendment so that there will be no undue delay and so that action can be expedited?

I am willing to enter into an agreement. There is an exemption or two in the House bill relating to the investment credit that I would like to have deleted That would be in order under this agreement. Such amendments can be considered on their merits, but they can be disposed of expeditiously.

Then the Senate could start consideration of the reform package coming over from the House. The extension of the excise taxes on automobiles and telephones could be included as a part of that bill.

I offer this suggestion, that rather than make the final decision now let this be considered as a possible area in which we could reach an agreement under which the Senate can proceed to a vote.

Mr. LONG. In my judgment, any Senator who is opposed to the extension of the surtax is going the extra mile to permit that matter to be brought to a vote in the fashion suggested. He is going the extra mile to accommodate the Senator in doing that. I believe we might be able to get some kind of unanimous-consent agreement to vote on an extension of the surtax to November 30.

But with regard to the investment tax credit, I should think that any Senator who wanted to assure the railroads of their right to have the credit on their rolling stock, or if he wanted to correct certain inequities in the House bill which adversely affect industries which have big investments in his State, or if he wanted to protect some other phase of the transportation industry, or if there were some other problem on which he was determined to win, if he gave that unanimous consent, he would not be very smart; because he might have a chance to win if he made his case and presented his witnesses. On the other hand, he would be left in the position of trying to repeal a bill that was a fait accompli if he gave the Senator that agreement and let it go through the way it is likely to happen under such an agreement.

I do not think the majority leader would want to ask for a unanimous-consent agreement to which Senators would not agree had they been present to hear the request. He would not want to prejudice them. No majority leader would want to do that.

I think the type of agreement the Senator has in mind would be difficult to achieve. But if he is talking about providing the revenue that this Government needs to sustain itself, to balance the budget, and to stabilize the economy, there is really no problem in getting this done. I believe that proceeding the way the Senator would like to proceed would involve a unanimous-consent request which could not be obtained—not at this time, anyway.

Mr. WILLIAMS of Delaware. Surely the Senator from Louisiana is not suggesting that we only get an agreement to bring up a bill for a vote in the U.S. Senate under conditions that the Democratic policy committee would get unanimous consent of 90 Senators that they all will vote as they dictate. That is incredible. We are not going to get that kind of agreement because the Senator realizes that each Member is going to insist upon the right to make up his own mind and to cast his own vote.

I think that what I have suggested here today may be an area in which we could get the matter before the Senate. The Senate could then work its will—if the majority of the Senate saw fit it could extend the surtax without acting on the investment credit. Let the Senate as a whole decide.

Mr. ALLEN. Mr. President, as a newcomer to the Senate, I have been interested in the game that is being played by the distinguished Senators. I am somewhat at a loss as to whether the name of the game is "poker," "brinkmanship," or the game that some of our reckless teenagers in my section of the country play, called "chicken." In that game, one teenager will get at one end of the field, in a car, and another teenager will be at the other end of the field, in another car, and they will head toward each other at rapid speed. The first one who gives away is called "chicken."

I have listened very carefully to the proposal of the majority leader. I am not a member of the policy committee. I am not a member of the Committee on Finance. So I can view the matter objectively. It seems to me that the Democratic vehicle is not going to give way in the proposal that has been made.

The proposal is made that action can be taken on the surtax as early as today and that will provide plenty of time for passage before the law expires on Thursday at midnight. The extension would be for 5 months, but that would provide ample time for the consideration of reform measures that all concede must come. The administration asks for the extension of the surtax.

The action of the Democratic policy committee and Finance Committee assures that a vote can be had on the surtax. It can be had, possibly today, certainly by tomorrow. What more could the other side want? I might say, parenthetically, that I plan to vote against the extension of the surtax, but I should like to see it come to a vote, so that we might then proceed to the further consideration of the ABM, for which I shall vote. I believe that the extension of the surtax for 5 months, with an opportunity then to vote on its further extension, is certainly a fair and reasonable proposal, one on which the Democratic Party could certainly go before the people, because if that proposal is not accepted by the minority party, and the surtax is allowed to expire, certainly the blame would lie at the door of the minority party.

So I believe that the Democratic "automobile" will not veer from the straight and narrow path that it is on.

Something has been said about the inability of Senators of the opposition party to speak for the administration. I should think that it would be the first time that they have been unable to speak for the administration if they are not able at this time to do so. To have 43 Senators not able to act on a bill in the legislative process would certainly indicate to me that there has been a great delegation of power to the executive on the part of a portion of the membership of the Senate.

I should like to see the majority leader's proposal accepted and the bill come to a vote. I believe the proposal is fair and reasonable, one that I would certainly be willing, as a member of the Alabama Democratic Party, but not a member of either of the two committees, to stand by and support.

Mr. ALLOTT. Mr. President, I shall not speak at length, but I feel that one remark that has just been made should be answered. I think the Senator from Alabama has not read carefully the message of the majority leader (Mr. MANSFIELD) to the minority leader, in which he made it specific that not only would the leadership of the minority speak, but also that the administration would speak—and, of course, the administration is the President of the United States, and no one needs to be told what the present situation is with respect to that.

There are two or three other things that I would want to make clear tonight. We have been regaled in the last few weeks with a lot of weeping about tax reform. I might tell my friends on the other side of the aisle that they do not have any monopoly on an interest in tax reform. We have had Democratic Presidents for 8 years. They had the overwhelming majority of the Members from their party in Congress for 8 years. I did not see any great enthusiasm in those last 8 years for any tax reform.

I feel somewhat sensitive about this, because my own great former colleague from Colorado, the late Senator Millikin, probably—and without doubt, in my mind—broke his health and perhaps caused his death by working so hard on the last great tax reform bill that came before the Senate, the tax reform bill of 1954.

Mr. MURPHY. Mr. President, will the Senator yield for a question?

Mr. ALLOTT. I yield.

Mr. MURPHY. I wish to ask the Senator if the effort made in 1954 was the last attempt at a tax reform bill.

Mr. ALLOTT. No. I believe there was a subsequent effort. Perhaps the Senator from Louisiana could give us the date. Was it 1957?

Mr. LONG. We had a comprehensive bill in 1962 and another comprehensive bill in 1964.

Mr. ALLOTT. It depends on what one would call "comprehensive." I did not call it comprehensive. We patched up some excise taxes and things of that nature, but it was not a comprehensive bill.

The last comprehensive bill that I recall, when we went through the tax structure, was 1954.

Mr. LONG. Mr. President, will the Senator yield?

Mr. ALLOTT. I yield.

Mr. LONG. Mr. President, I am now compiling a statement on this matter. However, if one will look at the bills that were passed in 1962 and 1964 he will see that those bills pretty well covered everything in the Internal Revenue Code so far as income taxes were concerned. Another act, in 1965, pretty well covered the excise tax provisions. I think one of them included more than 10 so-called reforms and the other about 20 so-called reforms. But both of those bills in 1962 and 1964 attempted to go through the entire Internal Revenue Code, but they did not look at the gift tax or the inheritance tax.

Mr. ALLOTT. And they did not look at foundations or other things.

Mr. LONG. The Senator will find we did something about foundations. I think it was in the 1964 bill.

Mr. MURPHY. Mr. President, will the Senator yield further?

The PRESIDING OFFICER (Mr. ALLEN in the chair.) Does the Senator yield?

Mr. ALLOTT. I yield.

Mr. MURPHY. Mr. President, I have listened attentively. I think that sometimes in debates or discussions some of the basic precepts involved get lost. We are in a vexing situation. The majority party has made an offer to be accepted by the minority party. They have had meetings and decided this is a concession. As I read the offer, it was an offer either to be accepted immediately or withdrawn. I did not realize when I heard the reading of it that it could be accepted tomorrow or Thursday, as the Senator from Louisiana suggested.

For purposes of clarification I would like to ask my distinguished friend, the Senator from Colorado, to go back to the beginning. As I recall, there are two matters confronting the Senate. One matter is the tax reform, upon which all agree. I know of no one who disagrees that we should not immediately and as quickly as possible have a complete and really comprehensive tax reform.

However, there is a separate matter.

Mr. ALLOTT. Mr. President, on that subject, I wish to say that I find no less enthusiasm on this side of the aisle for tax reform than I have heard expressed on the other side of the aisle.

Mr. MURPHY. I had been talking about it even before I thought of running for the Senate.

The other matter has to do with the emergency crisis situation. It has nothing to do with the long haul, but it has to do with the immediate problem which has been building up over the years, and which was even recognized last year when there was a joint effort to try to alleviate the situation, which did not go through the way it was planned. The distinguished Senator from Delaware was very active in connection with that measure.

This is an emergency situation wherein the President has asked that the surtax be continued. Everybody agrees that inflation is possibly the most important and the most serious question we face in this body at this time. Nobody wants the surtax. Certainly I do not want it. I think our people have been taxed far too heavily, and I think it is time we became more cautious and we should have better ways for raising revenue. But the surtax at long last is beginning to show signs of having the effect we all desire of slowing down the inflationary spiral.

These are two separate and distinct matters. I wish to ask the Senator from Colorado whether I am correct or whether I am in error.

Mr. ALLOTT. Mr. President, I thank the Senator, He is entirely correct and proper, except in the minds of those who want to utilize one as a wedge for the other.

Mr. MURPHY. That was to be my next question. Does it not appear, with full realization that the emergency exists, that the surtax is only an instrument for the situation and is not to be considered a part of the tax structure on a permanent basis? It is not at all. It is merely an instrument to try to stop inflation.

Mr. ALLOTT. As one of the instruments.

Mr. MURPHY. As one of the instruments. Would it not be reasonable that we ask that these be separated and one matter be taken up; and in the meantime there is no question about the desire to have a complete tax reform. I do not know that it can be accomplished in 4 months, 6 months, or a year. I think it is so important and it has been so long that it is going to take our very best effort to get it done by the end of this session.

But I wish to ask the Senator if it would not be practical, if it would not be thoughtful, if it would not be with full consideration of the welfare of the financial structure, and the welfare of individual citizens that we separate these two matters and decide whether or not the surtax should be continued; and that we should separately how fast we can move ahead to write a complete tax reform?

It seems to me that to continue to tie the two considerations together at one

point would indicate a reluctance on the part of some Senators. I know of no such reluctance and I know of no such disagreement. This is what concerns me. These two matters are intermingled in an impractical way and I get the feeling there is a use of coercion, which at best is not wise and at worst it is not worthy of the dignity of this great body.

Mr. ALLOTT. I thank the Senator. I could not agree with him more. I was about to discuss two or three of these things which I feel should be part of the RECORD today.

We heard the important discussion between the Senator from Louisiana and the majority leader. It was said, in effect, that the 15-day extension would not meet the problem. I could not agree with him more; that in a true sense the 15-day extension does not meet the problem. But—and it is a big "but" on the end of that—the 15-day extension would bring us past the date when Congress is supposed to begin a summer recess. We may have a little discussion about that recess before we are through here, because I do not think we can mess and tamper with the basic fiscal soundness of the Federal Government while we run off on a recess.

The significance of the 15-day extension is that this would bring it to the 15th of August. Congress is supposed to recess on the 13th of August. But at the meeting held at the White House a week ago this morning at which members of the Ways and Means Committee, the Republican and Democratic leadership of the House, and members of the Finance Committee of the Senate, both majority and minority leaders of the Senate were present, this matter was discussed in great detail.

As to the people in the House, I must say in all frankness that the chairman of the Ways and Means Committee was not there, but the ranking minority member was. The next to the senior member, next to the chairman on the majority side, was there.

At that time, he laid out in no unequivocal language that we were tampering with the safety of the Government if we did not pass the surtax bill for the entire year. This is from the other party, not from our party.

At the same time, four Secretaries of the Treasury were there. Bob Anderson was there, who was Secretary of the Treasury under President Eisenhower. Douglas Dillon was there. Henry Fowler was there, Secretary of the Treasury under the last administration, as well as David Kennedy, the present Secretary of the Treasury. They were all there. They said that passage of the legislation on extension of the surtax was an absolute "must" for the continued fight against inflation.

No one contends that the surtax alone will cure inflation. It will not. There are all sorts of means which will have to be employed to do that. We will have to employ the means to cut expenditures and to cut wherever we can. We will have to employ means which Congress has been so reluctant to do, is the thing the majority leader himself has advocated time and again; namely, the exercise of legislative oversight, taking some of the ill-conceived and rapidly written laws which have been placed on the statute books in the past few years, and no matter how meritorious they may have been, they should be rewritten to the point that they are workable so that the Government's money—which is the people's money—will be well and beneficially spent.

The significant thing that occurred at that meeting last Tuesday morning was that both majority and minority members of the Ways and Means Committee committed themselves—I repeat, committed themselves—to have a tax reform bill passed in the House before August 13, when we adjourn.

Thus, when we considered the 15-day extension in that context, it means that, at that time, for those people who say, "Well, I want to be assured of tax reform before I vote on a surtax," it means that those people—those in the Senate committee in which they have a majority—could have a meaningful tax reform bill in the Senate by the time we adjourned.

Whether, with the action taken today, we will still see those pledges lived up to, I am not sure. Upon the basis that the surtax was a vital necessity in this country, they made that flat commitment there, and I am sure that each and every one of them intended to do it.

Mr. MURPHY. Mr. President, will the Senator from Colorado yield at that point for a question?

Mr. ALLOTT. I yield.

Mr. MURPHY. Then it is the opinion of my distinguished friend from Colorado that it is not necessary the two considerations be tied together?

Mr. ALLOTT. I cannot see how they need to be tied together, because there are other so-called tax reforms in the surtax bill. The continuation of the excise tax, of course, is not a tax reform, but, for example, there is the termination of the investment credit and also provision for a low-income allowance for individuals and for other purposes.

Before the House passed that bill, it was only passed, as I recall, by a majority of five votes.

Mr. MURPHY. Five votes.

Mr. ALLOTT. Before they passed that bill, they had to put in those two reforms, granting some 3 million persons in this country in the lower income brackets relief from income tax, and then the repeal of investment credit.

They had to put those two reforms in the bill when it came over here. The Senator from Delaware (Mr. WILLIAMS) had another one with relation to foundations which he has shown great statesmanship, I believe, in stating that he was willing to waive his position temporarily if we could move this.

Knowing how strongly he feels about that particular amendment, I think he should be congratulated upon his great and generous offer to remove that particular amendment so that we can move forward on this bill.

There is another point I think we should make, that the surtax will raise approximately $7.5 billion. With the proposal made today, that will be reduced to about $4.1 billion.

Mr. President, the people who do that have got to assume the responsibility for what cuts will have to be made in many of the social problems we have to deal with in this country today.

I have been examining in the past few weeks, and have been sitting in on the hearings of the Independent Offices Subcommittee, of which I am the ranking member, appeals for money for urban affairs, model cities, for section 235 funds, and section 236, the interest subsidy funds. This administration is putting more money into them than has ever been done before. Yet, what are we going to do when we come to November and we do not have the assurance of the income from the surtax to take care of that?

Something will have to give at that time. The ones we will hear the most from, the ones who will speak the loudest at that time will be the same ones who are in the Chamber here saying that we need more money in the cities and ghettos and for social services. They will be those who in December, and in the latter part of November, will be talking the loudest that we have got to do more for these people. Yet, today, if we go through with this plan, we will be chopping off $3.4 billion which the Government needs to carry on the various services.

Mr. MURPHY. I wanted to make certain that I had a clear understanding, that the entire dilemma as it appears to me, and the reason it is taking this unique form at this time is caused by the decision to tie the necessary crisis consideration of the surtax to what we all agree has been a long needed attempt to do a complete rewriting job of the entire tax bill. Had these not been tied together, the condition that exists now, at this 11th hour decision—almost on a take-it-or-leave-it basis—would not have prevailed. Is that a fair statement of fact?

Mr. ALLOTT. Let me put it this way. The other body, I think, has exercised good judgment and has attacked the surtax problem first. As I stated a few moments ago, in order to get that through the House, they had to put certain tax reform provisions in that bill, which they did, particularly on the investment tax credit and taking 3 million low-income people off the tax rolls of this country—a provision, incidentally, which was suggested by the President. So they acted upon that first. They apparently did not have—and I frankly do not think a deliberative body of this kind could consider intelligently—a comprehensive tax bill to raise revenue and a tax reform bill. It would take weeks and weeks and months.

We may all have different ideas about what constitutes reform. I suppose that there would be, on either side of the aisle, all the variations one could think of about what constitutes tax reform. But we know that some reforms are needed. We know it is unconscionable that any American could so invest his money that he could walk away from any tax at all while living in luxury. I do not think that is justice. It has never been my idea of justice, anyway.

That is what they are trying to do in the House on that second tax bill—take care of the investment tax credit, about

which there was so much hue and cry, and take care of the President's suggestion that we cut 3 million low-income people off the tax rolls.

Then they turned around and tackled a tax reform bill. I know, of my personal knowledge, that they have been working like beavers—I hope they do not take umbrage at that term; that is the word we use when we consider somebody working hard to try to fill the commitment which was made by both the Democrats and Republicans at the White House meeting a week ago today—to have that tax reform bill brought here by the time we adjourn.

While it is not a significant reform, or anything of that sort, that is why the continuation for 15 days becomes very important. Those who say, "I want to see a tax reform within my grasp before I vote for a surtax," can have a reform bill in the Senate. It can be referred to the Finance Committee, of which the distinguished Senator from Louisiana is chairman. They have the majority to vote that bill out of the committee almost at their will. But they will have that bill here. So it cannot be said that anybody is blocking them from having a reform bill. The commitment was made that morning that it would be here.

I do not understand why we talk in circles around here to the effect, "You cannot have a surtax because I want to be assured of reform." I cannot assure them of reform, as a member of the minority party, but surely the majority leader and the chairman of the Finance Committee can assure them that they will have a reform bill before we adjourn this year.

There is a lot of other mischief. The distinguished Senator from Delaware, a while ago, mentioned some of the uncertainties and difficulties, not the least of which is that with the uncertainty in the tax situation people are hedging against inflation. If there is going to be inflation, the thing to do is to buy things that a person will use in his business and stockpile them for the future, because prices are going up.

Mr. MURPHY. Mr. President, will the Senator yield?

Mr. ALLOTT. I yield.

Mr. MURPHY. Having had some experience in business, I do not know of any business that operates on a projection as short as 4 months

Mr. ALLOTT. Neither do I.

Mr. MURPHY. I do not think this would do anything except cause utter confusion, when there is already enough confusion.

Mr. ALLOTT. Even my corner druggist does not operate on as short a projection as 4 months.

Mr. MURPHY. Particularly with the ending date about the end of the year, I fail to understand it. The longer I consider it, the more I am afraid it is going to complicate matters, rather than help.

Mr. ALLOTT. I thank the distinguished Senator for his help and his remarks, because they are very meaningful.

I would just like to conclude with two or three observations. It seems to me that the November 30 date causes a lot of difficulties. What it actually means is that every corporation is going to have to proceed on an eleven-twelfths year and a one-twelfth year basis.

As I understood the majority leader this afternoon, what they are proposing is to consider, at a later time, the surtax before it expires again. Well, all that is done is to compound uncertainty in this country. If we create an atmosphere of certainty as to what was going to be done in the surtax area, and resolve the question of the investment credit, and resolve the tax situation as to poor individuals who certainly cannot afford to pay a tax on the incomes they have, but who by our laws are required to pay an income tax, then I think we would be taking another step toward curing the inflationary problem.

Let there be no mistake about it, inflation is not just something people talk about; inflation has been said to be the cruelest tax of all. No matter how we go about it, a poor man cannot meet inflation. The man who has a great deal of money can invest in certain types of securities and make money and get rich, as hundreds of them have in an inflationary period. I would say it is not an overstatement. I do not say this is true of any Member of the Senate at the present time, but there are people in this country—many of them, perhaps thousands of them—who are just hoping to God that the Senate does not pass a surtax extension, because they want more inflation. They have perfected the techniques of making money out of inflation.

So we have the uncertainty. We have the mischief that is going to be caused by corporations having to operate on a eleven-twelfth-year and a one-twelfth-year basis. Most of all, we have done anything for tax reform.

When the people from the other body got up last week and said, "We will have a tax reform bill in the Senate by August 13, when we adjourn," I believed them. I believe only the occurrence of a cataclysm or a catastrophe could keep us from having such a bill by that time. That being so, I really cannot see any justification for the argument that we must have a tax reform bill on the Senate calendar before we consider the surtax extension.

With the assurance that has come not only from Members of my party but from the ranking Members of their own party in the House of Representatives, it would make much more sense to put the surtax extension to the first of the year, because they have assurance that they are going to have a tax reform bill. Let them vote on individual items. Each individual amendment is, of course, up to every Senators' own conscience. But the bill will be here. For that reason, there is not any justification for not extending the surtax now until the first of the year, at the minimum.

Mr. President, I yield the floor.

ORDER FOR ADJOURNMENT

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 12 o'clock noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT FROM TOMORROW TO THURSDAY, JULY 31, AT 11:30 A.M.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, at the completion of business on tomorrow, the Senate stand in adjournment until 11:30 on Thursday morning next.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR AIKEN ON THURSDAY, JULY 31, 1969

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, upon the completion of the prayer and the disposition of the reading of the Journal on Thursday morning next, the able senior Senator from Vermont (Mr. AIKEN) be recognized for not to exceed 30 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR THE TRANSACTION OF ROUTINE MORNING BUSINESS ON THURSDAY, JULY 31, 1969

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, on the completion of the address by the able senior Senator from Vermont (Mr. AIKEN) on Thursday morning next, there be a period for the transaction of routine morning business, with statements therein limited to 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 6 o'clock and 41 minutes p.m.) the Senate adjourned until tomorrow, Wednesday, July 30, 1969, at 12 o'clock noon.

CONFIRMATIONS

Executive nominations confirmed by the Senate July 29, 1969:

SPECIAL REPRESENTATIVE FOR TRADE NEGOTIATIONS

Carl J. Gilbert, of Massachusetts, to be Special Representative for Trade Negotiations, with the rank of Ambassador Extraordinary and Plenipotentiary.

HOUSING AND URBAN DEVELOPMENT ACT OF 1968 CORPORATION

Carter L. Burgess, of New York, to be an incorporator of the corporation authorized by section 902(a) of the Housing and Urban Development Act of 1968.

FEDERAL HOME LOAN BANK BOARD

Thomas Hal Clarke, of Georgia, to be a member of the Federal Home Loan Bank Board for the term expiring June 30, 1973.

HOUSE OF REPRESENTATIVES—*Tuesday, July 29, 1969*

The House met at 12 o'clock noon.

Rabbi Baruch Korff, Congregation Agudath Achim, Taunton, Mass., offered the following prayer:

Eternal God, we humbly acknowledge Thy gifts to mankind and the divine image with which Thou hast endowed us; the ability to endeavor and the fortitude to strive with wisdom for the abiding glory of human life.

We beseech Thee, Father of all men, to strengthen and motivate this august body of our Nation's legislators to meet the trials of life and liberty. May their faith and vision lead them to work together with resolution, and speed the approach of Thy kingdom on earth. May they brave every hardship Thy will to perform and proclaim Thy sovereignty in witness of Thy truth.

Bless our Nation, Almighty God, keep us ever steadfast and just that no weapon formed against us may prosper and no adversary endure.

For the roadway our forefathers charted we give thanks unto Thee, O Lord, who has called this Nation in righteousness and set it for a light among the planets.

How goodly is our portion;
How blessed our lot;
How beautiful our heritage.
Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

TRIBUTE TO RABBI BARUCH KORFF

(Mrs. HECKLER of Massachusetts asked and was given permission to address the House for 1 minute.)

Mrs. HECKLER of Massachusetts. Mr. Speaker, it is my privilege as a Representative of the 10th Congressional District of Massachusetts to welcome as our chaplain today Rabbi Baruch Korff, who has served as the spiritual leader to the Congregation Agudath Achim in Taunton, Mass., and surrounding towns for 15 years. Besides being a noted Talmudic scholar, Rabbi Korff has generated during his years in Taunton a renaissance in the Jewish community and has achieved wide reknown for his varied activities and achievements.

Rabbi Korff is not only personally in demand as a speaker, but he has brought to Taunton numerous other distinguished speakers to enrich and challenge both the congregation and the community as a whole. He is known and respected, too, for his great gift as a teacher, and many seek his counsel and guidance, particularly the young people. Few men have managed to establish such a rapport with the youth of today, and, in fact, Rabbi Korff has recently been named to a special mayor's board to study the problems of youth and drug addiction.

For 15 years, Rabbi Korff has also served as chaplain to the Taunton State Hospital and the Paul A. Devers State School and devoted much of his time to helping the mentally ill and the mentally retarded. His visits, counsel, and patient understanding as well as his personal dedication have again achieved wide respect since his efforts far exceeded the normal duties of chaplain.

It is almost unnecessary to mention his other accomplishments and honors, but I would like to note that Rabbi Korff has served as director of the Emergency Committee To Save the Jewish People of Europe during World War II; was appointed by President Roosevelt as Adviser to the War Refugee Board; was executive vice president for the Political Action Committee for Palestine. In 1942 he was awarded the Good Will Cup of the New York State Interfaith Movement and since that time has received many other honors and distinctions.

Again, I consider it a great honor for this body to have Rabbi Korff as our chaplain today.

NATIONAL COMMISSION ON POPULATION GROWTH AND THE AMERICAN FUTURE

(Mr. CARTER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CARTER. Mr. Speaker, as a member of the Republican task force on earth resources and population, I strongly commend the proposal of President Nixon for a National Commission on Population Growth and the American Future. I urge my colleagues in the Congress to give the creation of the Commission their immediate consideration.

The President's statement emphasizes, I think very rightly, the important tie, too little realized, between population growth and its tragic problems of starvation and undernourishment, social disorder, environmental destruction, poor education, and ill-housing. For this reason, as the President pointed out, the structure of the Commission must be flexible; because of the far-reaching effects and abundant problems with which the Commission must deal, it is desirable that Congress allocate for the Commission an expansionary budget.

A serious lack of coordination characterizes the efforts of the numerous agencies and groups which are presently dealing with population planning and family planning, both domestically and overseas. Under a National Commission on Population Growth and the American Future, we can proceed to coordinate and correct this significant defect.

It is doubly desirable, in view of the upcoming 1970 census, that the Commission be created as soon as possible to take advantage of the new census data which will be available.

RAISE THE TAXPAYER'S EXEMPTION

(Mr. MONAGAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MONAGAN. Mr. Speaker, I am happy to see the activity in the Ways and Means Committee in its consideration of the problem of tax reform and to learn of the progress that has been made toward completing a bill for action by the House. Many of the items have demanded treatment for a long time. These include the requirement that no taxpayer capable of paying a tax should escape, the broad principle that the tax burden be spread equitably among taxpayers, and that every attempt be made to prevent the average individual taxpayer from shouldering an unfair share of the common burden while taxwise individuals or organizations took advantage of unforeseen loopholes.

In view of the substantial increase in tax revenues which will come from the introduction of these reforms, it is my belief and recommendation that a substantial portion of these revenues be used to increase the standard exemption of the individual taxpayer. While it is true that an increase in the exemption requires very substantial revenues from other sources, nevertheless it appears quite possible for a sizable increase to be made and it is my judgment that an increase in this area would be fair to the individual taxpayer and not disruptive of orderly financing.

The individual taxpayer, most of whose income is derived from personal earnings, is in an exposed position and cannot escape the tax bite. It is, therefore, only fair that when we eliminate some of the loopholes and tax havens we should give the benefit to the individual who has suffered from the discrimination.

I, therefore, urge Mr. Speaker that the Ways and Means Committee who are currently engaged in the final writeup of the tax bill do everything in their power to increase the individual exemption and thus strike a blow for equality of tax treatment.

CALL OF THE HOUSE

Mr. PELLY. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 127]

Anderson, Tenn.	Dawson	Moorhead
Ashley	Evins, Tenn.	Murphy, N.Y.
Boggs	Gallagher	Ottinger
Bow	Gray	Powell
Brasco	Halpern	Reid, N.Y.
Brooks	Hanley	Riegle
Burton, Utah	Hanna	Rosenthal
Carey	Harsha	Ruppe
Celler	Hébert	Scheuer
Clark	Kirwan	Stuckey
Clausen, Don H.	Lipscomb	Teague, Tex.
Daddario	Lloyd	Wampler
	Lujan	
	Minshall	

The SPEAKER. On this rollcall 394 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

PERMISSION FOR COMMITTEE ON RULES TO FILE PRIVILEGED REPORTS

Mr. COLMER. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file certain privileged reports.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

RABBI BARUCH KORFF

(Mr. ROONEY of New York asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROONEY of New York. Mr. Speaker, I was deeply moved by the opening prayer delivered this morning by one of the great spiritual leaders of American Jewry, Rabbi Baruch Korff. I have known Rabbi Korff for many years going back to the days when we met in the common cause of aiding the victims of the Nazis and establishing an independent State of Israel. Rabbi Korff was an adviser to the War Refugee Board established by President Roosevelt and in that capacity, lent great support to our efforts to establish a refugee camp at Oswego, N.Y. His devotion to the unfortunate victims of the Nazi holocaust never waned and our paths crossed constantly in those years through the Political Action Committee for Palestine. He was, and is, a truly dedicated man. It is very fitting that Rabbi Korff is here today for this marks his 15th anniversary with his regional congregation, Agudath Achim in Taunton, Massachusetts, and his 15th anniversary as chaplain with the Department of Mental Health of the Commonwealth of Massachusetts. He is still giving of himself that this world may be a better place for all men. To my old friend I would just like to say how good it is that he is here today. Shalom.

DEPARTMENTS OF LABOR, AND HEALTH, EDUCATION, AND WELFARE AND RELATED AGENCIES APPROPRIATIONS, 1970

Mr. FLOOD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 13111) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1970, and for other purposes, and pending that motion, Mr. Speaker, I ask unanimous consent that general debate continue not to exceed 3 hours, the time to be equally divided and controlled by the gentleman from Illinois (Mr. MICHEL) and myself.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

The SPEAKER. The question is on the motion offered by the gentleman from Pennsylvania.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 13111, with Mr. HOLIFIELD in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the unanimous consent agreement, the gentleman from Pennsylvania (Mr. FLOOD) will be recognized for 1½ hours and the gentleman from Illinois (Mr. MICHEL) will be recognized for 1½ hours.

The Chair recognizes the gentleman from Pennsylvania (Mr. FLOOD).

Mr. FLOOD. Mr. Chairman, this is the one you have been waiting for. This is the one you have read about, and this is the one you have talked about. This is the one you have been talked to about.

The labor, health, education, and welfare bill for the fiscal year 1970 totals $16,651,000,000. But this is only part of the iceberg which is above the water.

Now you take your copy of the report that you have—that you may have in your office or you may have here. I direct your attention to pages 44 and 45 of the report. You will read that the permanent—now hear this—the permanent obligational authority for the two departments and related agencies which is mostly trust funds, totals $47,815,000,000.

Did you hear that figure?—$47,815,000,000. I want you to hear these figures because very few of you have heard them before.

The total amount of the funds in the 1970 budget for these two departments and related independent agencies—now wait until you hear this—is $64,466,000,000—$64 billion.

Well, it does not take very much imagination to foresee that this budget—and properly so—will very soon exceed the budget for the Department of Defense. I have been on the Appropriations Subcommittee of the Department of Defense since it was organized right after World War II. I am not unacquainted with that budget either.

Well, I hate war—a great President also said—and as as a great American general said, "War is hell." Of course, it is. If, and when, with the help of God this can of worms in Vietnam is finished, I would expect to see this budget of the Department of Defense cut $20 billion. I will demand, as chairman of this subcommittee, that at least $5 billion come into the budget for Labor and Health, Education, and Welfare.

The people will demand that and I hope and pray it will happen.

Now it is all very well to say if we can afford a war, then we can afford all these increases people are talking about for education, health, and other domestic programs, and if we can go to the moon, then we can afford this and we can afford that.

The fact remains, Mr. Chairman, there is a war in Vietnam—now—and in my judgment there will be for the life of this specific appropriation bill we have before us today, June 30, 1970. It pains me to say that I believe there will be a war. This bill must face the war in Vietnam. Do not come down here today and say, "Oh, we have a war. If we could afford the war, then we could afford this and this and this." You cannot. You cannot.

Some say we wasted billions on a shot to the moon? This House voted for every dime for the shot that went to the moon. Thanks be to God, it was a success. But you must pay for it, whether you like it or not, and you must pay for this war, whether you like it or not. And I do not like it. How do you like that? But those are the facts. So let us have a minimum of breast-beating dehors the facts as I have just stated them.

Here is another fact that most people do not realize. Wait until you hear this. Of the $16,600,000,000 in this bill, $9,600,000,000 is for uncontrollable items. Do you know that? More than half of this bill is uncontrollable by your Committee on Appropriations. Is that not something? It is for grants to the States for public assistance, payments to the Social Security trust funds and, oh, a long list. I shall not recite the litany of the long list of grants that are uncontrollable. You know them. You voted for them all in various legislative bills.

This committee, however, is recommending no phony cuts. Oh, that has been the practice here for years, for many appropriation subcommittees to come down here and boast, "We have cut the budget x millions of dollars." Those statements on these so-called uncontrollable items are as phony as a three-dollar bill. This is not a phony subcommittee or full committee. There are no phony cuts.

So, Mr. Chairman, out of almost $64.5 billion in the budget for these agencies, there is only $7 billion that is controllable under our appropriation process—$7 billion out of nearly $65 billion is all we can talk about today. Is that not astounding? Do we see what is going to happen to our appropriation process? Out of $64.5 billion, we can control about $7 billion. So we are not so important, are we? That is only $7 billion. Think about that. See what we are doing? We should be very careful today, should we not?

Everyone knows this is a tough year so far as the Federal budget is concerned and that we have to economize wherever it is reasonably possible. This we know. We have been voting for that all this long year. However, the committee has not been blind to the great need for proper financing of the important programs, the most important programs. We have not ignored them, nor, Mr. Chairman, do we consider the President's budget sacrosanct—not for a minute. This is the Appropriations Committee. The budget is no sacred cow for us. We can just take a glance at the table at the end of the report, and it will reveal many pluses and many minuses where

our committee, Mr. Chairman, has worked its will on this budget.

This year, Mr. Chairman, for the first time since I have been chairman of the subcommittee, we are recommending a net increase over the budget request—over, through the ceiling. We have, but with a rule of reason.

Oh, there is an invitation to be dramatic. A great invitation exists to be dramatic with the subjects. They just drip with it, do they not? Can the Members imagine me not taking advantage of a dramatic opportunity? God save the mark. It is strength of character, indeed.

Well, we have resisted. We have applied the rule of reason when we went above the budget. There are gross increases here totaling over $277 million, and almost all of it is accounted for by what? By hospital construction and the various line items in education.

I am against education? I married a schoolteacher. Can Members imagine me being against education? Why, I would die without the priest. In my hometown of Wilkes-Barre they are going to dedicate, with very sound judgment, in October, a $3.5 million elementary school named after DANIEL J. FLOOD. I think that is great. Do Members not agree with me? That is to be done in a couple of months. I am against education? How silly can we get?

It is just how far are we going to go. There is no greater bleeding heart in this whole committee than mine about education—but there is reason, not just emotions and theatrics and big figures.

Now, Mr. Chairman, I will go to some of the individual items in the bill. There are over 100 appropriation items in this bill, and Members will be pleased to know I am not going to parade through all of them.

It would go on like Tennyson's brook.

In total for the Department of Labor there is an actual slight cutback from the 1969 level except for manpower development and training activities, and that we are for, beginning with me. You know where I come from. I know the need in the coalfields.

For MDTA we recommend a cut of $20 million in the request of $675 million, but we are still putting in this bill an increase of $248 million above 1969. Now, as the saying goes, "That ain't hay."

This increase, by the way, is almost entirely for two programs. One is the now well-known and very successful JOBS, the JOBS program, which is sponsored by the National Alliance of Businessmen, started by the Ford people. They made a great presentation to our committee. We were very impressed last year. They are going well. They are doing well. The private sector has manned the barricades in this JOBS program all through this Nation. There is no horizon to what good that program can bring, no horizon. I am amazed, frankly, that it has been embraced so generally by the private sector throughout the Nation. Is that not good?

And there is what we call the CEP, which is the concentrated employment program, the job training programs back in the communities. I have one in mine. It is a wonderful thing. Many of you have such programs in your districts. I am sure the result is the same as in mine.

The revised budget contains a requested increase of $2 million and 130 positions for the Labor-Management Services Administration. By the way, if you are looking at your reports, that is on page 6. I see some of you have reports out. What I am talking about is on page 6, so you can read while I am talking, if you wish.

This is for the organized crime program. The justifications for the proposed budget state, and I quote:

> A large number (about 150,000 annually) of the reports submitted to the Office of Labor Management and Welfare Pension Reports contain a wealth of information essential in the fight against organized crime. Typical of this information are the names of persons who administer and control over $100,000,000,000 of the welfare and pension funds, as well as the fees paid to such persons as brokers agents, accountants, attorneys, and others. The reports also contain information as to party-in-interest transactions. In the fight against organized crime this information is not only invaluable, it is indispensable.

With this we agree. As deputy attorney general in charge of prosecution of the great State of Pennsylvania, I know what this means. Others have been prosecutors and share this view. I see my friend from Alabama (Mr. ANDREWS) is present. He knows, as do many of you; we have no quarrel with this.

While the Department of Labor has never before called to the committee's attention any significant problem in this specific area, it is obvious that a potential for serious crime does exist in this area. However, all those reports, Mr. Chairman, are public information, and they certainly are readily available to the Department of Justice for use in their law enforcement activities.

Mr. Chairman, the committee will expect the Department of Labor to be cooperative with the Department of Justice in their activities against organized crime, but it feels that the main responsibility in this area is that of the Department of Justice and it would be a mistake for the Department of Labor to becomes so heavily involved as proposed in this request. Every record Justice wants is a public record, and we will help them get it. There should be no problem.

Now, going to the Department of Health, Education, and Welfare, under "Consumer protection and environmental health services," here there are internal adjustments. The Department of Health, Education, and Welfare has been engaged in organizations and reorganizations and internal readjustments and more reorganizations throughout the last 4 or 5 years. So much so that I think the next reorganization should be a reorganization against any more reorganizations, if you know what I mean. We get it annually. But that is the way it is. It is a can of worms. However, the increase is $8.4 million. That will cover their mandatory costs. They have a job to do and they are doing it well.

The first increase above the budget is for mental health. You will be the first to agree, Mr. Chairman, that that is the way it should be. It is a net increase of $2,398,000. That results, first, from the addition of $4 million to the budget. We have added $4 million to the budget for the program to assist communities to provide treatment services for alcoholics that was authorized by you in the Alcoholic and Narcotic Addicts Rehabilitation Act of 1968.

Then, there is an item of $1,102,000 to start a new program. This is what you must watch in these departments; the starting of a new program; letting the camel get his nose under that tent. You know, there is nothing more permanent in Washington than a temporary agency or a temporary building. You must be gun shy on these new things. This one is "Early child care demonstrations." Now, would not that break your heart? Here is this cruel FLOOD and his subcommittee. I am against children. Mr. Chairman, this House and this Congress rejected this program last year and we reject it again this year because we already have at least five separate and distinct programs, doing much the same thing that they want this $1 million for.

And wait until you hear this one. They want $500,000—which they will not get—for this. Now, most of you do not remember Maury Maverick. When he was here he gave birth to the term gobbledygook. Oh, Maury, if you can hear me, listen to this: $500,000 to award contracts for research on a number of significant contemporary social problems.

Mr. Chairman, the original budget for 1970 carried $4 million for the programs I have just mentioned. This was deleted, and I cannot understand why. But this was deleted by the Bureau of the Budget and the budget amendments, but the committee is in complete disagreement with the budget. Mr. Chairman, we have restored the full $4 million contained in the original budget estimate.

Mr. Chairman, there are approximately 5 million alcoholics in the United States in need of medical and social services. The effects of alcoholism are costly both in dollars and in human suffering. Industry alone loses an estimated $2 billion every year as a result of alcoholism associated with absenteeism and reduced production. Annually, 10,000 deaths are attributed to alcoholism. Problem drinking has been identified as a factor in over 50 percent of all fatal traffic accidents. Compared with the cost of alcoholism, this appropriation is miniscule. We put it back.

Now, I have discussed, Mr. Chairman, with this House before, and I think it is appropriate for me to again point to research on mental illness, as a striking example of tangible results obtained through medical research. What do we get for our money? What do you get for your money? Ah, here is exhibit A. There is no doubt that this research which is carried on under the National Institute of Mental Health and elsewhere has not only resulted in a great reduction in human suffering, but also has actually saved much more money than it has cost. In the words of the Institute's Director before the committee:

> Our progress is reflected in the continuing decrease in the number of Americans residing in the Nation's mental hospitals. Thir-

teen years ago, that number was well over one-half million. Today, after more than a decade of steady advances in research and treatment, there are 401,000—a reduction of nearly 30 percent.

Now, I want you to hear this. Listen to this. This is dramatic:

Last year alone saw a decline of 25,000 patients, or 5.9 percent, including, for the first time, a decrease of 2 percent in the crucial 12–16 age group.

Had the rising mental hospital population seen before 1955 gone unchecked, we would today be confronted by 731,000 patients in our mental hospitals—or nearly twice the actual number.

That is what you got for your money.

The revised budget, Mr. Chairman—and I am talking about now page 11 of the report—the revised budget makes no change in the total amount requested under the comprehensive health planning and services program. Both the original and revised budget—and when I say the "original budget" I mean the Johnson budget, and when I say the "revised budget" it is the Nixon budget. So, if you hear me make a play on these terms, the original budget is the Johnson budget and the revised budget is the Nixon budget. The sum for partnership for health grants is $190 million in both budgets, and that is what we have in this bill.

However, Mr. Chairman, there is quite a significant internal adjustment in the revised budget to decrease project grants to the States for health activities by $18 million and increase formula grants by the same amount. One of the basic purposes of the partnership for health amendments to the Public Health Service Act was to shift more of the responsibility for determining priorities in expenditures of health grants to the States. As a general proposition, the committee agrees with this approach. However, Mr. Chairman, the administration proposes that funding of tuberculosis control programs be removed from the project grants category of funding and transferred to formula grants. In 1963, because it was dissatisfied with the lack of progress in controlling tuberculosis, the committee instigated a complete review of tuberculosis control in this country. The resultant report of the task force on tuberculosis control stated that the project grant was the most effective method of providing Federal support to State and local tuberculosis programs because it gave recognition to the fact that the tuberculosis problem is unevenly present among the States and localities. The committee and the Congress have supported tuberculosis control through project grants because they get funds to areas where the problem is greatest. Reports of progress over the past 5 years demonstrate conclusively the wisdom of the committee action. Because formula grants are allocated to States on the basis of population and per capita income with no relevance to specific disease problems the Committee recommends that the Department phase out the project grant support of tuberculosis control activities gradually.

Mr. Chairman, I cannot pass this appropriation for comprehensive health planning and services without mentioning a most dramatic new program that we initiated. This Congress, this House, initiated this program in the last supplemental appropriation bill that you voted on just a short time ago, and we are further implementing it in this bill. What is it? It is rubella—German measles—a vaccination program.

The last German measles epidemic—ah, you who are husbands, fathers, you who have children or expect to have more, tell your wives about this, if they do not know. Let me tell you this, and you tell them—the last German measles epidemic occurred in 1964, and resulted in over 20,000 children being born with birth defects ranging from relatively minor deficiencies like a missing toe or finger, if that is minor, to children born with severe mental retardation and those by the thousands born deaf, or blind, or both, because of German measles—rubella. The total eventual cost of that epidemic has been established as high as $2.8 billion. The U.S. Public Health Service gave us a conservative estimate, that the cost of the 1964 epidemic will be over $1 billion.

Mr. Chairman, through the research of the National Institute of Allergy and Infectious Diseases and the Division of Biologics Standards an effective vaccine has been established against German measles. Scientists now predict that this disease with its horrible consequences can probably be eliminated in the United States within a few years—thank God—through this vaccination program. That is what you are doing with some of the dollars you are appropriating. I am convinced that we can make rubella as much of a rarity in this country as polio, if we all support this program—as we did support the polio vaccination program and campaign. Do you remember that?

Mr. Chairman, we have not earmarked a specific number of dollars for this because it was not necessary. But I am sure I speak for every man in this House when I say we expect the Public Health Service to move forward with this program vigorously. If the funds are insufficient to really meet the needs of the program, I, for one, will say to them—and so will you—we hope they will come back to the Committee on Appropriations and request supplemental funds for this program. I never said that before in my life—or in the last 25 years that I have been in this House—never have I made such an invitation. But here we mean it.

The next rather significant item is a reduction of $24 million—and now I am on page 12 of the report—$24 million from the $100 million request for regional medical programs.

Let me tell you about that. This is my pet pigeon. This is FLOOD's baby. We started out with a heart, cancer, and stroke program. Then some of us soon saw that the idea was so good—"let us not waste time on this—let us go on"—and we created the regional medical programs, so every person in every region in the United States will be embraced and served by this wonderful program.

So when members of my subcommittee went after this—and let me tell you my friend, the gentleman from Kentucky (Mr. NATCHER)—he sure went after them—I sat there along side of him while he took them apart bit by bit, and I could just feel my heart turn over. I thought he was going to crucify them. Well, he roughed them up but he did not crucify them. The fact of the matter is I was worried about this. But the fact remains, I must admit, the program has failed by substantial amounts to utilize the funds available in every year since it was initiated. Now it is getting off the ground. Now it is underway. We have implicit confidence in the program.

Now look at page 13 of the report, if you are still with me. The hospital construction program budget. The hospital construction program budget proposed a significant shift—a shift in the method of financing construction and modernization of hospitals and related facilities. You have a lot of mail on this. When you go home during the recess a lot of people are going to talk to you about this.

I am on the boards of two hospitals back in my district. They talk to me. They will talk more at the first meeting I go to when I get back. You, too. The original 1970 budget request was practically at the same level as the appropriation for 1969. The Nixon budget, the revised budget, cut that by $104,400,000. They cut hospital construction and allied facilities grants by that amount. Then there was a proposed shift to what they call a mortgage guarantee program. That was entirely in keeping and entirely consistent with the philosophy of the present administration and their legislative proposals. They were consistent with their legislative philosophy in making that cut.

What happened to them was this: The legislative proposal made by the administration was turned down by this House. So where does that leave your committee? Not on the horns of a dilemma, but in a difficult situation. The legislative proposal has been turned down, and we must do one of two things. Your committee must either approve a budget that would cut hospital construction $104,400,000 or go over the budget by that amount.

Do you know what we did? Do you know what this bad, heartless committee did? Do you remember when everybody was calling Hitler names and trying to outdo each other on names you could call Hitler, and they made great speeches and used big words to describe how bad Hitler was, no good, blah, blah, blah? Winston Churchill went on the floor of the House of Commons, after everyone had talked for hours attacking Hitler, and do you know what he said? "Hitler is a bad man," and he sat down. Of course. Well, this bad committee, what did they do? They went over the budget $104,400,000 for hospital construction. How do you like that? These heartless workers.

I now refer to page 13 of the report. The total in the bill for all the items now carried under the National Institutes of Health—and the discussion goes on from there for several pages—the total of the bill of NIH is $1,453,000,000, a net increase of $1,041,000 over the budget, and only $44 million over the amount appropriated for 1969. This increase of 3 percent is obviously less than

enough to cover increased costs and so, in total, is going to mean some reduction in the program level. Due to rather substantial increases of approximately $46,000,000 for the item "Health manpower" and $41,000,000 for construction of health educational facilities, both aimed at greater output of trained medical and health personnel, the regular Institutes such as the Cancer Institute, Heart Institute, Arthritis and Metabolic Diseases, and so forth, are actually cut back below the 1969 level. Thus, what most of us think of as the National Institutes of Health will not only have to absorb the increased costs in 1970, but actually will be cut over $27 million below the 1969 funding level.

The amount in this bill for the appriation "Health manpower" is $218 million. That is the exact amount of the request and it is an increase of $46 million over 1969. That is an increase. Mr. Chairman, I do not think it is beyond anyone's doubt that this increase had to be made. This is the output of doctors. More doctors, more nurses, more dentists—that is what we need and by the thousands.

The construction funds, of course, go hand in glove with the grants to increase this manpower; $126 million is in this bill, and that is $41 million over 1969.

We did not hesitate—not a minute—in approving the increase in the budget for both of these. The committee, in effect, is indicating its agreement with both the Johnson and the Nixon administrations on the importance of this problem. The current situation dictates a shift of emphasis. Every administration, Mr. Chairman, has a catch phrase. We remember them all down through the years. I will not recite them. This year for this administration, the catch phrase is "a realinement of priorities." Is that not beautiful? The only thing the matter with it is that I did not think of it. This will shift emphasis from research to delivery. That is the important thing. But, with so much public attention on the need for delivery of services, there might be a tendency in certain quarters—and there is—to consider research an expensive luxury. It is not. We know it is a most profitable investment, I assure the Chairman. It is no luxury. The fact is that the practice of medicine has been drastically changed during the past decade as a result of what we have done for research—we in this House.

NIH research grants provide 70 percent of the funds for medical and health-related research conducted in academic institutions, hospitals, and other nonprofit research institutions and about 40 percent of the funds expended for all medical research in this country. Most of the biomedical research done in this country in recent years has been to some extent dependent, and in many cases very heavily dependent, on funds made available through the NIH appropriations. The pervasive role played by this research support and the complex, interlocking pattern of many separate research achievements that eventually result in the solution of a disease problem make it very difficult, and rather meaningless, to classify accomplishments by source of support. It is, however, undeniable that the impressive progress would not have been possible without the extensive support provided by NIH.

This year, Mr. Chairman, I have bowed to what appears to me as the inevitable, under all the circumstances, and have agreed to support appropriations for medical research that are woefully inadequate to exploit the leads we have to the answers of so many medical problems. I will certainly strongly endorse, and I think the American people will demand, the proper support for these activities as soon as we can put our fiscal house in order.

I was very impressed with the testimony of Dr. Howard Bierman on May 22, when he told my Subcommittee on Appropriations of a mass screening technique for cancer of the lung and cancer of the uterus which he said was called Cytec.

Every cancer specialist in the country agrees that early detection of cancer of the lung and cancer of the uterus would save thousands of lives each year. This means mass screening. The Cytec process, if it fulfills its early promise, may well be the answer to the problem. There are not enough pathologists in the country to process smears from 90 or 100 million people who might want and need tests for lung and uterine cancer. Therefore, we have to have an electronic or mechanical device of some kind to do the screening and this is what Cytec seems to be. The pathologists of the country would be relieved of the enormous amount of time they spend testing smears which are negative. This should be done by machine so that the pathologist can use his time examining the positive smears which will enable diagnosis to be made.

This process would give real meaning to the Pap smear, which was such a great discovery in itself. It is the reading of the smear that needs to be done on a mass basis. If this could be done as rapidly as the Cytec process suggests it will realize the full potential of the work of Dr. Papanicolaou. It would make the Pap smear available to millions of Americans who do not get it now. The American Cancer Society is to be congratulated on sponsoring the original Cytec studies in New York. I hope they go ahead now with large-scale studies to determine beyond any doubt the value of the process.

It may be necessary at some point for the Federal Government to participate in these tests. Mass screening for these forms of cancer is so important. There has been continuing cooperation between the American Cancer Society and the National Cancer Institute, so it would be no problem to have them cooperate in a joint venture like this if further developments indicate that it is advisable.

It is refreshing to have people come before our committee and report what is being done outside the Federal structure. The people are to be commended on their initiative and enterprise. I wish them well.

Let us turn now to page 32 of the report, and starting on that page look at the budget reductions in the Office of Education—and these have generated a great deal of correspondence—more so than all the rest of the items in the bill put together. Do Members think they have received stacks of mail? Well, if the Members have received stacks, I have received stacks and stacks and stacks—open end. There is nothing wrong with that. That is the right of petition. It can be overdone. It is entirely possible that it has been. There is such a thing in poker—of course, I know, Mr. Chairman, the chairman would never play poker, but I am very good at it—and there is such a thing as overplaying one's hand.

You know; overplaying your hand. In the theater, Mrs. REID, there is an old expression: There is only one prime sin in the theater. If a man cannot act, very well, he cannot act; that is just too bad. But if he can, and overplays a scene, that is a crime. Never overplay a scene, if you have an audience. I am advised I have an audience. All right.

I agree with the protestants. This committee unanimously agrees with these protestants that the budget sent to us for education was unrealistically low. There is no doubt about it.

On the other hand, I think it adds perspective to compare what is proposed in the budget—now, wait until you hear this—to compare what is proposed in the budget with what was actually appropriated a few years ago. The revised budget for the Office of Education for 1970, in round figures—now hear this, in 1970, for the budget—is $3.2 billion. Put that in your head.

What was it in 1965? For 1965 do you know what it was? The total appropriation for the Office of Education in 1965 was $1.5 billion; $1.5 billion in 1965.

Now hold your hats. Now hear this. Do you know what it was for 1960, 10 years ago? Less than $500 million. Less than half a billion dollars.

Education has been neglected? Education has been neglected by this Congress? They were starving to death until you, Mr. Chairman, and this House realized and recognized the need in this burgeoning Nation for education. You took the lead. You bared your breast year after year. Do not forget that when the tears start falling about how education has been neglected and nobody cares in this heartless House. As my grandfather would say, God rest his soul, put that in your pipe and smoke it.

Why, if anybody would have proposed 10 years ago a budget of $3.2 billion for education they would have had the guy with a white coat from St. Elizabeths standing out in the hall to pick him up.

For elementary and secondary education the committee recommends the amount of the budget request for title I which will make $1,216,175,000 available for this purpose, which is $93,048,000 more than the amount available for 1969.

Now, Mr. Chairman, just a few weeks ago, under the able leadership of the gentleman from Kentucky (Mr. PERKINS), the chairman of the Committee on Education and Labor, we passed the education bill. This included what came to be known as the Green amendment. What did the Green amendment do? The Green amendment created a package.

The Green amendment created a package, and into this package went these four items.

Mr. Chairman, following the action of this House, this committee is recommending one lump sum for supplementary educational services, under title III of the Elementary and Secondary Education Act; library resources, under title II of the Elementary and Secondary Education Act; guidance, counseling, and testing, under title V of the National Defense Education Act; and equipment and minor remodeling, under title III of the National Defense Education Act. The bill includes $200,163,000 for this purpose compared with $116,163,000 in the budget, all of which was earmarked for supplementary educational services. The budget requested nothing at all for library resources; guidance, counseling, and testing; and equipment and minor remodeling.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. FLOOD. I will in just a few minutes. As soon as I finish.

Mr. JOELSON. Mr. Chairman, will the gentleman yield?

Mr. FLOOD. I will in a few minutes. We will have lots of time.

So your committee, Mr. Chairman, reversed that. We put everything back into a package as suggested by the Green amendment. There were other things in the Green amendment, but I am just speaking of this part. Then we went above the budget by $84 million.

Mr. PERKINS. Mr. Chairman, will the distinguished gentleman from Pennsylvania yield to me?

Mr. FLOOD. Well, I said that I would not yield until I had finished my statement, but, of course, how could I refuse the gentleman from Kentucky? I simply could not do it.

Mr. PERKINS. First of all, I wish to compliment the distinguished gentleman from Pennsylvania for perhaps the most eloquent speech that I have ever heard since I have been here during the past 20 years. But on the last issue——

Mr. FLOOD. Did you get that, Mr. Reporter? Are you sure you have that down?

Mr. PERKINS. On the last issue you have raised I think the Bureau of the Budget and the Committee on Appropriations have thwarted and thrown aside the intent of the Green amendment.

First, the Green amendment does not take effect—that proposal, if it becomes law, until 1971.

Mr. FLOOD. That is correct.

Mr. PERKINS. And it left in the hands of the States, the State departments of education the discretion as to how much would go for each of these activities.

The CHAIRMAN. The gentleman from Pennsylvania has consumed 1 hour.

(By unanimous consent (at the request of Mr. NATCHER) Mr. FLOOD was allowed to continue for 10 additional minutes.)

Mr. PERKINS. Mr. Chairman, will the gentleman yield further?

Mr. FLOOD. Of course I yield further to the gentleman from Kentucky.

Mr. PERKINS. Here you come along and place the discretion in the Office of Education.

Mr. FLOOD. Well, I shall have to interrupt the gentleman because of that gavel which the gentleman just heard.

Mr. Chairman, I have taken too much time and I will attempt to explain the committee action on the rest of the bill in a more expeditous manner.

I know you all have heard about the impacted school areas. I have been called many things in life, but I have never been called naive. There are 385 Members of this House who have a share of this pie and I will not debate it because I do not have the time.

However, I know perfectly well and you know perfectly well that an amendment is going to be introduced, probably by a member of this subcommittee, the gentleman from Kansas (Mr. SHRIVER), to restore a large part of these funds and I am not going to bare my breast again and again against the inevitable because I know the amendment is going to pass.

So, under the circumstances it is unnecessary for me to redefend this old argument. As has been said by the gentleman from Illinois, the able minority whip, there has never been a pancake so flat that it does not have two sides.

Now, Mr. Chairman, my time is running out. I will leave out the asides and cover the rest in just a few minutes.

For higher education the committee recommends an overall increase of $5,000,000, and has made adjustments which will take $16 million from the scholarship program, $5,306,000 from the teacher fellowship program, and add $26,306,000 to the NDEA direct student loan program. This will result in the scholarship and fellowship programs, and the loan program, all operating at approximately the 1969 level.

Vocational education is another program that has generated stacks of mail. There is a concerted drive by the proponents of this program to get Congress to appropriate $100 million over the budget. I am personally convinced, and a majority of the committee was convinced, that this program is important enough that it should be funded at a higher level than proposed in the budget. The committee is recommending $357,216,000, or $78,000,000 above the request, composed of $70,000,000 for the basic grant program and $10 million for the work-study program, with a slightly offsetting decrease of $2,000,000 budgeted for transfer to the Secretary of Labor for studies of manpower needs.

You have all been visited I am sure by the librarians. The committee has not recommended restoration of all of the reduction below 1969 that was recommended in the budget, but has approximately split the difference and included $126,209,000 in the bill, an increase of $18,500,000 over the budget and a reduction of $16,935,000 below 1969.

The balance of the Department of Health, Education, and Welfare portion of the bill includes some very large sums of money; but, with a few exceptions, for relatively routine and, in large part, uncontrollable items. The largest is the appropriation "Grants to States for public assistance," which is continuing its upward trend. The bill includes the exact amount of the budget request of $7,351,551,000, an increase of $935 million over 1969. The main elements of the increase are $115,195,000 for aid to families with dependent children, $292,145,000 for old age assistance, $121,661,000 for aid to the permanently and totally disabled, $333,322,000 for medical assistance and $100,442,000 for social services and administration at the State and local level. This is the largest of the uncontrollable items included in the bill.

Some of you have likely gotten correspondence or calls from people interested in vocational rehabilitation. The budget is an increase of $130,793,000, but there would be an additional increase of $53 million were it not for a limitation which provides that the allotment base be held to $500 million rather than $600 million as provided in the basic legislation. The committee agrees with the administration that the increase of $131 million is rather liberal even for such a worthwhile program as this, and has approved the proposal contained in the budget.

Some of you have undoubtedly also received complaints with regard to the reduction of $2,200,000, in the revised budget, below the amount included in the original budget for training staff for the university affiliated mental retardation centers. This was in connection with the appropriation. "Maternal and child health and welfare." The committee has made three changes in the revised budget. First, it has restored the $2,200,000 to which I have just referred. Second, it has deleted the increase of $2,500,000 for research in maternal and child health and crippled children's services, which leaves $6,200,000 in the bill for this purpose. Third, it has deleted the increase of $200,000 for the research and demonstration program in child welfare, which leaves $4,400,000 in the bill for this purpose.

I think I should mention one other item in HEW. The revised budget contained an increase of $5 million over the original budget for "Cooperative research or demonstration projects." All of the increase was earmarked for income maintenance experiments which will make $9,700,000 available for that purpose. The proposal is to launch several income maintenance experiments at an estimated annual cost of $1,000,000 to $1,500,000 for each experiment.

The committee approved this proposal with some hesitation, however, most people are of the firm belief that the Nation's welfare system is badly in need of major reform. Many different approaches have been offered to remedy defects in the current system, but all of these suggested changes raised a number of key questions on which information is essential if a sensible long-term program of reform is to be undertaken. If these experiments result in any significant improvement in our current programs in this area, they will be worth many times their cost.

The related agencies section of the bill is rather routine this year since it does

not include the Office of Economic Opportunity. As you know, the authorizing legislation to extend the life of OEO has not yet been reported out of the House and Senate legislative committees. We, therefore, recommend that action on the budget request of slightly over $2 billion be deferred.

Mr. Chairman, we held 4 months of hearings. We heard 659 witnesses. Our hearings have 8,500 pages. The members of this subcommittee, I am proud to let you know, sat through every minute of these hearings.

Mr. Chairman, I assure you that we did not casually or precipitously handle this bill. Under all the circumstances—under all the circumstances—plus the rule of reason, Mr. Chairman, this is a good bill. I urge its support.

Mr. ANDREWS of Alabama. Mr. Chairman, will the gentleman yield?

Mr. FLOOD. I am happy to yield to the gentleman from Alabama.

Mr. ANDREWS of Alabama. Mr. Chairman, I would like to say to the distinguished gentleman from Pennsylvania that in my 26 years in the Congress the gentleman from Pennsylvania has made one of the finest presentations I have ever heard. The gentleman knows his subject well.

As he has described it, this is a can of worms. I served on this committee for one term, and unless one has served on that committee one does not know the problems the members of this committee have. So I say the gentleman from Pennsylvania has done an outstanding job, not only of conducting the hearings before the committee, but in presenting the bill on the floor of this House, and I think the gentleman is entitled to the support of all of the Members.

Mr. FLOOD. Mr. Chairman, I thank the gentleman. He is very gracious and I appreciate it.

The CHAIRMAN. The gentleman from Pennsylvania has consumed 1 hour and 5 minutes.

The Chair now recognizes the gentleman from Illinois (Mr. MICHEL).

Mr. MICHEL. Mr. Chairman, I yield myself 30 minutes.

Mr. Chairman, this is the first year that I am privileged to make the leadoff presentation for the Labor, Health, Education, and Welfare appropriations bill for our side.

The shoes of our good friend, former Congressman Melvin Laird, now serving as our Secretary of Defense, are mighty big ones to fill indeed, and while I cannot expect to match his performance, I am very grateful for his tutelage during the past 10 years that I have served on this subcommittee.

I want to pay special tribute to our chairman, the gentleman from Pennsylvania (Mr. FLOOD) and all the Members on the majority side for their very cooperative spirit in the makeup of this bill. On our side we are happy to have the charming and hardworking gentlewoman from Illinois (Mrs. REID) added to our subcommittee and she and the gentleman from Kansas (Mr. SHRIVER) have attended our meetings religiously and contributed greatly to our deliberations. I think it should be noted that our hearings this year extended over a 3-month period. We heard 659 witnesses and the testimony developed covers nearly 9,000 pages.

This is a bill that reaches in some way into every household in the country and I dare say touches the life of every individual in one way or another.

As you well know, there are many items in this bill as pure and sacrosanct as God, mother, and country, and when we talk about appropriations for funding these very worthwhile and laudable programs, it would be so much easier if we never had to arrive at some arbitrary figure, for regardless of what we decide upon ultimately, there will always be those who will argue with our figures.

We do the best job we know how and, personally, I think we are bringing a pretty good bill to you today.

As the chairman has indicated, the total amount carried in this bill is $16,651,039,700, but it should be borne in mind that unauthorized items included in the budget on which our committee has taken no action includes the Office of Economic Opportunity at roughly a $2 billion level; advance funding for title I of the Elementary and Secondary Education Act—nearly $1¼ billion; some $28 million for the aging; and some $10 million for assistance to the Indians in primary and secondary education.

Over and above this, there is permanent legislation authorizing the continuation of certain Government activities without consideration by the Congress during the annual appropriation process to the tune of $47,803,501,000 for the fiscal year 1970. These are in the main the trust fund accounts, so you really have a grand total involved in this bill for the fiscal year 1970 of $64,500,000,000, exclusive, as I said, of those aforementioned unauthorized items.

Mr. GROSS. Mr. Chairman, will the gentleman yield, or would the gentleman prefer that I wait until he concludes his presentation?

Mr. MICHEL. I will be happy to yield to the gentleman from Iowa.

Mr. GROSS. Mr. Chairman, I thank the gentleman for yielding, and I would say to the gentleman that in addition this bill does not provide a dollar for the pay increases of July 1 of this year, does it?

Mr. MICHEL. The gentleman is absolutely correct.

Mr. GROSS. And that would be a very substantial addition to the bill, is that correct?

Mr. MICHEL. There is no question about it.

Mr. GROSS. Again I thank the gentleman for yielding and say to him that although this bill is in my opinion, much richer than it should be, the gentleman from Illinois (Mr. MICHEL) has voted consistently for economy and fiscal responsibility.

Mr. MICHEL. I think this is the toughest appropriation bill of any on which to make reductions, and I suspect that we are doing well as a committee when we simply hold our own. But we have done more than that this year in deference to those many, many Members who have pleaded with us by word and communication to add money to the bill in the fields of education, student loans, vocational education, and hospital construction. As the chairman pointed out, we have $155.8 million over the budget estimates in our bill.

Unfortunately, over $9.6 billion in this bill are for programs classified as "relatively uncontrollable" in the budget message of the President, so all we really have to work with is the $7 billion balance of controllable items.

It is no secret that there are many Members unhappy with our bill and a number of amendments will be offered to increase it substantially.

I made the point yesterday and I will make it again here today that many of those who will be sponsoring amendments calling for increases in this bill of $900 million or a billion dollars are the very same Members who voted against extension of the tax surcharge just a few weeks ago.

On Tuesday, July 22, the President issued a statement when he signed the final supplemental appropriation bill for the fiscal year ended June 30, and in that statement made mention of his revised 1970 budget that contained specific reductions totaling $4,000,000,000. He went on to say:

> Since April the budget picture has worsened. We now anticipate further increases of approximately $2.5 billion in expenditure for such uncontrollable items as interest on the public debt, medicare, social security, civil service retirement benefits, reduced receipts from offshore oil leases, public assistance and veterans benefits.

The President went on to say that he has no alternative but to direct "the heads of all departments and agencies to reduce spending in the fiscal year just begun by an additional $3.5 billion—the amount necessary to bring current estimates back in line with the $192.9 billion target figure we set in April."

The President concluded this statement by saying:

> The Congress should also recognize that if it approves further increases above the April budget estimates, we cannot live within the $192.9 billion unless more off-setting cuts are made.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I am happy to yield to the gentleman.

Mr. HAYS. Did the gentleman read the paper today about the amount of surplus we had at the end of the fiscal year? When only last week they were estimating $900,000 and it turned out to be $3½ billion.

Mr. MICHEL. Yes, I read that. The point I am trying to make is even though there was a glowing account of a $3½ billion surplus, since April we have eaten up $2½ billion in that in uncontrollable items. So really we are just about where we started from.

Mr. HAYS. I am sure the gentleman from Illinois knows what he is talking of when he talks of uncontrollables. But the point I am trying to make is that I would not put too much stock in what the Bureau of the Budget says about anything if they cannot make estimates from

one week to another without making a $2½ billion mistake.

Mr. MICHEL. Mr. Chairman, we have our work cut out for us, and I would hope the House would reject these amendments to increase our bill and sustain your Appropriations Committee.

Mr. Chairman, our committee has drawn a pretty taut line on research and demonstration projects throughout this bill. As a matter of fact, Secretary Finch was very interested in the budget request of $25 million for demonstration schools, but since the testimony was so vague as to what the Department had in mind, your commitee disallowed every dime of the request. I am not sure whether or not it is possible to spell out in any better detail what we are hoping to accomplish with this kind of research and demonstration request, and I for one would have been willing to give a little on this item.

At the same time, we did keep the money in here—$9.7 million, as a matter of fact—for cooperative research for demonstration projects in income maintenance experiments.

Under any other situation or given set of circumstances, I would be inclined to have written off this request, except for the fact that we have got to do something to turn this whole welfare situation around. Mind you, we have in this bill a total of $7,351,551,000 in grants to the States for maintenance, medical assistance, and social services and administration—in other words, public assistance. It is a shocking and frightening figure that continues to rise at an alarming rate. As a matter of fact, this item alone is over $935,000,000 more than we appropriated for last year. The Secretary has given us repeated assurances in his testimony that "this is not a proposal for a guaranteed annual income, but that we want to key in on the incentive to work," manpower development programs, mobility, especially the rural migration matter, family stability, and size of family, and finally the demand for social services. These are the questions we hope to get some answers to in the Department's proposal to conduct a series of "well-controlled and carefully designed experiments, each of which will be an integral part of an overall plan."

Before getting into more specifics of this bill. Let me touch on two subjects which we find ribboned throughout our hearings, namely family planning and nutrition. The Department of Health, Education, and Welfare alone will be spending $65,899,500 on family planning services, which includes training, research, public information, and direct services.

These programs are carried on under the Social and Rehabilitation Service, Public Health Service, Health Services and Mental Health Administration, National Institutes of Health, and the Office of Education. Now, besides all these bureaus and divisions of this Department getting into the act, you will also find five other Federal agencies involved in one way or another in family planning, including the Department of State, the Department of the Interior, the Office of Economic Opportunity, the National Science Foundation, and the Agency for International Development. As a matter of fact, we found out the latter agency gave the National Institutes of Health a million and a half dollars for this activity. So, we simply scaled down the Department's request in this amount and more, where we felt it justified.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE—POPULATION AND FAMILY PLANNING ACTIVITIES—OBLIGATIONS
FISCAL YEAR 1966-70

Agency and program	Fiscal year 1966	1967	1968	1969	1970 (recommended in H.R. 13111)
Total, Department of Health, Education, and Welfare	$13,380,000	$19,719,000	$29,255,000	$47,242,000	$65,899,500
SOCIAL AND REHABILITATION SERVICE					
Maternal and child health:					
Maternal and child health formula grants to States	1,800,000	2,500,000	3,500,000	3,500,000	3,500,000
Project grants for maternity and infant care	1,200,000	2,500,000	2,500,000	14,500,000	26,300,000
Research and training in maternal and child health	600,000	500,000	500,000	500,000	1,700,000
Public assistance:					
Social services	2,000,000	3,000,000	6,300,000	8,300,000	10,300,000
Medical assistance	1,000,000	1,500,000	3,000,000	4,500,000	6,400,000
Cooperative research to prevent and reduce dependency			200,000	200,000	300,000
Subtotal, Social and Rehabilitation Service	6,600,000	10,000,000	16,000,000	31,500,000	48,500,000
PUBLIC HEALTH SERVICE

Prospective elementary and secondary teacher fellowships	72,000	121,000	121,000	100,000	162,000
EPDA Institute programs				230,000	200,000
Adult Education: adult basic education programs	317,000	317,000	644,000	720,000	800,000
Grants to States for vocational education	14,000	14,000	14,000	14,000	14,000
Subtotal, Office of Education	874,000	1,412,000	2,812,000	3,113,500	3,267,500
Scientific activities overseas [1] (Special foreign currency programs, Public Law 480)			314,000	2,400,000	3,500,000

[1] Not included in the Department of Health, Education, and Welfare total.

So far as nutrition is concerned, there is an increase of $4 million in the budget and the Secretary has recently reprogramed an additional $1 million in HEW.

DEPARTMENT OF LABOR

Mr. Chairman, getting to the specifics so far as the Department of Labor is concerned, the biggest item is $655,605,000 for the manpower and development training program, which represents an increase over the 1969 funding level of $248,113,000. This should practically double the number of trainees in the JOBS program from some 75,000 up to 140,000 and increase the number of trainees in the CEP—concentrated employment program—up to more than 156,000. We cut the revised budget request by $20,000,000 for the so-called "State supplements." The majority of the committee was inclined to believe that grant programs in this area should be consolidated rather than proliferated, notwithstanding the fact that the Con-

gress in amending the Manpower Development and Training Act in 1968, made provision for this program in title V. The Secretary of Labor has told us that the States are ready and willing to accept this responsibility of providing at least 25 percent of the total cost of projects conducted under title V, and that 24 States report that funds are available, or have been requested, to match the 75 percent Federal grants during fiscal year 1970. As I said before, with the serious restraints imposed upon us by budget limitations, the majority of the committee decided to delete this $20,000,000 from the bill.

While in the Office of the Manpower Administrator, we see an increase over 1969 of $8,690,000, this increase is entirely due to transfers to this appropriation from other activities in the Bureau of Apprenticeship and Training, Bureau of Employment Security, Office of Economic Opportunity, and the work incentive program. We have also made a reduction in the budget request for the experimental demonstration and research program to hold that to the 1969 funding level, although I must say that I have some reservation about this reduction, for it denies the request for $1,582,000 for: First, a study of seasonality in the construction industry; second, the continuation of experiments in financing the move of workers to areas where jobs can be secured; third, the insuring of security bonds for workers which permits them to be employed. We were told that without this insurance, employers are often unwilling to take a risk with workers who have prison records.

I am inclined to go along with the view that studies that lead to the reduction of seasonality in construction would provide fuller employment for the individual worker, lead to a reduction in the cost of construction, and further assist in meeting the critical housing needs of the country. You may remember that this program was also specifically provided for by the Congress in the 1968 amendments to the MDTA.

We also denied the request for $2 million under the labor-management services item that would have provided the Justice Department with information about undesirable elements in the management of workers, welfare, and pension funds. Actually, this was a request for 130 new positions and while we certainly do not want to be standing in the way of the Department of Justice's war on organized crime, we did not feel the Department of Labor ought to be saddled with this additional number of employees to be working for all practical purposes for the Department of Justice, and we say so in our committee report.

In the Office of the Secretary, we have provided for the increase in 31 positions to take over the audit function due to increases in manpower training activities, and this reflects the dollar increase of $477,000 over the appropriations for 1969.

In concluding my remarks with respect to the Department of Labor, I would like to give a résumé of the reorganization of the Manpower Administration, so that Members might be brought up to date.

REORGANIZATION OF THE MANPOWER ADMINISTRATION, DEPARTMENT OF LABOR

On March 14, 1969, the Secretary of Labor announced a sweeping reorganization of the Manpower Administration within the Department of Labor. This reorganization was the result of an intensive study of the organization that was launched by the Secretary shortly after he took office. The study revealed many structural weaknesses that had developed as manpower programs became more and more complex and began to outstrip the ability of the organization to deal with them.

There were too many lines to the field, too little coordination of the planning and operating aspects of the programs, and too much duplication of effort. The States, cities, and towns deserved a more efficient, understandable, and responsive Federal partner.

In order to remedy these deficiencies, alternative organizational structures were considered and an explicit plan was circulated to interested parties, including Members of the Congress.

Once general approval of the idea was obtained, the process of reorganization was started—that effort is now virtually complete, and the following represent some of the major changes that have grown out of it:

First. The top executive management capability of the Manpower Administration was strengthened by reestablishing the Assistant Secretary for Manpower and the Manpower Administrator as separate positions.

Second. The Manpower Administrator has been able to assume operating management responsibilities with improved staff support.

Third. A single direct line of administration was established from the Office of the Manpower Administrator to the regions. This arrangement replaces the multiple lines of administration from the national office to the field that existed under the previous structure.

Fourth. Duplication and overlapping authority in the administration of manpower programs at the national level was reduced by combining the U.S. Employment Service and the Bureau of Work-Training Programs.

Fifth. The status and effectiveness of the Employment Service function has been enhanced by moving responsibility for this function to a higher position in the Manpower Administration.

Sixth. Duplication in the provision of administrative and management support services to program offices is greatly reduced by moving resources and responsibility from the bureaus to the staff components of the Manpower Administration.

Seventh. Decentralization of operating authority, responsibility, and accountability to the Regional Manpower Administrators and the consolidation of the Manpower Administration field staff under their direction has lead to significant improvements in program operations at the State and local level with the concomitant improvement of service to the public.

Thus, the newly organized Manpower Administration will be able to meet the challenge of new and expanding programs in an efficient and timely manner.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

FOOD AND DRUG CONTROL

The first specific item in the Department of Health, Education, and Welfare is food and drug control, and our bill includes $72,007,000. The amount of the request and an increase of $3,122,000 above the amount appropriated for 1969. Incidentally, 10 years ago the appropriation for food and drug control was a mere $13,800,000, so you can see what is happened in that relatively short period of time. The only program increase is $717,000 for the very important work of expediting the review of new drug submissions from industry, and this increase is offset by decreases of $282,000 in other activities.

AIR POLLUTION CONTROL

The next item is Air Pollution Control and this is one of the major problem areas, and as we say in our report, "More must be done if we are going to make reasonable progress in correcting the problem." We have an increase here of $5,067,000 above the amount appropriated for 1969. Just 5 years ago, the appropriation for this item was less than $22,000,000.

ENVIRONMENTAL CONTROL

For Environmental Control, our bill includes $55,208,000, the amount of the request, which is $12,213,000 above the appropriation for 1969. Incidentally, 5 years ago the appropriation for this item was just a shade over $9,000,000. As a committee, we would like to see a reprograming of some activities to increase the availability of funds for the solid waste program.

MENTAL HEALTH

Moving on to the very vital field of mental health, we have $360,302,000, which is slightly over the budget request, and represents an increase of $96,762,000 over the appropriation for 1969. Ten years ago we were appropriating just $68,000,000 for this item.

The larger items in this increase are $4,000,000 for the programs to assist communities to provide treatment services for alcoholics authorized in the Alcoholic and Narcotic Addict Rehabilitation Amendments of 1968; and $2,931,000 for the narcotic addict treatment program, of which $2,500,000 is to provide aftercare services for approximately 1,300 narcotic addicts under contracts with community agencies.

Unfortunately, there are approximately 5 million alcoholics in the United States in need of medical, psychological, and social services. Testimony before our committee discloses that industry alone loses $2 billion yearly as a result of alcohol-associated absenteeism and reduced work efficiency. Ten thousand deaths annually are attributed to alcoholism, and problem drinking has been identified as a factor in nearly 50 percent of fatal traffic accidents. So, I think it is quite fair to state that compared with the cost of alcoholism, this appropriation item is indeed minuscule.

One of the striking examples of tangible results obtained through medical research comes in this field of mental illness. It was very enlightening to learn that there has been a significant decrease in the number of Americans residing in our Nation's mental hospitals. Thirteen years ago there were well over a half million persons committed to mental hospitals. Today, after more than a decade of steady advances in research and treatment, there are 401,000, or a reduction of nearly 30 percent. Last year alone, we were told, there was a decline of 25,000 patients, or 5.9 percent, including, for the first time, a decrease of 2 percent in the crucial 15–26 age group. Had the rising mental hospital population seen before 1955 gone unchecked, we would today be confronted by 731,000 patients in our mental hospitals—or nearly twice the actual number.

HEALTH SERVICES RESEARCH AND DEVELOPMENT

The bill includes $44,975,000, the amount of the request, an increase of approximately $4,000,000 over the amount available for similar activities in 1969. This appropriation relates to research and development in the area of actually rendering health services in much the same manner as the appropriations to the National Institutes of Health relate to research and development in the field of medical science. Both the original budget and the amended budget stress the importance of doing more in the area of getting the advances medical science translated into health services that are actually available to the people who need them. Our committee agrees entirely with this attitude and has approved the request in full.

COMPREHENSIVE HEALTH PLANNING AND SERVICES

The bill includes $207,143,000, a reduction of $6,890,000 from the request, and $30,853,000 above the appropriations for 1969. The reduction made by the committee represents the increase requested for migrant health grants. The bill includes $7,200,000 for this purpose, the same amount as was available in 1969.

The significant change from 1969, in the budget, was to increase by $23,968,000 the amount for formula grants to States for health activities, under which the States make the decisions as to priorities; and to decrease by $6,600,000 the amount available for project grants to the States, under which the Federal Government makes the decisions as to priorities.

REGIONAL MEDICAL PROGRAMS

The bill includes $76,000,000, a reduction of $24,000,000 from the request, and an increase of $14,093,000 above the amount appropriated for 1969. As our chairman said in recommending a reduction of $24,000,000 from the request, the committee has no intention of curtailing the regional medical programs. On the contrary, the committee strongly supports this program and is disappointed that it got started so slowly.

We do have an item in this section to provide $500,000 for a demonstration project to "find out more about the causes of violent behavior that results in death or critical injury to others and seek to develop medical means to help prevent people from undertaking senseless violence." There was considerable division of thought in the committee on this item and I personally am taking exception to it, for I cannot conceive our learning anything new about the subject that we do not already know.

COMMUNICABLE DISEASES

The bill includes $38,638,000, the amount of the request. It is interesting to note that during the Hong Kong flu epidemic in 1968–69, the virus was isolated in Hong Kong by July 25 and it was submitted to World Influenza Center in London on the 29th. The Communicable Disease Center is the International Reference Center for the Western Hemisphere. After establishing that the strains were different from the last flu here, the strains were furnished to the Division of Biologics Standards and by November 19 the first vaccine reached the market. Also, a vaccine has been licensed and production started for the expected epidemic of German measles this fall. With regard to venereal diseases, we are working on a diagnostic blood test for gonorrhea. We are spending approximately $1 million on this. The increase rate is approximately 14 percent last year. The total for VD is $4,937,000.

HOSPITAL CONSTRUCTION

The bill includes $258,323,000, an increase of $104,400,000 over the request. The chairman has explained the reasoning of the majority of the committee on this item, although I would personally have preferred to defer action to give the administration's legislative proposal a chance.

The bill also includes $72,224,000—the amount of the request—for patient care and special health services.

NATIONAL INSTITUTES OF HEALTH

Now we turn to the National Institutes of Health. As has been pointed out, the budget estimates for the NIH this year reflect, for the first time, the expanded organization and broader role of NIH as one of the three agencies into which the Department's health functions were recast in April 1968. NIH, which for many years has been justly proud of its preeminence in the conduct and support of biomedical research, now also has the responsibility for the health manpower and biomedical communication programs of the Department.

DIVISION OF BIOLOGICS STANDARDS

For the Division of Biologics Standards the bill includes $8,225,000, the amount of the request. I think it is interesting to note that this Division played a major role in the development and licensing of the Rubella vaccine, and helped in the development and fast production of the influenza vaccine last winter.

NATIONAL CANCER INSTITUTE

The amount in the bill for the National Cancer Institute is $180,725,000, the amount of the request. In 1969 cancer will claim 615,000 new victims and 325,000 lives in the United States. This is only exceeded by heart disease. Cancer mortality is increasing at a little less than 1 percent a year. Even with the best methods of treatment under optimum conditions, one-half of the victims would die. Lung cancer, in particular, is rising at an alarming rate and few of its victims can be cured.

In the area of detection it is interesting to note in just one type that available methods are not being used. Less than 30 percent of the women who should be getting the pap smear are doing so. Out of approximately 60 million women who should have had the test in 1968, only 18 million were tested. However, over the years the percent of women participating is growing: 1960, 8.3 percent; 1963, 15.8 percent; 1965, 22.5 percent; 1968, 30 percent.

NATIONAL HEART INSTITUTE

The bill includes $160,513,000 for the Heart Institute, the amount requested. Diseases of the heart and the circulatory system are the major cause of death in the United States. They account for 54 percent of all deaths. They strike down over 1 million Americans each year—three times as many as all forms of cancer and nearly twice as many as all other causes of death combined. Work is continuing on artificial hearts and perfecting heart transplants.

NATIONAL INSTITUTE OF DENTAL RESEARCH

The amount the committee is recommending for the National Institute of Dental Research is $29,289,000, the amount of the request. This Institute has launched a national program aimed at the complete preventability of tooth decay by 1980. This is the most prevalent of diseases, affecting 98 percent of all Americans.

NATIONAL INSTITUTE OF ARTHRITIS AND METABOLIC DISEASES

For the National Institute of Arthritis and Metabolic Diseases, the bill includes $137,668,000, the amount of the request. The committee this year heard testimony on the successful development of more effective artificial kidneys, with proven performance in clinical trials, which will be able to maintain patients with loss of kidney function more simply and less expensively than the equipment available heretofore.

NATIONAL INSTITUTE OF NEUROLOGICAL DISEASES AND STROKE

For the National Institute of Neurological Diseases and Stroke the bill includes $101,256,000, the amount requested. The Institute will continue its head and spinal-cord injury program and expand it as funds permit. The committee heard very dramatic testimony in the treatment of patients with Parkinson's disease with the use of the drug L–Dopa.

NATIONAL INSTITUTE OF ALLERGY AND INFECTIOUS DISEASES

The bill includes the amount of the request, $102,389,000 for the National Institute of Allergy and Infectious Diseases. This Institute was also very much

involved in the fast delivery of the Hong Kong flu vaccine last year.

NATIONAL INSTITUTE OF GENERAL MEDICAL SCIENCES

The amount is the bill for the National Institute of General Medical Sciences is $154,288,000, the amount of the request. The Institute is starting a program in the research of trauma. The objective being to reduce the death rate, suffering and disability caused by injuries of all types.

NATIONAL INSTITUTE OF CHILD HEALTH AND HUMAN DEVELOPMENT

The amount included in the bill is $73,098,000, reduction of $2,754,000 from the amount requested. The reduction is in the area of family planning research. As I mentioned earlier, there is $65 million in the bill for family planning activities.

NATIONAL EYE INSTITUTE

The bill includes $23,685,000 for the National Eye Institute which is the amount requested. This activity was formerly under the National Institute of Neurological Disease and Stroke.

It is interesting to note that more than 1 million persons have glaucoma and half of them are unaware of the problem. Every year 3,500 persons are blinded by the disorder. Obviously, the deterioration could be stopped if some of these people saw a doctor. It is estimated that 2 percent of the population over 40 has glaucoma.

NATIONAL INSTITUTE OF ENVIRONMENTAL HEALTH SCIENCES

The bill includes $18,328,000, the amount requested, for the National Institute of Environmental Health Sciences.

GENERAL RESEARCH AND SERVICES

The bill includes $73,658,000 for general research and services which is an increase of $3,960,000 above the amount requested. The increase in the request is in the area of clinical resource centers. The committee felt that increased hospital costs were curtailing the activities of this program and therefore restored it to the original budget request.

JOHN E. FOGARTY INTERNATIONAL CENTER FOR ADVANCED STUDY IN HEALTH SCIENCES

The bill includes $2,954,000, the amount requested.

HEALTH MANPOWER

The bill includes $218,021,000, the amount requested, and an increase of $45,845,000 over the amount appropriated for 1969. Under the revised budget for the health manpower appropriation, the committee was informed of the administration's plan to encourage a substantial increase in medical school enrollment. The objective of this physican augmentation program is to expand the output of physicians as rapidly as possible by assisting schools of medicine and osteopathy to increase first-year enrollments in the fall of 1970 by an additional 1,000 students. As an increase of 600 was already expected, the total increase will be 1,600.

Similar increases are projected for new entrants in each of the next 3 years so that by the fall of 1973 there will be an increment of 4,000 medical students over the number that could otherwise be expected. The cost of this program will be $10 million for each contingent's first year, of which $5 million is for "start-up" costs; for example, renovation, equipment, and so forth—and $5 million for each subsequent year of the 4-year curriculum. Under this plan total funding for the program will thus be $10 million in 1970 rising by $5 million per year to $25 million in 1973 after which the cost will level off to $20 million per year.

The committee endorses the new program and approves the budget except that it directs that the increase of $5,500,000 for nursing scholarships be transferred to direct loans in nursing, and that the increase of $4,781,000 budgeted for scholarships for "medical, dental, etc.," be transferred to direct loans for "medical, dental, etc."

DENTAL HEALTH

The bill includes $10,722,000, a reduction of $165,000 from the amount requested, and an increase of $498,000 over the amount appropriated for 1969.

CONSTRUCTION OF HEALTH EDUCATIONAL, RESEARCH AND LIBRARY FACILITIES

The bill includes $126,100,000, the amount requested, and an increase of $41,300,000 over the amount appropriated for 1969. The amount requested, plus an unobligated balance of $22,900,000, will make $149 million available for these matching grants for construction which is $24,874,292 less than the amount available for obligation in 1969.

Of the amount in the bill, $94.5 million, an increase of $34.5 million, is for construction grants for teaching facilities at schools of medicine, osteopathy, optometry, podiatry, veterinary medicine, and public health. For schools of dentistry, $23.6 million, an increase of $8.6 million, is included. In view of the urgent need for substantially greater numbers of the professional personnel trained at these schools, these amounts seem modest.

NATIONAL LIBRARY OF MEDICINE

The bill includes $19,682,000, the amount requested, and an increase of $1,521,000 over the amount appropriated for 1969.

The funds included in the bill will provide for the library's direct service operations at approximately the 1969 level and for the further implementation of its computer-based reference system, Medlars II.

OFFICE OF EDUCATION

Now let me move to a very critical part of this bill for the Office of Education. We know there are going to be amendments offered to increase a number of these figures substantially. But let me sketch out again what we have done here. In the first place, for elementary and secondary education our bill includes $459,523,700, which represents an increase of $65,000,000 over the request and an increase of $3,671,000 over the amount available for the same activities for 1969.

For title I we are providing $205,360,700, which added to the advance for 1970 included in our bill last year will make $1,216,175,000 available for this purpose. This is the exact amount of the authorized portion of the request and is $93,048,000 over the amount available for 1969.

Personally, I was in favor of adding some money for the specific titles II and III of ESEA, and titles III and V of the National Defense Education Act. But the committee felt that since the House in acting on the legislative proposal H.R. 514 provided for a lumping together of supplementary educational services, library resources, guidance, counseling, and testing, and equipment and minor remodeling, we simply added to the $116,163,000 earmarked for supplementary educational centers another $84,000,000 to bring the total for these four categories up to $200,163,000.

There was an amendment offered in our full committee by the gentleman from New York (Mr. ROBISON) that would have added a total of $110 million to the bill to restore the 1969 level for titles II and III, ESEA, and titles III and V of NDEA, but it was defeated and I suspect there will be an effort made later to do the same here on the floor.

As I said, I personally have been somewhat in favor of earmarking myself for specific categories in keeping with the views expressed to me by many of the educators out in my home district and State of Illinois, but the whole concept underlying H.R. 514 is to give the States more discretion in the use of Federal funds to meet their own special needs.

It should be borne in mind that we provide an increase of about $103 million over 1969 for title I. This was the figure recommended by both the Johnson and Nixon administrations, and we are not, I repeat not, cutting back 1 dime in title I.

According to the justifications, the increase will provide for a 5.5-percent increase in cost of education, and for an increase of 235,000 children in the number of children counted for entitlement as a result of updating AFDC data as required by the law.

The reasons for not increasing the amount in the bill for title I are primarily the general reasons for not increasing the budget—the need to curb inflation, and the fact that Federal expenditures estimated for 1970 already exceed the previous estimates by $3.5 billion.

In addition, however, it is clear that there is a need to evaluate the effectiveness of the title I program. The Office of Education is making an effort to get the States and school districts to concentrate their title I funds in the areas where they are most needed, rather than spreading them around so thinly that results are not apparent. There have been reports and studies indicating that many title I projects are not as effective as they might be. The Office of Education feels that there should be a thorough evaluation of the title I program, as well as other elementary and secondary education programs. There is an increase of $4,250,000 in this bill for these evalua-

tion studies. We think a good look should be taken at this program before pouring additional funds into it.

Before moving on to the impacted-aid items I should point out that for drop-out prevention we have held to last year's level of expenditure of $5 million. This is a substantial reduction of $14 million from the request, but we put this reduction over into the education account to help provide that $84 million increase.

For bilingual education we provide for $10 million, which was the budget figure and this is $2.5 million over the appropriation for 1969.

IMPACTED AREA AID

Mr. Chairman, our subcommittee gave a lot of thought to the question of what to do about the 1970 appropriations for impacted area aid under Public Law 874.

Some 4,600 school districts are involved in this program. Perhaps more importantly, this program affects the districts of around 385 Members of the House of Representatives.

The Eisenhower, Kennedy, Johnson, and now the Nixon administrations have all attempted to cut this program, but it has increased every year in spite of all their efforts. The Congress has not only increased the budget, but has repeatedly liberalized the authorizing legislation to expand eligibility for payments. We have just liberalized it again—but not with my vote—this session by making children living in low-rent public housing eligible for payments—H.R. 514.

This law is inequitable. It is bad. It is outrageous. It was originally enacted during the Korean war to help school districts which found themselves overstrained by an influx of children from military installations. There are still a lot of school districts which need and deserve such help from the Federal Government. But most of this money is not going to them. It is going to districts which qualify for funds simply because they have children whose parents work in Federal buildings. These people pay local real estate and sales taxes just like everyone else. Some of these districts are among the most affluent in the United States.

The suburbs of Washington, D.C., are a good example of how this program works. Fairfax County, Va., got almost $10.5 million in fiscal year 1969. Of that total, $10.2 is for the so-called "b" children—whose parents work on Federal property, but do not live on Federal property. Prince Georges County, Md., is getting over $9 million. Montgomery County, Md., is getting $5.8 million. All of these counties have high per capita income and a high level of homeownership. They are far more capable of educating their children with their own tax resources than many areas which receive no Federal impact aid at all.

The subcommittee is going along with the administration's budget proposal, which would pay full entitlement for "a" children, whose parents both live and work on Federal property, but allows no payments for "b" children. This will undoubtedly work a hardship on a few school districts which has a legitimate claim to Federal impact funds. But we know of no other way to call the attention of the Members to the gross inequity of this law and its enormous cost to the Federal taxpayers.

Mr. Chairman, I will include at this point with my remarks a table showing the 20 largest recipients of Public Law 81–874, the so-called impacted aid legislation:

20 LARGEST RECIPIENTS OF PUBLIC LAW 81–874, SCHOOL ASSISTANCE IN FEDERALLY AFFECTED AREAS

School district and application number	1969 entitlement		1969 appropriated		1970 entitlement	
	Sec. 3(a)	Sec. 3(b)	Sec. 3(a)	Sec. 3(b)	Sec. 3(a)	Sec. 3(b)
Alaska, E–1	$11,955,177	$469,688	$10,520,555	$143,325	$13,748,453	$540,141

EDUCATION PROFESSIONS DEVELOPMENT

Moving on to other items in this educational field we are providing $95 million for education professions development, which is the amount of the request, and the same as that appropriated for 1969. In our report we make mention that stronger emphasis should be placed upon summer workshops for teachers of the disadvantaged and upgrading the skills of teachers.

Mr. Chairman, I include at this point in the RECORD a Report of Human Heart Transplants as of April 1, 1969.

REPORT OF HUMAN HEART TRANSPLANTS, AS OF APR. 1, 1969

No.	Recipient Age	Recipient Sex	Donor Age	Donor Sex	Date of transplant	Survival	Reported cause of death	Country
1	53	M	25	(1)	Dec. 3, 1967	18 days	Pneumonia	South Africa.
2	2 17	M	2 2	M	Dec. 6, 1967	6½ hrs	(1)	United States.
3	58	M	24	M	Jan. 2, 1968	Surviving		South Africa.
4	57	M	43	(1)	Jan. 6, 1968	15 days	Internal hemorrhage	United States.
5	58	M	29	F	Jan. 10, 1968	8½ hrs	Heart failure; donor heart ½ size	Do.
6	27	M	19	F	Feb. 17, 1968	3 hrs	Pulmonary hypertension	India.
7	66	M	23	M	Apr. 27, 1968	53½ hrs	Embolism/brain damage	France.
8	40	M	43	M	May 2, 1968	3½ days	Pulmonary embolism	United States.
9	47	M	15	F	May 2, 1968	2 6 mos., 6 days	See No. 87	Do.
10	45	M	26	M	May 3, 1968	46 days	Lung/kidney infection	England.
11	48	M	15	M	May 7, 1968	8 hrs	(1)	United States.
12	62	M	36	M	May 7, 1968	7 days	(1)	Do.
13	65	M	35	M	May 8, 1968	2 days	(1)	France.
14	56	M	39	(1)	May 12, 1968	Surviving		Do.
15	54	M	17	M	May 21, 1968	4 mos., 23 days	Reiection/cardiac arrest	United States.
16	54	M	58	M	May 25, 1968	7 days	Total reiection	Do.
17	23	M	41	M	May 26, 1968	28 days	(1)	Brazil.
18	56	(1)	38	(1)	May 30, 1968	4 hrs	Lung/kidney complication	Canada.
19	54	M	47	M	May 30, 1968	5 days	Neurological complication	Argentina.
20	39	M	29	M	May 31, 1968	Died on table	Malfunction of right ventricle	United States.
21	41	(1)	20	(1)	June 10, 1968	1¾ hrs	(1)	Do.
22	49	M	23	M	June 28, 1968	5 mos., 2 days	Asphyxiation following indigestion	Canada.
23	24	F	32	(1)	June 28, 1968	4 mos., 13 days	Brain infection	Chile.
24	48	(1)	50	(1)	July 2, 1968	4 mos., 26 days	Heart attacks due to reiection	United States.
25	49	F	46	M	July 9, 1968	5 hrs	(1)	Czechoslovakia.
26	58	M	33	F	July 20, 1968	Surviving		United States.

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I am glad to yield to the gentleman from Iowa.

Mr. SMITH of Iowa. So that the Members might know what to expect, I might mention last year a $520 million maximum was available under the formula. This year that maximum jumped to $650 million or a $130 million increase in 1 year. I have just gotten the estimates for next year, and they are $1,050 mil-

lion. That represents a little over double the amount in 2 years on this program.

Mr. MICHEL. Yes.

Mr. JOELSON. Mr. Chairman, will the gentleman yield?

Mr MICHEL. I yield to the gentleman from New Jersey.

Mr. JOELSON. I merely want to remark that in spite of the amount of the appropriation it is still about 28 percent of the authorization in impacted areas.

Mr. SMITH of Iowa. The gentleman is far from right. It was almost 100 percent last year.

Mr. JOELSON. This year it is 28 percent of the authorization.

Mr. MICHEL. You are talking about the figure that was in our bill.

Mr. JOELSON. Yes. In your bill.

Mr. MICHEL. We are quite aware of that.

Mr. SMITH of Iowa. It is 100 percent for category A.

Mr. MICHEL. That is right.

TEACHER CORPS

So far as the Teacher Corps is concerned we are providing $21,737,000, a reduction of $9,363,000 from the request and an increase of $837,000 above the amount appropriated for 1969. We are told that this is the sum estimated to be necessary to carry the Teacher Corps program at last year's level, including "forward funding" of preservice training.

HIGHER EDUCATION

The bill includes $785,839,000, an increase of $5 million over the request, and an increase of $85,452,000 over the amount appropriated for 1969. The committee made three changes within the total request. First, the request for $175,600,000 for educational opportunity grants was reduced to $159,600,000. Second, college teacher fellowships were reduced from $61,469,000 to $56,163,000. Third, the amount for direct student loans was increased from $161,900,000 to $188,206,000. The action with regard to the reductions for educational opportunity grants and college teacher fellowships is applied entirely to funds available for first-year students and will hold such availability to the 1969 level. The addition of these funds plus $5 million to direct student loans will also place the fund availability for this program at approximately the 1969 level.

HIGHER EDUCATION CONSTRUCTION

The committee has gone along with the administration's proposals for funding construction of facilities at colleges and universities. There is $43 million in the bill for construction grants for public community colleges and technical institutes. There is $6 million in the bill for State administration for higher education construction programs, and there is $11,750,000 for interest subsidy grants, which, together with the funds for interest subsidy grants contained in the second supplemental bill for 1969, will support about $435 million in loans for higher education construction. There is no money in the bill for direct Federal loans, or for grants for 4-year colleges or graduate schools, other than the interest subsidy grants.

The interest subsidy grants were authorized in the Higher Education Act Amendments passed in the last session of Congress. They offer a way of helping colleges and universities to build without large Federal outlays. The committee thinks that it is worth giving a try in a period of severe fiscal stringency, when we are trying to hold down Federal expenditures.

Of course, most colleges would rather get a direct Federal grant than go to a bank for a loan. However, if the Federal Government makes a grant, it has to obtain the funds by borrowing in the private lending market.

There are dire predictions that some colleges will not be able to get loans under this program. The committee is adopting a wait-and-see attitude on this. If it turns out to be true, it can be corrected in next year's budget.

The budget places top priority on assistance to the 2-year community colleges and technical institutes, and the committee agrees with this priority.

VOCATIONAL EDUCATION

The committee bill provides an increase of $78 million over the budget request and $109 million over the 1969 appropriations for vocational education.

The 1970 estimate for vocational education was the same in both the Johnson and the Nixon budgets, $279,216,000. The committee has already indicated the high priority which it places on vocational education by increasing this figure by $78 million.

The amount recommended by the committee will permit the States to put in effect most of the new programs authorized in the vocational education amendments passed in the last session of Congress, without cutting back on the existing vocational education programs. The committee also added $10 million for the vocational work-study program, which was not funded at all in the budget request.

The budget problem which has been bothering the vocational educators around the country and producing a flood of mail to Members of Congress is that the vocational education amendments now require the States to set aside 40 percent of their basic grant funds for specific programs as follows:

Fifteen percent for postsecondary programs, 15 percent for special programs for the disadvantaged, 10 percent for special programs for the physically handicapped.

Since the budget proposed about the same total dollar level for the State grant program as 1969, this meant that in order to meet the "set aside" requirements, States would have to reduce support for ongoing vocational education programs. By adding $70 million to the budget for the basic grant programs, the committee has eliminated this problem.

Other new vocational education programs which are funded for the first time in this bill include: $14 million for cooperative education, $13 million for innovative programs, $2 million for curriculum development, $1 million for planning and evaluation.

VOCATIONAL EDUCATION RESEARCH

The budget shows only $1,100,000 for vocational education research compared with $11,375,000 in 1969. Actually, the reduction in vocational education research is not as great as these figures would indicate.

The Office of Education witnesses testified that, in addition to the $1,100,000 specifically earmarked in the budget for vocational education research, $4 million of the funds budgeted for general education research will be spent on vocational education, and the $2 million budgeted under vocational education for "curriculum development" will be spent for research, for a total of $7.1 million. Thus, the reduction in vocational education research is about $4.2 million.

The committee did not wish to increase appropriations over the budget request by earmarking additional funds for vocational education research. The Commissioner of Education has indicated that he is reviewing and reorganizing the whole research program of the Office of Education to make it more effective, and the committee thinks such a review would be highly desirable. We are, frankly, not convinced that the rather substantial amount of money which is going to educational research at the present time is all that its cracked up to be. If, after his review, the Commissioner decides that a larger share of the funds budgeted for research ought to go into vocational education research, he can recommend it in next year's budget.

LIBRARY PROGRAMS

Library programs were rather hard hit by the revised budget for 1970:

The 1969 appropriation for grants for public library services was cut in half, from $35 million to $17.5 million; and

No funds were provided for public library construction—$9,185,000 was appropriated in 1969; no funds were provided for school libraries under title II, ESEA—$50 million was appropriated in 1969; funds for college libraries were reduced from $25 million to $12.5 million; funds for training of librarians were reduced from $8,250,000 to $4 million; funds for the Library of Congress were reduced from $5.5 million to $4.5 million.

The committee felt that these reductions were too drastic, and has added funds over the budget in those programs which seemed to be of highest priority. These are: $17.5 million for public library services; an indefinite amount for school library resources under elementary and secondary education—a share of the $200,163,000 available for titles II and III, ESEA, and titles III and V, NDEA; $1 million for the Library of Congress for acquisition and cataloging of foreign language materials.

The amount in the bill for public library services restores this program to the 1969 level of $35 million. Our committee did not wish, however, to add to inflationary pressures on the economy by restoring funds for library construction. We think that a deferral of appropriations for construction for a year will not seriously damage the Nation's libraries. The only places in the bill where the committee has added funds for construction are for hospital beds and vocational rehabilitation facilities. We did not feel that libraries fell into the same category of urgency.

EDUCATION FOR THE HANDICAPPED

Our bill provides $84,540,000, reduction of $1,250,000 from the request, and an increase of $5,690,000 over the amount appropriated for 1969. The reduction from the request represents the amount of the increase over 1969 which was budgeted for research. The main increases over 1969 are $2,055,000 for early childhood programs, $1,500,000 for regional resource centers, and $1 million for the deaf-blind centers.

RESEARCH AND TRAINING

Our bill includes $85,750,000, a reduction of $29,250,000 from the request, and a reduction of $3,667,000 below the amount appropriated for 1969. The big increase in the budget was for the $25 million for experimental schools which I mentioned very early in my presentation. We say in our report that when this was first submitted to the committee, the written justifications were extremely vague and subsequent oral testimony, while a considerable improvement, left us with the impression that the Department should be given a considerably longer period of time to prepare their plans before any sum of money such as that suggested was made available.

We are not dismissing the proposal as being invalid, for we will have no objection to the use of funds in this appropriation account for planning purposes. And finally, Mr. Chairman, on this item we also disallowed the increase of $4,250,000 requested for "major demonstrations".

STUDENT LOAN INSURANCE FUND

The bill includes $10,826,000, the amount of the request. In accordance with the Higher Education Amendments of 1968, the student loan insurance fund now covers defaults up to 100 percent of the principal amount of the loss on federally insured loans and up to 80 percent of the principal amount of the loss on reinsured loans made by State and private nonprofit agencies. This is, of course, purely an estimate, but seems reasonable in view of the fact that approximately $2.2 billion in loans will be outstanding in 1970. No appropriation has been made to this fund since 1967.

NDEA STUDENT LOANS

Now so far as NDEA student loans are concerned we have increases totaling $26,306,000 over the 1970 budget request.

Our bill provides for an appropriation of $188,206,000 for 1970 for the NDEA student loan program compared with $193,400,000 appropriated for 1969. However, the total dollar level of NDEA student loans will increase from $265,100,000 in fiscal year 1969 to $277,005,000 in 1970, an increase of $12 million. This is because collections of loan repayments are going up each year, and these funds are available to the universities to make new loans.

Funds are also available to students through the insured loan program. The budget predicted that $641,250,000 worth of insured loans would be made by banks and other lending institutions in fiscal year 1969, and that $794,241,000 worth of loans would be made in fiscal year 1970 or an increase of over $150 million. There has been considerable doubt as to whether the 1970 estimate will hold up, since the prime interest rate has risen to 8½ percent, and the law limits the interest which may be paid on insured student loans to 7 percent.

However, the most recent information we have received from HEW indicates that almost $65 million worth of insured loans were made in the month of June. This is over twice the amount of loans which were made in June last year. The data we have from the Department also indicate that the total loan level for fiscal year 1969 was $672 million, or $30 million over the estimate in the budget.

If, as some alarmists are saying, the insured loan program is going to collapse because of the tight money market and the 7-percent statutory interest rate ceiling, the way to deal with the situation is not to increase Federal expenditures by adding more money to the bill for direct student loans, but rather to amend the authorizing legislation at once to remove or raise the interest rate ceiling. We understand that HEW has proposed such amendments to the Budget Bureau, but that they cannot reach agreement on the details. If the administration cannot make up its mind about this, then Congress ought to initiate its own amendments to keep the insured student loan programs going.

Student aid programs are not being cut back in this bill. They are being increased. The total amount for undergraduate student aid programs recommended under the appropriation for higher education increases from $568,100,000 in 1969 to $609,917,000 in 1970, an increase of over $40 million.

This includes the educational opportunity grants, the NDEA student loans, interest payments for the insured loan program, the work-study program, and special services for disadvantaged students, such as Talent Search and Upward Bound. It does not include, of course, the dollar value of insured loans made by banks.

HEALTH PROFESSIONS STUDENT LOANS

The budget request included $15 million for loans to students of medicine, dentistry, and related professions. The bill, as recommended by the committee, would raise this by $4,781,000 to $19,781,000. This is $4,781,000 above the 1969 appropriation.

Even though the recommended appropriation for health professions students loans is higher than the 1969 appropriation, the total amount available for these loans will go down in 1970. This is because funds in the student loan revolving fund are being exhausted, since there have been no sales of participation certificates recently which would replenish these funds. Total available: 1969, $26,255,000; 1970, $20,894,000.

The President's budget message indicated that medical and dental students are eligible for the Office of Education's guaranteed student loan program. The administration is presenting proposals to Congress designed to make these loans more attractive to private lenders in the present money market. The budget estimated that the guaranteed loans would increase by about $150 million in 1970, from $641 million to $794 million.

Medical and dental students should not have difficulty in repaying these loans, since their future income after graduation is likely to be quite high.

SOCIAL AND REHABILITATION SERVICE

GRANTS TO STATES FOR PUBLIC ASSISTANCE

Mr. Chairman, this is that better than $7 billion item I made reference to earlier in my remarks, and will say again that these public assistance payments are almost entirely beyond administrative control, so far as our Federal administrators are concerned.

WORK INCENTIVES

The bill includes $129,640,000 the amount of the request, and an increase of $12,140,000 over the amount appropriated for 1969. The original budget request was for 164,640,000 and was revised to the lower figure solely on the basis that the program was not progressing as planned.

GRANTS FOR REHABILITATION SERVICES AND FACILITIES

The bill includes $499,783,000, the amount of the budget request, and an increase of $130,793,000 over the appropriation for 1969. The main increase proposed in the budget is an increase of $125,100,000 for basic support grants. This is in addition to the 1969 base amount of $345,900,000 and will provide rehabilitation services for an estimated 241,000 disabled individuals or an increase of 11,000 over the estimate of 1969. While under the allotment base of $600,000,000 authorized in the Vocational Rehabilitation Amendments of 1967, the required increase in the appropriation for basic support would be $178,100,000, we believe that an increase of over one-third in such a year of fiscal austerity is very generous, even for such a worthwhile program as this.

We disallow $3,500,000 requested to start a new program of services for migratory agricultural workers, which is consistent with action taken by Congress on a similar request last year, and add this sum to the funds budgeted for rehabilitation facilities under section 12. The budget request included no funds for construction. The committee is earmarking all of the $3,500,000 for construction of rehabilitation facilities which will cover only a small fraction of the need. Since this is such a small amount, the committee will expect that the Department revise or waive its regulations concerning the geographical allocation of such funds by region and, instead, allocate these funds strictly on the basis of the merit of individual projects and the hearing record will show those we believe to be most meritorious.

MENTAL RETARDATION

The bill includes $33,629,000, the amount of the request, and an increase of $1,073,000 above the appropriation for 1969.

After adjustments are made for comparability largely because of unobligated balances of funds for construction carrying forward from 1968 to 1969, the funds available for obligation in 1970 are estimated to be $5,440,000 less than in 1969. This net decrease is made up of a decrease of $13,582,000 in funds for construction of community service facilities and construction of university-affiliated

facilities, and an increase of $8,142,000 for services.

MATERNAL AND CHILD HEALTH AND WELFARE

The bill includes $284,800,000, an increase of $19,400,000 over the amount appropriated for 1969.

We made three changes in the revised budget. First, we restored the $2,200,000 increase contained in the original budget for training through university-affiliated mental retardation centers that was deleted in the revised budget. Second, we deleted the increase of $2,500,000 for research in maternal and child health and crippled children's services, which leaves $6,200,000 in the bill for this purpose. Third, we deleted the increase of $200,000 for the research and demonstration program in child welfare, which leaves $4,400,000 in the bill for this purpose.

JUVENILE DELINQUENCY PREVENTION AND CONTROL

The bill includes $5 million, a reduction of $10 million from the request, and the same amount as was appropriated for 1969. At the time of our hearings on this budget request, planning grants had not even been made. We would like to know more about the specific plans for this program before proceeding with an increased appropriation.

REHABILITATION RESEARCH AND TRAINING

The bill includes $60 million, the amount of the request, and a reduction of $4 million below the amount appropriated for 1969.

COOPERATIVE RESEARCH AND DEMONSTRATION PROJECTS

The bill includes $11,500,000, the amount of the request, and an increase of $8,350,000 above the amount appropriated for 1969. I spoke earlier of the proposal to launch several income maintenance experiments at an estimated annual cost of $1 million to $1.5 million for each experiment, so that should be sufficient.

SALARIES AND EXPENSES

The bill includes $28,780,000, a reduction of $2,720,000 from the request, and an increase of $1,163,000 over the amount appropriated for 1969. The amount allowed will support 60 more positions than were authorized for 1969. The revised budget would have provided for 160 additional positions, but we believe that a very creditable job can be done in administering these programs with the amount allowed.

SOCIAL SECURITY

Twenty-five million persons are receiving monthly benefits under the social security program. One out of eight Americans are now receiving a monthly social security cash benefit. While retired workers and their dependents are the largest group, almost a fourth are under 60. At the end of 1968, about 90 percent of persons aged 65 and over were either receiving cash benefits or would have been eligible for such benefits if they or their spouses had not been working.

Moreover 95 percent of all older persons in the country have elected to be covered under the voluntary supplementary medical insurance plan which covers primarily the cost of physicians' services.

For payment to trust funds for health insurance for the aged the bill includes $1,545,413,000, the amount of the request and $185,186,000 over the amount appropriated for 1969. The request is simply a mathematical calculation of the amount that will be required under the Social Security Act. The increase includes $152,035,000 for payment to the hospital insurance trust fund for coverage of medicare beneficiaries who are not insured under the social security or railroad systems, and $33,151,000 for payment to the supplementary medical insurance trust fund to match the monthly premiums of $4 paid by persons enrolled in the voluntary medical insurance program.

There is $105 million included in the bill for payment for military service credits, which is the amount of the request, and the same amount as was appropriated for 1969. This appropriation covers the reimbursement to the Federal old age and survivors insurance trust fund, the Federal disability insurance trust fund, and the Federal Hospital insurance trust fund for benefits paid on the basis of noncontributory military service credits of veterans of World War II and certain veterans of the post-war period. These payments are required by law.

For payment for special benefits for the aged the bill includes $364,151,000, the amount of the request and $138,606,000 over the amount appropriated for 1969. This is another uncontrollable item. It covers the payment of social security benefits to uninsured persons over 72, which was authorized by the 1966 amendments to the Social Security Act.

The limitation on salaries and expenses amounts to $901,500,000, which is the amount of the request and $94,008,000 over the amount appropriated for 1969. This appropriation is from the social security trust funds and does not involve any expenditures from general funds of the Treasury.

Mr. LANGEN. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman.

Mr. LANGEN. Mr. Chairman, I want to extend my compliments to the gentleman in the well, the gentleman from Illinois (Mr. MICHEL), as well as to the chairman of the subcommittee and the other members of the subcommittee for the attention which they gave to the work-study program. This has served the country and the students who have participated in the program very well.

Last year we had a mixup as to the understanding of the use of those funds. I am pleased to note that the committee has taken action which should place this program back on a functional basis.

Mr. MICHEL. As I told the gentleman, there was nothing in the budget on the work-study program. However, we have put $10 million into that particular item.

Mr. JOELSON. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from New Jersey.

Mr. JOELSON. Before there is given to the gentleman and to the members of the subcommittee too many congratulations with reference to the high priority which it has given vocational education, I would point out that the figure recommended for appropriation is less than 50 percent of the authorization.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. MICHEL. Mr. Chairman, I yield myself 10 additional minutes.

The CHAIRMAN. The gentleman from Illinois is recognized for 10 additional minutes.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Minnesota.

Mr. QUIE. With reference to the program of vocational education the gentleman from Illinois I note that you accept part C of title I of the Vocational Education Act which is the program by which 10 percent of the money is set aside for research and training. However, the principal part of this program in which I am interested—and I realize that later on you put in $1.1 million for part D of that section—is really the training and dissemination of information on vocational education.

At one time vocational education involved pretty much only cabinetmaking and things of that sort. That is not the case today because there is a tremendous need for the dissemination of information and a need for upgrading the trainees and the teachers in vocational education.

I do not feel that this represents an adequate amount for these purposes.

I was wondering if the gentleman would care to elaborate upon the reasons for including such a low figure for these purposes.

The figure that most people have been talking about is $34 million in that area.

Mr. MICHEL. I would respond to the gentleman from Minnesota by saying first of all that the Office of Education witnesses testified that it might be cut—$1.1 million is specifically earmarked in the budget and $4 million of the funds budgeted for general education research will be spent on vocational education and that $2 million budgeted under vocational education is for curriculum development and will be spent for research, for a total of $7.1 million. Thus, the reduction from the 1969 level of $11,375,000 is only about $4.2 million. If you take those figures into account you come up with a little different picture.

Mr. QUIE. A little different picture from the $1.1 million, yes. It is not adequate, but I appreciate the gentleman pointing out the fact that $7 million will be expended for research.

Mr. MICHEL. Frankly, and for the sake of the record, I might make the point that the other new vocational educational programs which are funded for the first time in this bill include $14 million for cooperative education, $13 million for innovative programs, $2 million for curriculum development and $1 million for evaluation of the program.

Mr. RHODES. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Arizona.

Mr. RHODES. As the gentleman from Illinois knows two of our hospitals in the Phoenix area are now engaged in a program with reference to injuries to the spine. The program has generated great interest nationwide as a pilot program.

However, one of the needs involves funds to be used for helping to pay for the treatment of indigent people who have spinal injury.

As the gentleman recalls, I testified before the subcommittee and requested some $900,000 for this particular purpose as a demonstration project.

Will the gentleman from Illinois tell me whether or not there are funds in the bill which could be used for that purpose?

Mr. MICHEL. Yes. We recall very well the gentleman's very eloquet testimony before our committee which laid this program out to us in no uncertain terms.

We have an item under rehabilitative research and treatment, an item for $60 million for research.

A review of the testimony that comes from Government witnesses attests to what the gentleman said, and more so, that it is a wonderful program, and that surely within the $60 million somewhere there ought to be enough to cover this program.

Mr. FLOOD. Mr. Chairman, if the gentleman would yield, I would like to say that the gentleman from Arizona appeared before our subcommittee and gave a much better presentation and testimony than anybody else in support of this program. It is the unanimous opinion of this committee that the proposal of the gentleman from Arizona be carried out by the Department. We know the seriousness of the situation, and we know that it is a good program. The gentleman has contributed much to the thinking of the committee.

Mr. GROSS. Mr. Chairman, would the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Chairman, I thank the gentleman for yielding. I would ask the gentleman if it is not true that if you consider the effect of the advanced funding for fiscal year 1970 which was granted by this Congress last year, that the pending bill is $1.3 billion over 1969 rather than the $705 million figure as set forth in the report.

Mr. MICHEL. I would say to the gentleman from Iowa that of course I cannot be sure without checking it specifically, but I think the gentleman is generally correct in his statement.

Mr. GROSS. It is $1.3 billion above rather than $705 million, as set forth in the report.

Does the gentleman have an estimate of the cost of the package deal that is supposed to be offered here today, or tomorrow? Is it not about $1 billion?

Mr. MICHEL. I understand it is something in the neighborhood of $900 million. I believe it is $894 million. And as I indicated earlier in my presentation I thought that it would be just unconscionable to have our bill raised to that extent when we are in the throes of the financial problem that we have.

Mr. GROSS. And when the bill is already $1.3 billion over last year.

Mr. MICHEL. The gentleman is correct, but I want to say, as I believe has been indicated earlier, that there will be other amendments offered other than that package. That is certainly not the only thing we have to contend with this afternoon.

Mr. GROSS. The gentleman would not think that kind of additional spending would be designed to win the battle against inflation, would he?

Mr. FLOOD. Mr. Chairman, if the gentleman will yield to me so that I may respond to our friend from Iowa, actually, we are over the 1969 level by only $154,700,000 in controllables. The gentleman is talking mainly about the uncontrollables, those that we cannot touch.

Mr. GROSS. Mr. Chairman, will the gentleman yield further?

Mr. MICHEL. I yield further to the gentleman from Iowa.

Mr. GROSS. When you speak of controllable and uncontrollable items, the Congress of the United States can control, can it not?

Mr. FLOOD. The public assistance grants are uncontrollable as far as this bill is concerned. They are controlled by the organic law, of course. That is the big problem, and the big item, and that cannot be controlled through this appropriation bill.

Mr. GROSS. But there is no such thing as an untouchable, or an uncontrollable appropriation.

Mr. FLOOD. Of course not.

Mr. GROSS. Not insofar as the Congress is concerned, if the Congress wants to change it.

Mr. FLOOD. That is true, but it has to be changed in the organic law. It cannot be, under our rules, in this bill.

Mr. HALL. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Missouri.

Mr. HALL. Mr. Chairman, I appreciate the remarks of the gentleman about the cooperative research project, and I appreciate the reluctance of the committee, as recorded in the report, in approving of this suggested legislation. For the information of the Members, can the gentleman define for me—as a result of the committee hearings—the difference between "income maintenance experiments," and "guaranteed annual income" experiments?

Mr. MICHEL. Well, I must confess to the gentleman from Missouri that it is a difficult differentiation to make, or a clearcut line to be drawn. But as the chairman pointed out, and as I have earlier, and we had the Secretary on the griddle, and we just told him "You know, this Congress will never go for a guaranteed annual income."

I thought the gentleman from Michigan (Mr. CEDERBERG) had a good response one day when he said we wanted a guaranteed work program, not a guaranteed annual income program.

But we have to do something here, and as I said, there is $9,700,000 here for experimentation on how we can turn this tremendously and rapidly increasing welfare program around and the Secretary keeps on telling us, "We want to concentrate and work on incentives and this is the kind of project we have to have for them and something has to be done and we cannot turn our back on it."

Mr. HALL. I agree with the need for research. But does the gentleman know of any pilot projects that were ever started that came to a satisfactory end, especially at the behest of Congress?

Mr. MICHEL. I will say to the gentleman, a demonstration project in New Jersey is bearing some fruit by way of information. But here there are only male heads of households participating in this kind of demonstration. What we are talking about is one of the biggest problem areas where there is no man head of the household. That is a wide base area to be further explored.

Mr. HALL. I agree with the definition of the gentleman from Michigan (Mr. CEDERBERG), but I think the time has come on these projects that we should see if people are willing to relocate to those places where job opportunities are available, before training them and subsidizing them with stipends and benefits galore.

Mr. FLOOD. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman.

Mr. FLOOD. I am in entire agreement, I may say to my friend, that the welfare system as we now have it is a debacle and it is a system that must be changed. Everybody knows that—even the recipients.

The Secretary came to us with this proposal that something has to be done to change the entire facade of the organization and operation of the welfare system in this country. This is the first step.

Mr. HALL. I appreciate the gentleman yielding. I appreciate the work of the subcommittee and I would only add that by definition, welfare in terms of social security is a failure.

Mr. MICHEL. Mr. Chairman, I appreciate the attention of my colleagues.

I know others of my colleagues wish to speak on these questions, and there are several items that will be mentioned conceivably in the questions that other Members might have and presentations of other members of the subcommittee and these matters will be covered.

The CHAIRMAN. The gentleman from Illinois (Mr. MICHEL) has consumed 41 minutes.

Mr. MICHEL. Mr. Chairman, I yield 5 minutes to the gentleman from Kansas (Mr. SHRIVER).

Mr. SHRIVER. Mr. Chairman, the Labor-Health, Education, and Welfare appropriations bill being considered by the House today is symbolic of the budgetary and social problems facing our Nation. In this bill, second in size only to the Defense appropriation, we find programs which directly affect every citizen of this country. These programs educate and train our children for the future strength of our economy. They furnish research and resources for improving systems of health care. They investigate the mixed blessings of a modern industrial environment. And they provide assistance, however imperfect, to those of our citizens who cannot help themselves.

The needs in the area of labor-health, education, and welfare are great. Resources are great, but limited. Obviously, the committee had to set priorities.

As every Member on this floor can attest, there is no general consensus across this country today as to how these priorities should be established. The mail we have been receiving has been unanimous in only one respect: a very genuine opinion on the part of each writer that the programs which most directly affect him should have highest priority.

The committee is well aware of this problem. After 10 weeks of departmental hearings, 659 private individuals and organizations and their representatives in Congress stimulated an additional 1,400 pages of convincing testimony. Let me say here I greatly appreciate the hard work and excellent work of our chairman, the gentleman from Pennsylvania, and the diligence and cooperation of the ranking minority member, the gentleman from Illinois (Mr. MICHEL).

At the end of these hearings, however, the committee had to assume its responsibility. The task was not merely to decide how much to spend on each program; it was how to spend what was available. This the committee has done.

The recommendation before us now represents many compromises on the part of individual committee members which were necessary in a bill encompassing such a broad range of programs. As is evident in the number of amendments to be proposed, some disagreements still exist.

The new budget authority recommended in this bill for fiscal year 1970 totals $16,651,039,700. This figure represents a decrease of $705 million below the fiscal 1969 appropriation, but an increase of $155.8 million above the administration's budget requests. Most of this increase is for hospital construction grants and for certain education programs.

Included in the bill are $976.9 million for the Department of Labor, $15.6 billion for the Department of Health, Education, and Welfare, and $78.4 million for related agencies.

The committee report provides an excellent capsule summary of what we are getting for our $16.6 billion. I will mention just a few highlights.

The committee recommends increases of $192 million for the job opportunities in the business sector program and $44 million for the concentrated employment program. These two programs can go far to bring together unemployed and underemployed people with labor scarce areas in our economy.

The bill includes $360 million for mental health activities. It was revealed during the hearings that the population of America's mental hospitals has been reduced by 30 percent over the past 13 years, due in large part to our active research programs.

There is an increase of $44 million over 1969 for the National Institutes of Health.

These are noncontroversial items for the most part and, as a result, receive little publicity. The American taxpayers should know that with their basic health research investment, we now have in operation a program capable of solving the cancer problem; death from high blood pressure has been reduced by almost half over the past two decades; we now have a national program to prevent tooth decay completely by 1980; the programs to combat cystic fibrosis and kidney disease are making real progress; an effective German measles vaccine has been developed; and experiments in the treatment of Parkinson's disease are very promising.

These are dramatic developments. However, with hospitalization costs increasing 55 percent between 1965 and 1969, and expected to increase by another 15 percent this year, it is evident that basic research is not enough. Thus, the committee recommends $45 million be spent on health services research and development. It is imperative that the advances accomplished by NIH be translated into health services that are actually available at reasonable cost to the people who need them.

Another step toward better health services was endorsed by the committee. That is the administration's new physician augmentation program, which will increase the number of incoming medical students by 4,000 annually by 1973.

In response to needs pointed out in testimony before the committee and by thousands of letters from our constituents, Funds have been provided for elementary and secondary education library resources; guidance, counseling, and testing; and equipment. Increases are also included for direct student loans, vocational education basic grants and the work-study program, and for libraries and community services.

It is obvious that I have mentioned only a small percentage of the items in this bill. But it is important that our taxpaying citizens know that much is being accomplished in these fields.

I do not agree with everything in this bill. I definitely do not agree with the impacted area education program on which I will have more to say later, as I intend to have an amendment. I would emphasize that given the demands presently being made on our resources, this bill is a responsible, constructive effort to continue our efforts toward a better life for all of our people. The committee has spent many hours studying the details of these programs, both the accomplishments and the remaining problems. I would urge you to consider very carefully any changes which will be advocated later today.

I yield back the balance of my time.

Mr. MICHEL. Mr. Chairman, I yield 10 minutes to the gentlewoman from Illinois (Mrs. REID).

Mrs. REID of Illinois. Mr. Chairman, as a new member of the Subcommittee on Labor-HEW Appropriations, I would first like to pay sincere tribute to our distinguished and able chairman, the gentleman from Pennsylvania (Mr. FLOOD), and to our ranking minority member the gentleman from Illinois (Mr. MICHEL). It is a pleasure to serve under the responsible and capable leadership they provide. To serve with these colorful, dynamic members along with other members of the committee makes this an interesting one on which to serve to say the least.

The appropriation bill for the Departments of Labor, Health, Education, and Welfare, and related agencies for fiscal 1970, which is before the House today, represents the bipartisan decisions of the members of our subcommittee after over 3 months of intensive hearings. As the seven volumes containing over 8,000 pages of printed hearings indicate, the subcommittee conducted a very thorough investigation of the requests presented. Representatives from the executive agencies, as well as those outside of the Federal Government, made excellent presentations. I am sure all of us are aware not only of the growing needs in the field of manpower, health, education, and welfare, but also the necessity to place these needs in a realistic framework of priorities in view of current budgetary limitations.

It has been pointed out by other members of the committee that this is the largest of the appropriation bills excluding Defense. Naturally, in an appropriation of this size—and dealing with matters which are related so closely and directly to people—there are bound to be honest differences of opinion regarding specific amounts. The needs in all of these areas are great, and many of these programs have much merit. Certainly more funds could be utilized if available, but we must remember that our resources are not unlimited—and we must do our best to allocate these limited funds wisely and where they will prove to be most effective.

In this regard I would like to point out some of the specific areas which have been of particular concern to me and many others. For instance, library services—I am sure we are all aware of the importance of good books and library services in the whole learning process. The assistance given to libraries has proven to be one of the best investments the Federal Government has made in the education field. Therefore, I supported the increase of $17.5 million over the budget recommendations for library services, restoring the appropriation to the 1969 level of $40.7 million.

For elementary and secondary education the committee followed the guidelines of the authorization bill passed recently and included in one sum the funds for supplementary educational services, school libraries, guidance, counseling, testing, equipment, and minor remodeling. The bill includes $200.1 million for these purposes—compared with the budget request of $116.1 million. These items have been of vital concern to school administrators.

In my opinion, too, one of the most effective ways to strike at the root causes of poverty and discontent and to open new doors for millions of young in both urban and rural areas is to improve and expand occupational education and vocational training. I have supported such programs in the past and feel that the increase of $78 million above the budget request for this item is a wise investment. The programs of vocational-technical education are among the Nation's best efforts to reduce unemployment and eliminate occupational shortages.

Our subcommittee also heard impressive testimony concerning the programs of the National Institutes of Health. For

instance, 55 clinics are now participating in the National Heart Institute's coronary drug project and have enrolled 8,000 patients in a long-term study of the efficacy of drugs in prolonging the survival of heart attack victims. As requested in the budget, we have included an additional $1 million to bring this study into full operation. Also, recognizing that cardiac replacement may often be the only hope for a patient with an irreparably damaged heart, the committee further directed the Heart Institute to devote more study to heart transplants and the development of an artificial heart.

Another area of progress is the development of a more effective artificial kidney with proven performance in clinical trials, which will be able to maintain patients with loss of kidney function more simply and much less expensively than the equipment available heretofore.

In addition, I think all of us were impressed by the leading role the National Institute of Allergy and Infectious Diseases has played in the development of vaccines against German measles or rubella, the first of which was recently licensed. This disease—while usually very mild in children—can have serious effects when it strikes an expectant mother. It is estimated that the rubella epidemic of 1964 caused some 50,000 abnormal pregnancies, and from 20,000 to 30,000 infants were born with severe birth defects.

I believe no one would question that we have better medical care in this country than anywhere in the world. However, we know there is a critical shortage of trained medical personnel—hospital costs are high and still rising—and there are many diseases for which there is still no cure. This is why it is very exciting when medical science discovers a method of preventing a disease.

In another area, the committee heard alarming testimony from representatives of the National Institute of Mental Health on the use of marihuana and other drug abuses on the part of students—and incredible as it may seem this is even becoming prevalent in the elementary grades. This points up the need for more and better educational programs to demonstrate the devastating effects of drugs.

In a continuing effort to meet the shortages of personnel in the health field, the committee has included $218 million for the health manpower program. The committee was informed of the administration's plan to encourage a substantial increase in medical school enrollments—also the size and quality of the dental manpower pool. Certainly more physicians, dentists, nurses, and other health personnel are vitally needed.

Mr. Chairman, in my judgment the bill before the House is a good compromise in that we have made every attempt to establish priorities among those programs which have proven their worthiness for the health, education, and welfare of our people. It was not an easy task under the very difficult fiscal situation which faces our Nation at this time.

Mr. MICHEL. Mr. Chairman, I yield 5 minutes to the gentleman from New York (Mr. ROBISON).

Mr. ROBISON. Mr. Chairman, this subcommittee—under the able leadership of the gentleman from Pennsylvania (Mr. FLOOD) and the gentleman from Illinois (Mr. MICHEL)—has faced up well to its unenviable task.

This bill, providing as it does over $16.5 billion for some of the most sensitive activities in which the Federal Government is today involved, is a natural for controversy and protracted debate. This would be so under normal fiscal conditions—whatever those might be, it being so long since we have enjoyed the comparative luxury of that kind of situation that most of us have forgotten. And it is especially so during protracted periods demanding budgetary restraint of the sort we have experienced these past several years.

For it is then that the question of relative priorities—on a program-by-program basis—becomes all important.

By and large, I think the subcommittee has done well—exceptionally well under the circumstances—in sorting all those priorities out, and I would wish to compliment its members for that fact.

But it has faced a dilemma all along with respect to the competing programs funded through this bill for the Office of Education. That dilemma will become more apparent as debate wears on this afternoon, and as we reach the amendment stage. In short, it relates to the probable political fact that, before we finish with this vehicle, the House—and in this instance, I think, in its questionable wisdom—will have voted a good many millions of dollars more for the purposes of the so-called impacted aid programs than the subcommittee has recommended.

I do not know how many millions of dollars more—that remains to be seen. But I think one can safely assume that the final figure for such purposes will be at least equivalent to the amount appropriated therefor for fiscal 1969.

And it is that situation, Mr. Chairman, that impels me to speak on this bill as I now do and, later on, to offer an amendment which I will describe for you in a moment.

But, first, let me make my position clear: Although the impacted aid programs are of some importance to my district—and certainly to my State—I believe that the so-called section 3(b) portion thereof, under which payments are made for children whose parents work, but do not live, on Federal property and the like, to be an ill-conceived program, badly in need of review and revision if not abandonment. Like the summer showers we have been experiencing, its benefits do not fall evenly across the Nation. It does not address itself to areas of demonstrable need—the best illustration of which remains the dollars liberally poured under this section into Montgomery County, Md., where I, as the parent of a public school child, am counted for collection purposes even though I am a property owner in Montgomery County and pay school taxes on that property.

Few such dollars flow into the school systems in city ghetto areas, and fewer still into rural school districts struggling with the ever-increasing costs of providing their children with an adequate education out of an inadequate tax base.

I am, therefore, in full support of the subcommittee's recommendations in this respect, and will vote to maintain that position when the time comes—and it is this attitude that prevents me, though with some regret, from supporting the so-called Joelson package that may be offered by way of amendment to this bill.

However, if that package proposal does not carry, political realism dictates the probability that the subcommittee's position on impacted aid still cannot be held. And, if that proves to be the case, then we will end up with those programs funded at or above last year's levels while other—and in my judgment more desirable—educational programs will be cut back.

I would like to speak to you now about four such programs. You will find them referred to in the bottom paragraph on page 32 of the report where it is noted:

> The Committee has included in one sum the funds for (a) supplementary educational services, (b) library resources, (c) guidance, counseling, and testing, and (d) equipment and minor remodeling.

Then it is stated—and I invite your attention to the report—that—

> The bill includes $200,163,000 for this purpose compared with the budget request of $116,163,000 all of which was earmarked for supplementary educational centers.

So the subcommittee has attempted to improve on the budget request in this connection—and I congratulate it for that—but what the report does not tell you is that the recommended figure for these combined programs is still $110,453,000 less than was separately appropriated for these same purposes in the fiscal year just concluded.

The amendment I intend to offer—if opportunity arises—would be one simply increasing the subcommittee figure for these four programs by that $110,453,000 which, if adopted would bring the funds for these four programs—though still on a combined basis—up to last fiscal year's combined total.

The only difference between my proposed amendment—as just described—and that relevant portion of the so-called Joelson package, is that I would consolidate the funds for these four programs in the same way the committee has, whereas the gentleman from New Jersey (Mr. JOELSON) would individually fund—or "earmark"—them. Such a consolidation would be in accordance with a provision in the ESEA Amendments of 1969—H.R. 514 as passed by the House—requiring the consolidation of such programs beginning in fiscal 1971, but would move that requirement up 1 fiscal year for reasons that seem justifiable.

Now, Mr. Chairman, let me also say this: If I thought the subcommittee's position on impacted aid might be held, perhaps I would not offer such an amendment—accepting the indicated cuts in these four programs, unfortunate though that would seem to be, in the interests of overall restraint. But since, as I have

said, everyone seems to feel that there will be full funding for impacted aid, then I feel I must make this effort in an attempt to get our priorities back into some better order.

For these are four good educational programs: The supplemental educational services program, under title III of ESEA, which can be compared to research and development into ways to improve the processes of education—sort of after the fashion of the great experimental stations in agriculture; the highly useful effort under ESEA's title II to improve the library resources of both public and private schools at the elementary and secondary levels, and to provide such schools—on a basis of relative need and not on a per pupil basis—with textbooks and other instructional materials, all of which has been of especial benefit to ghetto schools and the small, rural school districts where money remains scarce for such purposes; the extremely important effort under title V–A of NDEA to improve—or establish—guidance and counseling programs in the schools at such levels as well as in junior colleges and technical institutions, and also to support testing programs in the same institutions, all of which—under the local budgetary pressures now felt by nearly every school board in the land—can hardly be maintained without the continuance of Federal aid at at least last year's level; and, finally, the familiar program under title III of NDEA—a matching program with the States on a 50–50 basis so we know our investment here is being put to good use—under which laboratory and other instructional equipment has been acacquired by thousands of school districts badly in need thereof, along with such minor remodeling of the school plant as may be needed to accommodate the same, the need for all of which is an ongoing thing that, again, the States and local districts cannot be expected to pick up.

Mr. Chairman, as one whose reputation for being something other than a "big spender" around these parts ought by now to have been well established, let me say I know $110,453,000 is still a lot of money. But perhaps not so much, after all, in the relative sense, for we spent $15.8 million, so I understand, to build that laboratory in Houston where the three Apollo astronauts and their lunar rocks are now quarantined, plus who knows how much more to operate that lab, and we are spending—what?—somewhere around half a billion dollars a week in Vietnam. Looked at in that light this is not so much money.

Besides which, though the subcommittee members—or most of them—will have to oppose my amendment, if I have a chance at offering it, from a reading of the hearings and their comments on the underfunding of these four programs it would appear that they do not all agree that what I would propose is so wrong.

These four programs, Mr. Chairman, have demonstrated their value, the continuing need for them is apparent and, if the impacted aid program is to go forward full speed then so, too, should these; that is my position, and I uge your support thereof at the appropriate time.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MICHEL. Mr. Chairman, I will be happy to yield the gentleman an additional 2 minutes.

Mr. ESCH. Mr. Chairman, will the gentleman yield?

Mr. ROBISON. I am glad to yield to the gentleman.

Mr. ESCH. I would like to compliment the gentleman from New York on his detailed analysis and wish to associate myself with his remarks.

Mr. ROBISON. I appreciate the gentleman's remarks.

Mr. Chairman, I now yield back the balance of my time.

Mr. MICHEL. Mr. Chairman, I am happy to yield 8 minutes to the gentleman from New York (Mr. PIRNIE).

Mr. PIRNIE. Mr. Chairman, the legislation under consideration today—the Departments of Labor and Health, Education, and Welfare appropriations bill—is one of the most important measures we will consider this session. As we recall the glory of Apollo 11 and the technology which made it possible, we cannot help but be reminded of the contributions made to that endeavor by our educational system. As we look toward greater human goals we must be sure that we have the tools to accomplish them. Certainly, one of the most critical of these is the Federal commitment to education.

In my view, there can be no lessening of this commitment, and in April I wrote the President urging that his administration maintain the support to education necessary to continue the progress in this field which has been and is continuing to be made. In that letter I mentioned specific areas of great concern to me and called for full funding for both. The Higher Education Facilities Act and the impacted areas program are two of the many items included in this appropriations bill but, in my judgment, they are worthy of special comment.

I was very disappointed that the administration did not recommend any new budget obligations for the construction of educational facilities in 4-year undergraduate institutions. Last year, $33 million was allocated for higher education facilities construction and we should at least match that sum during the current fiscal year.

It is somewhat puzzling to me that the administration would request and receive $43 million for the construction of educational facilities at 2-year community colleges and yet not request one penny for construction at 4-year institutions. While there is no question that community colleges of the 2-year variety are the thing of the future and serve a very critical need, our 4-year institutions are also of great importance. My district has a balance of both the 2- and 4-year schools. Both types serve useful and necessary functions, and I believe both should have the opportunity to expand to accommodate their differing constituencies.

The impacted area program interests me, not only because the thousands of children in my district benefit from it, because it has contributed substantially on a national basis to our educational system. For example, last year over 52 percent of all the school districts in America received Public Law 874 funds. No other Federal program can match this record.

I recognize that there is a great deal of discussion on the merits of this program and I agree that certain alterations in the qualification requirements may be necessary, but eliminating the category B students by not providing adequate funds for it will diminish the quality of educational services to thousands of students. I have long advocated and so testified before the Labor-HEW Subcommittee of the House Appropriations Committee that the correct procedure is to change the authorizing legislation after indepth hearings.

In the absence of that procedure, it is well to look as this program, not from the view of the Washington suburban areas, but from the standpoint of the small communities who are directly and materially affected by the existence of Federal installations. I would be the first to agree that there is questionable justification for the schools in suburban Maryland and Virginia to qualify for federally impacted area funds for those residents who work in the District of Columbia for the Federal Government.

It should be noted, however, that the original law did not allow the school districts in these suburban communities to receive Public Law 874 funds for those residents employed in the District of Columbia. Only a subsequent amendment authorizing those who were within "commuting areas" made them eligible. In my view, the rationalization for Public Law 874—at least as far as most of the country is concerned—is as valid today as it was when it was enacted; namely, that military installations and Federal properties are not taxable by States or localities, despite the fact that the students of the parents who work on these facilities must be educated by the States and localities. In the absence of providing these communities with the authority to levy taxes on these facilities, we have an obligation which must be met.

Generalizations are always risky and in the case of generalizing from the example of suburban Virginia to Rome, N.Y., in my district, it is like comparing apples and oranges. Adjacent to this upstate New York community of about 50,000 is Griffiss Air Force Base—a large installation estimated by the Air Force to be worth $125,921,000 in both land and improved structures. The Rome School District receives less than $1 million in Public Law 874 funds annually, yet if the tax rate currently in force in Rome were applied to Griffiss Air Force Base, the amount would be nearly double the annual Public Law 874 allotment. Furthermore, of the 4,000 impacted students in Rome, 2,800 are in the B category. Under the terms of the bill now under consideration, the Rome schools would not receive a penny for them. While this is a disaster in itself, it would be especially critical because of the fact that all funds would be cut off immedi-

ately. If this program is to be reduced, it ought to be done over a period of years—not in one fell swoop.

As we consider the course to follow, we should all be mindful of the fact that earlier in the year, the Office of Education awarded a $167,000 contract to the Battelle Memorial Institute to conduct an indepth study of Public Law 874 and to make recommendations for change. The report is due late this year, and unless we are willing to admit that we just threw that $167,000 of the taxpayers money in the street, we should await the results of that study before either eliminating or broadening this program.

In the meantime, schoolchildren in most of the congressional districts will be returning to school in about a month. The question we answer today in deciding whether to provide near-full funding or the pittance contained in H.R. 13111 is, Will they have the resources necessary to get a good education this school year? That is the question. If we provide the $585 million necessary for the 90 percent of the entitlement under Public Law 874 for both A and B category students, the answer will be "yes." If we fail to do that, we will have denied educational services to hundreds of thousands of students in every corner of this country. This must not happen and it can be prevented by supporting the amendment to be offered later in the debate to increase Public Law 874 funds for fiscal year 1970 to $585 million.

Mr. FLOOD. Mr. Chairman, I yield 10 minutes to the distinguished chairman of the legislative Committee on Labor and Education, the gentleman from Kentucky (Mr. PERKINS).

Mr. PERKINS. Mr. Chairman, again I want to pay my respects to this distinguished subcommittee, and to the distinguished gentleman from Pennsylvania (Mr. FLOOD), who chairs the subcommittee, and to all the members of the subcommittee who have worked diligently in bringing this bill to the floor.

Mr. Chairman, I well realize that it is a difficult task to work out an equitable solution to all the problems that are presented in such a large bill. It would be difficult under any circumstances and I have no doubt that my distinguished colleague from Pennsylvania and the member of the committee would not have brought a bill to the floor with these kinds of cuts for education had the budget surplus picture appeared at the time the bill was reported as bright as it does today. The downturn for education started by the Budget estimate in fiscal 1969 when they decided to cut back funds for certain programs.

The funds in this bill amount to 36 percent of the authorization, and that is all. Thirty-six percent. The Johnson budget of $3,591,614,000 for the Office of Education has been cut back by the committee more than one-quarter of a billion dollars. This cut takes education almost to the point of destruction.

Mr. Chairman, I fully support the package amendment that will be offered today. Time and again many of my distinguished colleagues in this body have come to me over the years and expressed concern over the mounting welfare costs and the obvious need for retraining, rehabilitation and remedial-type programs. The costs for these programs are indeed mounting and are a heavy burden for the taxpayer.

In 1965 the Education and Labor Committee sought to do something about them.

I recognize, as I think every Member of this body recognizes—that if we are to reduce the burden of welfare costs—that if we are to eliminate hard-core unemployment which saps the vitality of the economy, if we are to erase the dropout problem—we must begin to do those things which increase educational opportunities in the early processes of education and in those areas which lack the financial ability or the motivation to adequately provide the programs at the elementary and secondary school levels to equip our young people with the basic educational skills necessary for them to enter occupational training, employment or higher education.

Thus, in 1965 the Elementary and Secondary Education Act was enacted. The major program among several authorized by that legislation is title I which provides grants to local school districts to strengthen educational opportunities in schools with concentrations of disadvantaged children. Children who are not provided with adequate learning opportunities today will present problems for our country tomorrow.

I have been greatly impressed with what educational specialists and school administrators have said across this land with respect to the importance of this program and the success it is having in enabling our young people to achieve better in school and gain the basic educational skills so necessary in fulfilling a responsible role in our society.

At the same time I think it is clear from the evidence before our Committee and from what I have observed in the school systems it has been my privilege to visit—that the effectiveness of this program has been greatly reduced by our refusal to fully fund it.

Appropriations for title I have been at a level of less than 40 percent of the authorization. If we are really serious about strengthening educational opportunities in our Nation's schools so as to really enable our children to participate fully in the complex technological world of today, title I should be fully funded. The additional amount provided in the package—$180 million—falls short of doing this, but at least it is a step forward and will permit a continuation of programs, now operating, in the face of rising school costs.

Mr. Chairman, I support this package, because I realize as I think my colleagues do that the educational system of this Nation is a very broad and complex one. In order for there to be meaningful educational opportunities, it is not sufficient for us to think in terms of specialized geographical areas such as we do in the impact aid program or to think of only the grade schools or to ignore the needs of children who have dropped out of school or the needs of children who do not attend public schools.

Nor can we simply look at one segment of the educational process and focus entirely at the elementary or secondary level.

The needs are great in the fields of vocational and technical education—in our newly emerging community college system—and in our colleges and universities.

While the constituency influences upon my distinguished colleagues will incline some to favor one program against another, the fact remains that the children and the parents of each congressional district represented here today have a great stake in what we do with respect to the needs of the entire extent of the education system—what we do to enable young people to have an opportunity for college education—what we do to enable young people to obtain the vocational technical training they desire—what we do to assure young people with the necessary basic skills to enter upon further education and training at the higher levels.

These are the basic reasons that I support a package approach in meeting what I feel to be great deficiencies in the level of funding proposed by H.R. 13111.

The package approach would restore funds for impact aid, bringing it up to 90 percent of the authorization. It would bring our school library, textbooks, and other instruction program, title II of ESEA, to the 1969 appropriation level. It would do the same for the National Defense Education Act equipment program—title III. It would provide funds to the 1969 appropriation level for guidance and counseling programs under title V–A of the National Defense Education Act as well as for the supplemental education centers program under title III of ESEA.

The package approach would provide $488,716,000 for vocational education, assuring that present programs in vocational education would not be reduced because of the set asides required in the 1968 amendments and further, would enable the States to make substantial progress in providing programs of occupational training for young people now on waiting lists of technical schools.

The package approach would enable grants to be made to institutions of higher education for the construction of undergraduate facilities to accommodate increased enrollments, a program that would be discontinued entirely if the provisions of the Committee bill were allowed to prevail.

The package would provide an additional $40,749,000 to the National Defense Education Act student loan program to provide a source of financing a college education for many students who are unable at this time to secure a loan under the guaranteed loan program because of the level of interest rates.

If we look at fiscal year 1968, the appropriation was $1,191 million. Since that time we have had more than 10 percent inflation. We have had added groups of migrant children and handicapped children that must be first supported fully.

School districts are getting partially paid for about 7.2 million children and

we are serving more than 9 million. So by all means the amount of money should be increased for title I. Let me show you the funding history of the programs affected by the package amendment, as reflected in the table hereby submitted for the RECORD.

The table follows:

HISTORY OF APPROPRIATION OF PROGRAMS AFFECTED BY PACKAGE AMENDMENTS TO H.R. 13111

[In thousands of dollars]

	1968 appropriation	1969 appropriation	1970 revised budget	1970 appropriation bill, H.R. 13111	H.R. 13111 plus Joelson package	H. R. 13111 plus package, compared to 1968 appropriation	H.R. 13111 plus package, compared to 1969 appropriation
Impact aid	486,355	521,253	202,167	181,000	585,000	+98,645	+63,747
ESEA II school libraries	99,234	50,000	0	200,163	50,000	−49,234	Same
NDEA III–A equipment	75,680	75,740	0		75,740	+60	Same
NDEA V–A guidance and counsel	24,500	17,000	0		17,000	−7,500	Same
ESEA III supplemental centers	187,876	164,876	116,393		164,876	−23,000	Same
Vocational education	284,216	248,216	279,216	357,216	488,716	+240,500	+240,500
HEA construction, 4-year undergraduate	200,000	33,000	0	0	33,000	−167,000	Same
NDEA II student loan	184,000	193,400	161,900	181,306	229,000	+45,000	+35,600
ESEA title I	1,191,000	1,226,000	1,226,000	1,216,175	1,396,975	+205,975	+273,848
Total	2,696,861	2,462,612	1,985,676	2,141,860	3,040,307	+343,446	+613,695

Let me now refer to titles II and III of ESEA and titles III and V of NDEA. Here in H.R. 13111, for fiscal year 1970 you are tying these different programs together, contrary to the Green amendment which let the States have the discretion—in H.R. 13111 you provide that the Office of Education shall have the discretion—and in the Green amendment consolidation is effective in 1971—here you make the U.S. Commissioner's authority to allocate these funds effective—now.

Mr. JOELSON. Mr. Chairman, will the gentleman yield?

Mr. PERKINS. I yield to the gentleman from New Jersey.

Mr. JOELSON. I certainly agree completely with the distinguished chairman.

I would like to make clear that under the package amendment which I will offer at the appropriate time, this matter will be dealt with so that the discretion will be taken away from the commissioner of education and specific sums will be allocated for each specific purpose.

Mr. PERKINS. I wish to say to the distinguised gentleman from New Jersey that, what he has said is my understanding of the package amendment and that is just and proper. That is the minimum, in my judgment, that should be expended by this Congress for these various educational programs. I do not think this Congress wants to tear up and destroy title II of ESEA, the library title, and that is what this bill (H.R. 13111) does. It would destroy title II.

The example. The Bureu of the Budget put nothing in the budget for title II, leaving it to the discretion of the Office of Education, and they will not turn one dime loose, in my judgment, for titles that they are in disagreement with.

I say to you, it would be a grave injustice if this Chamber permitted legislation of this type on an appropriation bill, where the standing committee of the House has carefully worked out this situation and heard hundreds of witnesses, and there is no authority in the law anywhere to group these titles together as they have been grouped together simply because the bureaucrat does not like the library program, does not like the supplemental educational centers, and does not like the equipment title and does not like the guidance and counseling title. Now, that is it. In concluding my remarks let me turn to title V–A of the National Defense Education Act:

The NDEA of 1958 stimulated and strengthened the growth of guidance and counseling services for our nation's children and youth. Then only 13,000 school counselors existed while 38,000 were needed. Now after a decade of Federal support authorized by Congress, we have reached a goal of 37,-915. Yet elementary, secondary and vocational school populations of youth continue to increase. More than 70,000 such counselors are needed in our nation's schools and communities today.

NDEA Title V–A funding authorization for fiscal 1970 is $40 million. A critical need exists today for a substantial appropriation for guidance and counseling at a minimum of $25 million to the maximum of $40 million.

Guidance services in elementary schools have grown remarkably with the seed money support of NDEA to the states. In California, Georgia, Illinois, Kentucky, Pennsylvania, Tennessee, Texas and elsewhere across the nation, actually hundreds of new elementary guidance programs have developed because of NDEA support.

Counselor ratio to numbers of students which nationally was one to 960 students in secondary schools in 1958 has now been reduced to a ratio nationally of one counselor to 450 students. These gains must be preserved.

The ratio of elementary school counselors to pupils is now one to 6,485 elementary children. Of the more than 26 million pupils in elementary schools in 1967, only 11 percent were receiving guidance services in programs meeting state standards.

In the high schools in 1967 only 64 percent of the 17 million students were reached by approved guidance services.

These tragic gaps in guidance and counseling must be filled. NDEA Title V–A funding at substantial levels is imperative.

The facts for selected states of guidance growth and support stimulated by our Congressional action to provide NDEA Title V–A funding are: (These fiscal 1967 data based on a $24.3 million appropriation are documented in *Review of Progress*, Title V–A, National Defense Education Act, released July 15, 1969.)

	NDEA funds	State and local support funds
California	$2,200,000	$34,700,000
Georgia	571,000	4,200,000
Illinois	1,300,000	13,700,000
Kentucky	407,000	2,200,000
Pennsylvania	1,300,000	16,900,000
Tennessee	486,000	2,900,000
Texas	1,400,000	6,300,000
Total	7,700,000	80,900,000

It should be noted for these seven states alone that Federal NDEA support of $8 million stimulated a ten-fold state and local funding support of $81 million for guidance and counseling services for children and youth.

The task is unfinished; in fact, we have just begun. At least eight critical needs exist which require Federal support and stimulation:

1. Early childhood development must be emphasized.

Research and experience in elementary schools give evidence that services in depth and at the earliest possible age are essential to prevent mental retardation, especially among disadvantaged children; to remove beginning difficulties in learning; and to correct or minimize effects of physical and psychological handicaps. The history of dropouts from high school commonly reveals signs of emotional and learning difficulties that were known and might have been corrected in the first few years of school.

Furthermore, services directed toward early and individual treatment of highly gifted and creative children have the potential of producing the future leaders so greatly needed in today's complex world. The lack of professional help at the right time may prevent a potentially gifted artist from making any contribution to society.

2. A broader concept of pupil personnel services is necessary to meet fully the developmental needs of the individual child.

The concept of "guidance," broadly interpreted, includes all of the services that keep children fit to learn. These are commonly called "pupil personnel services" and usually consist of guidance and counseling, psychological, social work, health, attendance, and sometimes speech and hearing services.

Pupil personnel services are needed by all children because all children face common obstacles in growing up, and many have serious problems. Multiple services are mandatory for those children whose families cannot provide the physical necessities, home training, and psychological support required for normal progress.

3. Effectiveness of pupil personnel services could be strengthened through greater coordination of program whatever their source of funds.

4. New sources must be topped for support personnel.

An increasing number of experiments suggest that pupil personnel services can be enriched and extended to serve more children by the use of para-professionals, aides, or support personnel. Para-professionals from certain socio-economic backgrounds and age groups may be able to help children from similar backgrounds with even greater understanding of their problems than some specialists possess.

5. More research is needed in pupil personnel services.

In the emerging structure of pupil personnel services, it is essential that the organization of services, roles of practitioners, and techniques of helping children and youth be based on valid research experience.

6. Existing services should be expanded for maximum impact.

(a) Guidance services in elementary schools should be increased.

(b) More extensive services should be provided for school dropouts at all educational levels.

(c) Guidance and personnel services in post-high-school education are in urgent need of expansion.

7. More attention needs to be given to the involvement of parents in the guidance process.

Events reported throughout the United States attest to the mounting independence and alienation among youth, and to the failure of educators and parents to understand the changes taking place. Confusion of adults has led to frustration and antagonism, less frequently to sympathy for a generation that is caught between two worlds. The generation gap is real.

At the same time, teachers and parents should be helped to understand and appreciate an informed, sensitive, and determined generation of youth.

8. Greater emphasis upon career development and the relevant use of computer systems is necessary.

The counselor's role in shifting, to the assistance of counselees to plan careers which will allow them to change the nature of their work several times during their lives.

In the near future, it is probable that information about institutions for training and job openings will be programmed into computers along with student data relating to education, abilities, interests, experience, and even values associated with work.

Mr. HANNA. Mr. Chairman, the city of Anaheim, Calif., has always prided itself on the excellent educational opportunities it has provided for its children. Today, however, this city's educational leaders are seriously facing the possibility of reducing, and in some cases eliminating, valuable programs from their curriculum.

The anxiety of the Anaheim educators is being caused here in Washington since the House of Representatives will today decide whether the students of Anaheim have access to field trips and an updated English language program. The Members of this House will determine whether Anaheim can afford to purchase valuable instructional equipment and continue intradistrict competitive athletic events. The Congress will have to decide whether the youngsters of Anaheim will have the educational advantage of four language laboratories and continued curriculum improvement and enrichment through pilot projects.

I am sure if the schoolchildren and parents of Anaheim were asked if they wanted these educational opportunities there would be little doubt as to the answer. Yet there is considerable doubt about the answer Congress will give.

I expect that in the course of this debate on financing education we will hear the fine rhetoric reminding us of the importance of education to the Nation's future. I have little doubt someone will appeal to us not to shortchange our youth. And someone will remind us of the growing generation gap, and the need to restructure our priorities.

No doubt these are excellent arguments. Many have employed them in the past and I personally believe they are still valid, and relevant to today's debate.

What is unfortunate is that we need to repeat these arguments at all. Perhaps I have been laboring under a gross misassumption when I believed the Congress had made, some years ago, a continuing commitment to service our country's educational needs.

What I cannot understand, and what the educational leaders of Anaheim and the leaders of thousands of school districts like Anaheim cannot understand is why has the support for education suddenly been withdrawn?

When the Appropriations Committee reports legislation which completely eliminates funds for section B students of Public Law 874, when vocational education, and title I ESEA funds are drastically cut, and when little or no money is made available for needed library services or vital instructional equipment, one can only conclude that our continuing commitment to education is at an end.

If the Appropriations Committee recommendations are followed the credibility of the House will be seriously damaged. The fact the bill was reported with its present contents has undoubtedly eroded confidence in this body's ability to follow through with its commitments.

Obviously more important than the veracity of this institution will be the impact the committee's recommendations will have on educational programs throughout the Nation. At the beginning of this statement I pointed out some of the choices the Anaheim School District faces. I have received similar letters urging my support for full funding from virtually every school superintendent in my district. These letters will appear at the conclusion of my remarks. Thousands of schoolchildren in the 34th Congressional District will find themselves facing a barren school year unless the House restores to 90 percent of authorization the funds for Public Law 874. Multiply my district by hundreds across the Nation and it will not take a prophet to predict the impending crisis in education. If any Member has a doubt about whether to support the Joelson amendment, I suggest he read his mail. The concern of almost every local educator is being heard and it will be a tragedy if we do not respond.

The Washington Post summed up the situation fairly well this morning in an editorial in which it was clearly pointed out that—

Every economical American ought to hope that Congress will approve these proposed increases in aid to education. There is nothing in the least spendthrift about them. They would do no more than meet the fundamental obligation of a civilized society to its younger generation.

President Nixon said when he was campaigning for the Presidency:

When I look at American education I do not see schools, but children, and young men and women—young Americans who deserve the chance to make a life for themselves and ensure the progress of their country. If we fail in this, no success we have is worth the keeping. We are on the brink of failure as the price of parsimony. Generosity affords the only hope for redemption.

The material referred to follows:

ANAHEIM UNION
HIGH SCHOOL DISTRICT,
Anaheim, Calif., July 18, 1969.

Subject: Pending Legislation, Public Law 874 Funds.

Hon. RICHARD I. HANNA,
Representative, 34th District,
House Office Building,
Washington, D.C.

DEAR MR. HANNA: The Anaheim Union High School District has received, during the past several years, approximately $200,000 annually under subject Federal Authority to help finance approximately 1,000 pupils educated at this District and classified as subsection 3(b)2 pupils (Pupils—Parent employed on Federal property—pupil not residing on Federal property). We understand that a new fiscal year appropriation in the amount of $187,000,000 will come to the floor of the House during the week of July 21, 1969. This limited appropriation would remove present entitlement of this District to any funds received under the above law.

Without PL-874 funds this District would have to curtail expenditures of approximately $200,000. We would have to stop all transportation for field trips and intradistrict competitive athletic events. We would have to reduce desirable expenditures for renewal of instructional equipment and cancel the planned updating of the English language program through the purchase of four language laboratories. We would have to limit our efforts to improve education through pilot projects.

We respectfully request that you support this bill to provide additional funds for the Category 3(b)2 students educated at this district. Your attention to this request is sincerely appreciated.

Yours truly,

R. KEN WINES,
Deputy Superintendent.

CENTRALIA SCHOOL DISTRICT,
Buena Park, Calif., July 8, 1969.

Hon. RICHARD T. HANNA,
House of Representatives,
Washington, D.C.

DEAR MR. HANNA: This has been a very interesting year in terms of school finance, both in the state and on the national scene. As you know, it has been increasingly difficult to get tax overrides or bond issues passed in the State of California during the last few years. The threat of the removal of Public Law 874 funds has added considerably to the strain in terms of financing many of the school districts in California. It is a sort of paradox—everyone seems to want more and better education but seem at a loss to know which way to turn in order to get money to pay for it.

I have before me a pamphlet prepared by Dr. Gordon Harrison, who appeared before the Senate Sub-committee on Education on behalf of maintaining the Public Law 874 for support at its present level. This report indicates that the total entitlements amount to $45,840,253 and the entitlements for 3B students is $32,909,678. This is an enormous amount of school support and it could not be replaced in most instances by applying more taxes at the local level because most of us are at the limit of our taxing power at present. We are caught in a squeeze. We must be competitive in salaries to get the people we want, and we must at least try to keep up with the modern approaches to education in terms of program. I imagine that you find pleas and pressures brought to bear upon you by many special interest groups, so you are quite familiar with all sorts of problems of this kind.

We in education would certainly appreciate any help that you can give us in maintaining Public Law 874 support at its present level. In some districts any appreciable cut

will mean severe cuts in educational programs, which will result in doubtful savings to the people we serve in the long run.

We thank you in advance for any help you can give us in this matter.

Sincerely,

PAUL DOSS, Ed. D.,
District Superintendent.

CALIFORNIA SCHOOL BOARDS ASSOCIATION,
Sacramento, Calif., July 22, 1969.

Hon. RICHARD T. HANNA,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN: The California School Boards Association requests your support of all approved Congressional programs of Federal aid to education. Last year California schools received over $230,000,000 from all Federal aid programs currently in existence. This constitutes over 6% of the total support of California public schools. It is imperative for the welfare of California's educational systems that these programs be continued and fully funded.

In addition, the Association is opposed to the inauguration of any new Federal aid projects that would be funded from any of the existing programs currently approved by the Congress. It is the firm position of this Association that new aid projects should be accompanied by new sources of revenue. This is the only procedure that will guarantee that California school districts will not be harmed by a shift in the basis of Federal support.

Your consideration and support of this position is respectfully requested.

Sincerely yours,

JOSEPH M. BROOKS,
Executive Secretary.

LOS ALAMITOS SCHOOL DISTRICT,
Los Alamitos, Calif., July 23, 1969.

Hon. RICHARD T. HANNA,
House Office Building,
Washington, D.C.

SIR: Your support for full funding of Public Law 874, Section 3(b), is crucial for the Los Alamitos School District. If these funds are cut from our recently adopted budget for 1969–70, all reserves will be depleted and we will be left in a deficit position.

In addition, the completion of 202 housing units on the Los Alamitos Naval Air Station will place a heavy financial burden on the district, which is far below state average in assessed value per pupil. Continuation of funds under Section 3(a) is equally vital.

We need your help in support of full funding for Public Law 874.

Very truly yours,

GEORGE PLUMLEIGH,
Superintendent.

LOS ALAMITOS, CALIF.,
March 25, 1969.

Hon. RICHARD T. HANNA,
House Office Building,
Washington, D.C.:

Please support H.R. 514. Extension of section 3(b) of Public Laws 815 and 874 is essential to our school district. Loss of funds from any section of Public Law 874 would be a catastrophe to this school district.

Dr. E. L. GREENBLATT,
Superintendent, Los Alamitos School District.

NEWPORT-MESA UNIFIED SCHOOL DISTRICT,
Newport Beach, Calif., March 27, 1969.

Hon. RICHARD D. HANNA,
House Office Building,
Washington, D.C.:

Respectfully request you attend hearing on H.R. 514 (Public Law 874) to be held on March 31. This district receives $100,000 in Federal funds from P.L. 874 occasioned by proximity of El Toro Marine Base and the Marine Air Facility in Santa Ana, urge continuance of Public Law 874 in its present form as loss of these funds will create severe financial blow in the operation of this school district.

WALTER ADRIAN,
Director of Budget and Business Services.

GARDEN GROVE, CALIF.,
March 25, 1969.

Hon. RICHARD T. HANNA,
Washington, D.C.:

We urge your support of P.L. 874 funds as recommended by committee maintaining 3B category.

DAVID H. PAYNTER.

FOUNTAIN VALLEY SCHOOL DISTRICT,
Fountain Valley, Calif., April 24, 1969.

Hon. RICHARD T. HANNA,
House of Representatives,
Washington, D.C.

DEAR MR. HANNA: We were happy to receive your letter of March 6, 1969 in response to my letter of February 17 regarding funding of Public Law 874.

We have just learned that H.R. 514 was amended on April 16 to delete the entitlement for all Category B students. If allowed to stand, this amendment would eliminate PL 874 funds for our district as well as many other districts in California.

The current entitlement of $80,470.56 represents an average of $9.25 for each student in the Fountain Valley School District. Since you are familiar with our district, you can readily see that deletion of Category B students would cause an extreme burden upon the district.

Your efforts in helping to reestablish Category B students, as well as maintaining the Public Law 874 program, will be greatly appreciated.

Sincerely,

CHARLES A. WOODFIN, Ed. D.,
Associate Superintendent.

GARDEN GROVE UNIFIED SCHOOL DISTRICT,
Anaheim, Calif., July 28, 1969.

Hon. RICHARD T. HANNA,
Cannon House Office Building,
Washington, D.C.:

Respectfully request your support on inclusion of P.L. 874 subsection 3B2 students in current appropriation bill.

DAVID H. PAYNETER,
Superintendent.

Mr. MICHEL. Mr. Chairman, I yield 5 minutes to the gentleman from California (Mr. COHELAN).

Mr. COHELAN. Mr. Chairman, today or perhaps tomorrow, we as Members of the House of Representatives will be called on to decide whether we really mean what we say when we advocate a restructuring of our national priorities.

Today or tomorrow we will have the opportunity to either add $900 million for education or to pass an emaciated education budget providing something like 40 percent of the sums we have so glibly authorized for education.

In short, we will soon be put to the test. Do we really want better schools, better colleges, better research facilities? Or do we want to limp along with decaying school systems, overcrowded colleges and underfunded research?

We have gotten to the moon on the investments we have made in education in the last generation. The question of whether we will be capable of similar technical feats in the next generation will depend largely on whether and how well we educate that generation. Education costs money. The Federal Government has authorized the expenditure of more than $8 billion for this fiscal year. Yet, the administration and the Appropriations Committee have suggested that we spend only a little more than $3 billion this year for education. It was not this sort of pittance funding or our half-hearted commitment which got us to the moon. We devoted enormous sums and 100-percent dedication to the task of a lunar landing.

We cannot and we should not make a lesser commitment to our own children as they prepare for their generation of leadership and new ideas.

Amendments will be offered to the Labor/HEW appropriations to restore funds previously authorized by the Congress for education of the culturally disadvantaged, for school libraries, for equipment, experimentation, guidelines and counseling in our elementary and secondary schools, for vocational education, for college construction and student assistance, for impact aid. These are all vital and important programs providing desperately needed Federal aid to education.

I would like to take just a moment at this time to explain some of the thinking which underwrites the package amendments which will be introduced.

ESEA TITLE I

In the Elementary and Secondary Education Act Amendments of 1967, the Congress provided that statewide programs for disadvantaged students should be 100-percent fully funded, even if the Congress failed to appropriate the full sums authorized by the Congress. Since we have not ever appropriated more than about 40 percent of the sums authorized for title I of ESEA, each local educational agency—that means schools—has received a prorated share well below the authorized levels, yet the statewide programs have received full funding. Because of the increase in the number and size of these statewide programs it is necessary in the current fiscal year to provide $80,800,000 in additional funds above the committee's bill simply to assure that each local school district in fiscal 1970 receive a Federal payment at least as large as the payment received in previous years.

In 1968 we were provided $210 for each disadvantaged pupil who qualified under ESEA guidelines. At the funded levels suggested by the administration and the Appropriations Committee, we would be providing only $170 for each such pupil this year. In short, at the funding level of this bill we would be taking a giant step backward.

And at the same time we are taking this step backward, education costs have been increasing at the rate of at least 5 percent per year. In 3 short years, education costs have escalated more than 15 percent. For this reason, too, under the sums suggested by the committee we would be moving still further to the rear. It is then for reasons of attempting to maintain current funding levels for local schools and to meet the problems of increasing educational costs that we have

thought it appropriate to include more than $180 million in additional funds for programs to serve educationally disadvantaged students.

HIGHER EDUCATION

Two major schemes which provide Federal assistance to our colleges and universities are not working under current conditions.

We have recently created a new program of interest subsidies for the construction of university facilities.

Under this program colleges and universities are allowed to borrow money at commercial rates and then to seek reimbursement from the Federal Government for their interest payments. The trouble is that in 15 or 20 States public educational institutions cannot borrow money on the commercial markets. Thus, in these States the interest subsidy program is of no benefit. Yet, in the administration's amended budget all funds for the construction of facilities at 4-year colleges and graduate schools have been deleted. It seems unconscionable for us to deny our universities funds they so badly need to keep pace with ever increasing college population. It seems doubly so when we have so recently devised a program to provide low-cost assistance to these institutions for this type of construction.

To make our college construction programs work we have included in the package amendments $33 million for construction at 4-year undergraduate institutions. This is the same sum we appropriated in fiscal year 1969. There is no increase to take care of inflation or the growing demand. We are merely attempting to hold the line.

There is another program of benefit to higher education which has failed entirely. Under the guaranteed student loan program the Federal Government insures commercial banks against losses on loans made to students at qualified 4-year colleges. The law provides, however, that these guaranteed loans are to bear not more than 7-percent interest.

The trouble is that today the prime interest rate is 8½ percent. The banks just are not making loans to anybody at 7 percent. In short, there are no 7-percent student loans for the Federal Government to guarantee.

If we are to continue to provide assistance to college students, we must do so through a program of Federal loans. The best of these programs is a student loan authorized by title II of the National Defense Education Act. The administration has requested $162 million for this program this year. This sum is considerably under what we appropriated last year.

The Appropriations Committee has recommended an increase in the title II NDEA loan funds to $188 million. But even with this increase, it is still less than the sums we provided for this program last year.

To get back to where we were last year and to make up for the failure of the guaranteed loan program we just simply need more money. It is for this reason that the package amendments will provide an increase of $40 million over the subcommittee recommendation for guaranteed student loans.

SCHOOL LIBRARIES

Mr. Chairman, as you know, the amended administration budget for fiscal 1970 provides no funds for school libraries. It provides no funds for school equipment or minor remodeling. It provides no funds for guidance and counseling. It provides diminished funds for education demonstrations.

I find it incredible even with our current fiscal problems that we must cut back so drastically on these basic educational services.

The package proposal for these items does not ask for the moon. It merely provides funds at the levels we appropriated last year. It provides $50 million for school libraries. It provides $17 million for guidance and counseling. It provides $78 million for equipment. These are all the same sums we have expressed a willingness to support in the past. We can surely maintain that support today.

Under these educational service programs we provide the only Federal assistance for outreach programs for our libraries—programs which have brought bookmobiles and librarians to the inner city for the first time. We provide guidance and counseling to youngsters with emotional problems, development problems, and just plain career problems.

Can anyone really say that these are superfluous programs? Can anyone say these are Federal giveaways or a waste of Federal money? I think not. I think we must restore these funds.

VOCATIONAL EDUCATION

Under the administration budget request we would spend less than a third of the $750 million authorized for vocational education. We would be appropriating this small fraction of the authorization for vocational education in a year in which we know that a million people will leave our school systems without being able to read and without being able to find a job. We would spend this pitiful fraction in a year in which we know that we are conscious of attempting to cool off the economy in order to reduce the number of jobs. So we know that in this year we will be creating unemployment and we will be turning out another crop of unprepared workers for the job market.

Under the vocational education programs, grants are given to the States to provide job training through established schools, to school dropouts, to those who have jobs but want better jobs, to those who have no skills but recognize the need for skills.

It seems to me that in a year in which we can expect grave pressures on those in the work forces and those entering the work forces to have marginal preparation, we cannot in all good conscience cut back on our efforts to help these people. The least we can do is to provide more funds for vocational education. The package includes $131 million for this purpose.

IMPACT AID

In 1969 local schools received 90 percent of the sums authorized for them under Public Law 874, section 3(b) impact aid program. With this 90 percent of entitlement funding level we appropriated $505 million for impact aid. To maintain this 90-percent funding level in the current fiscal year will require the appropriation of $585 million. The package of amendments provides this sum.

Again, we are only attempting to do this year what we did last year.

Impact aid is a form of generalized aid to education. It provides unearmarked money which local schools can spend entirely as they deem appropriate. These are vital funds.

And while many of us may be concerned that the impact aid allocation formula is not all that it could be or should be, it seems to me clear that until we can be certain that we can obtain this several hundred million dollars in Federal aid for a better program, we must continue to support it.

Mr. Chairman, in the strongest possible terms I urge the support and adoption of the package amendments for the Office of Education appropriations.

Mr. Chairman, I also rise in opposition to sections 408 and 409 of this bill.

This effort is repetitious. We have all been through this exercise before during last year's consideration of this bill. At that time, the Whitten amendments, which would have surely turned back the clock to the "separately but equal" era, provoked a heated and lengthy debate and were put down only by a very close margin. This was an important victory for civil rights, and for equality.

Now, we find this issue before us again. The fact that it has reappeared so inexorably is the very reason we must act to defeat it. The renewal of this effort undermines the good that the Congress has done in the name of civil rights, underscores the point that all the laws in the world will not change prejudicial attitudes. The law is the instrument that will effect climates of decency and equality under which free men can live with dignity and honor. These laws must be properly enforced to protect this climate.

It is imperative that we take immediate action to remove sections 408 and 409 from this bill. If we do not, we are paving the way for further prejudicial and discriminatory practices. This bill as it now stands, will drastically reduce the effectiveness of the Civil Rights Act of 1964, by obliterating title VI as it applies to education.

If we are honest, we will admit that we all know these facts. But the monster has reared its ugly head again, forcing us to scrutinize the issues before us. Let us take a close look at these provisions, for they must be clearly understood and rejected for what they are:

SEC. 408. No part of the funds contained in this Act may be used to force busing of students, abolishment of any school, or to force any student attending any secondary school to attend a particular school against the choice of his or her parent.

SEC. 409. No part of the funds contained in this Act shall be used to force the busing of students, the abolishment of any school, or the attendance of students at a particular school as a condition precedent to obtaining funds otherwise available to any state, school district, or school.

In effect, these provisions are an attempt to perpetuate the blatantly discriminatory

"separate but equal" dual school system concept which was declared unconstitutional by the Supreme Court 15 years ago.

They attempt to impose Federal limits on local school board decisions regarding desegregation policies.

They are an attempt to undercut and negate the Department of HEW's enforcement efforts to prevent discrimination in federally aided education programs and to eliminate unconstitutionally segregated school systems.

They speak of busing and forced closings—emotion charged issues inspired to trigger old, obsolete, and irrational arguments. There is in fact, no real issue here. The Federal Government cannot and does not require busing of students as a mechanism to end segregation.

In the same sense, the Federal Government does not force closings of schools. Local districts have in the past resorted to closing schools in order to avoid desegregation. In some instances, schools were closed because they were too inferior and inadequate to continue in operation.

These provisions have little to do with busing and abolishment of schools. Their clever insertion in this bill was to detract from the real issue which is to allow certain southern districts to revert to unconstitutional discrimination and segregation.

In the final analysis, we see these provisions as an attempt to legitimize the "freedom of choice" plan as acceptable and workable means of desegregating schools, even though such plans have proven ineffective and inadequate, a point determined by the courts just last year.

To pass this bill with sections 408 and 409 intact would be tampering with the present civil rights laws. These sections are obstructionist devices representing a blatant denial of our national commitment to end unconstitutional segregation.

This we cannot tolerate. We have fought hard in the past to get responsible and equitable legislation to provide and protect the basic rights of our citizens. It worries and frightens me to think that we have once again come so dangerously close to reversing our position. Can we afford to retreat on so vital an issue at this point in our history?

We are a great nation—a first-rate power abounding in wealth, affluence, and prestige. However, we remain a paradox, for in our greatness we continue to harbor poverty and ignorance which breed dissension and unrest. Not only do we harbor these ills, but today we may take steps to perpetuate them.

We are a troubled nation, a people at unrest. Our only hope, and all of us know this, is through education. How then can we even consider taking steps which will have no effect other than to deprive great numbers of our people of equality of education? How can we in conscience, in fairness, and in justice consider passage of this bill with sections 408 and 409?

This relentless attempt to reinstate these anti-civil-rights measures must be met with relentless resistance. These measures would undermine not only our objectives and goals in civil rights, but our accomplishments so far. We must be ever mindful of the citizens who suffer the consequences of discrimination and of the society which pays the price of social unrest, unemployment, undereducation, and all the rest of the bitter fruit of a segregated society.

This whole issue is an outrageous attempt to disregard the Constitution, the several properly enacted civil rights laws, the Supreme Court ruling on desegregation and discrimination, and the intent of the Congress as manifested by the defeat of these provisions last year.

The only assurance provided in these provisions is a guarantee of delay, confusion, increased discontent by white and Negro citizens alike, and a renewed and revitalized era of suppression of minorities. We cannot let this happen.

I cannot overstate the seriousness of this question. I appeal to my fellow colleagues in the House for a rational and mature consideration of these issues. And I urge and solicit support for amendments which I will introduce at the proper time to strike these clauses from this bill.

This is an issue of black and white.

A vote against my amendments will be recorded all across the country as a vote against civil rights, against our Negro citizens.

Mr. Chairman, I include the following items on sections 408 and 409.

These compelling materials are an editorial from today's Washington Post, a moving letter from Leadership Conference on Civil Rights, and a detailed factual statement on the level of desegregation as found by the U.S. Department of Health, Education, and Welfare.

The material follows:

[From the Washington (D.C.) Post, July 29, 1969]

SON OF THE WHITTEN AMENDMENT

It has not even been a full year since Congress last dispatched the Whitten Amendment—or thought it did anyway. The Amendment, which is the work of Rep. Jamie Whitten of Mississippi, is an artful bit of legislative language which would, in effect, undermine a number of Supreme Court desegregation decisions and gut Title VI of the Civil Rights Act—its vital enforcement section—so far as the schools are concerned. In October of 1968, Mr. Whitten's Amendment was narrowly rejected by the House. Now it is back: the Labor-HEW appropriations bill coming before the House today once again has the Amendment appended to it, courtesy of the full Appropriations Committee. By tonight there may have been a vote.

Mr. Whitten is chiefly at pains to engineer a congressional blessing for his own district's resistance to the law. Yet his Amendment has a certain surface appeal for Congressmen who ordinarily would not tamper with the Civil Rights Act or the Court's rulings on this question. That is because it seems only to say that HEW may not use its appropriated funds to "force busing," a proposition generally approved by Northern and Southern legislators alike. The hitch is that "forced busing" for the sake of overcoming racial imbalance is already forbidden by law. The really important parts of the Whitten Amendment would forbid HEW from using funds to "force any student attending any elementary or secondary school to attend a particular school against the choice of his or her parents or parent." And HEW would also be enjoined from "forcing attendance of students at a particular school as a condition precedent to obtaining Federal funds otherwise available . . ." The first effect of the Amendment would be to retrieve the discredited "freedom of choice" plans under which Southern districts were, for the most part, merely playing at desegregation.

The language of the Whitten Amendment has not changed much since last October but circumstances have. It is worth remembering how the Amendment came to be defeated that time around. It was touch and go until Rep. Melvin Laird passed the word that the candidate, Mr. Nixon, did not support the Amendment, but was in fact opposed to it. Perhaps the Nixon Administration, or someone who can speak for it, has a similar last-minute instruction in mind. But up until very late in the game, the Administration has kept its silence. If it is really serious about sending a message to the South to the effect that it does not plan a wholesale retreat on desegregation, then a forthright position against the Whitten Amendment is—to put it mildly—indicated. As of yesterday afternoon, there was no official statement. To let the Whitten Amendment go by without opposition would provide a very clear signal to the South and further undermine the efforts of Mr. Nixon's appointees at HEW.

LEADERSHIP CONFERENCE ON CIVIL RIGHTS,

Washington, D.C., July 28, 1969.

DEAR MR. CONGRESSMAN: When the House votes this Tuesday afternoon on the Labor-HEW Appropriations bill (H.R. 13111), we urge you to vote against the anti-civil rights riders that have been added to it.

A statement we have just issued on behalf of the 126 national labor, religious, civil rights and civic organizations in the Leadership Conference sums up the reasons for our opposition. It declares:

"It is shameful and scandalous that the Appropriations bill for the Departments of Labor and Health, Education and Welfare has emerged from committee with the same anti-civil rights amendments Congress rejected last year. The sole purpose of these amendments is to destroy the school desegregation program.

"Earlier this month the Administration declared it was 'unequivocally committed to the goal of finally ending racial discrimination in schools, steadily and speedily, in accordance with the law of the land.' If the Administration means that, it has a clear obligation to come forward now and publicly condemn the amendments and work to have them rejected. Every member of Congress who was in the overwhelming majority that voted for the Civil Rights Act of 1964 will have an opportunity now to reaffirm that commitment to first-class citizenship by voting against the Whitten amendments. Every member of Congress who realizes the extent to which the cancer of racial discord is infecting our society should vote against them.

These amendments are an illegal attempt to legislate on an appropriations measure, a blatant attempt at blackmailing members to accept terrible injustice as the price of getting funds for badly needed educational programs. The amendments should be stricken from the bill."

Sincerely yours,

CLARENCE MITCHELL,
Legislative Chairman.

SCHOOL DESEGREGATION DATA

[News release of Department of Health, Education, and Welfare]

Preliminary analysis of the 1968 data on school desegregation in the 11 States of the Deep South shows that 20.3 percent of the 2.5 million Negro students in these districts or a total of 518,607 Negro children are attending schools with white children. (Table 1). This figure compares with 13.9 percent for the 1967–68 school year.

TABLE 1.—ALL DISTRICTS REPORTING, FALL 1968

PUPIL DESEGREGATION IN 11 SOUTHERN STATES

State	Number of districts reporting	Enrollment		Desegregation [1]	
		Total	Negro	Number of negro students	Percent negro students
Alabama	89	588,639	204,365	15,039	7.4
Arkansas	173	376,470	94,791	22,048	23.3
Florida	57	1,160,644	282,226	67,961	24.1
Georgia	144	883,287	268,044	38,196	14.2
Louisiana	50	774,140	299,152	26,354	8.8
Mississippi	100	398,725	193,602	13,839	7.1
North Carolina	143	1,120,602	330,449	92,028	27.8
South Carolina	76	486,509	196,203	29,198	14.9
Tennessee	120	843,525	140,287	34,098	24.3
Texas	501	2,264,881	306,648	119,259	38.9
Virginia	115	992,047	236,023	60,587	25.7
Total	[2] 1,568	9,889,469	2,551,790	518,607	20.3

[1] The Office for Civil Rights estimates that the data on which the 1968 preliminary analysis is based accounts for 85 percent of the estimated 11,677,684 public school students in the 11 Southern States.
[2] Includes all districts with total enrollment over 3,000 students and a sampling of districts with less than 3,000 students enrolled.

At the same time, the data reveals that in the school districts desegregating under the requirements of Title VI of the Civil Rights Act of 1964, 25.6 percent of the one million Negro children in those districts or 272,281 are attending schools with white children.

The overall desegregation figure, 20.3 percent, includes districts desegregating under court orders as well as those desegregating under voluntary plans.

The voluntary plans under which the districts are desegregating have been developed locally and have been submitted to the Office of Civil Rights of the Department of Health, Education, and Welfare.

The 25.6 percent figure, contained in survey data released today by the Office for Civil Rights, HEW's Title VI compliance agency, compares with the 19 percent or 202,794 Negro children reported in desegregated schools in the same districts during the 1967–68 school year. The districts are in the following States: Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas and Virginia.

All of the school districts in the 11th Deep South State, Alabama, are desegregating under court order.

A comparison of the voluntary plan desegregation progress in the 10 Deep South States for 1966–67, 1967–68 and 1968–69 is shown in Table 2:

TABLE 2.—VOLUNTARY PLAN DISTRICTS [1]

1967	54	431,799	117,148	26,190	22.4
1968	53	370,799	119,676	30,607	25.6
Total:					
1966	895	3,837,771	1,033,693	145,628	14.1
1967	902	4,007,749	1,075,625	202,794	18.9
1968	718	3,787,262	1,064,070	272,281	25.6

[1] The Office for Civil Rights estimates that the data on which the 1968 preliminary analysis is based accounts for 86 percent of the estimated 10,846,023 public school students in the 10 Southern States. (All districts in the State of Alabama are under Federal court order to desegregate.)
[2] For 1966, a desegregated school was defined as one which had 5 percent or more white enrollment. For 1967 and 1968 this definition was changed to schools which had 50 percent or more white enrollment.

A desegregated school is defined, as in 1967–68, as one attended by minority group children in which at least 50 percent of the students are white.

Preliminary analysis also showed that:

1. Desegregation progress in Deep South school districts desegregating under court orders was sharply below the voluntary plan desegregation figure. Data from court order districts showed that only 11.5 percent or 149,000 of the Negro students in those districts are attending school with white children. (Table 3 below.)

2. In those school districts in the 10 Deep South States which have submitted forms certifying they have eliminated their dual systems (Form 441), 51.6 percent of the Negro students are attending schools with white children.

TABLE 3.—COURT ORDER DISTRICTS [1]

PUPIL DESEGREGATION IN 11 SOUTHERN STATES (2-YEAR COMPARISON)

State	Number of districts reporting	Enrollment		Desegregation [2]

1967	22	240,653	96,681	12,961	13.4
1968	20	215,699	91,381	12,709	13.9
Total:					
1967	300	3,708,273	2,273,127	118,843	9.5
1968	297	3,688,188	1,299,060	149,000	11.5

[1] The Office for Civil Rights estimates that the data on which the 1968 preliminary analysis is based accounts for 85 percent of the estimated 11,677,684 public school students in the 11 Southern States.
[2] For 1966, a desegregated school was defined as one which had 5 percent or more white enrollment. For 1967 and 1968 this definition was changed to schools which had 50 percent or more white enrollment.

These preliminary figures account for approximately 85 percent of the students attending schools in the 11 Deep South States. The reports were to be completed and returned to HEW by October 15, but school districts which account for approximately 15 percent of the students in these States failed to return reports or returned incomplete information.

The only large system which has not yet reported data is Dallas, Texas. Dallas is under court order.

A breakdown of the extent of school desegregation in the 11 Deep South States for all types of school districts (voluntary plan, 441, court order) is shown in Table 4:

TABLE 4.—PUPIL DESEGREGATION IN 11 SOUTHERN STATES: TOTALS, BY CATEGORY, FALL 1968

Category	Number of districts reporting	Enrollment		Desegregation [1]	
		Total	Negro	Number of Negro students	Percent Negro students
Voluntary plan	718	3,787,262	1,964,070	272,281	25.6
441's [2]	553	2,414,019	188,660	97,326	51.6
Court orders	297	3,688,188	1,299,060	149,000	11.5
Total	[3] 1,568	9,889,469	2,551,790	518,607	20.3

[1] For purposes of this fall 1968 tabulation, Negro students are considered to be enrolled in a desegregated school only when the white population of that school is at least 50 percent.
[2] Includes all districts with total enrollment over 3,000 students and a sampling of districts with less than 3,000 students enrolled.
[3] The Office for Civil Rights estimates that the data on which the 1968 preliminary analysis is based accounts for 85 percent of the estimated 11,677,684 public school students in the 11 Southern States.

Mr. FLOOD. Mr. Chairman, I yield 5 minutes to the gentleman from New Jersey (Mr. JOELSON).

Mr. JOELSON. Mr. Chairman, I listened with interest and admiration to the eloquent remarks of the gentleman from Pennsylvania (Mr. FLOOD). I think he deserves a school being erected in his district and named after him, and I hope after I am through today or tomorrow, I will have a school named after me, and perhaps even a college.

I am going to offer a series of amendments, and I would like Members of the House to know these amendments are backed by an extremely wide range of opinion. For instance, we have the U.S. Conference of Mayors, from which we have received a letter, and a companion group, The National League of Cities. It is signed by the mayor of Nashville, Tenn., C. Beverly Briley, and the mayor of San Leandro, Calif., Jack D. Maltester. This is also backed by labor groups such as AFL–CIO, and by almost every distinguished educational group we can think of, and by religious groups.

This is not politically oriented. It is an attempt to try to do justice.

Mr. MILLER of California. Mr. Chairman, will the gentleman yield for an observation?

Mr. JOELSON. I yield to the gentleman from California.

Mr. MILLER of California. Mr. Chairman, Jack D. Maltester, whom the gentleman mentioned, is now the national president of the League of Cities.

Mr. JOELSON. Yes. He wrote a very warm letter in support of this package.

Mr. Chairman, I would like to explain what my amendments would do. With respect to impact aid, it would restore most of the funds authorized to 90 percent, so instead of the amount the committee has recommended, we could have an additional $398,000,000. With respect to vocational education, we bring that figure up by $331,500,000.

So instead of the program being funded at only a percentage which is very small, 46 percent of the authorization, we would now go to 63 percent of the authorization.

With regard to title I, we would bring that up another $180 million, so that instead of being funded for a very meager 38 percent of the authorization it would be funded at 44 percent of the authorization. This is not wild. This is not extravagant. It is still less than half of the authorization.

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. JOELSON. I yield to the gentleman from Iowa.

Mr. SMITH of Iowa. Why would the gentleman want to fund the impact aid at 90 percent and title I at only 44 percent? Is that not discriminating against the disadvantaged children?

Mr. JOELSON. It is realistic. That is why I do it. I believe by doing this realistically I can get this package passed. I believe it would be better for those kids to have $180 million more than nothing.

Mr. SMITH of Iowa. In other words, this package does not represent what is fair, just, and right; it represents only what you can get?

Mr. JOELSON. It represents what is fair, just, and right, and possible; yes.

Mr. COHELAN. Mr. Chairman, will the gentleman yield?

Mr. JOELSON. I yield to the gentleman from California.

Mr. COHELAN. Is it not true that this was a matter worked out in consultation with Members on both sides of the aisle?

Mr. JOELSON. Yes.

Mr. COHELAN. In the hope that we could get a broad basis of support?

Mr. JOELSON. I am very hopeful we will get bipartisan support.

I am skipping, because I have only 5 minutes, but I want the Members to think about the student loan program for a minute. The students cannot get loans from banks because of the high interest situation. They must refer to the direct loan program.

The committee proposed to fund the loan program at 65 percent of the authorization. I would raise that to 83 percent of the authorization.

With regard to college construction, the committee does not give anything. There is an authorization in the amount of $711 million. I am proposing $33 million, a meager 4.6 percent.

So I feel that the package I am going to propose later is a reasonable one, one we can all support, and one that will do justice to the schoolchildren of this land.

Mr. BOLAND. Mr. Chairman, will the gentleman yield?

Mr. JOELSON. I am glad to yield to the gentleman from Massachusetts.

Mr. BOLAND. Mr. Chairman, I compliment the gentleman from New Jersey for sponsoring these amendments. The amendments he will offer are most important to continue to carry out the educational programs—particularly the great programs proposed by the 90th Congress.

As the gentleman knows, a number of his amendments which will be included in the package were offered in the full committee last week, and they were defeated by a relatively small margin of votes. I compliment the gentleman on the package, and I intend to support him in all the amendments he has to offer.

Mr. MICHEL. Mr. Chairman, I yield myself 2 minutes.

Mr. Chairman, I cannot help making a comment right at this particular point, in view of the remarks by the gentleman from New Jersey (Mr. JOELSON) as to those organizations which are supporting his package.

I was rather astounded to see that among those sponsoring groups, so-called, are the Appalachia Educational Laboratory, the Michigan-Ohio Regional Education Laboratories, and a whole list of educational laboratories which we have been funding practically 100 percent with Federal money. We have a kind of situation here where taxpayers' money is being used to lobby the Congress for increased money, a shocking conflict of interest.

Following is a list of the supporters:

ORGANIZATIONS SUBSCRIBING TO STATEMENT OF PRINCIPLE OF EMERGENCY COMMITTEE FOR FULL FUNDING

Academy For Educational Development, 1424 16th St., NW.

AFL–CIO, 815 16th St., NW.

American Association for Health, Physical Education and Recreation, 1201 16th St., NW.

American Association of Junior Colleges, 1315 16th St., NW.

American Association of School Administrators, 1201 16th St., NW.

American Association of State Colleges and Universities, 1785 Massachusetts Ave., NW.

American Association of University Women, 2401 Virginia Ave., NW.

American Council of Education, 1785 Massachusetts Ave., N.W.

American Educational Research Association, 1126 16th St., NW.

American Federation of Teachers, 1012 14th St., NW.

American Industrial Arts Association, 1201 16th St., NW.

American Library Association, The Coronet—200 C St., SE.

American Personnel and Guidance Association, 1607 New Hampshire Ave., NW.

American Society for Public Administration, 1225 Connecticut Ave., NW.

American Vocational Association, 1510 H St., NW Suite 300.

Appalachia Educational Lab, Box 1348, 1031 Quarrier St., Charleston, W. Virginia 25325.

Association for Children With Learning Disabilities, 627 Allison St., NW.

Association of American Colleges, 1818 R St., NW.

Association of American Law Schools, 1521 New Hampshire Ave., NW.

Association of Classroom Teachers—NEA, 1201 16th St., NW.

Association of Research Laboratories, 1527 New Hampshire Ave., NW.

Association of School Business Officials, 2424 W. Lawrence Ave., Chicago, Illinois 69625.

Catholic Library Association, Trinity College Library.

Center For Urban Education, 105 Madison Ave., New York 10016.

Central Midwestern Regional Educational Laboratories, Inc., 10646 St. Charles Rock Road St., St. Ann, Missouri.

Chief State School Officers, 1201 16th St., NW.

Committee for Community Affairs, 1000 Wisconsin Ave., NW.

Conference of Large City Boards of Education of New York State, 111 Washington Ave., Albany, New York.

Council for Advancement of Small Colleges, 1346 Connecticut Ave., NW.

Council of Graduate Schools, 1875 Massachusetts Ave., NW.

Department of Elementary School Principals, 1201 16th St., NW.

Educational Commission of State, 1860 Lincoln St., Denver, Colorado.

Educational Task Force, Washington Interreligious Staff Council, 2633 16th St., NW.

Far West Laboratory for Educational Research and Development, One Garden Circle, Hotel Claremont, Berkeley, California.

IUE–AFL–CIO, 1126 16th St., NW.

Jesuit Educational Association, 1717 Massachusetts Ave., NW.

Lutheran Council in the USA, 2633 16th St., NW.

Memphis City Schools, 2597 Avery, Memphis, Tennessee.

Michigan-Ohio Regional Education Laboratories, 3750 Woodward, Detroit, Michigan 48201.

Mid-Continent Regional Education Laboratories, 104 E. Independence, Kansas City, Missouri.

National Association of Independent Schools, Four Liberty Square, Boston, Massachusetts 02109.

National Association of Secondary School Principals, 1201 16th St., NW.

National Association of State Boards of Education, 604 Circle Drive, Bryan, Ohio 43506.

National Association of State Universities

& Land Grant Colleges, 1785 Massachusetts Ave., NW.

National Catholic Education Association, 1785 Massachusetts Ave., NW.

National Commission for Multi-Handicapped Children, 339 14th St., Niagara Falls, New York.

National Commission for Cooperative Education, 52 Vanderbilt Ave., New York, New York 10017.

National Congress of Parents and Teachers, 9202 Ponce Place, Fairfax, Virginia.

National Council of Catholic Men, 1312 Massachusetts Ave., NW.

National Council of Jewish Women, 1346 Connecticut Ave., NW.

National Education Association, 1201 16th St., NW.

National Faculty Association of Community & Junior Colleges, Room 721, NEA Building.

National School Boards Association, 1616 H St., NW.

New York State Personnel and Guidance Association, State University of New York, 135 Western Ave., Albany, New York.

Northwest Regional Educational Laboratories, 710 S. W. 2nd, Portland, Oregon.

Regional Educational Lab. for the Carolinas and Virginia, Mutual Plaza, Chapel Hill & Duke Streets, Durham, North Carolina 27701.

Rocky Mountain Educational Laboratories, 120 24th Ave. Ct., Greeley, Colorado 80631.

Saranac Community Schools, 149 Main St., Saranac, Michigan.

South Central Region Educational Laboratory, P.O. Box 6197, Little Rock, Arkansas.

State University of New York, 1730 Rhode Island Ave., Suite 500.

United Steelworkers of America, 1001 Connecticut Ave., NW.

University of Texas System, 1140 Connecticut.

Upper Midwest Regional Educational Laboratory, 1640 East 78th St., Minneapolis, Minnesota 55423.

Urban Coalition Action Council, 1819 H St., NW.

Mr. JOELSON. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I am happy to yield to the gentleman from New Jersey.

Mr. JOELSON. I am not ever shocked by the fact that taxpayers lobby the Congress. It happens every day. It is in the very best interest of democracy. Who else should lobby us? Aliens?

Mr. MICHEL. Not at the taxpayers' expense. If the taxpayer himself wishes to do it, fine, but I think this is a situation where the taxpayer is getting racked up for more taxes to lobby for more spending against his will. It is wrong.

The CHAIRMAN. The time yielded by the gentleman from Illinois has expired.

Mr. MICHEL. Mr. Chairman, I am happy to yield 5 minutes to the gentleman from Massachusetts (Mr. CONTE).

Mr. CONTE. Mr. Chairman, I rise today to support an amendment to H.R. 13111. It would amend the bill to provide additional funding for vocational education in the amount of $131.5 million.

You will recall that the Vocational Education Act of 1963 was a real turning point. It provided a new foundation from which we have continued to move ahead. In fact, during the 1966–67 school year, 50 percent more persons attended vocational education classes than did in 1963–64.

But we did not stop there. We passed the Vocational Education Amendments of 1968. They represented an important next step in the ladder to better and greater opportunities for more of our people. And they were designed to meet the needs of an increasingly complex and technical society.

Three basic facts were recognized when we considered the amendments last year. First, the emphasis in education has shifted from high school to college. Second, the number of high school dropouts has increased, especially among the disadvantaged. Third, our economy has become so technical that many high school training programs are no longer adequate for a lifetime career.

Mr. Chairman, I can attest from my own personal experience—I attended a vocational high school—to the need for improving the quality of these training programs and for doing it with a total commitment. This need is the result of many factors, foremost among which is the failure of our schools to do as much for the noncollege bound student as they have for the college bound student.

There is another important factor I would like to mention; namely, the very serious domestic crisis we have in our cities. There have been countless reports on the causes of urban unrest. They have consistently maintained that high unemployment and a lack of job opportunities are major causes of the unrest. Perhaps some of you do not realize the extent of the problem. For example, last year it was estimated that the unemployment rate among youth in disadvantaged and minority groups was 35 percent.

We have to do something about this—and now, before it is too late. And we have to do the best job possible. The noninstitutional manpower programs we have are just not the long-term—or in some cases even the short-term—answer. They often tend to frustrate those they try to help. Besides that, they are very expensive when compared to vocational education programs.

Mr. Chairman, I want to see our vocational education programs funded adequately. The budget authority recommended in the bill before us is only 46 percent of the authorization for fiscal 1970. This amendment would increase the budget authority to 63 percent of the authorization. Specifically, budget authority would still be $277.9 million below the authorized level of $766.6 million. This increase would, nonetheless, permit continuation of the programs at a respectable level.

Mr. Chairman, I am hard put to think of a better investment in the future of our Nation. By funding the vocational education programs adequately, we will be giving a new life to millions of our youth who for one reason or another do not enjoy the benefits of college. And at the same time, we will be making them productive citizens, ready to meet the challenges of an increasingly technical society.

I am thankful for the opportunity to support this amendment.

Mr. FLOOD. Mr. Chairman, I yield such time as he may consume to the gentleman from Pennslyvania (Mr. BARRETT).

Mr. BARRETT. Mr. Chairman, I rise in the interest of supporting the package amendments.

Mr. Chairman, at a time when still fresh in our minds are the very recent magnificent accomplishments of our space efforts we appropriately have before us the bill, H.R. 13111, to provide funds for the fiscal year 1970 for the Department of Labor and the Department of Health, Education, and Welfare. It is appropriate because this bill is to provide the funds for the federally supported education programs. Of the $16.3 billion in the bill, a total of $2.3 billion is provided for education. We have heard many statements here today, with which I wholeheartedly agree, that this figure is inadequate for today's educational needs.

It is an established fact that all of man's achievements, for himself and society, are vitally connected with his education and training. The Congress has recognized the Federal role, the benefits to the Nation, of supporting educational programs. To skimp in providing the necessary funds to fully fund these programs is unthinkable.

Mr. Chairman we are dealing here with funds necessary to educate the youth—our children—of this great Nation.

The gentleman from New Jersey (Mr. JOELSON) will propose to increase the amount of funds for the educational programs by approximately $550 million. I will support this effort, whether it be a package amendment or individual amendments. The House must again show its determination to provide for the education and training of our youth and I urge my colleagues to support this effort.

Mr. FLOOD. Mr. Chairman, I yield 5 minutes to the distinguished gentlewoman from Hawaii (Mrs. MINK).

Mrs. MINK. Mr. Chairman, those of us who come from districts which have a large involvement with Federal installations find ourselves each year with a fight on our hands to save education funds which the Congress in 1950 voted to authorize our local school agencies.

Some argue that these funds under the impact program should be used to meet other more urgent needs of education such as urban and ghetto education. I would be the first to agree that our country needs to commit more of its resources to the cities and to the poorer communities who lack the tax base to adequately support a good educational system. But in taking that position to urge larger expenditures for education for our poorer disadvantaged children, I do not support the argument that we should in any way reduce our effort of supporting our 4,263 school districts who depend on Federal support under Public Law 874.

The argument that inadequate education of the poorer children who live in the cities is due to lack of an adequate tax base is certainly valid, but it is equally valid and the basis for the Public Law 874 legislation.

It is my personal opinion that the Appropriations Committee is mindful of the needs of our school districts who depend upon impact aid funds provided in Public Law 874. Their failure to provide any funds whatsoever for category "b" children is due to their belief I am told that the funds should be provided for by a

floor amendment. To the extent that this belief is valid I am prepared today to ask for the restoration of our entitlement up to 90 percent of the estimates. It would have been more gratifying to have had the full weight and support of the members of the House Appropriations Committee for our program which affects the lives and education of 45 million schoolchildren in the 4,263 school districts. It is true that only 3 million children are counted in allocating these funds under impact aid, however since these funds are paid into the general school budget once allocated, its denial will deprive the entire 45 million schoolchildren who are part of these 4,263 school systems. There is no possible way in which these school districts could make up the lost funds. In many school districts tax revenues are fixed, and loss of these impact funds will necessarily mean a drastic curtailment of their program.

Since the very beginning from fiscal year 1951, Public Law 874 has received full congressional support for 100 percent funding, except for the last fiscal year where the funding level was set at 90 percent. In the first year of the program, sections 2, 3, and 4 of the program received 96 percent of their entitlement; in fiscal 1955 sections 2, 3, and 4 received 99.5 percent of their entitlement; and in fiscal 1967 sections 2, 3, and 4 received 98.7 percent. These distributions were due to errors in estimates and not because of the Congress intention to fund these programs at any lower level than the full 100 percent of entitlement.

Only because of the budget situation, which incidentally may not be as critical as we have been told, since I read by this morning's paper that we had a $3.074 billion surplus at the fiscal year end on June 30, 1969, I have agreed at this time to ask for only 90 percent of our entitlement for fiscal 1970. If the fiscal year 1970 budget situation appears to improve further by early next year, I intend to rise at the appropriate time to ask the House to consider a supplemental appropriation to raise the funding level to 100 percent of our entitlement.

In my own State of Hawaii during our 1968–69 school year there were 17,131 students whose parents lived on and worked on Federal property. My latest figures from the Hawaii State government show that there are 57,791 military dependents in my State. These 17,000 children who live on base are covered under category "a" of Public Law 874. While it is true that the Appropriations Committee has provided full funding for these children under Public Law 874, what is not widely known is the fact that this so-called full funding pays for less than 50 percent of the cost of educating these children. The formula in Public Law 874 provides that these "a" children shall receive 50 percent of the average per pupil cost in the school year 2 years previous. This means that for the 1967–68 school year, the average per pupil school costs used are those costs for the 1965–66 school year. Thus while the average per pupil costs for the 1967–68 school year in Hawaii was $637.32 in calculating what was due these "a" children we had to use $538.33 as the cost base which was what the average was 2 years previous.

Further since we do not receive the full costs, but only 50 percent of costs, instead of receiving 50 percent of costs in the 1967–68 school year, or $316 per pupil, we received only $269.12 per pupil; $269.12 comes to only 42 percent of the actual average school per-pupil costs which the State of Hawaii received in that school year for the education of our "a" children. The balance of 58 percent was paid by the State of Hawaii.

We have justified over the years our continuance in this program only because the funds we received from the category "b" children were such that the State cost of educating the "a" children was subsidized by the "b" category funding. If "b" funding is denied, a State subsidy of $7 million for the cost of educating only the "a" children, will have to be borne immediately this fall by the State. This could not be done without jeopardizing the quality of education for the 180,000 children in the total school system. Thus we would be left with the possible necessity of transferring the education of the "a" children to the Federal Government as is provided for such cases by section 6 of Public Law 874. With 100 percent funding of the "a" and "b" children under Public Law 874 Hawaii would receive $11 million, but our total current school costs beginning September 1969 will be $13 million just for the "a" children above. However the appropriations committee has provided Hawaii with only $5.7 million for the "a" children. It is impossible for the State to find the $7.3 million needed to maintain the on-base schools for the "a" children, unless the category "b" funds are fully provided.

This is my case for full funding for category "b" children under Public Law 874. I urge this House to look upon this program as essential to the maintenance of the quality of education for 45 million children in America. I know of no one who would jeopardize the welfare of these children, and I hope that when the time comes for these funds to be added to this bill, that this will be the consideration upon which the House acts to restore these much-needed funds.

I thank the chairman of this subcommittee for his generous allotment of time to me.

Mr. DOWNING. Mr. Chairman, as is the case with most of us whenever we rise in support of specific funding legislation, my purpose is somewhat a selfish one on behalf of my district. It is by no means the sole reason that I am concerned with the impacted areas' funds; for the problem which my district faces is one that is shared by every section of the country which contains Federal installations. My district is perhaps better off in this regard than some and undoubtedly in a worse position to others. I am not here to make comparisons, simply to state the case as it concerns the people who have sent me here to represent them.

Because of its strategic location the First District of Virginia has a heavy concentration of defense establishments and numbers of other supporting Federal installations. Some of these have large numbers of dependents living on them, but there are far more civilians working on these establishments who live in the civilian communities and whose children must be educated in the local school systems.

It is true these Government workers pay local real estate taxes on the homes they own. They pay sales taxes, state income tax, buy automobile licenses, and in general contribute to regular tax revenues like all other citizens with one notable exception. Their employer pays no tax on the real estate which he occupies and no tax on the volume of business which he does.

I would like to show you the cost to one locality by giving you one small set of figures from one of the 11 local Governments in my district. One county, which happens to be the most heavily impacted county in my district, is the smallest county in Virginia in land area. It contains a mere 78,000 acres of land. Of this small area almost 31,000 acres are owned by the U.S. Government. This is just under 40 percent of the total land area of the county. This means that almost 40 percent of the normal real estate tax base of this county is exempt from taxation.

How could any section of the country expect to operate if 40 percent of its major source of revenue is cut off. This is a prime example of what these impacted areas are faced with. This is why I feel it is imperative that we in the Congress accept a rightful share of the cost of educating the children of those who work for an employer who is exempt from taxation.

And then, too, whether or not you agree with the philosophy of category "b" funding, there is another important factor which should not be overlooked.

These school districts, which have been depending on these funds for years, have received no warning that they will be cut off. Their plans have been formulated and their budgets made. For many of them, it will be too late to appeal to their localities for more money. To cut them off this quickly would be most unfair and would be detrimental to our national educational effort.

Mr. PETTIS. Mr. Chairman, there is nothing more important that we can do for our country than to provide a quality education for every American. There is, however, a threat to quality in education which was not recognized in the appropriations bill presented to us today. The drastic reduction of $5 billion in programs authorized by the House and the amount recommended in H.R. 13111 would break faith with our children and shatter the credibility of Congress and an administration which was elected on a pledge of full support for education.

I am disappointed that President Nixon did not lend his support to the long-established obligation of the Federal Government to assist with school financing in federally impacted areas. It appears the President has been influenced by those who feel Public Law 874 is outmoded. I would like for them to help me explain to the taxpayers in my district just why it is outmoded. These are taxpayers who are paying the lion's

share of the cost of educating the children of Air Force families, Marine Corps and Army families, who live in the communities surrounding the bases in my district.

Most of these families live in modest homes which return, in property taxes, only a fraction of the costs of educating the children who live in them. Even fully funded, section 3B pays only half the cost of educating these children. With this section eliminated, as recommended by the President and the Appropriations Committee, an intolerable burden will be placed on those families, and on the other taxpayers in those areas. Keep in mind that the burden will fall the heaviest on enlisted men of our military services who are trying to support their families on their limited military pay. They are the ones who will have to make up the difference, in the form of increased taxes on their homes, if they happen to own their homes, or in higher rent if they do not. In some school districts, even this will not be possible, because they are already operating at the statutory limit of the property tax rate—and these are among the highest rates in the Nation. The only alternative they will have, if we do not fund section 3B, will be to fire teachers, increase the size of classes, cut down on the purchase of textbooks and other materials—in other words, offer those children a second rate education.

It is not fair to require federally employed families, military and civilian, to live in communities where they cannot obtain a good education for their children. It is foolish economy, and it could be disastrous to the generations who would be deprived by our shortsightedness.

I find it hard to believe that the President and this Congress are so insensitive to the need that they cannot recognize the danger. If Federal school aid to federally impacted areas is outmoded, I would like to know what they have in mind to replace it. I believe that studies are being made to determine the type of program needed to replace Public Law 874. That is fine. But until these studies have been completed and new programs devised, we must continue Public Law 874, with both sections 3A and 3B fully funded.

I ask my colleagues to join in support of this amendment—or substitute—which will provide the money our schools must have to continue the most important job in America today—the job of educating our children.

Mr. MICHEL. Mr. Chairman, I yield 5 minutes to the gentleman from Minnesota (Mr. QUIE).

Mr. QUIE. Mr. Chairman, I commend the Committee on Appropriations for bringing out a bill which at least increases the appropriation for education to the extent of $123 million over the budget request. It shows that the committee recognizes there was a mistake made in the budget for education and that it was too low.

Mr. Chairman, my own feeling is that the committee is still too low for what is needed. When you look at the educational needs in America today, one of the major mistakes which the administrations have made in the last couple of years has been reducing the appropriation for education. The Congress made the mistake last year to go along with the education appropriation cuts.

Once a school gets geared up for a certain amount of Federal money, then they depend on it for the future, and they budget for that purpose, and it is very difficult for them to pick up that money from either State or local sources.

One of the principles that we should maintain is when we begin funding at a certain level from the Federal Government that we ought to continue that. If it is too high, we should not have gotten into it in the first place.

So, when the gentleman from New York (Mr. ROBISON) talked about those four programs that were packaged at about $200 million in the committee bill, that figure is still $110 million less than was appropriated last year, and we ought to bring it up to last year's figure.

Last year it was cut from the year before. The year before, fiscal year 1968, it had been even $80 million higher for those four titles. So I think the least we can do is reinstate the four titles, library resources, equipment, supplemental centers, and guidance and counseling, to that $310 million appropriation level of 1969.

I hope that my colleagues will support that amendment when it comes before the House.

There are two areas in which we need to move in order to avert what is virtually a crisis situation in education. One is the national defense student loan program, since the guaranteed loan program in which the banks make money available to the students, is just not working now. The prime rate of interest is higher than the statutory limit of the guaranteed loan program. Therefore the only help we can give to the poor students—the ones who come from poor families—is under a tried and true program that has been in operation since 1958, our national defense student loan program. I believe an amendment to bring the NDSL appropriation to $229 million is the minimum we can do.

Another area in which we ought to move above any level that has existed before is in vocational education, because so many of our young people today do not have the skills that are necessary to secure a job. It is estimated that only one out of six has received any skill training by which they could secure a job after they have finished school. There are many who are dropping out of high school because their education appears irrelevant to them. Vocational education is relevant. There have been dramatic changes since the 1963 Vocational Education Act was adopted, and we provided the legislation and the authorization in 1968. Congress has provided good vocational education authorization for the young people who are in our secondary schools, and the area vocational schools, but insufficient appropriations.

The proposal I have heard some of my colleagues talk about, which is completely unreasonable to me, is the $80 million increase in impacted aid over and above what it was last year. That is to me an unacceptable part of the Joelson package.

Now, I do not blame those of you who want to see a substantial amount of impacted aid in their congressional district, and who are taking up the task of their school superintendents to maintain the expenditures of last year, but to go $80 million above last year is completely unreasonable, because last year was more than a $100 million increase over the year before.

In 1968 the appropriations for school funds in federally affected areas was $414 million, and the amount last year was $520 million. In fiscal year 1968, because of the budget deficit that the Federal Government had run into, the Committee on Appropriations had cut the appropriations from $530 million down to $414 million. So last year the effort of the gentlewoman from Hawaii was to bring it up to about that level that the Committee on Appropriations had set it at before the reduction due to the financial difficulties.

Now, this year the proposal is to go even higher than $520 to $585 million for Public Law 874 plus $15 million for Public Law 815.

With all of the needs in education—and there are dramatic needs—if we are going to set sound priorities for the use of Federal money, I do not see how we can possibly decide to put in for an additional amount of money for impacted aid above last year. I realize that you have the votes to set it at the level of last year's figure of $520 million but $600 million would mean an increase of $186 million in 2 years.

I grudgingly will accept last year's figure of $520 million. But I hope you will not go any further than than but rather appropriate increased amounts for programs with higher priorities.

Mr. BRADEMAS. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

One hundred and thirty Members are present, a quorum.

Mr. MICHEL. Mr. Chairman, I yield to the gentleman from Florida (Mr. FREY) such time as he may desire.

Mr. FREY. Mr. Chairman, 19 years ago the U.S. Congress recognized the Federal Government's responsibility for the impact which certain Federal activities have on local educational agencies in areas where these activities occur. The committee report—H.R. 7940, Public Law 874, 81st Congress, second session, Report No. 2287—stated clearly the philosophy of the Federal Government as follows:

> Section 3 of the bill seeks to compensate school districts in reasonable amounts for the cost of educating children who, because they reside on tax exempt Federal property or because their parents are employed on such property, do not in effect pay their own way. The underlying philosophy of this section is that the Federal Government, as a property owner, should pay to each local educational agency which furnishes education to children residing on or whose parents are employed on Federal property an amount. Under this principle, Federal payments to school districts are more closely related to

the "burden imposed" than to the value of the Federal property.

This program was first funded in 1951. Last year was the first time that the 4,235 school districts throughout this country who have relied in various degrees on this program did not receive 100-percent entitlement. The amount necessary for full entitlement for fiscal 1970 is $650 million. The budget as proposed by former President Johnson and accepted by this administration is for $187 million, while the Appropriations Committee voted for a $202 million figure. In both instances, the payments under section 3(b) for children whose parents work, but do not live, on Federal property are entirely eliminated.

Both the administration and the majority of Appropriations Committee members apparently feel that parents living off Federal property do provide for their children's education by paying county property taxes on their homes. I would like to point out that a large percentage of the revenue from property taxes which goes to education is paid by business and industry. In impacted areas, this critically needed revenue paid by industry is not realized from Federal facilities, which pay no taxes.

It does not seem fair to require local taxpayers to absorb the major costs of educating children from federally employed families. Likewise, it does not seem fair to children of nonfederally connected families to decrease the quality of education in an area through massive Federal impact.

Two counties in the Fifth Congressional District I am privileged to represent in Congress clearly show the severity of this problem. In both Orange and Brevard Counties, the greater majority of Federal employees and their children do not live on Federal property. While Orange County would lose approximately $1,000,000 in aid under the present provisions of section 3B of Public Law 874, Brevard County would lose more than $4,000,000.

Brevard County, the home of the Kennedy Space Center, had a total of 16,972 students enrolled in the public school system in June of 1959. Today, the enrollment has increased by 245 percent to 58,599 students, 29,956 of whom are federally connected while the remaining 28-643 are nonfederally connected. Only approximately 2,000 of the so-called federally connected students are living on Federal property. Therefore, if the proposed recommendation is enacted into law, the county will receive $600,000 and will lose $4,137,900. I do not think I have to point out to you what this loss would mean to the school system in the county.

The school boards in these counties feel they cannot meet their responsibility to provide an adequate education to all children without their full Federal impact aid funds. Even those of my distinguished colleagues who feel that funds to the "b" category children should be eliminated would, I hope, want this done in an orderly fashion and over a period of time. To do otherwise would be to destroy the public education system in many areas of the country.

I therefore call on my fellow House Members to act within the intent of Congress and vote for the full restoration of the impact aid.

(Mr. HOGAN (at the request of Mr. Mr. MICHEL) was granted permission to extend his remarks at this point in the RECORD.)

Mr. HOGAN. Mr. Chairman, providing education for our children is to give them the greatest gift of all: the means to make their own way in the world. But a halfhearted backing of their education is no gift at all—but rather a denial of their future and that of our Nation.

Unfortunately, this is what H.R. 13111 does. Many of the programs which are necessary in making education a purposeful and meaningful experience are gravely neglected by this bill.

For this reason, I will support amendments which will increase funds for our schools and colleges in such programs as impacted aid, school libraries, educational equipment and materials, vocational education, guidance and counseling, construction grants for colleges, and national defense student loans.

We cannot expect our primary schoolchildren to have a full educational experience if the schools they attend have poorly stocked libraries, outmoded equipment and materials, and little or no guidance staff. We will have to take the blame if this generation of schoolchildren does not have the chance to perform to the best of its ability.

We cannot expect our industrial needs to be filled, nor insure the employability of our youth if we neglect vocational education. In our present economy, the unskilled are not needed; the highly skilled are in short supply. We could remedy this by giving vocational education the support it warrants.

Furthermore, we cannot expect our colleges and universities to provide our future leadership, if we do not give both the student and the institution the support they so desperately need. This year the need for an increase in national defense student loans is especially needed. The soaring interest rates on bank loans make it difficult for both middle-class students and the increasing number of students from poverty groups to finance higher education. Direct Government loans are necessary if we expect those students to enter college this fall.

We must make a firm commitment to effective education. We must keep faith with our youth. We must not become the Congress which broke faith with the Nation and jeopardized its future.

I am fully committed to reducing expenditures by the Federal Government, but as far as I am concerned education is not an area to move backward in the interest of fiscal economy.

Mr. MICHEL. Mr. Chairman, I yield such time as he desires to the gentleman from New York (Mr. HORTON).

Mr. HORTON. Mr. Chairman, the bill that is before us now, the labor, health, education, and welfare appropriation bill, may be the most important bill the 91st Congress will consider. This legislation is so crucial because it is symbolic of our intentions over the next 12 months to make good the Federal promise of meaningful and adequate resources needed to solve domestic problems.

There has been much criticism leveled at programs which have been labeled "patchwork" approaches to the problems of poverty, unemployment, and underemployment—programs which treat the effects and not the causes of these problems. But no one can question that the very best possible assurance that these problems and their detrimental effects on people and on society as a whole will be reduced or eliminated is to insure that young Americans, particularly the disadvantaged, are given the educational opportunities they need to achieve their full potential as productive, tax-paying citizens.

We realized several years ago that this kind of educational opportunity could only be made available on a nationwide basis with substantial Federal help. The Elementary and Secondary Education Act, the Higher Education Acts, the Vocational Education Act, the National Defense Education Act, the Bilingual Education Act, the International Education Act, the Education Professions Development Act, the Health Manpower Act and many others are legislative landmarks to our commitment to Federal education assistance at many levels and in many spheres.

Our enactment and extension of these laws and the funding authorizations they contain constitute a continually reinforced Federal promise to provide certain kinds and amounts of education assistance to State and local government and to educational institutions. Because many of the education facilities and opportunities in both urban and rural areas of America are seriously deficient, and because to a man, the States and localities and privately funded educational systems and institutions are facing severe limitations in available revenue and financial resources, the fulfillment of this collective promise to help educate our people is the most important item in our Federal budget.

When the new administration took office, the new Secretary of Health, Education, and Welfare wisely sought meaningful increases in many categories of education aid in the 1970 budget. Soon after the press reports of these sought-after increases, it was reported that Secretary Finch was being instructed by the Budget Bureau to cut the level of education aid requests by as much as 5 or 10 percent. Even the increases which Secretary Finch sought would not have brought 1970 funding levels up to the implied promise of the authorization bills. But they would have been sufficient to serve notice on the educators and on the families of America that this Government intended to pursue educational excellent in this country, even at a time of budgetary difficulty. Instead, the cutbacks were sought, compromised and recommended to Congress. In effect, the needed national commitment to fulfilling these promises was postponed at least another year by budget planners, in the face of rising inflation and a tight budget. I have no quarrel with the goal of a balanced Federal budget during a serious inflationary period. My only quarrel is with the priorities which had to be employed in order to produce rec-

ommended cutbacks in crucial education programs. I cannot, in conscience, place education after farm subsidies, or after the ABM, or after public works, or after costly new weapons systems and countless other budget items which, despite their worthy nature, cannot supersede the need for providing the world's best educational opportunities for American youngsters.

I commend the Labor-HEW Appropriations Subcommittee for restoring some $123 million of requested cutbacks. And I further concur with the administration's and the committee's judgment and the impacted school aid program should be trimmed, as the lowest priority program and as one of the most costly Federal education programs. But I cannot agree that our outlays for education aid in general should fall short of 1969 expenditures by more than half a billion dollars. If this bill is passed in the same form it was reported by the Appropriations Committee, it would mean a deep cut in the most crucial education programs.

Programs for library assistance and construction, for education of disadvantaged youngsters in inner-city schools, for desperately needed work-study grants and student loans to open college doors to deserving students who otherwise would never achieve their potential, for higher education facilities, for innovative title III programs which can find new ways of retrieving children now lost to productive society because of a hostile environment—all of these must be given the resources they need to have impact.

School systems today are faced with a funding squeeze at every turn. Where annual budgets are increased, larger and larger portions of the increases are eaten up by either higher teacher and staff salaries or by higher enrollment, leaving little or nothing to improve the quality and impact of the education program. In fact, many schools are having to phase out so-called low priority aspects of their education program, such as athletics, physical education, driver education, after-school clubs and activities and others. At the same time that local and State resources are becoming scarcer, it is proposed that the Federal aid portion of local budgets now also be trimmed back. These Federal funds are the only education funds which schools must spend on program improvement and enrichment. Without them, and without these funds in sufficient quantity, some schools can do little more than keep their doors open from September through June, and some cannot even accomplish that.

Mr. Chairman, I realize that I am taking a considerable amount of time to express my concerns about this bill, but I do not feel there has been a more crucial debate since Congress convened in January.

While there is not time to read all of the many constituent letters I have received urging full funding of these programs, I would like to read a partial listing of public officials, educators and knowledgeable citizens in my district who have expressed their concerns to me about the future of education assistance commitments. The nationally known superintendent of the Rochester city schools, Dr. Herman R. Goldberg has spoken with me at length about the importance of following through on ESEA commitments in title I and title II programs. Others whose counsel I value include Robert R. France, associate provost of the University of Rochester; Harold S. Hacker, director of the Monroe County Library System; Carl Hallauer, chairman of the board of Bausch & Lomb, Inc.; Joseph J. Kolczynski, district vice principal, Clyde-Savannah Central School; the Very Reverend Charles J. Lavery, C.S.B., president of St. John Fisher College; Evaline B. Neff, director, Rochester Regional Library Council; the Right Reverend Monsignor William Roche, superintendent of schools for the Diocese of Rochester; James T. Ryan, president of the board of trustees of the Rose, New York Free Library; Mrs. Pauline P. Spare, secretary of the Wayne County Library System; and Dr. Byron Williams, director of services of the Genesee Valley School Development Association.

At least 50 more educators, parents, and concerned citizens both within and outside my own district have written or wired urging my support of adequate funding of Federal education programs. These people, for the most part, see the deficiencies and the benefits of education every day of their lives, either through the eyes of their youngsters who attend school, or as professionals responsible for our educational system.

Their appeal is not a selfish one. These people are not indifferent to the problems of inflation and Federal budgeting. They are in a position to identify a high priority national problem and to seek what they believe is a proper and adequate response to this problem from the Federal Government. We must respond to this need—at all levels from Headstart and kindergarten through graduate and post-graduate studies—by supporting significant increases in the most crucial of these programs. There is no better, surer way to treat the cause of our domestic and urban ills than to invest today's tax dollars in the futures of millions of soon-to-be taxpaying Americans, some of whom, without this investment, would have merger features at best, to look forward to.

I urge my colleagues to place on education assistance the importance and priority it deserves and to support efforts to adequately fulfill the promises we have made to strike, through education, at the root of human problems in America.

(Mr. FISH (at the request of Mr. MICHEL) was granted permission to extend his remarks at this point in the RECORD.)

Mr. FISH. Mr. Chairman, I sincerely hope the House will increase the HEW budget presently before it in several needed areas.

There are several gaps in the appropriation bill before us—total omissions if you will. Nothing at all is directly appropriated in this bill for ESEA title II school library funding, NDEA title III equipment, NDEA title V guidance and counseling. Nor for higher education construction for 4-year undergraduate institutions. All of these items should be funded to at least fiscal year 1969 level.

I further believe the vocational education appropriation must be increased. The need is real and present for occupational training programs for the disadvantaged as well as providing funds for vocational educational research, essential in developing new teaching methods.

Student loan funding at 62 percent of what Congress has authorized is far too low and also must be raised. This is an investment in America.

(Mr. PELLY (at the request of Mr. MICHEL) was granted permission to extend his remarks at this point in the RECORD.)

Mr. PELLY. Mr. Chairman, in connection with H.R. 13111, providing appropriations for the Departments of Labor and Health, Education, and Welfare for fiscal year 1970, I wish to indicate my support for full funding of educational programs. I have set my highest priority this year on education because to me education is basic to most of our domestic problems. With a budget surplus as of June 30, of $3 billion, I am encouraged now to support funds to reestablish previous program levels for school libraries, national defense educational equipment, and guidance and counseling and college facilities and to provide needed funds for Public Law 874—impact areas aid—and vocational education.

I actively support the package amendment offered by the gentleman from New Jersey (Mr. JOELSON) which includes an additional $894,547,000 for education.

This is a lot of money, Mr. Chairman, but I am told each Apollo flight to the moon will cost the taxpayers $350,000,000, and the amount called for in this amendment is less than the cost of three of these space flights. Yet the value to all Americans is beyond measure.

I strongly urge support of this amendment.

Mr. FLOOD. Mr. Chairman, I yield such time as he may require to the gentleman from New Jersey (Mr. MINISH).

Mr. MINISH. Mr. Chairman, I rise in qualified support of H.R. 13111, the bill to appropriate $16.6 million in fiscal year 1970 for the Department of Labor, the Department of Health, Education, and Welfare, and related agencies. I certainly hope the House will act today to increase the woefully inadequate funds provided in this legislation for education and for libraries.

The education of the youth of our Nation should hold the very highest priority for the Congress. Through the Elementary and Secondary Education Act, the National Defense Education Act, the Higher Education Act, the Library Services, and Construction Act, and other landmark progressive, farsighted legislation, we have committed ourselves to the goal of quality education for all Americans. We cannot now shirk our responsibility in this important field.

The measure before us contains funds providing $155.8 million more for fiscal 1970 than requested by the Nixon administration. In education, the committee has increased the budget request by

$123.4 million. But the administration had already drastically cut the Office of Education from its fiscal 1969 level—from $3.7 billion to $3.2 billion. The committee action, therefore, restored only a small fraction of the actual dollar reduction from 1969.

Many vital programs are affected by these shortsighted economies. For example, although the committee has allowed $188.2 million for the NDEA loan program, or $26.3 million more than the amount requested by President Nixon, this is $5.2 million less than was appropriated for the 1969 fiscal year and comes to only about two-thirds of the certified needs of our institutions of higher education. I regret the committee's decision to reduce the amounts requested for the educational opportunity grants and for the NDEA fellowships program. This is no time to dilute our commitment to afford an opportunity to all able, eager young people to secure a higher education, and make a valuable contribution to our society.

Another shocking cut is contained in the appropriation for construction of community facilities and construction of university affiliated facilities for the mentally retarded. These funds have been reduced $13.6 million below last year's figure, and, if left intact, will have a catastrophic impact on programs for the mentally retarded throughout the Nation. In New Jersey, for instance, the voters last year approved a $5 million bond issue to finance 60 percent of the construction cost of community facilities for the mentally retarded. The other 40 percent was to come from the Federal Government. Of course this will prove impossible if the program is not adequately funded.

The allocation for library resources, materials and construction is similarly insufficient. Despite the existence of 40,000 schools in our Nation without their own library, no funds whatsoever are provided for library construction in the coming fiscal year. Over the past 3 years, through the assistance of this legislation, New Jersey has established 300 new public school libraries, while 1,998 libraries have increased their acquisitions. Yet there is still a crying need for library assistance in my State. In my own congressional district, the city of Newark recently came perilously near to closing its city library due to a lack of funds. The city of East Orange will shortly be faced with a critical situation if these cuts are allowed to stand. This city's predicament is illustrative of that confronting many other communities. The excellent East Orange Library, which serves seven communities with a population of 292,000 has greatly augmented its services in recent years and there has been a tremendous increase in the use of all the services. The library building which was originally built in 1903 with an addition in 1915 is approximately one-half of the space actually needed now and one-third of the space needed by 1980. As Mr. Eugene M. Fahey, president of the library's board of trustees, has commented:

> With all the additional advantages we have been able to offer through federal and state aid, a new building is essential. Federal recognition of this need through a grant of construction funds would give a considerable boost to our building program. It is unbelievable that libraries, and especially public libraries who serve the whole public, should be cut from Federal Aid when our people need access to the best educational materials and information available.

In his 1967 education message to the Congress, President Johnson said:

> I believe that future historians, when they point to the extraordinary changes which have marked the 1960's, will identify a major movement forward in American education.

The former President was correct. In the 89th Congress alone, more quality education measures were enacted than ever before in the history of our country.

We are now confronted with the following choice: Do we continue to move forward, building upon our accomplishments, or will the 1970's someday be characterized as an era of "a major movement backward in American education." The education funds in H.R. 13111 provide us with a very poor start indeed. I believe this unfortunate situation can be altered, and that we should begin the alteration today by increasing substantially the appropriation for the Office of Education.

Mr. Chairman, no nation can be both ignorant and great. How can we continue, in good conscience, to allocate more than $80 billion for the defense of a country which proposes to spend only the barest minimum on the education and enlightenment of its citizenry. I urge my colleagues to support the effort which will be made today on the floor to increase the dangerously low level of funding for education programs.

Mr. FLOOD. Mr. Chairman, I yield to the gentleman from Virginia (Mr. ABBITT) such time as he may require.

Mr. ABBITT. Mr. Chairman, I rise in support of section 407 of the bill presently before us.

I commend the House Appropriations Committee for including provision in the Labor-HEW appropriations bill to prohibit the use of Federal funds to provide assistance to those who engage in campus disorders. This is a matter of grave national importance and one with which this Congress needs to deal forthrightly before the resumption of classes in the fall.

Many of our people are profoundly concerned about the widespread campus disorders which occurred during the last term and judging from statements made by some of the militant leaders of student groups, it would appear that a resumption of these confrontations can be expected next fall.

Literally millions of dollars in Federal funds are being spent in college campuses all over America. Loans are going to individual students; research grants are going to professors and students; and millions of dollars are being spent in capital improvements and development projects at many institutions.

It is vital that the Federal interest be protected and it is inexcusable that in the face of recent history the Federal Government should be put in the position of subsidizing those who are creating disorder.

Anarchy has reigned on many campuses and administrative personnel have been harassed and literally driven out of their offices. The ROTC program has been placed in serious jeopardy and military research projects of various kinds have been picketed and threatened. To say that there is no Federal interest is in fact to close our eyes to the situation that confronted us last year.

Figures provided by the Office of Education indicate that at practically all of the educational institutions which were involved in disorders last year, a large percentage of the student body was receiving student loans. It has also been widely reported that at some institutions most of those who were actively involved in the disorders were receiving Federal aid of one kind or another. It is ridiculous that the Federal Government should be put in the position of subsidizing those who are undermining its authority and creating disturbances which, carried to their logical conclusion, would mean the closing of the institution which they are attending. It seems to me that Congress not only has a responsibility to see that Federal funds are properly administered but also to protect the rights of those law-abiding students who are being frustrated in their attempts to secure an education.

The whole purpose of Federal education programs is to enhance and increase the educational opportunities for young Americans. To have one segment of college students causing disruption and threatening the operation of the institution while the remainder of the student body is prevented from pursuing their normal activities is defeating the purpose of the program.

Certainly I do not relish the idea of any extension of Federal authority. I do not want to see the Federal Government controlling our colleges nor do I feel that Federal officials should be telling college administrators how to run their schools. I do feel, however, that it is incumbent upon Congress to take such steps as are necessary in order to see that Federal funds are properly spent. This does not mean that Federal funds will be withdrawn or that the operation of the institutions will be unnecessarily bothered. It simply means that Congress will be saying to those who participate in disorders that they are doing so at the risk of losing their entitlement to Federal financial aid. As long as there is no disorder and the college programs are carried on as they are intended to function, there will be no implementation of this section. However, if disorders erupt, those who participate will have to pay the penalty. I think this is only just and fair and is indeed necessary in the situation we now face.

I strongly support the provisions of section 407 and hope that they will remain in the bill.

Mr. FLOOD. Mr. Chairman, I yield 5 minutes to the gentleman from Iowa (Mr. SMITH).

Mr. SMITH of Iowa. Mr. Chairman, a good deal has been said about the need for further input of part of our national resources into education.

I certainly agree with that, over a period of time. However, I think there are two other considerations that are

very important, for the good of education. The first is how fast we increase individual programs. I would remind you, that the moon shot cost $24 billion; but we could not have put the $24 billion into 1 year's appropriations in 1962 and done the job. You have to build a good program over a period of years.

The same thing is true of some of the other educational programs. They have to be increased at the proper rate so that the money can be used efficiently and so that it does not merely incorporate into inefficient systems more money to do the same kind of job they have been doing.

Vocational education is in point. I am strong for vocational education, but you may founder this program if you try to double it each year for 2 years. Many of the States in most need of upgrading programs are not ready. It must be done at a rate so the effective systems can be channeled more money and the ineffective systems will not get the money until they do the job.

In addition, I wish to mention the fact that it is important how you get the money, because the Budget Bureau has been under stress, especially the last 2 years, to find ways to avoid the debt limit and to avoid showing up as an expenditure certain funds. For this reason, with regard to college construction, they came up with the idea of using interest subsidies as a complete substitute for grants and loans. This might be all right if it were not for the fact that colleges cannot use more bonded indebtedness. They have in this appropriation a little item of $11,750,000, of which over $7 million is for the first year on a contract that will cost this Government over $300 million. This is in lieu of $107 million in grants and loans.

It will cost three times as much to use interest subsidies than for appropriations for the amount in the Johnson budget. I tell you here today that $107 million given this year in grants and loans will do the colleges and universities more good than it will to go in debt for over $300 million for interest subsidies. They do not want more indebtedness. If they try to float more bonds on top of what they have to float anyway, interest rates will skyrocket. What they must have are some grants and loans.

In addition, I want to mention that I was somewhat disappointed on some matters, but I go along with the committee usually because a committee member must make whatever adjustments a majority will accept and try to work these things out. I would like to see more money for loans to college students. At the appropriate time, I shall offer an amendment to provide more aid to college students.

There are 126 items in this bill. There is no chairman who could come in with a bill of 126 items and satisfy all the Members. The fact that most opposition seems to be concentrated on only four or five items is really a great credit to the chairman of the subcommittee, and I think these things should be taken into account, to look at the overall bill instead of just picking out certain items and saying, "The bill is bad," because they do not like a particular item.

Overall this bill increases and shifts some money to places that badly need funds and also supports the budget requests for a large number of items.

Mr. PIRNIE. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from New York.

Mr. PIRNIE. I thank the gentleman for yielding. I wish to commend him for his emphasis on the student loan program. I do believe it is one way in which we can stimulate education in a proper way and still create responsibility.

Mr. Chairman, the pursuit of educational excellence is a noble venture demanding our continuing attention and support. There is no more worthy domestic objective than the attainment of an environment in which equal and full education opportunity is available to all of our citizens.

The emphasis—first, last, and always—must be on quality. But we must also be concerned with quantity. It is not merely desirable, it is essential that we make it possible for our greatest national resource—our young people—to travel the road to new and higher plateaus of achievement. It is in their interest, it is in our long-range interest, it is for the good of all mankind that we pave the way for individuals to journey as far as their abilities and ambition permit.

Fortunately, we are endowed with a great number of young people who are academically prepared and properly motivated for higher education. They are eager to learn and anxious to apply themselves. Unfortunately, far too many of these bright and promising youths never reach their full potential because they don't have the financial backing needed to pay their way.

For millions of young Americans, the cost of a college education is prohibitive. Their parents, engulfed in an inflationary whirlpool that makes it difficult, and in some cases impossible to make ends meet, are not able to provide the needed dollar assistance. The result is an American tragedy of the first order. We all ultimately share the loss when prospective scholars are denied access to an academic environment and the knowledge they enthusiastically seek. Who knows which one of these might someday contribute significantly to solving the problem of war, disease, famine, and deprivation?

Congress long ago recognized the Federal Government's obligation to assist deserving students who wished to continue their education. Since enactment of the National Defense Education Act in 1958, millions of dollars have been made available for undergraduate student loans and graduate fellowships and loans. The national defense student loan program has been an outstanding success, it has passed the test of time and has demonstrated its value in support of our continuing quest for educational excellence. Much has been accomplished, much more remains to be done—the task is unending.

The measure before us provides in excess of $188 million for the NDSL program. That sounds like a lot of money, and indeed it is, but is is not enough. There is a completely justifiable need for more dollars to permit an expanded program to reach more deserving people and I urge my colleagues to give this matter serious thought. I sincerely believe that an examination of the facts will prompt the support required to amend this measure by earmarking an additional $40 million to the NDSL program in fiscal year 1970.

The facts and figures of the NDSL program—past, present, and projected—speak more eloquently about the urgent need for additional funding than all the rhetoric we are able to muster in this debate.

The bill under consideration calls for $188,206,000 for the NDSL program for fiscal year 1970, only a slight decrease from the $190,000,000 which was available last year. On the surface, logic would dictate an unemotional response to these figures, a variation from one year to the next of less than $2 million in such a sizable program, especially during a period in which every effort is being made to hold the line on Federal spending, is not very dramatic. In the absence of any compelling arguments to the contrary, one would almost be prompted to applaud what would appear to be fiscal restraint. However, there is more to the story.

I have received a great many letters from constituents who point out that their children have sought financial aid to attend college but have been told that while they qualify for aid on the basis of need, aid will not be forthcoming because funds are lacking. Each year I anticipate receiving a few such letters because I recognize that there is a limit to the amount of money available for the NDSL program and it can only go so far. But this year the mail has been enormously heavy. In checking with my colleagues, I learned that they were having a similar experience. This prompted me to delve deeper into the problem. What I was able to uncover has led me to support the plea for more NDSL funds.

According to student loan specialists with whom I have conferred, there are presently on file "approved" requests for $268,191,099 in NDSL funds for the 1969–70 academic year, the year covered by this measure. This is the total amount requested by students and prospective students who have been determined in need of outside assistance in order to pursue higher education. The approval does not mean the applications will be funded, it merely means the applicants are eligible, based upon need, for a portion of the funds which will eventually be appropriated by the Congress.

Now let us review some very important figures. On the one hand, this bill contains a request for roughly $188 million for the NDSL program in fiscal year 1970 and on the other hand, it has been clearly established that there is an urgent need for over $268 million to fund already-approved applications for assistance during the same period. There is a difference of $80 million between what is called for and what is needed. It would appear that the proposal I am supporting

only goes halfway toward meeting the need. This is not the case.

First of all, I am advised by officials of the Office of Education that there will be approximately $23 million in carryover funds from fiscal year 1969. Mainly these funds were obtained through repayment of loans by students who borrowed to get through college and now are earning their way in the outside world. It must be remembered that this is not a grant program, it is not a massive giveaway, it is a loan program and there is an obligation to repay. At this point I would like to add that the default rate is minimal, less than 3 percent are 1 to 3 years in arrears.

Second, during the next fiscal-academic year, more loans will be repaid, bringing in additional money to the program, money that will be available for future student financial assistance requests. According to educated estimates, $85 million will be coming in through this process. However, because the repayments are scattered throughout the year, not all of this $85 million will be utilized since much of it will not come in until after the semester is underway when the applicants will have abandoned their plans for college.

The additional $40 million requested in the amendment, added to the $23 million carryover from last year and the amount of money that will become available during the coming year through repayments will bring the requests for aid and the amount available more nearly in line. Such action will be a great service to our people and a worthy investment in our future.

Before closing I would like to bring to the floor one more statistic. It is a projection that I hope will never become a reality. If we fail in our effort to provide the $268 million required to fund the applications for NDSL loans on file, an estimated 45,000 young Americans will be denied the opportunity to explore new horizons through higher education. We will deny them and in the process rob ourselves.

If an individual has confidence in himself, if he is academically qualified, properly motivated and willing to gamble on his future by borrowing to finance an advanced education, we should support him. It is a gamble that in the long run will pay a big return for us all.

Mr. DONOHUE. Mr. Chairman, few if any, measures coming before the Congress equal the importance and impact to and upon the continued and expanding progress and security of this Nation than the measure now before us to grant appropriations to the Departments of Labor, and Health, Education, and Welfare, and related Federal agencies.

All of us are deeply concerned, of course, about the proper operation of each activity within these major units of the executive department of the Government, and all of us are, I think, very specially concerned today about the full and proper functioning of the particular programs coming under the direction of the U.S. Office of Education. We are very particularly concerned with these programs simply because of their tremendous effect upon and meaning to American youth at a turbulent point in our national history. Under these circumstances, Mr. Chairman, I suggest that the basic legislative challenge facing us today, in our consideration and decision on this bill, is our determination of the priority position in Government spending that will be granted to the educational needs of our American youth in the fields of formal, occupational, and vocational educational training and development and related areas of student loans, college facilities, school equipment, library services and materials and impact aid.

Mr. Chairman, every Member here is, I know, rightly and patriotically concerned, as I am, about our urgent legislative obligation to insure the most prudent spending of the taxpayers' money and each Member must meet that obligation in accord with his own wisdom and conscience.

On this score, practically every major educational organization, as well as most labor, library, and scholarship groups, have registered emphatic belief that, in this bill before us, the committee-proposed appropriations for the proper educational encouragement and development of our youth are regrettably inadequate. They have all registered their further and intense conviction that increased fundings in such vital educational areas as student loans, construction facilities, impact aid, library materials under title II of ESEA, improving the quality of instruction in programs of title I of ESEA, vocational education, and providing equipment under title III of NDEA should be reasonably increased, because of advanced costs and justifiably projected school system planning, in my district and throughout the country, to or above the 1969 fiscal year levels, if these programs are to be continued with any substantial significance or real vitality in meeting the very urgent needs of our youth today.

In order to adequately fulfill these needs, appropriate amendments will be offered. In my judgment, the amendments represent a realistic and responsible effort to fulfill our congressional promises to the Nation's youth, while remaining within the stringent standards of true economy in present and long-range national commitment.

For my own part, therefore, I intend to support these amendments to increase funding for the educational programs and objectives I have outlined. I intend to do so because I conscientiously believe such an investment in our American youth and in the future of this country is a profoundly wise and prudent investment that eminently merits inclusion among the very highest spending priorities to maintain, improve and expand our national integrity, progress, and leadership for world peace.

I also and most earnestly hope that the great majority of the Members here, after full consideration, will, in their wisdom, see fit to approve the proposed increased funding of these educational programs, authoritatively held to be essential for their true effectiveness in the national interest, now and in the future.

Mr. MOORHEAD. Mr. Chairman, I would like to say a few words concerning the Equal Employment Opportunity Commission in support of the amendment offered by the gentleman from New Jersey. Since the day the Commission opened its doors, it was besieged by individuals seeking redress from employers because of alleged job discrimination.

As the public grew more aware of the activities of the Commission, and as the Commission's jurisdiction was expanded to include employers of 25 or more, the number of charges pending before the Commission increased dramatically.

Due to this tremendous workload and occasional harassment by recalcitrant EEOC foes—the Commission has found it impossible to obey the mandate given it by Congress—to process all cases within 60 days from the date of filing. Indeed, the period it takes to process a charge now is nearer to 2 years.

Two years, Mr. Chairman, means more than just an administrative backlog. It means that a man with a family who is denied a job because of his race must wait 2 years before the Commission can even attempt to right this wrong.

It means that a woman who is denied equal pay because of her sex, must wait 2 years before any attempt to obtain what is rightfully hers is made.

Mr. Chairman, the Congress of the United States has passed the Civil Rights Act of 1964. This body has declared that it is unlawful to discriminate in employment because of race, color, religion, sex, and national origin, and we have charged the Equal Employment Opportunity Commission with enforcement of this law.

Can we now, in good conscience, deny the Commission the wherewithal to do its duty? If we do so, Mr. Chairman, we are breaking faith with all of our citizens who are protected by this law. It is a pleasure for me to support the amendment offered by Mr. JOELSON.

Mr. LANGEN. Mr. Chairman, I rise to compliment the able members of the Labor and Health, Education, and Welfare Subcommittee of the Committee on Appropriations. These men have labored long hours in the face of pressure from all sides to put together the bill we will consider today. I am proud particularly of the work they have done with respect to education. This subcommittee has seen the need for funding the many vital programs that will widen the horizons of America's young people and will make the best education possible available to the greatest number. Their attention to the entire scope of education meets with my hearty approval and, I am sure, the approval of educators across the Nation.

I take great pleasure in pointing out one of the very significant if not one of the major aspects of the appropriations bill before us today. I refer to the appropriations for the Office of Education in the Department of Health, Education, and Welfare. Within the schedule of funds recommended to the full House is an item of particular importance to me as its prime advocate. I refer to the appropriation of $10 million for vocational work-study programs.

The importance of this program cannot be overemphasized. We are lending a hand to the students who need it the most and we are most likely to use that money to the advantage of themselves,

their communities and, ultimately, this Nation. These students are the ones for whom college is not practical but whose abilities and talents must not be overlooked. They are the students from disadvantaged homes where, in many cases, training beyond high school would be financially impossible. These are the students for whom training in a needed skill will yield indefinite social and financial returns. These are the students who have dedicated themselves to developing a career in a field of established economic value but who might be consigned to the role of unskilled labor were help not available to them.

In my State of Minnesota, as in many other States, there are many fine vocational-technical schools in which many bright, energetic, and determined students may develop skills in auto mechanics, aircraft technology and maintenance, electronics and radio-television repair, appliance maintenance, and many other skills. These same schools teach medical and dental technicians their trade. They educate a great many of our nurses and policemen. In short, vocational and technical education for many is the alternative to quitting school after high school graduation.

In addition, many of these same schools provide programs for those for whom high school graduation was impossible. Economic problems at home, illness, family tragedy, and other reasons cause all too many of this Nation's prime resource to drop out of school before graduation. In Minnesota, the vocational-technical schools help these students to get their high school equivalent degree and then proceed with further programs aimed at skills and abilities our communities need so desperately.

The $10 million figure is small in terms of the good it can do. This program functions where it is increased in its significance by the determination of the students who take advantage of the help they get because they understand the advantage they are given. It is increased again by the dedication of the teachers who work in the program realizing that their contribution will pay off handsomely in years to come.

Mr. Chairman, the money is the same as was appropriated last year. Last year, however, the program was listed under the Neighborhood Youth Corps where it was all but forgotten. It may not have been sound judgment to place the program under NYC and, because of administrative difficulties, the program was nearly lost. I testified before the Labor-Health, Education, and Welfare Subcommittee in May asking that these funds be returned to the Office of Education where they could again be directed toward the students who so desperately need them and so diligently use them. I am very much appreciative of the moves made by that subcommittee toward that end.

Mr. PODELL. Mr. Chairman, we are confronted by a massive challenge in the form of an administration effort to financially eviscerate many ongoing Federal aid-to-education programs. Immediately upon taking office, the President cut approximately a straight 10 percent from the Office of Education budget left to him by his predecessor. This came to about $370 million.

Not content with such potentially disastrous fiscal surgery, President Nixon then proceeded to cut the heart out of Government aid to libraries, completely eliminating one $42 million program. And $12 million sought for guidance and testing was totally eliminated. Impact aid to poorest school districts is slated for drastic deprivation of funds. These cuts will imperil schooling for needy children, college construction grants, college student loans, vocational education, guidance, counseling, and purchases of school equipment.

Simultaneously, schools and colleges around the entire Nation are inexorably running short of funds. Up to now, Congress has appropriated only about one-third of total funds authorized for their aid programs. In short, it is plain for all the Nation to see that this administration is boldly making war across the board on existing Federal programs which directly aid all levels of education in this country. No program has been spared some surgery. None has emerged truly intact. All are threatened by this giant step backward.

Does the President actually envision what will transpire if Federal aid to impacted school districts is set at the present $318 million below actual appropriations for fiscal year 1969? Does he really understand what cutting out all aid for school library books and materials will mean to so many? Does he know what will happen if all funds for title III and title V of the National Defense Education Act are deleted, as he presently recommends? Has he full comprehension of what his massive cuts in funds for public library services and college library materials will mean?

Surely, we must spend at least as much in fiscal year 1969 as we did in fiscal year 1968 for these programs. The President hailed the triumph of American technology and education in the form of the recent landing on the moon. By what means does he think this was accomplished? Did we surpass the Soviets by good looks and good will?

There are some extremely short memories downtown these days. Presidents Kennedy and Johnson fully realized what had to be done with American education on all levels. Laboriously and painfully, the Nation made a supreme commitment to educational excellence. Congress and the entire Nation reaffirmed it in a series of aid to education acts allowing National Government to allocate major sums to upgrade and totally develop educational potential of our Nation. The fruits of these efforts are today self-evident. We have only to look to the moon, and note that it was not a Russian but Neil Armstrong who took that first step.

A "giant step," he called it. Forward was the direction. That single step was a monument to America's dedication to education. Does the President propose to take as giant a step backward in American education to compensate for Armstrong's step forward on the moon?

Shall we abandon our commitment as a nation to educational excellence by Government's faltering example? Is this to be seriously contemplated? Is it to be suffered quiescently by the American public? Is ground so tortuously gained to be given up so blithely?

This Congress must act to save Federal education programs by government from dismemberment by the administration. Once lost, this ground shall not be regained with ease. Who shall suffer? Children of the land. Dedicated students. Teachers and librarians. Our future. Our heritage. All shall be that much weaker for each education denied—each library unbuilt—each unfilled classroom—each dollar unspent. There can be no compromise whatsoever.

For these reasons, the cuts must be restored and these programs continued at least at fiscal year 1968 spending levels.

Mr. ADDABBO. Mr. Chairman, H.R. 13111 is a good bill in many of its provisions, going far in providing for the health and welfare of the people of this Nation. However, I believe in several instances it falls short of the needed funding to reach the true goal in education. Although I support H.R. 13111, I will rise to support those amendments which will give true funding and a proper priority to our educational requirements which also include the many library services and I urge my colleagues to restore a sense of priority to the Nation's education needs.

As a member of the House Appropriations Committee, I opposed all cuts for education on the grounds that until we commit ourselves to a meaningful investment in education, we cannot begin to solve the crisis of our cities or poverty in rural America.

H.R. 13111 appropriates $3.3 billion for the Office of Education, a reduction of $800 million from the fiscal 1968 appropriation, a reduction of $400 million from the fiscal 1969 appropriation, and an increase of only $123 million for the revised budget request.

Among the more drastic cutbacks are the reduction of funds for title II of the Elementary and Secondary Education Act covering school library books and materials and a 50-percent cut in funds for public library services and college library materials under the Library Services and Construction Act—title I—and the Higher Education Act—title II–A.

The need for belt-tightening and restraint in Federal spending is recognized by the great majority of Americans, but I cannot understand why we tend to cut basic programs like education which affect the cycle of poverty and every social goal of our Nation.

This summer New York City announced that a number of public libraries would be closed this fall as a result of the lack of Federal or local funds. This appropriation bill would sign the death certificate for those libraries in Queens, Brooklyn, and other areas of New York City.

Cuts in the National Defense Education Act—titles III and V—will deprive high schools of needed equipment and guidance counseling assistance. How can we justify these reductions and still maintain that we are meeting our responsibility to set priorities?

The revised budget request from this

administration would have eliminated all funds for school library books and materials. The Appropriations Committee has restored a token amount but we must do more. I favor an increase in the Office of Education budget which will raise the appropriation to the fiscal 1968 level of $4.1 billion and I urge my colleagues to support the amendments which would restore education to a high place on our list of national priorities.

Mr. EILBERG. Mr. Chairman, I rise today to express my alarm and dismay at the amounts which the committee has recommended to fund the education programs of this Nation. The amounts recommended bear little or no relation to the actual needs of the Nation and even less resemblance to the amounts which we so carefully deliberated and decided on when the authorization legislation for these programs was considered. The simple fact of the matter is that while the Nixon education budget requests were some $5 billion below the authorized spending level for our education programs, the committee bill only reduced this gap by between $100 and $200 million. Thus, we still have a situation in which the amounts we will be asked to approve for our education programs in H.R. 13111 are a pittance—they are over $4 billion below the amounts we have authorized and about $300 million below the minimal education budget which was submitted to us by the outgoing Johnson administration with its apologies.

I know there will be many, many amendments offered to this bill to restore some of the money which we must have if our education programs are to be maintained as viable programs. If these amendments are not successful, we will have let down the Nation. I believe the people of the United States expect us to be pennywise, but on the other hand they certainly do not want us to be pound-foolish when we are considering the funding levels for programs which could well mean the difference between success and failure for millions of American youngsters in their quest of the American dream. Education, as we all know, unlocks the limitless doors of opportunity. Without the funds which are absolutely essential for our education programs to do the job, these doors will remain closed for many of our children and the toll in terms of unfulfilled ambitions and resentment toward the systems will just not be worth the few pennies that might be saved by being pennywise with these most urgent of all governmental programs. How can this Nation, which sent a man to the moon and back such a short time ago, sit idly by and watch its representatives in the Congress show such little concern about the Nation's desire to win the battle to improve the minds of all its citizens through education.

I believe that our national priorities are mixed up. Education has to have the top priority. For, without an educated people what can this great Nation hope to achieve? Our constituents are being asked each year to shoulder heavier and heavier tax burdens by almost every level of government. Education is one of the areas in which they deserve to see a concrete return on their investment in terms of an effort on a sustained basis by the Government to improve the minds of their children. Adoption of the administration's education requests which have largely been endorsed by the committee could well set our educational system back some 50 years. I believe that we cannot afford such a foolish situation at this crucial juncture in our history.

There are many, many areas which are not funded at near what they should be by H.R. 13111. Here I would like to comment on three of them. First of all, I recognize that the committee increased the amount of funds available for the title II ESEA program and the other programs which we consolidated when we considered H.R. 514 earlier this year to continue the authorization for the Elementary and Secondary Act programs. The increase certainly is a step in the right direction; but it comes nowhere near the level at which these programs were funded in the 1969 fiscal year nor the $1 billion level at which we authorized these programs to be funded.

The simple fact of the matter is that the funds for this group of programs will have to be increased by some $110 million to reach even the low level at which they were funded last year. If the committee level of funding for these programs is approved, the city of Philadelphia will lose up to $500,000. This is divided almost equally between the public and nonprofit private schools in the city.

Since the 1965–66 school year, the public elementary and secondary schools in the city have received over $1.5 million in title II money. Even though they suffered a reduction of 50 percent in the amount they received last year as compared to the prior school year, much has been done with even these limited funds. Prior to the availability of title II money, the book collections and programs of existing libraries in the Philadelphia school district were grossly inadequate. At the time, there was an average of about two library books for each child. National and State standards call for a minimum of 10 books per child. Even though these schools still are not up to standard, through the assistance which the title II library resources program has provided, these schools have now an average of five books per child. In addition, title II funds have made libraries available to many children who had never even been in one before. The accessibility and availability of a wide range of instructional materials, so essential to the needs of modern education, have also been made available through the programs.

The same situation has occurred in the nonprofit private schools in the city. Four years ago, the city nonprofit private schools were seriously concerned about the lack of library resources in its schools. Through the title II programs, more books have been made available, more schools now have access to books and also many parents have volunteered their time to help staff the library facilities. For the first time, there has been a willingness on the part of parents to contribute not only their time but their limited funds so that additional library resources could be provided in addition to those which the limited Federal funds from the title II program were able to provide. Since the Federal Government was doing its part, parents reasoned they should do theirs. The completely inadequate funding level for this program which the committee bill suggests will, no doubt, cause these parents to lose faith in the Federal Government's pledge to help those who help themselves.

On the matter of the committee suggestion with regard to funding of the program of assistance for school districts with concentrations of Federal employees, I can only confess that once again this year, as I have been since I became a Member of Congress, I have been completely baffled by the position of the administration and the committee with respect to funding the portion of the program which provides some reimbursement for school districts for the cost of educating youngsters whose parents work on Federal installations. If the amounts which the committee has suggested are approved, the school district of Philadelphia will lose about $3½ million. No longer, under the terms of the legislation we are now considering, will any money be provided to the school district for the 15,000 children which it educates because their parents work on a Federal installation and live in the city. The impacted areas program is one of the least complicated programs of educational assistance which we have. It ought to be continued in operation at its full funding level. If it is not, I fear that in urban centers throughout the Nation there will be a taxpayers' revolt, the likes of which we could not imagine. If the city of Philadelphia loses $3½ million from its general education fund, it will mean additional taxes paid by my constituents. I believe their taxload is already too heavy, and I will do my utmost to see to it that they do not have to shoulder any heavier burden.

I could go on and on about the inadequacies of the committee bill, but I will not at this time. Just let me add that the administration and the committee have failed miserably to fund those programs which are designed to return something to the middle-income taxpayers. The library resources program, the impacted areas program, the student assistance programs, the higher education facilities construction programs, all have been reported at funding levels which will cause a severe dislocation in the educational community and the Nation as a whole. Therefore, I urge all my colleagues to remain on the floor today and act when the votes are counted to put education where it belongs, as our highest national priority.

Mr. GAYDOS. Mr. Chairman, I would like to add my objections to the proposed reductions in funds for education and libraries. I am particularly concerned with the recommendations to eliminate money for elementary and secondary library programs under title II of the Elementary and Secondary Education Act.

It is my understanding these funds were cut last year by nearly 50 percent in many cases and the complete elimination of them now will place added financial burdens on school districts already fighting to keep from being

swamped by the tidal wave of rising taxes and inflation.

In the 20th Congressional District which I represent, we have approximately 20 public school districts, several of them in urban areas where municipal governments also are forced to increase taxes year after year.

These school districts, despite the fact that they are nearing the limit of their taxing capacity, still must plead with the State and Federal governments for more funds in order to remain competitive with their more affluent neighbors. The money is vital if the urban districts are to attract a better caliber of teachers and improve existing educational programs.

These districts depend on State and Federal grants if they are to furnish the quality of education demanded by the Constitution and deserved by the child. They cannot be expected to meet this obligation if such help is cut off. This results in a heavier financial load on the districts which as a matter of course must be shouldered by the individual taxpayer.

I need not remind you gentlemen of the hue and cry being raised today throughout the Nation for tax relief. The outcry is unprecedented. I am sure that each of you has received as I have, mountains of mail calling for Congress to institute such relief and quickly.

I fail to see where eliminating the library funds will help the taxpayer. In just five of the 20 school districts in my area, the funds total $33,000. I realize that this is a mere pittance when compared to other expenditures being considered by the Congress, but these funds provide educational materials for 32,000 children and their education cannot be measured in dollars.

I might also point out the school enrollment in these five districts does not include another 6,000 parochial students who use public school library facilities.

I have checked with educators in these five districts and they have expressed deep concern over what the elimination of these funds will do to their educational programs.

How can we equip our children for the competitive world of tomorrow when we take away their tools of knowledge today?

Mr. POWELL. Mr. Chairman, I would like to address the House as to the merits of the pending budget appropriation for the Equal Employment Opportunity Commission.

We have spent billions of dollars putting man on the moon and millions of dollars in aid to foreign countries, but we have done little to assure that all of the American people are able to provide for their own welfare. We have recently allowed the schools of our Nation to slow their move in the area of desegregation of the public schools. Let us not also allow our Commissions to slow their moves toward an end to discrimination. As the leaders of the Nation and the makers of laws that govern all our citizens, we have failed to bring all our citizens up to a level of subsistence and dignity when it is our sworn duty to uphold the Constitution by doing exactly this.

The minority groups of this Nation have not been incorporated into any long- or short-range involvement concerning the improvement of their situation, and they cannot be left without any solutions to their problems.

In the face of the civil disturbances during the past few years, I find it hard to believe that there can be any question as to our responsibility. We must now take this opportunity to let America know that we are running the Government in behalf of all of the people.

Welfare, poor education, and civil disturbances all contribute to the continuing alienation of the minorities from the mainstream of American life. It has cost the American people more to run the welfare organization than it would cost to support the efforts of the EEOC in ending job discrimination which is the cause of the heartbreaking circumstances responsible for welfare recipients. A poor education only contributes to the dejected circumstances of minority groups, but with equal job opportunity, the poorly educated can become a functioning part of our society instead of an economic burden.

The President's Commission on Civil Disorders discovered that many minority group Americans feel so alienated that they can only resort to violence as a means to effect the response from the establishment needed to resolve grievances.

Civil unrest is part and parcel of this administration, and if we continue to ignore the unfortunate conditions of the minority groups in the country, we will find ourselves using nerve gas instead of tear gas in order to stop civil disturbances. We must now abolish even the need for tear gas, for we have other solutions if we will use them.

Let us move forward together. Let us be part of the solution and not part of the problem. I urge you to endorse the EEOC budget proposal and make a concrete step toward ending discrimination in employment. Then we may say in truth that we are moving the country forward together.

Mr. RODINO. Mr. Chairman, while the debate today will naturally center around the question of the Federal Government's adequate and responsible level of funding for public education throughout the United States, I want, at this time, to raise the question of our Federal commitment toward programs to alleviate the incidence of the lifelong burden of mental retardation.

My home State of New Jersey has a mental retardation planning board that has the special responsibility of coordinating local, State, and National programs that affect all mental retardates in the State of New Jersey.

The Federal Government's commitment toward helping local and State efforts in the field of mental retardation has only recently been recognized.

In fact, money for construction of facilities for the retarded first became available in 1965, and staffing funds were first authorized in fiscal year 1968 and the first appropriation of $8.3 million was only released in fiscal year 1969.

I believe it is factually clear that the Federal Government's interest and responsibility in offering aid and assistance to local and State program efforts in the field of mental retardation has been developed late in time and short in cash. With that background in mind, I would like to unequivocably state that the Nixon budget, instead of making up for lost ground, carries us back to the day when a national program for aid to mental retardates was only a dream.

Mr. Chairman, I support, as a matter of principal, the concept that our appropriation for educational and vocational rehabilitation ought to match the original authorization. I view measures relating to these subjects as items of highest domestic priority. I want to conclude my remarks by a simple statement of hope that this Congress will not renege on its flowery rhetoric of years passed, and yet its very practical outlook of what is best for the American public by appropriating the maximum amount of funds for education and social rehabilitation.

This, of all times, is not the time to lose heart. Without objection, I would like to enclose a statement from the Mental Retardation Planning Board of the State of New Jersey:

STATEMENT OF THE MENTAL RETARDATION PLANNING BOARD OF THE STATE OF NEW JERSEY

The Mental Retardation Planning Board of the State of New Jersey wishes to express its concern regarding the serious retrenchment at the federal level of programs for the mentally retarded. The proposed budget for the Division of Mental Retardation in the Rehabilitation Services Administration, Social and Rehabilitation Service, of the U.S. Department of Health, Education, and Welfare illustrates the situation. The requested FY 1970 budget totals $39,129,000 compared with the FY 1969 estimated budget of $44,569,085, a decrease of $5,440,085. In addition, only $33,629,000 of the $39,129,000 represents new monies, the balance being transferred and unobligated funds which are being forwarded.

This budget decrease has serious implications for state and local program development in the field of Mental Retardation. The policy determinations implicit in these budget reductions represent a great weakening of Federal commitment towards support of essential research and services for retarded persons and their families. If we allow this to go unnoticed we would not be fulfilling our responsibility as members of the Mental Retardation Planning Board to both the providers and consumers of mental retardation services.

The Mental Retardation Planning Board finds the retrenchment in programs and services for the mentally retarded in the FY 1970 federal budget recommendations untenable. The Board seeks to make the drastic effects of this proposed austerity perfectly clear, and particularly the disparity between the appropriation request and the actual amount authorized by Congress.

The Mental Retardation Planning Board believes that the FY 1970 budget recommendations constitute a monumental danger to the continuation and improvement of services to the retarded and their families. The Board urges that all action necessary to reverse the reduction of programs and services be taken so that our commitment to the human and civil rights of the retarded may be more fully realized.

APPENDIX

The following data are appended to highlight the current crisis:

Under the *Mental Retardation Facilities Construction Act*, as amended, grants are allowed for both the *construction* of facilities and for initial *staffing* with professional and technical personnel. Money for *construction of facilities* for the retarded first became available in 1965, for which the full authorized amount of $10 million was appropriated and released. As of December 31, 1968, 242 projects had been funded nationally. Of these, 55 projects are completed and in operation, 101 are under construction and 86 projects have been approved and are now in the architectural planning stage. Estimated total cost of these projects is $143.5 million and the estimated Federal share is $43.3 million.

The federal authorizations for this construction program through FY 1969 total $97.5 million. However, only $61.5 million has been appropriated of which only $5.5 million will remain to be obligated in 1969–70, the lowest carry over of any year to date. The Nixon Administration budget request for new construction money for the period 1969–71 is only $8 million (the lowest appropriation to date) against an authorization for $50 million for 1970.

The Mental Retardation Planning Board sees in the following summary of budget figures (in millions of dollars, rounded) an erosion of the once-firm federal commitment to the construction of facilities for the mentally retarded:

Construction	1967	1968	1969	1970
Appropriation authorized (new funds)	$15.0	$30.0	$30.0	$50.0
Appropriation requested by President	15.0	15.0	6.0	8.0
Appropriation enacted by Congress before cutback	15.0	18.0	6.0	.....
Allotment basis after cutback	15.0	12.0	12.0	8.0
Carried over from previous year	11.7	12.6	11.5	[1] 5.5
Transferred from mental health	3.3	3.6	[2] 2.0	.....
Actually obligated including carryover and transfer	15.7	16.7	[2] 20.5	.....

[1] Estimated May 1, 1969.
[2] Estimated.

The 1970 budget request for construction funds, then, totals $13.5 million ($8 million requested plus $5.5 carry-over) compared with the 1969 figure of $18 million, a decrease of $4.5 million. And this in spite of the fact that federal officials estimate 1,500,000 retarded persons nationally need facilities and services not presently available to them!

Construction grants are made on a formula basis, with a matching formula of approximately 60% local and 40% federal funding. The following table records the federal funds authorized and the funds actually made available to New Jersey to date for construction under the amended *Mental Retardation Facilities Construction Act*:

	Funds authorized	Funds actually made available
Fiscal year:		
1968	$859,723	$328,075
1969	863,800	330,780
1970	1,439,667	195,564
Total	3,163,190	854,419

On the basis of the federal commitment to participate in the development of community facilities for the mentally retarded, New Jersey designed a programmed plan for 21 county day care centers and other community facilities which proved so attractive that the people of New Jersey voted in the Fall of 1968 to invest $5 million of their own capital in this construction program. The people of New Jersey, then, have earmarked $5 million, some portion of which would be their 60% matching funds. The federal funds now proposed to match the $5 million total $854,419 (not 40% but 16%)! The proposed federal retrenchment for FY 70 means instead of the $1,439,667 authorized by Congress, New Jersey is confronted with the prospect of $195,564. The total funds made available, then, for FY 68, 69 and 70 are less than the authorization by Congress for FY 68.

This erosion of federal commitment is not only a grievous reversal of pledges to the retarded, but may make impossible the implementation of the program to which the populace has dedicated $5 million. To suffer this shrinkage is not only to outrage the retarded and their families and to embarrass State officials who carried this program to the people, but it is to call into question the confidence of the people in a federal commitment. It should be carefully remembered that the people of New Jersey have invested $33 million in institutionalized construction in the past 5 years. In May 1964 there were 1357 retardates wait-listed for admission to a State institution. So the people of New Jersey built the Woodbridge State School and the Hunterdon State School. And this May 1969 there were 1203 retardates on an institutional waiting-list and 516 retardates additionally are privately placed on a purchase-of-care basis. The people of New Jersey believe they are meeting their commitment to the mentally retarded and their families. Where is the federal response?

The Mental Retardation Planning Board views as critical that:

(1) Appropriations requested for construction in Fiscal Years 1968, 1969, and 1970, have fallen far below authorizations which in turn have run well below need as estimated by the President's Panel on Mental Retardation in 1962.

(2) Since allotments are made among the States, with a requirement that no State receive less than $100,000 a year, the first $5 million appropriated is absorbed in meeting this requirement, making the allotments to the larger states disproportionately small.

(3) Since the construction funds are available for a two-year period many States encumber a significant portion of their allotments in the second year of availability of the funds. In FY 1968, the Bureau of the Budget did not release the full amount appropriated in the year of appropriation. As a result the "carry over" funds from the first year coupled with the appropriation for that year, make it appear that a substantial amount of funds are available. This tends to create an impression of higher cumulative expenditures than has, in fact, been made. For example, the 1970 budget appendix shows $18 million to be obligated in FY 1969 and $13.5 million for 1970. However, the appropriation for FY 1969 is $12 million with $11.5 million carried over from FY 1968. The FY 1970 budget requests an appropriation of $8.0 million with an estimated $5.5 million to be carried over from FY 1969.

The Mental Retardation Facilities Construction Act, as amended, also makes grants for the initial *staffing* of facilities with professional and technical personnel.

The *staffing funds* were first authorized in FY 1968, and the first appropriation ($8.3 million against $10 million authorized) was released for FY 1969. As of May 1969, 285 applications had been received, requesting Federal funds in the total amount of $14.4 million for the initial year.

The Nixon Administration revisions did not affect the Johnson Administration budget for staffing for FY 1970, i.e., requests are for $5 million for *new* staffing grants, and $7 million for the second-year *continuation* of grants initiated in 1969 when New Jersey received $251,459. By contrast, the original *authorization* for FY 1970 for *new* grants is $14 million; the *appropriation* requested is $5 million. This request represents a decrease of $3 million from last year for new programs. It is perfectly clear that these monies will, in no way, meet the needs of the 50 states. The budget figures (in million of dollars, rounded) for the staffing program are as follows:

Staffing	1967	1968	1969	1970
Appropriation authorized (new grants only)	[1]	$7	$10	$14
Appropriation requested (new grants only)	[1]	0	8	5
Continuing grants	[1]	[1]	[1]	7

[1] Not available.

To propose to reduce further funds for staffing is to make ludicrous this component of the program. As stated above, New Jersey received $251,459 in 1969–70 staffing grants. The FY69 operating budget of the community facilities for the retarded constructed in New Jersey over the past two years was $882,078 and $1,220,300 has been budgeted for FY70. It is seriously doubted that the $200,000 New Jersey would receive under the proposed FY70 budget would cover the cost of administering the new facilities for the retarded for the construction of which the people of New Jersey voted $30.1 million of its own capital in the 1968 bond issue approvals.

The proposed FY70 budget will also sharply penalize New Jersey under the *University-Affiliated Facilities* construction program. The Medical School of Rutgers, The State University has submitted an application to construct a Mental Retardation Diagnostic and Evaluation Center (as part of the Rutgers Psychiatric Institute of the developing Rutgers University Medical Center) under Part B, Title I, P.L. 88–164. The projected cost of the Diagnostic and Evaluation Center is $1.6 million, of which $1.2 is sought from federal sources, and $.4 million will be Rutgers-provided. In the proposed FY70, federal budget there is *no request* for construction of *University-Affiliated Facilities*, compared with a 1969 funding estimate of $9.1 million!

The Mental Retardation Planning Board finds the federal retrenchment, particularized in the foregoing instances, spread across all FY 70 budget requests for programs and services for the mentally retarded and their families. This retrenchment is found in program areas such as: Residential Care of the Mentally Retarded; Training of Personnel for the Service of the Retarded; Vocational Rehabilitation; Special Education.

Even in the *Research* area, where the $126,000 requested for FY 70 does not differ from the 1968 and 1969 budget figures, the Mental Retardation Planning Board is gravely cencerned. It recognizes that these monies can fund only three research grants throughout the nation and that, to date, very little research emphasis has been placed on social and behavioral research or on the evaluation of existing programs. The Mental Retardation Planning Board gives applied research a high priority and considers $126,000 for support of critical social, behavioral research and program evaluation as totally inadequate.

The Mental Retardation Planning Board of New Jersey finds the reductions in the proposed FY 70 budget for programs and services for the retarded and their families less than responsible and potentially disastrous. In keeping with its mandate, the Board so alerts its publics among whom it importantly numbers its legislative representatives.

The CHAIRMAN. The time of the gentleman from Iowa has expired. The time of the gentleman from Pennsylvania has expired.

Mr. MICHEL. Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. The time for general debate having expired, the Clerk will read.

The Clerk read as follows:

OFFICE OF THE SOLICITOR

SALARIES AND EXPENSES

For expenses necessary for the Office of the Solicitor, $5,978,000, together with not to exceed $144,000 to be derived from the Employment Security Administration account, Unemployment Trust Fund.

Mr. BELL of California. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

One hundred and seven Members are present, a quorum.

The Clerk will read.

The Clerk read as follows:

AIR POLLUTION CONTROL

To carry out the Clean Air Act, as amended, and the functions of the Secretary of Health, Education, and Welfare under the provisions of section 48(h)(12)(C)(ii) of the Internal Revenue Code of 1954 (80 Stat. 1508, 1512), including hire, maintenance, and operation of aircraft, $93,800,000.

Mr. HECHLER of West Virginia. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I am surprised and disappointed that the Committee on Appropriations has recommended a reduction of $2 million from the budgeted funds for air pollution activities. In the context of appropriations for health-related programs, funds earmarked for air pollution research and control have special significance. Every dollar the Nation invests in finding solutions to the problem of air pollution is an investment in preventive medicine, because improvements in the control of air pollution ultimately will reduce illness and death from chronic diseases associated with exposure to polluted air. Thus, a dollar invested in seeking solutions to the air pollution problem may save the Nation many dollars in expenditures for the care and treatment of chronic disease victims, not to mention the savings that will accrue from keeping people healthy and productive.

I note that the Committee on Appropriations has recommended that the proposed $2 million reduction be taken out of funds for air pollution research and development activities. I am informed by the Department of Health, Education, and Welfare that this cutback will result in a delay in the development of a process for reducing the sulfur content of coal. Representing the largest coal-producing State in the Union, I am impressed with the important work which needs to be done. This particular process would be of substantial value in the Nation's effort to control sulfur oxides pollution. It would help to make low-sulfur coal available to fuel users whose facilities are not suited to other means of dealing with the sulfur oxides problem. Thus, this process would have the two-fold advantage of permitting continued use of the Nation's coal resources while also contributing to progress toward cleaner air.

In summary, restoration of the $2 million would be a bargain from more than one standpoint. It is a bargain that I believe the Congress and the Nation cannot afford to pass up. Accordingly, I hope that these funds will be restored to the budget for air pollution activities.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

NATIONAL CANCER INSTITUTE

For expenses necessary to carry out title IV, part A, of the Public Health Service Act; $180,725,000

AMENDMENT OFFERED BY MR. YATES

Mr. YATES. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. YATES: On page 18, line 13, strike out "$180,725,000" and insert "$185,149,500".

Mr. YATES. Mr. Chairman, my amendment seeks to restore the appropriations for the National Cancer Institute to last year's level. I would like to offer amendments that would continue those appropriations.

Mr. GIAIMO. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

One hundred Members are present, a quorum.

The gentleman from Illinois is recognized in support of his amendment.

Mr. YATES. Mr. Chairman, the committee has provided all the funds in the budget requested by the National Institute for Cancer, but the budget for the National Institute for Cancer is ridiculous. It provides less funds than were provided last year and the Institute is more active. The Nixon budget is woefully inadequate.

The budget for this Institute is approximately $6 million below the appropriation for last year. And that appropriation for last year is below the budget for the Institute for the previous year. We keep going down year by year in the appropriations not only for the Institute for Cancer but for all of these Institutes.

Does it make sense to cut back the appropriations for a National Institute that is doing a good job?

If Members will look at the report, on page 15, they will find the committee statement that the Institutes are doing an outstanding job. It wants the NIH to brag a bit about themselves. It says:

The Committee has found NIH spokesmen almost prudishly restrained in claiming credit for the research accomplishments of its grantees. This reticence does both NIH and the medical research community a serious disservice. In the present climate of opinion the high dividends paid by investment in research must be well-advertised if its support is to compete successfully with other urgent demands on the public purse.

Mr. Chairman, the Institutes are doing a remarkable job and it is incredible to me that the committee should cut the budget, for in effect that is what is being done. Do I have to recite the achievements already gained? New advancements which have been made in research in the field of cancer have been demonstrated time and again. There was the Pap test for women, which reduced drastically cancer of the cervix. Skin cancers have been treated. We are on the verge of a breakthrough in chemotherapy, yet in this bill vote "no confidence" in the Cancer Institute.

Can one image what this budget would have been like had the predecessor to our friend from Pennsylvania still been in office? I have great respect for my friend, Mr. FLOOD, who is chairman of this subcommittee. He does a very good job. But when I think of the HEW appropriations bill, I remember the great Congressman from Rhode Island, John Fogarty. We all recall his fights on this floor to provide funds for the Nation's health. The National Institutes of Health were built by his eloquence, his sincerity, and his integrity. It was he who fashioned this remarkable institution. It was he who fought through the House, with your support, the research money that inaugurated a new concept of research, a massive effort to eradicate the killing and crippling diseases that plague mankind. Restoring adequate funds to carry on this fight would be a realistic tribute to our late beloved friend, John Fogarty.

There is no reason to cut these programs back. We must vote our confidence in these institutions by voting at least the same level of appropriations they had last year.

Mr. Chairman, I urge that the House support my amendment.

Mr. FLOOD. Mr. Chairman, I rise in opposition to the amendment.

I remind you, Mr. Chairman, we are talking about the Cancer Institute. If there is anyone in this room who knows more about cancer than I do, I should like to hear from him. Can you imagine me being a party to damaging, retarding, injuring, or casting a shadow upon anything having to do with treatment or research on the killer cancer? Me? That is nonsense.

The emphasis of the Johnson administration and the emphasis of the Nixon administration has now been placed upon delivering service, taking the research and putting it at the bedside of the person who needs that treatment. So there have been some small reductions in these research activities.

However, let me remind you that there is $180,725,000 for research, and related activities, in cancer now. This committee, led by the gentleman from Pennsylvania, under no circumstances, would permit anything drastic to happen to research in cancer.

Mr. Chairman, I oppose this amendment and suggest and hope it will be defeated.

Mr. TIERNAN. Mr. Chairman, I move to strike the requisite number of words.

Mr. OLSEN. Mr. Chairman, will the gentleman yield?

Mr. TIERNAN. I am glad to yield to the gentleman from Montana.

Mr. OLSEN. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. One hundred and seven Members are present, a quorum.

The Chair recognizes the gentleman from Rhode Island (Mr. TIERNAN).

Mr. TIERNAN. Mr. Chairman, I just want to commend the gentleman from Illinois on his fine statement with regard

to John Fogarty whom I succeeded in Congress.

I support the gentleman from Illinois (Mr. YATES) in his efforts to restore the appropriations for the National Institutes of Health to the level of spending at which they are this year. I am sure the committee will support them in their efforts.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. TIERNAN. I am happy to yield to the gentleman from Illinois.

Mr. YATES. Mr. Chairman, some years ago when the appropriations for the National Institute of Cancer was under attack, John Fogarty defended that appropration in eloquent speech in which he said:

I do not know how much we have expended on cancer research. I do not care. I do not know whether it is $100 million or $3 billion, but if any part of that was a help in finding this new technique in diagnosing cancer in a stage early enough to cure 100 percent of cancer of the cervix in women, every dime that we have expended has been well expended by the Congress of the United States.

Dr. Sidney Farber, of the Children's Hospital of Boston also appeared before our committee. He is an outstanding expert, not only in this country but in the world, in the field of leukemia which is cancer of the bloodstream, especially in children. He was the man who pioneered in the use of antifolic compounds in the treatment of leukemia. He has used these compounds to treat one boy since 1947. He discovered their use in Boston, with the help of funds from this appropriation, if you please. As a result of that discovery, for the first time in medical history a young boy afflicted with acute leukemia is still living after 10 years. How much is his life worth? I do not know, but to me it is worth every dime we have put into these programs over the past 10 years.

The Institutes stand as a living memorial to the greatness of John Fogarty. They will continue to be dynamic, constructive organizations so long as adequate appropriations support its research efforts. Without funds, the Institutes must wither. The research teams built up so painstakingly over the years must be disbanded and their work disrupted. The tendency now is in the direction of retrenchment, rather than advancement. That must be checked.

Mr. Chairman, let us not move backward. I am asking $6 million in my amendment to bring the level of cancer research to the same level for the next fiscal year as it is for this fiscal year. The Institute for Cancer is doing outstanding work. The committee agrees, but unfortunately it accepted the recommendation of the Bureau of the Budget which cut the funds.

I think that this House ought to vote its encouragement to the National Cancer Institute by at least placing it at the same level as it has been for this current year. I hope the members of the Committee will sustain my amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. YATES).

The question was taken; and on a division (demanded by Mr. YATES) there were—ayes 23, noes 78.

Mr. YATES. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. YATES and Mr. FLOOD.

The Committee again divided, and the tellers reported that there were—ayes 59, noes 91.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

NATIONAL HEART INSTITUTE

For expenses, not otherwise provided for, necessary to carry out title IV, part B, of the Public Health Service Act, $160,513,000.

Mr. YATES. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I had intended to offer other amendments to increase the appropriations for the other National Institutes which suffered reduced appropriations but in view of the action just taken by the House I have decided not to offer them. I believe their level of funding should at least be equal to this fiscal year's level but I do not think the House is in a mood to increase the appropriations.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

HEALTH MANPOWER

To carry out, to the extent not otherwise provided, sections 301, 306, 309, 311, title VII, and title VIII of the Public Health Service Act, $218,021,000: *Provided*, That the amount available for scholarship grants to schools of nursing for the current fiscal year under such title VIII shall include, in addition to funds appropriated herein, funds appropriated for nursing educational opportunity grants for the fiscal year ending June 30, 1969, but not allotted to States for that fiscal year.

AMENDMENT OFFERED BY MR. REID OF NEW YORK

Mr. REID of New York. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. REID of New York: On page 21, line 8, after "Public Health Service Act," strike out "$218,021,000" and insert in lieu thereof "$232,821,000".

Mr. REID of New York. Mr. Chairman, the budget request for loans to medical students under the health professions student loan fund is almost 50 percent below the money available last year. The gentleman from New York (Mr. ROSENTHAL) and I are jointly offering this amendment on page 21, line 8, to strike out the figure of $218 million, and to insert $232 million.

This amendment will provide an additional $14,800,000 for loans to medical students under the Health Professions Student Loan Fund—part C, title VII, of the Public Health Service Act.

The appropriation must be increased by this large an amount for two reasons. First, the need for loan funds is already far outrunning the money available. There are 100 medical schools in this country with a total enrollment of 34,018. The schools have requested a total of $20,983,026 for loans for this fiscal year. The budget allots $7,924,353 of that request. This is just about half of what was available last year and about one-third of what is needed to insure that enrolled students and new students will be able to continue or begin their medical education. Some 23,000 students received loans last year and if the appropriation is not increased, many thousands will have to drop out or not enroll at all because of terminated or reduced loans.

The additional $14,800,000 would maintain support to schools previously participating in this program at the 1969 level; provide support for new schools entering the program for the first time; and allow for expanding enrollments of continuing schools, particularly for needs of disadvantaged students being admitted to first year classes. A total of $17,943,353 would then be available for the loan program.

The second reason that the appropriation must be increased is that the report accompanying this bill directs that the increase in scholarships for health professions students—about half of whom are medical students—be transferred to the loan program. For several reasons, I believe it most unwise to do this, and, while the parliamentary situation under which this bill is presented does not make it possible to amend the bill in this regard as this item does not appear in the bill itself, the legislative history of this amendment will show that the loan fund appropriation is increased by sufficient funds to allow the scholarship moneys not to be transferred, thereby leaving the scholarships at the same level as the budget requested.

The scholarship funds cannot be transferred, first of all, because the awards have already been made for the new school year. We are, in effect, directing medical schools to tell students who are counting on scholarships that what they were told last month must be rescinded. This is an unconscionable breach of faith on the part of the Congress. Second, these scholarship funds are needed to give such aid to all four classes of students. Until fiscal year 1970, only three classes were covered. With the increase of $4,781,000 that the budget requested for this fiscal year, the fourth class would also be covered as intended in the basic legislation.

The administration had hoped that the guaranteed loan program of the Higher Education Act of 1965 would be able to assist many medical students whose health professions loans would be reduced or terminated. That hope has unfortunately not proven to be a fruitful source of funds because the tight credit market is making it exceedingly difficult for any students to get loans under this program and because the reduction in loan funds was made known to medical schools only earlier this month—some 6 weeks before the new school term begins. Whatever guaranteed loans might have been available have long since disappeared, and medical students are left but a short time before school begins with no source of support.

The Department of HEW estimates that we need 52,000 more physicians right now, and that by 1976 we will still need 41,000. Our 100 medical schools now produce about 8,500 graduates a year—clearly an insufficient number. The administration, in its budget request, indicated its interest in encouraging the physician augmentation program in order to produce some 4,000 additional doc-

tors by 1973. This is indeed a laudatory objective but I cannot understand the logic in financing this program by taking $5 million from the funds allotted to medical student loans, as the report directs on page 30. Frankly, I do not understand how it is proposed that these additional medical students—not to speak of present medical students—are to finance their education if the loan funds are reduced.

Many students have expressed eloquently the hardships they are undergoing to finance their medical educations, and the greatest deprivation, if not termination of their careers, that will ensue from a reduction in loan funds. Such a situation will surely not close the gap between the number of physicians this Nation needs and the number we are now educating. It is simply the most shortsighted and cheap sort of economy to cut in half the funds that enable potential physicians to be trained.

I should like to insert in the RECORD at this point a paragraph from a letter I have received from Dr. Harry Gordon, dean of the Albert Einstein College of Medicine in New York, and a table of the appropriation history of medical student loan funds. Dr. Gordon writes:

It is appalling that the Federal and State Governments have not taken into consideration the fact that there is an increasing number of minority group students unable to support their education and an expanding number of students from low and middle income families who find it extremely difficult to attend medical schools. At a time when we have become increasingly aware of our acutely understaffed medical services, this will have a socially undesirable effect on our recruiting policies for health expansion.

MEDICAL STUDENT LOANS

	1968	1969	1970
Number of medical schools	93	98	100
Enrollment	34,018	35,962	37,558
Medical schools request for loan funds	$16,885,425	$19,030,340	$20,983,026
Appropriation	$14,736,357	$14,240,726	$7,924,353
Students receiving loans	23,255	23,000	(1)

[1] Not available.

Source: Public Health Service.

Mr. Chairman, I will not belabor the figures except to say when our Nation is able to send men to the moon and make such a magnificent achievement as that, this is hardly the time to cut back on needed scholarships and loans for our doctors, especially since there is a shortage of doctors throughout the country.

It is time to keep faith with our medical students. I would urge the House to add these rather modest, additional funds to the bill so that medical students will be able to complete their courses and we will be able to keep faith with those who are trying to become doctors and serve our Nation.

Mr. ROSENTHAL. Mr. Chairman, I rise in support of this amendment. In almost every medical school of this country, and in thousands of homes of medical students, basic decisions about future doctors are being made today and throughout this summer. It is now less than 2 months before medical schools resume for the 1969–70 year. Yet many students, and their schools, do not yet know how they will finance next year's schooling.

This situation results from several unusual factors which affect medical education. First, training for medicine is an arduous, lengthy, and very expensive undertaking. Second, doctors, once trained, are very well paid. Third, scholarship and loan aid for medical students has always been very limited because both private and public sources have been understandably, though regrettably, reluctant to help students who eventually will earn handsome incomes.

These factors in turn contribute to several serious problems in providing the medical care our country needs and deserves. Physician production has fallen increasingly short of our requirements. The doctors we do produce are selected from a too-narrow economic and social segment of our population. Too many doctors' sons become doctors. Social attitudes of medical care as a privilege, of the sanctity of fee-for-service as the only way of providing medical care and similar narrow values tend to become perpetuated in each successive generation of doctors because of the selection process for medical schools.

To face these problems, Congress gradually undertook programs both to increase physician production and to provide for more scholarship and loan programs for a wider variety of medical students. These programs, and these students are in a situation today which borders on desperation.

The administration seriously underestimated the results of attempting to economize on medical student loan funds. Under this misunderstanding, a funding was proposed for these funds which cut loan availability by about 50 percent.

Schools which had been encouraged by Congress to increase medical student enrollment discovered one morning this spring that their enrollment for September 1969 would almost certainly be reduced, in some cases drastically, by the administration's reduction in loan funds. These schools have already been advised of these proposed cuts. Medical school deans are confused and dismayed by these events. Students and their families are searching desperately for funds so that their education can proceed.

The administration's calculations in reducing the health professions student loan fund was based on an assumption, now clearly repudiated, that the guaranteed loan program of the Higher Education Act of 1965 would provide funds to medical students who would no longer need the health professions loan fund. The rise in the prime rate of interest and the general scarcity of private loan funds for educational purposes, made this assumption a cruel, though unintentional, deception for medical students.

When medical schools announced that existing loan funds would be reduced this fall, students went to local banks for guaranteed loans. There was simply no money available. Today, these students still have no fair prospects for financing their education in the school year which starts in 2 months.

To abandon these students to disruption or termination of their medical studies is unthinkable. To rely on the private credit market is impossible. The solution must come in additional funds for loans for medical, and other students, whose careers in medical care are both a public responsibility and in furtherance of a public good.

My colleague from New York (Mr. REID) and I have prepared an amendment to provide funds for the health professions student loan fund sufficient to insure the operation of that program at the fiscal year 1969 level. A sum of $14.8 million is needed for this purpose. This amount, we should recall, is not for grants or scholarships to students but for loans which are repayable.

The $15,000 to $20,000 which medical school training costs is a burden which society must share if we want to improve our medical care system by providing more and better doctors. Medical students have already had the considerable expenses of college training to finance by the time they start their specialized studies. After medical school they have 3 to 4 years of internship and residency training. To allow this long and costly burden to fall on students and their families alone will perpetuate the present inbred system of medicine and deprive our country of those new sources of health manpower we need so badly.

I urge my colleagues to support this amendment. Before we vote, I urge every Member to consider our past commitments to improved medical care which this amendment will help preserve and confirm.

Mr. FLOOD. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, you will recall that in my statement earlier in the day, I went to some lengths to point out how this committee has shifted the emphasis from research to delivery and to service.

There is an increase in the bill, over 1969, of $46 million for training doctors, dentists, and nurses, and $41 million for construction of facilities where these students, studying to be doctors, nurses and dentists, can be trained—we have no quarrel with this, we are all for it and we put it in the bill.

Let me point this out to you. On this very item that is the subject of the pending amendment, this committee raised the budget $4,781,000. Further than that, the Nixon budget came in at $15 million—the Johnson budget was $20 million. This committee, because of the reasons I stated earlier, because we do believe in training and teaching doctors, nurses, and dentists, and building facilities for them, has done this.

We applied the rule of reason again, after consulting the experts who best know. We raised this item over $4,700,000, practically equal to the Johnson budget of $20 million, because of the reasons I have stated and stated earlier.

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. FLOOD. I yield to the gentleman from Iowa, who is well experienced in this program.

Mr. SMITH of Iowa. Mr. Chairman, I agree with what the gentleman from New York has said, except for one thing, and that is his statement that we did not

increase these funds. We did. It is a little difficult sometimes to see exactly how these things are handled. What happened is that the administration proposed a big increase in scholarship money. We took that money and put it into loans. We believe that as long as there is not enough money for all the students who want it, we ought to emphasize loans instead of scholarships, because this money will come back and be used again at some time in the future.

Mr. REID of New York. Mr. Chairman, will the gentleman yield?

Mr. FLOOD. I yield to the gentleman from New York.

Mr. REID of New York. It is my understanding that we are taking money from the scholarship program for the loan program. The problem is that there have already been commitments to certain students that scholarships would be provided.

Mr. SMITH of Iowa. It would not affect them one iota, because every dollar provided last year for scholarships is in the bill. All we took out was the increase in scholarships.

Mr. REID of New York. If the gentleman will yield further, it is my understanding that the medical schools of the United States have asked for an increase of $10 million. The reason I have requested an increase to $14 million is that the committee has transferred, if I understand correctly, $4 million from scholarships to loans, and the increase in the commitments in terms of classes that now exist would require an additional increase of $10 million. So there would be need for $14 million in scholarships to maintain the medical schools at the levels that were set.

Mr. SMITH of Iowa. If the gentleman will yield further, I do not know what somebody asked, but I know that we took the extra money that they wanted for scholarships and put in into the loan program. There will not be any reduction in the scholarship money previously provided. Our agreement in the committee was that we ought not to provide an increase in the scholarships, but to put the money into the loan program.

Mr. FLOOD. The gentleman from Iowa has stated the record and the facts. There was no intention on the part of the subcommittee under any circumstances to cut the scholarship program below the 1969 level.

Mr. Chairman, I ask that the amendment be defeated.

Mr. OTTINGER. Mr. Chairman, I move to strike the requisite number of words.

I would like to say a few words in support of the amendment. As a member of the Committee on Interstate and Foreign Commerce, which deals with substantive health legislation, I can tell you that one of the prime reasons for the tremendous increase in medical costs that we are experiencing all over the country is the inadequate numbers of doctors and inadequate facilities to train doctors to service the people who have medical needs.

In the medicare program and the medicaid program we supplied a vastly increased number of dollars with which people can pay for services, and that increased number of dollars is chasing an inadequate number of doctors, thus bidding up the prices all over the country. This is a classic case of inflationary pressure.

If you want to do something to provide adequate medical service for people who are not presently receiving it—if you want really to do something to decrease medical costs—there is no better way you can do it than to provide funds for the additional medical training set forth in the amendment of my colleague from New York.

I earnestly urge your support for the amendment.

Mr. REID of New York. Mr. Chairman, will the gentleman yield?

Mr. OTTINGER. I am glad to yield to the gentleman from New York.

Mr. REID of New York. Is it not a fact that there was a commitment to provide increased funds in the sum of $4.7 million for scholarships to enable all four classes to get scholarships, and that an additional $10 million, at the minimum, is necessary to provide loan funds close to the amount requested by the medical schools? Is it not correct that the effect of our action today would be to make it impossible for some of the students in their third year to complete their fourth year in the medical curriculum, and, therefore, the effect is to break faith with these students and actually cut back on the number that would be trained had this $14 million been made available?

Mr. OTTINGER. That is my understanding.

Mr. SMITH of Iowa. The fact is that that would have happened if we had not shifted funds; new students would have gotten scholarship money, and others may not have. We restored the money so the third-year students could get the money.

Mr. REID of New York. It is my understanding that transferring the $4.7 million will hurt students presently enrolled and all I am asking now is that we consider maintaining the amounts necessary so that those who have completed a portion of their medical training can complete their final years.

The CHAIRMAN. The time of the gentleman has expired.

The question is on the amendment offered by the gentleman from New York (Mr. REID).

The amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

OFFICE OF EDUCATION

ELEMENTARY AND SECONDARY EDUCATION

For carrying out titles II, III, V, VII, and section 807 of the Elementary and Secondary Eductaion Act of 1965, as amended, section 402 of the Elementary and Secondary Education Amendments of 1967, and title III–A and V–A of the National Defense Education Act of 1958, $254,163,000; of which $200,163,000 shall be for school library resources, textbooks, and other instructional materials under title II and supplementary educational centers and services under title III of said Act of 1965 and for equipment and minor remodeling and State administrative services under title III–A and guidance, counseling, and testing under title V–A of said Act of 1958 (to be distributed in accordance with regulations promulgated by the Secretary of Health, Education, and Welfare); and $29,750,000 shall be for strengthening State departments of education under title V of said Act of 1965.

AMENDMENT OFFERED BY MR. MICHEL

Mr. MICHEL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MICHEL: On page 25 strike out line 9 and all that follows on page 25 and insert in lieu thereof the following:

"For carrying out titles II, III, V, VII, and section 807 of the Elementary and Secondary Education Act of 1965, as amended, section 402 of the Elementary and Secondary Education Amendments of 1967, and title III–A and V–A of the National Defense Education Act of 1958, $254,163,000; of which $200,163,000 shall be for school library resources, textbooks, and other instructional materials under title II and supplementary educational centers and services under title III of said Act of 1965 and for equipment and minor remodeling and State administrative services under title III–A and guidance, counseling, and testing under title V–A of said Act of 1958 (to be distributed in accordance with regulations promulgated by the Secretary of Health, Education, and Welfare); and $29,750,000 shall be for strengthening State departments of education under title V of said Act of 1965.

"For an additional amount for grants under title I–A of the Elementary and Secondary Education Act of 1965 for the fiscal year 1970, $205,360,700: Provided, That the aggregate amounts otherwise available for grants therefor within States shall not be less than 92 per centum of the amounts allocated from the fiscal year 1968 appropriation to local educational agencies in such States for grants.

"For carrying out title I of the Act of September 30, 1950, as amended (20 U.S.C., ch. 13), and the Act of September 23, 1950, as amended (20 U.S.C., ch. 19), $521,067,000, of which $505,900,000 shall be for the maintenance and operation of schools as authorized by said title I of the Act of September 30, 1950, as amended, and $15,167,000 which shall remain available until expended, shall be for providing school facilities as authorized by said Act of September 23, 1950."

Mr. O'HARA. Mr. Chairman, I make a point of order against the amendment.

The CHAIRMAN. The gentleman will state his point of order.

Mr. O'HARA. Mr. Chairman, I make a point of order against the amendment on the ground that the paragraph which it amends has not yet been read.

May I be heard on the point of order, Mr. Chairman?

The CHAIRMAN. The Chair recognized the gentleman for that purpose.

Mr. O'HARA. Mr. Chairman, when the amendment was offered, the Clerk had finished reading the paragraph which begins on line 9, page 25, and concludes on line 24, page 25.

At that point amendments to that paragraph were in order. But the amendment of the gentleman from Illinois does not change so much as a comma in that paragraph; it repeats it absolutely verbatim. It is not an amendment to that paragraph. It is only in subsequent paragraphs that any amendment is made.

As a matter of fact, it goes on through another paragraph without any change whatsoever before it makes an amendment. The amendment does not come until the paragraph beginning on line 9 of page 26.

I would make the point of order, Mr.

Chairman, that the gentleman from Illinois will have to wait until that paragraph is read before he can offer an amendment to it.

The CHAIRMAN. The Chair will hear the gentleman from Illinois on the point of order.

Mr. MICHEL. Mr. Chairman, I submit that really all I am doing is adding to that first paragraph; therefore, it is very much in order.

The CHAIRMAN. The Chair has considered the arguments both for and against the point of order. The Chair sees no inconsistency in the gentleman's amendment repeating the paragraph on page 26 which the Clerk had not yet read. It is a different paragraph, but the Chair feels that the following paragraph can be consolidated with an amendment to the total paragraph.

Mr. O'HARA. Before the Chair rules, may I be heard further on the point of order?

The CHAIRMAN. The Chair will hear the gentleman further.

Mr. O'HARA. Mr. Chairman, under the rules of the House, when a bill is to be read by paragraph and a Member wishes to amend a paragraph that has been read and several succeeding paragraphs he is permitted to offer an amendment at the time the first of those paragraphs is read that he wants to amend and then at the same time give notice that if his amendment, which goes beyond the first paragraph and into several others, is adopted he will move to strike the succeeding paragraphs.

In the first place, the gentleman from Illinois gave no such notice, but let us not dwell on that. Let us dwell on the danger of upholding the amendment he is offering.

The gentleman from Illinois, I am sure, will agree that he makes no change whatsoever in the paragraph just read; absolutely no change.

If the Chair is going to hold that one can offer an amendment at any place one wants in the bill in order to get a provision that comes a page later, or two pages later, or 10 pages later—and that is what he has done; he has offered an amendment here that changes nothing but gets at something on the next page—and if we are going to say that the precedents of this House say one can offer an amendment any place and repeat some language until it gets to the thing he wants to amend, we are heading for legislative chaos, Mr. Chairman.

I believe this is a very serious problem, and I most earnestly ask the Chair to carefully consider his ruling, because otherwise it might be possible to offer an amendment to repeat the language for the next 25 pages until it gets to the thing one seeks to change. I believe it is terribly important that this amendment be considered out of order, Mr. Chairman.

Mr. HANNA. Mr. Chairman, a point of order.

The CHAIRMAN. On the amendment?

Mr. HANNA. On the point of order pending.

The CHAIRMAN. The gentleman will be heard on the point of order.

Mr. HANNA. Mr. Chairman, would I be correct in assuming that in the event amendments of this type were allowed, where you repeat language and then make changes further on down in the bill, that those persons desiring to change that language which has been incorporated in toto without change would have to make an amendment to the gentleman's amendment in order to be appropriately given recognition? If that is so, it indicates another problem which would arise in this kind of an amendment.

Mr. GERALD R. FORD. Mr. Chairman, may I be given the opportunity to comment on the point of order and urge disallowance of the point of order?

The CHAIRMAN. The Chair will recognize the gentleman for that purpose.

Mr. GERALD R. FORD. Mr. Chairman, it seems to me, first, that obviously that part of page 26 between lines 8 and 22, inclusive, are all germane to the subject matter of this legislation.

Second, according to the format of the bill H.R. 13111, you will notice that between the first paragraph that begins on page 25 and the second paragraph that begins on page 26 there is no numerical division by title or subtitle or otherwise.

Third, let me point out, as I understand the amendment offered by the gentleman from Illinois (Mr. MICHEL) in the preparation of his amendment he was careful to strike out the language which is included on page 26, line 8, entitled "School Assistance in Federally Affected Areas." So in effect he was considering not only paragraphs on page 25 and paragraphs on page 26 which are all germane, but there is no breakdown in numbers or in articles as far as this portion of the bill is concerned.

Therefore, I think it is logical and is sound reason for disallowing the point of order.

The CHAIRMAN (Mr. HOLIFIELD). The Chair is prepared to rule. The Chair is presented with a most difficult ruling at this time. He has resorted to a precedent in "Hinds' Precedents," volume V, page 404, paragraph 5795, which reads as follows:

> When it is proposed to offer a single substitute for several paragraphs of a bill which is being considered by paragraphs, the substitute may be moved to the first paragraph with notice that if it be agreed to, motions will be made to strike out the remaining paragraphs.

The Chair notes that the gentleman from Illinois did not give such notice. The amendment goes beyond the paragraph which has been read and in effect modifies a paragraph which has not yet been read.

The Chairman, therefore, sustains the point of order.

The amendment in the form in which it is offered is not in order.

AMENDMENT OFFERED BY MR. JOELSON

Mr. JOELSON. Mr. Chairman, I offer an amendment to the paragraph just read which is a simple substitute to several paragraphs of the bill dealing with the Office of Education, and I hereby give notice that after the amendment is agreed to I will make a motion to strike out the paragraphs appearing as follows: the paragraph on page 26, lines 1 through 7; the paragraph on page 26, lines 8 through 22; the paragraph beginning on line 13 of page 27 and extending through line 21, on page 28; the paragraph beginning on line 22, on page 28, and extending through line 17 on page 29.

The Clerk read as follows:

Amendment offered by Mr. JOELSON: On page 25 strike out lines 9 through 24 and substitute in lieu thereof the following paragraph:

"For carrying out titles II, III, V, VII, and section 807 of the Elementary and Secondary Education Act of 1965, as amended, section 402 of the Elementary and Secondary Education Amendments of 1967, and titles III–A and V–A of the National Defense Education Act of 1958 $364,616,000; of which $50,000,000 shall be for school library resources, textbooks, and other instructional materials under title II of said Act of 1965; $164,876,000 shall be for supplementary educational centers and services under title III of said Act of 1965; $78,740,000 shall be for equipment and minor remodeling and State administrative services under title III–A of said Act of 1958; $17,000,000 shall be for guidance, counseling, and testing under title V–A of said Act of 1958; $29,750,000 shall be for strengthening State departments of education under title V of said Act of 1965; $5,000,000 shall be for dropout programs under section 807 of said Act of 1965; $9,250,000 shall be for planning and evaluation under section 402 of the Elementary and Secondary Education Amendments of 1967; and $10,000,000 shall be for bilingual education programs under title VII of said Act of 1965. For an additional amount for grants under title I–A of the Elementary and Secondary Education Act of 1965 for the fiscal year 1970, $386,160,700: *Provided*, That the aggregate amounts otherwise available for grants therefor within States shall not be less than 92 per centum of the amounts allocated from the fiscal year 1968 appropriation to local educational agencies in such States for grants. For carrying out title I of the Act of September 30, 1950, as amended (20 U.S.C., ch. 13), and the Act of September 23, 1950, as amended (20 U.S.C., ch. 19), $600,167,000, of which $585,000,000 shall be for the maintenance and operation of schools as authorized by sections 3, 6, and 7 of said title I of the Act of September 30, 1950, as amended, and $15,167,000 which shall remain available until expended, shall be for providing school facilities as authorized by said Act of September 23, 1950. For carrying out titles III and IV (except parts D and F), part E of title V, and section 1207 of the Higher Education Act of 1965, as amended, titles I and III of the Higher Education Facilities Act of 1963, as amended, titles II and IV of the National Defense Education Act of 1958, as amended (20 U.S.C. 421–429), and section 22 of the Act of June 29, 1935, as amended (7 U.S.C. 329), $859,633,000, of which $159,600,000 shall be for educational opportunity grants under part A of title IV of the Higher Education Act of 1965 and shall remain available through June 30, 1971, $63,900,000 to remain available until expended shall be for loan insurance programs under part B of title IV of that Act, including not to exceed $1,500,000 for computer services in connection with the insured loan program, $154,000,000 shall be for grants for college work-study programs under part C of title IV of that Act (of which amounts reallotted shall remain available through June 30, 1971), including one per centum of such amount to be available, without regard to the provisions in section 442 of that Act, for cooperative education programs that alternate periods of full-time academic study with periods of full-time public or private employment, $43,000,000 shall be for grants for construction of public community colleges and technical institutes and $33,000,000

shall be for grants for construction of other academic facilities under title I of the Higher Education Facilities Act of 1963 which amounts shall remain available through June 30, 1971, $11,750,000, to remain available until expended, shall be for annual interest grants under section 306 of that Act, $222,100,000 shall be for Federal capital contributions to student loan funds established in accordance with agreements pursuant to section 204 of the National Defense Education Act of 1958, and $12,120,000 shall be for the purposes of section 22 of the Act of June 29, 1935. For carrying out the Vocational Education Act of 1963, as amended (20 U.S.C. 1241–1391) (except part E of title I), and section 402 of the Elementary and Secondary Education Amendments of 1967, $488,716,000, of which not to exceed $357,836,000 shall be for State vocational programs under part B and $40,000,000 shall be for programs under section 102(b) of said Vocational Education Act of 1963, including development and administration of State plans and evaluation and dissemination activities authorized under section 102(c) of said Act, and $10,000,000 for part H of said title I, not to exceed $1,680,000 for State advisory councils established pursuant to section 104(b) of said Act, $13,000,000 for exemplary programs under part D of said Act of which fifty per centum shall remain available until expended and fifty per centum shall remain available through June 30, 1971, $15,000,000 for consumer and homemaking education programs under part F of said Act, and $14,000,000 shall be for cooperative vocational education programs under part G of said Act.

PARLIAMENTARY INQUIRIES

Mr. GERALD R. FORD. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. GERALD R. FORD. Mr. Chairman, would the Chairman or the gentleman from New Jersey clarify whether the amendment offered by the gentleman from New Jersey was offered as a substitute or as an amendment to the section?

Mr. JOELSON. If the Chairman will permit me to reply to the gentleman from Michigan, I would state to the gentleman from Michigan that it is an amendment which is a single substitute to several paragraphs of the bill.

Mr. GERALD R. FORD. It is an amendment.

Mr. JOELSON. That is correct.

Mr. GERALD R. FORD. Mr. Chairman, a further parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. GERALD R. FORD. A substitute for the amendment offered by the gentleman from New Jersey (Mr. JOELSON) would be in order if offered by someone?

The CHAIRMAN. The Chair will state that a substitute for the amendment would be in order.

Mr. GERALD R. FORD. I thank the Chairman.

Mr. MICHEL. Mr. Chairman, a further parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. MICHEL. Mr. Chairman, if the amendment offered by the gentleman from New Jersey (Mr. JOELSON), the entire package, is defeated, would it then be in order to amend different sections in this area, in this whole part?

The CHAIRMAN. The Chair will state that if the amendment is defeated, why, of course, we would be right back where we started.

Mr. MICHEL. And open to amendment at any point?

The CHAIRMAN. The paragraphs would be read, and they would be open to amendment.

PARLIAMENTARY INQUIRY

Mr. QUIE. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state the parliamentary inquiry.

Mr. QUIE. Mr. Chairman, the entire substitute, as I understand, is open to amendment at any point, but insofar as the bill is concerned is the paragraph on page 25 which was read by the Clerk also open to amendment?

The CHAIRMAN. The gentleman is correct.

The Chair recognizes the gentleman from New Jersey (Mr. JOELSON).

Mr. JOELSON. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes to explain this amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from New Jersey?

Mr. SMITH of Iowa. Where is a copy of this amendment so that we may know what we are doing?

Mr. JOELSON. There is a copy at the desk.

Mr. SMITH of Iowa. Is that not the usual procedure so that the Members may know what we are doing, and to have a copy of an amendment as long and as complicated as this?

Mr. JOELSON. If the gentleman will yield, I am asking for an additional 5 minutes so that I can explain my amendment to his satisfaction. If I have not done so, I will ask for another 5 minutes.

Mr. HALL. Mr. Chairman, reserving the right to object, I would suggest the gentleman ask for permission at the end of his first 5 minutes.

Mr. JOELSON. Mr. Chairman, I withdraw my request.

The CHAIRMAN. The gentleman from New Jersey is recognized in support of his amendment.

Mr. JOELSON. Mr. Chairman, during general debate, in order to indicate the widespread support for my proposal, and that it was not limited to one party or to one segment of the economy or limited to one type of interest. I gave the names of some of the sponsors and I think I should do that again.

Today I received a letter from the U.S. Conference of Mayors warmly endorsing the proposal signed by Jack D. Maltester, mayor of San Leandro.

I also received a letter from the National League of Cities signed by the mayor of Nashville, Tenn., C. Beverly Briley.

Included in the list of organizations in support of this proposal, there is the AFL–CIO, the American Association of Junior Colleges, the American Association of School Administrators, the American Association of State Colleges and Universities, the American Federation of Teachers, the American Library Association, the American Vocational Association, the Catholic Library Association, the Lutheran Council in the United States, the National Congress of Parents and Teachers, the Council of Catholic Men, and the National Education Association.

There are others, Mr. Chairman. There are some 50 to 60 sponsors.

Mr. Chairman, I would like to explain what my proposal would do.

First, let us start with the largest item, which is impacted aid. My proposal would increase by $398 million the recommendation of the full Committee on Appropriations. This would provide sufficient funds for 90 percent of the authorizations. I must confess I am very puzzled by the committee approach which now says, "We will fund you for the people who work on the Federal property and who live there, but if they live across the street, they are not covered."

I think this seems to be just folly. So my proposal would be to lump these two together and to fund them as one. So the appropriation would be an increase over the House committee, as I said, of $398 million.

Going to vocational education, my proposal would increase the committee proposal by $131,500,000.

But I would like to point out to you that the bill, as authorized by the Committee on Education and Labor, would provide a figure that even with my amendment would come up to a figure only 63 percent of the full authorization.

Going to title I of the Elementary and Secondary Education Act, that is ESEA, I would increase the figure of the House committee by $180 million. But I want to point out very clearly that even with the increase I have proposed, the percentage of the total authorization is 44½ percent, less than a half of authorization even with my increase. The committee would fund only 38 percent of the full authorization.

Now we go to this one group containing four items. One is title II of ESEA pertaining to school libraries; title III of NDEA concerning equipment; title V, of NDEA providing for guidance and counseling; title III of ESEA, providing for supplemental centers. The full committee did what, to me, is an absurd thing. They did not fund each item. They took one lump sum and then they said to the Commissioner of Education, "You divide it up as you like. No matter what you do, it is OK with us."

What I would do is to provide funds for each one of these items specifically: $50 million for school libraries; $78,740,000 for equipment; $17 million for guidance and counseling; and $164,876,000 for supplemental centers.

The CHAIRMAN. The time of the gentleman from New Jersey has expired.

(By unanimous consent, Mr. JOELSON was allowed to proceed for 5 additional minutes.)

Mr. JOELSON. We also propose to increase two items for higher education. I am very, very disappointed to have to tell you that with regard to construction, the committee, although they were authorized $711,360,000, appropriated not one penny—nothing. I would propose to ap-

propriate $33 million. Do you know what percentage of the total authorization that would be? 4.6 percent of the total authorization.

Again, going to student loans, I do not have to tell you, for I am sure you have received letters, that young people who want to go to college cannot get loans from banks because of the high interest rates. I propose an increase for student loans so that instead of funding the program at 62 percent of the authorization, as the committee would have you do, I would fund it at 83 percent, which would be an increase in the appropriation of $40,794,000.

I might also let you know that even with my increase, many of the items would not be increased. In title II, school libraries are not increased over the appropriation for 1969. Title III, for equipment, not increased over fiscal 1969, even with my amendment. Title V, for guidance and counseling, not increased over 1969. Title III, for supplemental centers, not increased over 1969. And higher education construction not increased over 1969.

We hear about taxes. I want you to know, and I am sure you know, that the school bills are paid by the local taxpayer; the little guy, the little homeowner. The money will have to be spent for local education. What we are saying to the little homeowner is, "You are strapped. You are against the wall. The Federal Government has greater resources than just you little homeowner, and we are going to help you out." So we are not really raising more taxes; we are just distributing the load.

I would like to remind you that we have an authorization bill here. We just cannot turn everything over to the Appropriations Committee, and I am a member of that committee, but we must not give it the right to decide everything because then we would not need any legislative committees.

Mr. Chairman, when I leave Congress, if I am remembered for a week or two, I would like to be remembered as an advocate of educational opportunities for our youth. I am sure you would, too. I think it is good Government. I think it is good politics. I think that is what the people want. It is our way of expressing faith in our young people, our way of acknowledging their potential, and helping them to realize it is to supply the money that I am urging. I ask you, please, to join me in this constructive effort.

Mr. KARTH. Mr. Chairman, will the gentleman yield?

Mr. JOELSON. I yield to the gentleman from Minnesota.

Mr. KARTH. Mr. Chairman, I commend the gentleman from New Jersey particularly for increasing substantially the amount for student loans. Let me explain why.

Last year when a young lady by the name of Jean Johnson graduated from a high school in my district, and because she graduated with honors, I sent her a letter of commendation and urged her to continue her education through college. Today she sent me a letter in which she said she desperately wants to go to college but can only do so by taking advantage of the student loan program the Congress has previously authorized. However, try as she did, she could not find a financial institution in the entire Twin Cities area that will grant her a student loan, even though there is statutory legislation to that effect on the books.

Mr. Chairman, she went to the 10 leading financial institutions in the Twin Cities metropolitan area. The biggest financial institution said if she had 1 year of college and had a substantial savings account at their bank, then they would talk to her about a student loan. Sorry you do not qualify.

The second financial institution said if she had been a customer of their bank and had a savings account for 6 months they would consider her request. Sorry.

The third one said they were sorry also, but all the money for student loans had been used up.

The fourth one said they were sorry, all they do is provide installment loans and installment loans only.

The fifth one said they had discontinued participating in the student loan program in April 1969.

The sixth and seventh institutions of finance said they were sorry but student loans were of no interest to them.

The CHAIRMAN. The time of the gentleman from New Jersey has again expired.

(On request by Mr. KARTH and by unanimous consent, Mr. JOELSON was allowed to proceed for 1 additional minute.)

Mr. KARTH. Mr. Chairman, if the gentleman will yield further, the last institution said they were sorry, they do not sponsor the student loan program at all, and they never had.

Mr. Chairman, this is the only way this young lady can continue with her education.

I commend the gentleman from New Jersey and certainly indicate my strong support for his amendment, because there are so many other Jean Johnsons around the country who will not be able to go to college unless we do something more substantive in the student loan program.

Mr. Chairman, I thank the gentleman from New Jersey for yielding.

Mr. JOELSON. Mr. Chairman, I thank the gentleman from Minnesota for his comments.

Mr. McCARTHY. Mr. Chairman, I rise to support the package of amendments offered by the distinguished gentleman from New Jersey (Mr. JOELSON). This package would mean about $1,050,000 in urgently needed additional aid to Buffalo schools.

Let me state the specifics:

First. Under title I of the Elementary and Secondary Education Act, the board of education of Buffalo would receive $500,000 more than the present bill calls for. The level in the bill as it now stands does not even meet rising salaries and costs. Buffalo would have to curtail programs for the disadvantaged. It is already planning to cut all programs and eliminate several programs. Among the victims, without the Joelson amendments, would be Buffalo's "early push" program. Similar to Headstart, it has been so successful in Buffalo that it has been designated by Washington as a "Follow Through" city. Other victims would be the remedial reading programs in Buffalo and other compensatory programs.

Second. Under title II of the Elementary and Secondary Education Act, all schools in Buffalo, public and parochial, would stand to gain $200,000 for books and other library materials.

Third. Under title III, as it now stands, Buffalo will lose about $25,000 for instructional equipment material such as audio-visual aids, foreign languages and the like.

Fourth. Under the National Defense Education Act and VA, Buffalo would lose about $80,000 as the bill now stands which is desperately needed to improve guidance counseling services. The ratio of guidance counselors to students in Buffalo now stands at one counselor to 400 boys and girls. It should be one counselor to 250 young people.

Fifth. Under Elementary and Secondary Education Act, title III, Buffalo expects it would have to curtail innovative and experimental programs to the tune of $60,000.

Sixth. Under vocational education, Buffalo would stand to lose $25,000 under the present bill. This would mean that needed equipment at Buffalo's seven excellent vocational and technical high schools would not be purchased. It costs twice as much to educate a youth in a vocational school, but New York State provides nothing extra. In the opinion of Buffalo's School Superintendent, Dr. Joseph Manch, every high school should offer vocational education so that every student could have it available to him.

Seventh. Under impacted area aid, Buffalo would stand to lose $160,000 as the bill now stands. This is $160,000 that has already been budgeted as anticipated funding. I should note here that the Buffalo Board of Education estimated that for this present fiscal year it would need $6,000,000 more just to carry out the same programs as last year on the same level. But it got only $16,000 more. The State failed in its responsibility and compounded the emergency.

So that the total comes to $1,050,000 that is desperately needed by the schools of Buffalo, I hope the House will see its way clear to passing the Joelson amendments.

Mr. ADDABBO. Mr. Chairman, I rise in support of the Joelson amendment. Specifically, the focus of my remarks will be directed to title II of the Elementary and Secondary Education Act. The legislation is aimed at remedying some of the deficiencies in the area of school library resources, textbooks, and other printed and/or published instructional materials existing in our Nation's schools. In fiscal year 1969 there was appropriated in support of this legislation $50 million out of an authorization of $162.5 million. For fiscal year 1970, against an authorization of $200 million, the committee has recommended that no specific amount be appropriated in support of title II, but rather that funds for this purpose be included in a general

fund that would cover not only title II of ESEA, but title III of ESEA, and titles III–A and V–A of NDEA as well. In fiscal year 1969 there was appropriated in support of all these titles a total of $311.61 million. The committee recommends that we appropriate in fiscal year 1970 the sum of $200.16 million to support all these titles. Since this is $110.5 million under fiscal year 1960 levels, it is clear that title II of ESEA will suffer a severe blow if the committee recommendation is accepted by this body.

All evidence clearly established a continuing need to fund title II ESEA at substantial levels. As of March 1968, there were 36,000 public schools in our Nation that lacked library facilities. Increasing enrollments are placing more and more demands on those school library facilities which already exist.

Texts and other instructional materials, already in short supply in many school districts, are bound to become obsolete through extended use if funds are not available for replacement. While the Joelson amendment will not provide funds sufficient to overcome these deficiencies, it does insure—to some extent—that programs under title II will not be allowed to backslide to a point where gains made in the last 5 years will be canceled out. I, therefore, urge you to vote yes for the Joelson amendment and for the youth of America.

SUBSTITUTE AMENDMENT OFFERED BY MR. MICHEL FOR THE AMENDMENT OFFERED BY MR. JOELSON

Mr. MICHEL. Mr. Chairman, I offer an amendment as a substitute for the amendment offered by the gentleman from New Jersey (Mr. JOELSON).

The Clerk read as follows:

Amendment offered by Mr. MICHEL as a substitute for the amendment offered by Mr. JOELSON: On page 25 beginning with line 9 and continuing to line 17 on page 26, insert the following:

"For carrying out titles II, III, V, VII, and section 807 of the Elementary and Secondary Education Act of 1965, as amended, section 402 of the Elementary and Secondary Education Amendments of 1967, and title III–A and V–A of the National Defense Education Act of 1958, $254,163,000; of which $200,163,000 shall be for school library resources, textbooks, and other instructional materials under title II and supplementary educational centers and services under title III of said Act of 1965 and for equipment and minor remodeling and State administrative services under title III–A and guidance, counseling, and testing under title V–A of said Act of 1958 (to be distributed in accordance with regulations promulgated by the Secretary of Health, Education, and Welfare); and $29,750,000 shall be for strengthening State departments of education under title V of said Act of 1965.

"For an additional amount for grants under title I–A of the Elementary and Secondary Education Act of 1965 for the fiscal year 1970, $205,360,700: *Provided*, That the aggregate amounts otherwise available for grants therefor within States shall not be less than 92 per centum of the amounts allocated from the fiscal year 1968 appropriation to local educational agencies in such States for grants.

"SCHOOL ASSISTANCE IN FEDERALLY AFFECTED AREAS

"For carrying out title I of the Act of September 30, 1950, as amended (20 U.S.C., ch. 13), and the Act of September 23, 1950, as amended (20 U.S.C., ch. 19), $521,067,000, of which $505,900,000 shall be for the maintenance and operation of schools as authorized by said title I of the Act of September 30, 1950, as amended, and $15,167,000 which shall remain available until expended, shall be for providing school facilities as authorized by said Act of September 23, 1950."

Mr. MICHEL (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read inasmuch as it is the same as the amendment I previously offered.

Mr. O'HARA. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

The Clerk will read.

The Clerk proceeded to read the amendment.

Mr. MICHEL (during the reading). Mr. Chairman, I ask unanimous consent that the substitute be considered as read inasmuch as it is the same as I offered previously.

The CHAIRMAN. The Chair would suggest the gentleman explain the meaning for his request. There was no objection.

Mr. MICHEL. Mr. Chairman, it is only in the interest of time.

The CHAIRMAN. Will the gentleman explain the meaning of his request? Does the gentleman wish to tell the committee what he told the Chair just now?

Mr. MICHEL. Mr. Chairman, I simply asked unanimous consent that my substitute for the amendment be considered as read, inasmuch as it is in the same form as that which I offered previously.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

Mr. QUIE. Mr. Chairman, reserving the right to object, does the gentleman make the announcement about striking out later paragraphs in the bill?

Mr. MICHEL. Mr. Chairman, there is no need for that kind of announcement. I have offered an amendment.

Mr. JOELSON. Mr. Chairman, further reserving the right to object, did the gentleman make the announcement that he will serve the same type of notice I served, that this is the same type of amendment?

The CHAIRMAN. Under the circumstances of the gentleman's amendment, he does not have to serve that notice.

Mr. O'HARA. Mr. Chairman, a parliamentary inquiry.

Mr. MICHEL. Mr. Chairman, I withdraw my unanimous-consent request, and ask that the substitute amendment be read.

The CHAIRMAN. The Clerk will read.

The Clerk concluded the reading of the substitute amendment.

The CHAIRMAN. The gentleman from Illinois is recognized for 5 minutes in support of his substitute amendment.

PARLIAMENTARY INQUIRY

Mr. QUIE. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. Does the gentleman from Illinois yield for a parliamentary inquiry?

Mr. MICHEL. I yield.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. QUIE. If the substitute amendment of the gentleman from Illinois prevails, is the remainder of the title still open to amendment, which would have been amended if the amendment offered by the gentleman from New Jersey (Mr. JOELSON) had prevailed?

The CHAIRMAN. If the substitute amendment offered by the gentleman from Illinois is agreed to and the Joelson amendment as thereby amended is agreed to, then there are some remaining paragraphs which have not been read and they would be next for consideration and subject to amendment.

Mr. QUIE. So the announcement of the gentleman from New Jersey that subsequently those further paragraphs he would move to delete would no longer prevail; is that correct?

The CHAIRMAN. The Chair is not faced with that situation. If a motion to delete the remaining paragraphs is made, that would be for the consideration of this Committee.

PARLIAMENTARY INQUIRY

Mr. JOELSON. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. Does the gentleman from Illinois yield for that purpose?

Mr. MICHEL. Mr. Chairman, may I ask if this is coming out of my time?

The CHAIRMAN. It is coming out of the gentleman's time.

Mr. MICHEL. If the gentleman would consent to an additional 5 minutes, I would yield.

The CHAIRMAN. Does the gentleman make that request?

(By unanimous consent, Mr. MICHEL was allowed to proceed for an additional 5 minutes.)

The CHAIRMAN. Now does the gentleman from Illinois yield for a parliamentary inquiry?

Mr. MICHEL. I yield, Mr. Chairman.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. JOELSON. If the gentleman's amendment should carry, what would he move to delete?

The CHAIRMAN. If action is taken on the Michel substitute amendment and it is agreed to, and then the Joelson amendment is agreed to, then we would proceed to read the succeeding paragraphs which have not been read and amendments of various kinds may be made to those paragraphs.

Mr. JOELSON. Mr. Chairman, may I ask the gentleman a further parliamentary question?

Mr. MICHEL. I yield to the gentleman.

Mr. JOELSON. Does your amendment refer to any subject matter not contained in my amendment?

Mr. MICHEL. Not to my knowledge.

Mr. JOELSON. Thank you.

The CHAIRMAN. The gentleman from Illinois will proceed.

Mr. MICHEL. Now, Mr. Chairman, the gentleman from New Jersey has sweetened up his package here for those 385 Members in this House who get a little piece of that action, that is, the federally-impacted aid money. In our bill we held to the budget request of $202 million, but we recognized that these 385 Members would probably want to do something additional for their districts with respect to impacted aid.

At this point, Mr. Chairman, I would like to yield to the original author of the amendment to increase that amount up to last year's level, the gentleman from Kansas (Mr. SHRIVER) and have him take the ball at this particular point. Before doing so may I say that the first part of my amendment here would hold the committee figures to our $84 million increase for the four categories of Supplementary Educational Centers, library resources, guidance counseling and testing and equipment and minor remodeling.

Mr. PERKINS. Mr. Chairman, will the gentleman yield to me?

Mr. MICHEL. I am sorry. I have to yield to my friend from Kansas.

Mr. SHRIVER. Mr. Chairman, I thank the gentleman from Illinois for yielding to me.

Mr. Chairman, my amendment will restore $318.9 million to the Public Law 874 program. This would make $505.9 million available for school assistance in federally affected areas which is the same amount as appropriated for 1969.

Nearly 19 years ago the Congress established a program of Federal assistance to school districts which were affected by Federal activities. The program recognizes the inequity of forcing local taxpayers to pay the extra costs of educating an increased enrollment of new pupils as a result of expanded Federal activities in local school districts. The number of Federal installations used as a basis for Public Law 874 funding in fiscal 1968 was 5,601; 85 percent of these were military bases. Payments are also made under Public Law 815 to assist in constructing schools in areas where enrollments are increased by Federal activities. The request for this item in fiscal 1970 is $15,167,000.

The Public Law 874 program is based primarily on two categories of children. Those who live on Federal property with a parent employed on Federal property are "a" pupils, and children who either live on Federal property or live with a parent employed on Federal property are "b" pupils. The amount paid for the "a" category child is roughly one-half of the yearly per pupil cost, and the amount paid for "b" category children is roughly one-fourth of the cost per child.

This year the committee has accepted the administration's request for $202,167,000 for the impacted-area programs. This would include $154.7 million for category "a" children, $32.3 million for the full cost of educating 52,400 pupils under section 6, and $15.2 million for Public Law 815 construction costs. No funds are provided for category "b" pupils.

According to testimony before the committee, there are approximately 2.5 million children in the "b" category, or about 5½ percent of our total number of elementary and secondary school pupils. Actually, 52 percent of all public school children attend schools receiving this aid. The elimination of "b" funds has created a pending crisis for local school districts. They are, in many cases, awaiting action by Congress on this matter to determine local tax levies for the coming year. Failure of the Congress to restore these funds to their 1969 level could mean the difference between holding the line or increasing property taxes in many school districts.

I have heard the argument that category "b" parents contribute to the upkeep of these schools through State sales taxes, but it is well known by those who pay the bills that the major source, by far, for education expenses is the local property tax, not the State sales tax. At any rate, many of these category "b" school districts are inhabited by low-income enlisted personnel with large families and stays of short duration. Many of these bases provide post exchanges for these low-income people, thus removing a large part of local income from these installations and from State sales tax income.

It is depressing to note that with the reported recommendation, after the $32 million for section 6 is taken off the top, the remaining funds would pay only 28 percent of full entitlement if both "a" and "b" children are included.

If these programs were to be funded in full for fiscal 1970, a total of $650.6 million would be needed. In addition to this, the low-rent public housing amendments which were added to the education authorization by the house earlier this year would add nearly one-quarter of a billion dollars per year to this program. Also, if full entitlement were granted for the construction program, that would add nearly $65 million to the bill.

On a number of occasions in the past. I have supported funding of this law up to full entitlement. These days, however, are not ordinary.

The difficulties in obtaining Senate passage of the surtax extension only serve to add weight to the burden of inflation. I believe it would be irresponsible at this time for the house to add $145 million included in a so-called full-funding amendment.

Such action may also be impractical. If the full-funding amendment is adopted, it would be probable that the full amount would not be allocated by the Bureau of the Budget. We have faced that problem before. Thus, local school districts still would not know what to do about their local tax levies. We would at least be on firmer ground with this amendment which holds fiscal 1970 spending to the fiscal 1969 level.

Over the years, the impacted areas program has proven to be one of the most effective and least-complicated programs providing Federal assistance to education. We all know there are some inequities in this program. For example, there are many wealthy counties in the country, such as suburban communities outside Washington, D.C., which are large beneficiaries of this aid when, in fact, Federal activities in the area constitute tremendous economic advantages for those school districts.

My own children have been counted in Fairfax County, Virginia's allocation of funds, and I own my home and pay most of the taxes of the State and area, so there is not any real impact upon the school system because of my employment on Federal property. There have been several studies advocating a change in the impact aid program. There is presently another study being conducted. Changes, however, should be made by the legislative committee after hearings and careful consideration, not by the Appropriation Committee—nor in an appropriation bill.

Last year, we appropriated $200,000 for an evaluation of the program to determine whether or not the payments were too high or too low in some categories. The survey will be completed in December by the Battelle Memorial Institute of Columbus, Ohio. We should wait until those recommendations are made before making major funding changes, be they increases or decreases.

I believe that restoration of Public Law 874 funds in the same amount as voted in 1969 is a reasonable and responsible compromise at a time when we are endeavoring to fight inflation. It also honors the longtime commitment of the Federal Government with 4,235 school districts in the country which have relied in part on this 19-year-old program. I urge you to support this amendment. It is reasonable; it is responsible in this point of time and with the fiscal problems we face; it is the proper compromise while we await the studies and the Legislative Committees consideration of changes in this program. It does not violate any prior commitment.

We are endeavoring to fight inflation. This action would honor the long-term commitment of the Federal Government to the 4,235 school districts in the country which have relied, in part, upon this program for the period of 19 years.

So, Mr. Chairman, I urge the members of the Committee to support the amendment which has been offered by the gentleman from Illinois (Mr. MICHEL).

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I shall be happy to yield to the distinguished chairman of the full Committee on Appropriations.

Mr. MAHON. Mr. Chairman, there seems to be some considerable uncertainty and confusion as to just what is pending before us.

Let me ask the gentleman from Illinois: Is it true that with respect to this portion of the bill, he is proposing no change in the bill as it is printed and as it is before all of the Members of the House? He is making no change whatever, except that he is adding $319 million above the budget for impacted aid.

Is that the only issue involved and is that the only change being proposed by the gentleman from Illinois?

Mr. MICHEL. The chairman is altogether correct.

Mr. MAHON. I wish to say, Mr. Chairman, that I strongly support the gentleman's substitute.

Mr. MICHEL. As I indicated in the first part of my statement——

Mr. ANDREWS of Alabama. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Alabama.

Mr. ANDREWS of Alabama. Will this $319 million proposed by your amendment take care of the so-called category "b" schools?

Mr. SHRIVER. Mr. Chairman, will the

gentleman from Illinois yield to me in order to respond to that question?

Mr. MICHEL. I yield to the gentleman from Kansas.

Mr. SHRIVER. It would.

Mr. ANDREWS of Alabama. If the gentleman will yield further, at the same level of funding for 1969?

Mr. SHRIVER. Mr. Chairman, if the gentleman will yield further; no, not the same level of funding because we do not know how many students there will be, but at the same rate of category "a" students.

Mr. MICHEL. The category "a" and "b" students would be at the same level.

Mr. ANDREWS of Alabama. In other words, there would be no change in their status?

Mr. MICHEL. There will be no distinction between the two.

As I started to say, in the first part of this amendment we added $84 million to the four items where there was only $116 million for supplementary educational centers and nothing for library resources, guidance and counseling and equipment.

In summary what we added in committee and what I am proposing to add for impacted aid we are $402 million over the budget on the items included in my substitute.

I am certainly not proud of supporting those kind of increases, but I see the handwriting on the wall and would much prefer this to the $894,547,000 increase as proposed by Mr. JOELSON.

Mr. ANDREWS of Alabama. I thank the gentleman.

Mr. BOLAND. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in opposition to the substitute and in support of the amendment offered by the gentleman from New Jersey (Mr. JOELSON). I say this because it seems to me that if one listened carefully to the argument of my beloved and distinguished chairman of the full Appropriations Committee and to the response of the gentleman from Illinois (Mr. MICHEL), the ranking minority member on the Labor-Health, Education, and Welfare Subcommittee, one should vote against the substitute.

Mr. Chairman, let me repeat that if one listened to the arguments advanced by the chairman of the full Appropriations Committee—a giant of this Congress, or any other Congress, for that matter, and a man I love and admire—and if one listened to the response of the gentleman from Illinois, a distinguished and highly respected Member of Congress known for his diligent work on the Appropriations Committee, it would appear that their comments are really in support of the Joelson amendment rather than in opposition. I say this because the only aid-to-education program in which they appear to be passionately interested is the one that offers financial assistance to federally-impacted school districts—the one that has elicited the support of 385 Members of this body, as the distinguished gentleman has cited, because they have some kind of military installation in their areas.

So they are concerned about federally impacted areas—and justly concerned. I feel that all 385 Members have a right to believe the Federal Government must honor its commitment to provide financial assistance under Public Law 874—not only for category "a" students but for category "b" students as well.

That is enough on impacted areas. All of you know this issue well. All of you know how you are going to vote on it.

But I think we should be just as concerned—just as passionately concerned—about the poor, the disadvantaged, the disinherited millions that live in the Nation's rotting ghettos and ruined countryside towns. The programs that would help the children of these millions to realize their educational goals would be given at least a modicum of financial strength under the amendment sought by Mr. JOELSON. Programs such as ESEA, title II and title III; NDEA, title III and title V; vocational education, higher education grants, and the student loan program would continue stimulating education in the United States if Mr. JOELSON'S amendment carries. These programs are the ones we should fund most amply because they are the ones that will eventually help solve the country's major problems—poverty, unemployment, injustice, and all the social ills that attend a lack of educational opportunity.

Mr. Chairman, I do not come to the well of this House with a bleeding heart; nor do I come here as one who is impressed with what we spent on aid-to-education 5 years ago or 10 years ago.

I come here only to urge that we accept our responsibility to fund education programs as adequately as possible. The problems faced by our school systems are mounting. They are difficult. They are complex. One of the best ways to help solve them is in the legislation now before us.

So we should stand up and be counted on the funding of education programs that the legislative committees have strived so hard to develop over the past years, and with which the Labor-HEW subcommittee has cooperated so well over the same period of time.

We must not compromise our Nation's school systems.

The sweeping cuts sought in fiscal 1970 Office of Education programs would jeopardize the school systems responsible for educating American children, and, in turn, would jeopardize the very future of the United States.

It would be the most arrant brand of false economy to carry out wholesale budget cuts in aid-to-education programs—programs, that school systems throughout the country need, to meet their responsibilities in this era of increasing social and technological sophistication.

Such cuts, in fact, would be tantamount to taking a $5 oar away from a boatsman struggling to row $5,000 worth of cargo across a river. "Sorry," we would have to say to him. "But we have to do this in the interest of economy."

In 1965 we made an historic commitment to the improvement of education at all levels and to the expansion of educational opportunity. I think that the question confronting us today is whether we are willing to compromise that commitment.

In 1965 President Johnson proposed "a program to insure every American child the fullest development of his mind and skills." Subsequently in his education message he declared:

> We want this not only for his sake . . . but for the Nation's sake. Nothing matters more to the future of our country; not our military preparedness, for armed might is worthless if we lack the brainpower to build a world of peace; not our productive economy, for we cannot sustain growth without trained manpower; not our democratic system of government, for freedom is fragile if citizens are ignorant.

These remarks set the tone of the 90th Congress. They reflected, too, the depth of our commitment and signaled a new direction in Federal aid to education. Someone has suggested that children do not fail but rather that schools fail our children.

Education deficiencies so blatantly clear by 1965 would seem to substantiate this claim.

Then Secretary of Health, Education, and Welfare Celebrezze and Commissioner of Education Keppel both underscored the close relationship between education attainment and family income. At that time enrollments in elementary and secondary schools were expected to increase by 4 million within the next 5 years. It was also estimated that almost this same number of young people would drop out of high school before receiving their diplomas.

The greatest education deficiencies were then and are now in the schools that serve the children of the poor in the heart of our large cities and in many rural communities.

No less an educator than our present Commissioner of Education and then Commissioner of Education in the State of New York, James E. Allen, Jr., underscored the seriousness of the situation. No one painted a more vivid and disturbing picture of the plight of schools that house the children of racial minorities and of the economically deprived.

Commissioner Allen said:

> It is abundantly clear, that a society committed to the principle of equality and with the means to achieve it, must act swiftly and massively with measures appropriate to the need.

I agree with Commissioner Allen. I, too, believe that we have the means to achieve educational equality. But the proposed HEW budget certainly does not reflect that capability. As Commissioner of Education in New York, Mr. Allen noted that even with the full funding of title I of the Elementary and Secondary Education Act it "would be only a modest beginning on a tremendous task." I believe that this is applicable on a national scale.

That is why I am wholeheartedly supporting the package of amendments introduced by Representative JOELSON.

The authorization for fiscal year 1969 for title I of ESEA was $2.184 billion and slightly over half of that amount was appropriated. For fiscal year 1970 some $2.359 billion is authorized, yet the administration is asking for only $1.226 billion. The Appropriations Committee seeks even less—only recommending $1.216 billion.

The amendment sought by Mr. JOEL-

SON would increase title I appropriations to nearly $1.4 billion for fiscal year 1970. With elementary and secondary enrollments skyrocketing, I do not see how we can expect education agencies to maintain, even their present efforts, for disadvantaged children on a lesser amount.

Another revision Mr. JOELSON proposed would maintain intact the individual appropriations for titles II and III of ESEA and titles III–A and V–A of the National Defense Education Act.

H.R. 514 as passed by the House this year would allow a combined appropriation for these titles. The danger of this approach has been demonstrated in the meager budget request of only $116,-163,000—all of which has been earmarked for title III of the ESEA.

It is extremely difficult for me to understand how the needs and accomplishments of other titles can be conveniently ignored. There are pages and pages of testimony from all sources in the 1965 ESEA hearings concerning the importance of books, libraries and educational equipment in the education process.

The proposed budget would seem to indicate that these have now become low propriety items.

The testimony before an Appropriations Subcommittee on this cutback of library and equipment funds was weak, indeed. The gist of the Office of Education's reasoning was that since so much has already been accomplished under these programs, and since we have, what was termed a "very constrained budget," we could put these programs aside for a while. However, one administration witness went on to say that, "I would suspect, in subsequent years, we would come before you and reiterate the importance of using Federal resources to help purchase books, equip libraries, and provide equipment to the schools."

None of this makes sense to me. I believe that it is necessary to make specific appropriations for each of these programs or some—quite obviously, will be cut back entirely.

Financial jargon such as "a year of stringent budget" and "realigning of our priorities" and "constrained budget" is simply begging the question.

Many of HEW witnesses before the Appropriations Subcommittee are the same people who testified 4 years ago on the pressing need for greater Federal support for elementary and secondary programs, for college facilities and student aid, for expanded public libraries, for better vocational education programs.

If our educational needs were critical 4 years ago then they are no less critical today. I do not believe that the needs of our disadvantaged, handicapped, migrant, Indian and Spanish-speaking children, of our potential dropouts, of our potential college and vocational school students can be economized.

I vigorously support the amendment to appropriate $50 million for title II of ESEA, the same amount appropriated last fiscal year; to appropriate $78,740,-000 for title III of the NDEA, a figure also equal to last year's funding level; to appropriate $17 million for title V of the NDEA; and to appropriate $164,876,-000 for title III of ESEA.

Aid to federally impacted school districts, the districts charged with educating the children of Armed Forces personnel and Federal employees, is still another program that must be adequately funded. Yet the legislation now before us seeks a fiscal 1970 appropriation of only $202,167,000, a sum that would assist in the education of category "a" students, but that would wholly ignore category "b" students.

In enacting Public Law 874, the law authorizing financial assistance to impacted school systems, the Congress recognized its responsibility to help thousands of communities throughout the Nation.

These communities, faced with soaring school enrollment rates spurred by manpower buildups in the Armed Forces and the defense industry, are caught in a financial squeeze, of almost unprecedented severity.

Military personnel and defense workers are often transients living on Federal installations or in rented apartments, contributing very little to the tax base of a community. The school systems responsible for educating their children have drafted budgets and educational programs with the assumption that the Congress would honor its commitment under Public Law 874.

Major budget cuts in this program would create educational chaos in these school systems.

Chicopee, Mass., for example, is a city in my congressional district that must educate the children of personnel at nearby Westover Air Force Base. This community would be shortchanged by hundreds of thousands of dollars if category "b" is not funded. Other communities in my district would be similarly hard hit—Springfield, Ludlow, Wilbraham, the Hampden Wilbraham School District, Granby, South Hadley and Belchertown.

For the sake of these communities, and thousands more like them throughout the country, I urge adoption of the Joelson amendment proposing $585 million for Public Law 874.

Several areas of post-secondary education have been subjected to the slash of the budget cutter's knife, areas where I do not believe we can afford to economize.

Vocational education has become increasingly more important in the past few years because the need for post-secondary education has become increasingly more important.

It is just as necessary to provide adequate vocational education to motivated students as it is to provide high quality, higher education for qualified students. Legislation enacted by the 88th Congress in 1963 provided a major thrust forward in achieving this goal. Efforts were reinforced by extensive amendments in 1968.

The Vocational Education Act and its amendments can accomplish little, however, if we fail to provide adequate funding. That is why Mr. JOELSON's proposed amendment would appropriate a substantial increase, for vocational education programs over last year's amount. Under the amendment $488,716,000 would be available for vocational education in fiscal year 1970.

Another area in which we must maintain at least last year's level of funding is the construction of undergraduate academic facilities. The proposed budget calls for phasing out grants for the construction of undergraduate facilities, and would substitute instead, some $11,750,-000 for annual interest grants on construction loans obtained from private sources.

Building costs have been skyrocketing in the past few years—moving upward at a rate approaching 12 percent annually. Spiraling college enrollments make it undesirable at this time to consider the phasing out of this program. The proposed amendments would appropriate the amount of $33 million for fiscal year 1970, the same amount appropriated last year.

One final program that would be strengthened by the amendment package is the NDEA student loan program.

The administration's budget seeks only $161,900,000 for the loan program—$31.5 million less than last year. The committee recommendation is that the program be increased to $188.2 million for fiscal year 1970.

In any testimony or study I have ever read the NDEA student loan program has been lavishly praised particularly because it enabled many students to pursue their educations. The NDEA loan program is focused on the needy student, the one who would not be able to attend college without such assistance. And there are many such students.

The cost of higher education is putting college farther and farther out of the reach of increasing number of students. I do not believe that the existence of an insured loan program obviates the need for the NDEA student loan program. If anything, the tight money market and the reluctance of many banks and lending institutions to participate in the program dictate that we not only maintain the NDEA student loan program but that we expand it.

The Joelson amendment would appropriate $229 million for fiscal year 1970—a modest increase.

Mr. Chairman, I am sure that all of us are alarmed by the overheated economy and its inflationary trends. This necessitates a tightening of our belt.

Certainly we must scrutinize the budget very closely this year. We must eliminate waste and duplication. We must reconsider the expansion of existing programs and the initiation of new ones.

I would hope, however, certain fundamental goals are not subject to cutbacks. Educational excellence and opportunity are two such goals. We have undertaken to achieve these goals. We must not compromise them!

The Joelson amendments merely maintain our present effort in education. They would simply prevent us from backtracking. If we are to have the future scientists, educators, doctors, elected officials, trained technicians, and informed citizens, we must support our schools.

I strongly urge my colleagues to join

me in supporting the Joelson amendments.

Mr. DULSKI. Mr. Chairman, will the gentleman yield?

Mr. BOLAND. I yield to the gentleman.

Mr. DULSKI. Mr. Chairman, I am disappointed in the action of the Appropriations Committee in dealing with certain areas of the budget for the Office of Education.

The committee's recommendations follow pretty much along the line of the revised budget of the Nixon administration.

But these recommendations, to my mind, ignore the facts of life with regard to the financing of many of our school systems today.

The details of school budgets are not new to me. I formerly served on the common council of my home city of Buffalo, N.Y., which handles the budget for the Buffalo school system.

Since I am particularly familiar with the current crisis in the Buffalo school budget and its relation to the current appropriation bill, I am going to use the Buffalo situation as my example.

Let me be specific:

On ESEA I, the committee has recommended $3.8 million—about the same amount allocated in fiscal 1969. This is not nearly adequate for fiscal 1970. I believe the amount needs to be increased at least 7 percent just to cover the cost-of-living factor. If Buffalo is held to the fiscal 1969 allocation, it will mean that Buffalo will be forced to curtail programs for the disadvantaged and to cut or eliminate other programs. The costs of education are not static, they are increasing; it is essential that the Federal share be increased to at least maintain the status quo for our local school budgets.

On ESEA II, the proposed fiscal 1970 appropriation provides no funds and this will mean a loss of $200,000 for library resources in the Buffalo school system. The effect of this cut is obvious.

On NDEA III, there is no allocation for fiscal 1970, which will mean a loss for the Buffalo system of about $25,000 for instructional equipment and materials. Another backward step.

NDEA V–A also is not funded under the bill, which will mean a loss of about $80,000 for the Buffalo system being used to improve guidance services. This is a program which we most certainly cannot afford to curtail.

ESEA III does receive certain funding in this bill, but it is our understanding that the amount is not adequate and probably will require curtailment of innovative programs.

The most serious budget setback for Buffalo and many, many other communities in the Nation is the slim budget allocated in this bill for impacted area aid.

The allocation of $187 million is only about one-fourth of what is needed. The need is for $650 million. If the proposed allocation in the bill is not increased, it will mean a loss of Buffalo's entire allocation of about $160,000. Please note this is only six figures. Yet, tc our school budget in Buffalo it is significant and will produce a deficit in our current operating budget. Indeed, this is the only general Federal aid used as support for current operations.

Mr. Chairman, I hope sincerely that the House will increase these budget items for the Office of Education because of the vital importance to our individual communities which already are having severe budgetary problems.

At this point, Mr. Chairman, I would like to include the text of a statement which was made June 26 to the Senate Subcommittee on Education by Dr. Joseph Manch, Buffalo superintendent of schools, in testifying on public housing amendments to Public Law 874. While this is not directed specifically to the bill now before the House, it outlines the problems which our city is having in trying to meet the educational needs of our young people.

The statement by Dr. Joseph Manch, Buffalo, N.Y., superintendent of schools follows:

STATEMENT OF DR. JOSEPH MANCH

As Superintendent of schools in Buffalo, New York, I have long been interested in proposals to achieve equity in federal-state-local partnerships in financing large city schools. One major element of such a move toward equity is the recognition of federal impact in the large cities.

When Congress amended Federal Law 874 several years ago so that Buffalo's substantial numbers of federally connected children were to be recognized in the aid formula, a step toward justice was taken. The step was aborted, however, when Congress failed to underwrite the cost of the plan with the necessary appropriation.

The following two years the funds were made available and Buffalo received aid for those children whose parents served the federal government. Now I note with deep concern that the present budget stance in Congress would eliminate Buffalo and many other districts entirely from participating in PL 874 funds next year.

When in 1967, it was suggested that Federal school aid be paid on the basis of public housing in the large cities, I strongly supported such a move in testimony before this committee. Again in 1968 and still again early this year, I, along with our School Board President, confirmed this support in statements before the House Education Committee and the Big City Council of the National School Boards Association.

Let me recapitulate our position.

Low-rent public housing produces concentrations of socially and economically disadvantaged families whose children relate primarily to each other. The result is to reinforce the cycle of disadvantagement and to add to the already costly problem of meeting the special educational needs of these children.

It is not yet possible to quantify the excess social and educational cost resulting from this advertency, using objective and conclusive data. If we judge the educationally disadvantaged child to be one who is academically retarded at least 1 year, however, then it can be estimated that the cost of erasing that disadvantage is at least the current average cost of a year's schooling—$900 per pupil.

The Buffalo Municipal Housing Authority reported in September 1968 that federally-aided housing developments in Buffalo include 4,231 units occupied by families whose median income is $2,628. The largest proportion of these families is on the welfare rolls, broken families outnumber standard families, and the proportion of non-white families is considerably greater than the citywide average. Approximately 4,200 children of school age live in these housing units.

Ironically, as special educational needs are fostered and reinforced in a public housing situation, the means to a financial solution are simultaneously weakened. This results from the fact that such property is excluded from the tax rolls and the property tax is the mainstay of local revenue for both city and school purposes.

Federal payments for these properties in lieu of taxes amount to $220,000, but none of this is available to the schools. If these federally-aided developments were subject to taxation, however, they would produce over $1.1 million in property tax revenue.

In summary, the factors of added needs and reduced resources which I have just outlined mean an added cost burden of some $1,000 per pupil. The federal government, through ESEA Title I, and New York State, through its special urban education aid, are at best supplying about $200 towards financing this added cost.

It is recommended, therefore, that federal legislation be adopted to provide payments recognizing the federal impact on school financing that results from such public housing. In this respect, I would support Senate bill 2834 by Senator Javits or Senate bill 2147 by Senator Eagleton, with the single reservation that neither appears to provide sufficient funds to recognize equitably the federal responsibility in this matter.

For ease of data-gathering, a bill such as S. 2834 basing payments on housing units rather than pupils, would be more operable, although municipal housing authorities could be required to report data in either manner.

In any event, I would urge this committee to recommend and support legislation which would have the federal government assume its proper share of school support, particularly in this situation where federal responsibility is so clear.

Mr. COHELAN. Mr. Chairman, I move to strike out the last word and rise in opposition to the amendment.

Mr. Chairman, in general debate I did not have time to go over some of the things contained in the package amendment. I would like to emphasize them at this time.

Also I would like to take this opportunity to concur in the very eloquent remarks of my colleague, the gentleman from Massachusetts (Mr. BOLAND) because they absolutely square with the facts.

You will recall that this morning we sent out a letter fully supporting the package amendment, along with the major education, religious and labor organizations.

We recognize that the sums requested in the amendment do not fill the entire $5 billion gap between the present authorizations and appropriations. However, the Joelson amendment will at least permit the continuation of ongoing programs and more adequate funding of others such as impacted aid, vocational education, and title I ESEA and NDEA student loans.

This letter, Mr. Chairman and members of the Committee, was signed by seven members of the Committee on Appropriations and most of the members of the Education and Labor Committee.

What I would like to do in the few minutes that I have is to stress something that I am terribly interested in. That is indeed a package, most of which receives widespread support throughout

the community among our schools and colleges.

ESEA—TITLE I

But I would like to speak for a minute on title I. In the ESEA Act Amendments of 1967, the Congress provided statewide programs for disadvantaged students should be 100 percent fully funded, even if the Congress failed to appropriate the full amounts authorized by the Congress.

Since we have not ever appropriated more than 40 percent of the funds authorized for title I of ESEA, each local educational agency, and that means the schools, has received a prorated share well below the authorized levels.

Yet, the statewide programs received full funding.

Because of the increase in number and size of these statewide programs, it is urgently necessary for the current fiscal year to provide $80,800,000 in additional funds above the committee's bill simply to insure that each school district in the fiscal year 1970 receives a Federal payment at least as large as the payment received in previous years.

For example, in 1968 we provided $210 for each disadvantaged pupil who qualified under the ESEA guidelines.

At the funded levels suggested by the administration and our subcommittee, we would be providing only $170 for each pupil this year.

In short, at the funding level of this bill, we would be taking a giant step backward and at the same time that we are taking this backward step costs of education are increasing at the rate of at least 5 percent a year. As I told the committee and as I said during general debate, in my own congressional district we are in a terrible condition.

We cannot even pass a school bond issue or raise. People talk about Federal aid to education. Where are we going to get the money? Sixty percent of the children in the Oakland school system are blacks, and we cannot get local government to support the kind of finances that are required to maintain the standards of our public schools. What ESEA is all about is to help disadvantaged students and to help the schools in districts serving these students. Many of these school districts exist throughout this country. In 3 short years education costs have escalated over 15 percent. It is for this reason that, under the suggestion of the committee, we would be moving still further to the rear.

It is for these reasons of attempting to maintain current funding for the local schools to meet the problems of increasing educational costs that we felt it necessary to appropriate and to include more than $180 million additional funds for programs to serve the educationally disadvantaged kids.

HIGHER EDUCATION

On higher education—and I come from a community with a great university, the University of California at Berkeley—two major schemes which provide Federal assistance to our colleges and universities are not working under current conditions. We recently created a new program of interest subsidies for construction of university facilities. Under this program colleges and universities are allowed to borrow money at commercial rates and then to seek reimbursement from the Federal Government for their interest payments. The trouble is that in 15 or 20 States public educational institutions cannot borrow money at the commercial market rate. These institutions need direct Federal grants for construction.

For these and many, many more reasons I strongly urge the defeat of the Michel substitute and the adoption of the Joelson package amendment.

AMENDMENT OFFERED BY MR. ROBISON TO THE SUBSTITUTE AMENDMENT OFFERED BY MR. MICHEL

Mr. ROBISON. Mr. Chairman, I offer an amendment to the substitute amendment offered by the gentleman from Illinois (Mr. MICHEL).

The Clerk read as follows:

Amendment offered by Mr. ROBISON of New York to the substitute amendment offered by Mr. MICHEL of Illinois:

"Strike the figure $254,163,000 and substitute in lieu thereof the figure $364,616,000, and strike the figure $200,163,000 and substitute in lieu thereof the figure $310,616,000."

The CHAIRMAN. The gentleman is recognized.

Mr. ROBISON. Mr. Chairman, I would appreciate having some order, if I could, because the situation already is confused enough without it becoming further confusing by virtue of the fact that Members cannot hear me.

What my amendment to the Michel substitute would do would be best understood by you if you would all turn to page 25 of the bill, which language has not been changed by the Michel substitute, and if you will then read on page 25 of the bill down to line 13 thereof, you will find the figure $254,163,000. My amendment to the Michel substitute would increase that figure by $110,453,000.

Then, on line 14 of the same page you will also find the second figure of $200,163,000. My amendment would also increase that by the same $110,453,000, making that figure $310,616,000.

Precisely what does this do? What this amendment to the susbtitute would do would be to raise to fiscal 1969 levels the appropriated funds for the four programs shown and lumped together by the committee in the bottom paragraph on page 32 of the report where the committee refers to them as being: first, supplementary educational services; second, library resources; third, guidance counseling, and testing; and fourth, equipment and minor remodeling.

The bill, as the committee report states, includes $200,163,000 for this purpose—or these purposes—compared with the budget request of $116,163,000. But what the report does not tell you is that the committee figure is still $110,453,000 below the funds appropriated for these purposes in 1969.

Mr. Chairman, what my amendment to the Michel substitute would do, then, would be to bring the moneys to be appropriated for these four valuable, necessary and ongoing education programs up to the same appropriation levels they had in fiscal year 1969, just concluded.

Mr. Chairman, as I said earlier today, I am not an admirer of the impacted aid program, particularly section 3(b) thereof. But it is as evident to me, as it is to everyone here, that the amount the subcommittee recommended for impacted aid is going to be substantially increased, either to the Michel figure or that proposed in the Joelson package.

And if it is, Mr. Chairman, then it is my position that these four programs that I have just mentioned, programs that have demonstrated their value—and the continuing need for which is apparent—if the impacted aid program is to go forward full speed, ought to go forward at full speed as well.

Mr. STEIGER of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. ROBISON. I yield to the gentleman from Wisconsin.

Mr. STEIGER of Wisconsin. Mr. Chairman, I commend the gentleman for his amendment. I have serious misgivings about the Michel substitute amendment and the original Joelson amendment as well, but if the Michel substitute is to be adopted, clearly these four titles deserve to have increases in money available also.

I support the Robison amendment and congratulate the gentleman for having offered it.

Mr. FEIGHAN. Mr. Chairman, will the gentleman yield?

Mr. ROBISON. I yield to the gentleman from Ohio.

Mr. FEIGHAN. Mr. Chairman, earlier this year, Paul W. Briggs, superintendent of the Cleveland public schools, told the House Education and Labor Committee that the major problems in urban living as they relate to education are isolation, poverty, unemployment, and drabness.

With a school enrollment of 153,000 children, Cleveland contains only 7 percent of the total school population in Ohio. However, Cleveland schools enroll 30 percent of the total number of children in Ohio who receive public assistance. The demands on the city, therefore, to provide even greater educational opportunities for their young people are tremendous. The city of Cleveland has recognized this challenge and has embarked on a series of innovative and effective programs to broaden the educational experience of its pupils. In their efforts, the city has utilized Federal funds for a wide variety of elementary and secondary education programs. In fiscal year 1969, the city's budget reached $5.5 million for just title I programs from the Elementary and Secondary Education Act.

It is well known that Cleveland is heavily dependent on Federal financial assistance to meet its critical program needs and I intend to do all I can to see that these requirements are met. Cleveland schoolchildren have benefited from a vast array of federally sponsored programs. If approved by the other body, authorized impacted aid funds will benefit over 15,000 Cleveland children alone who reside in low-income housing and attend public schools in Cleveland. In addition, thousands of youngsters have profited from special instruction at supple-

mentary educational centers, from up-to-date library books and materials, guidance counseling, and new educational equipment. The excitement of learning has been a wonderful experience for the thousands of disadvantaged children who have participated in these programs and the wonders of knowledge continue to offer unlimited possibilities for the undereducated.

I speak specifically of these programs only to emphasize their tremendous importance and to alert my colleagues to the danger of their impending demise.

The administration, in an effort to reduce its educational costs, excluded funds for school library materials or equipment for elementary and secondary schools. Neither did it request any money for counseling and services. It appears that little thought was given to the value of these programs when budget priorities were made because if any consideration had been given to the obvious educational advantages derived from these services, the full amount authorized by the Congress would have been requested. In an attempt to do justice to these vital programs, I recently joined with several other Members in urging the Subcommittee on Health, Education, and Welfare Appropriations to restore the educational and library budgets to their fiscal year 1968 level. Although sympathetic, the committee chose to include in one sum the funds for these three programs together with funds for supplementary educational centers. The bill thus provides for $200,163,000 to be appropriated for this purpose, an increase of approximately $84,000,000 from the administration's request for supplementary centers. While this action was certainly a major step forward, it is not, in my opinion, the most desirable method of funding these programs. Under the "package" amendment, however, offered by the distinguished gentleman from New Jersey, these programs would be funded separately and at a higher level than presently provided in the bill. The Joelson amendment restores these programs to their fiscal year 1969 levels and appropriates $50 million for school libraries under title II of the Elementary and Secondary Education Act; $78,740,000 for equipment under title III of the National Defense Education Act; $17 million for guidance and counseling services under title V of the National Defense Education Act; and $164,876,000 for supplementary educational centers under title III of the Elementary and Secondary Education Act.

In each instance the needs are even greater than provided for by this amendment. It is evident that the continuation of services is absolutely essential to those institutions which currently have operating programs, but it is of the utmost importance to stress the need for these services at schools which have felt the Federal financial pinch and have not yet been able to participate.

Education is the most precious opportunity we can provide to our young people and it is vital that we continue to advance the progress we have made thus far. This is why it is positively crucial for the Joelson amendment to pass. We recognized the pressing responsibility we had to our young people when we authorized almost $5 billion more for education than what is called for in House Resolution 13111. The Joelson amendment is the very least that we can do for our constituents since its primary purpose is to insure that certain programs receive the same amount of money this year as last. In five areas, it simply keeps programs at their fiscal year 1969 level. In the areas of impacted aid, the Joelson amendment provides for 90 percent of the money originally authorized by the Congress. I have already mentioned the more than 15,000 Cleveland children who benefit from these funds. Close to $3 million has been authorized by this body to meet the needs of these Cleveland pupils and the failure to appropriate the necessary funds for this program would severely reduce the number of children who stand to benefit from it. We must not allow aid to impacted areas to be cut back. We must not permit the program to be crippled. Instead, we must give it our resounding support.

Our efforts should not be limited to the programs I have described. Our losses to our young people and ultimately to our Nation, would be considerable if the Joelson amendment is not approved in is entirety. We must recognize the consequences that would be inevitable should this amendment fail. The progress that has been made on local, State, and Federal levels because of these programs would be halted. When children have had a taste of the wonders of learning, we cannot destroy their desire for more. We must nourish it.

This year I have received an unusual large number of letters and telegrams from educators in Ohio. The tenor of these messages is the same throughout—deep concern that vital educational programs will be crippled by the Congress. I have heard from elementary and high school teachers, college professors, librarians, guidance counselors, and vocational educational instructors as well as the students themselves. Everyone is frightened that all the good work we have accomplished will be undone. This apprehension is easy to appreciate because it unfortunately is too realistic a possibility.

In addition to these programs, there are other valuable programs that deserve special mention. The Joelson amendment seeks to implement those portions of the 1968 amendments to the Vocational Education Act which call for occupational training programs for the disadvantaged, and funds for vocational educational research. The necessity for effective occupational training opportunities has become increasingly apparent in recent years and last year's act was written in response to the growing awareness of the importance of vocational training in our society. We cannot now fail to fulfill those amendments which we so enthusiastically approved 1 year ago.

The student loan program under the National Defense Education Act has enabled millions of people to obtain a college education. Students at all levels from high school graduate to Ph. D. candidates are eligible for long term, low interest loans approved directly by their colleges. The rapid rise in interest rates has seriously reduced the availability of guaranteed loans and has made it absolutely imperative for additional funds to be made available for direct student loans. The $229 million figure in the Joelson amendment will permit many students to continue their college education and will also enable freshmen in financial need to participate in the program. Many of the young people who have worked for me have been able to attend college only because they had NDEA loans. There is no question that this program, particularly this year, must be expanded to meet the swelling enrollments of our colleges and universities.

Elementary and secondary schools, vocational institutions, colleges and universities in Cleveland and all around the Nation will be watching closely today to see what the House of Representatives does regarding educational funds. Cleveland has an urgent need for all the programs I have described. To combat the problems of isolation, poverty, and unemployment it is incumbent that we endorse the entire package amendment, not just segments of it. I urge the Members to give this amendment their unqualified support.

Mr. TIERNAN. Mr. Chairman, will the gentleman yield?

Mr. ROBISON. I yield to the gentleman from Rhode Island.

Mr. TIERNAN. Mr. Chairman, I rise in support of the amendment offered by the gentleman from New Jersey. His amendment would add nearly $900 million for vitally needed educational programs.

It is disheartening for me to think that while we are spending $20 to $30 billion a year in Vietnam, billions more in space, and untold millions in such widely diverse projects as research in chemical warfare and new weapons systems, we seem not to be able to afford the paltry sum of $900 million for the education of our children.

The glaring need for a reordering of our Nation's priorities has never been in more evidence than it is today when one looks at the figures in H.R. 13111. I submit to my colleagues that there is no greater need, no more fruitful an endeavor, no more necessary a task, than the continuing upgrading of the educational systems that are made available to our Nation's youth.

I urge all of my colleagues to consider this amendment in the light of what it can realize for tomorrow. For it has been said that "the youth of a nation are the trustees of posterity." Let us not play partisan politics with the best hopes for our country and the world.

Mr. BUCHANAN. Mr. Chairman, will the gentleman yield?

Mr. ROBISON. I yield to the gentleman from Alabama.

Mr. BUCHANAN. Mr. Chairman, I rise in support of the amendment offered by the gentleman from New York (Mr. ROBISON) and commend him for giving the Members opportunity to register their support for these vital programs. I must confess, however, serious reservations about both the amendment offered by the gentleman from New Jersey (Mr. JOELSON) and the substitute of the gen-

tleman from Illinois. The former provides for an increase in Office of Education programs of $894.5 million over the amount provided for in H.R. 13111—Labor-HEW appropriations for fiscal year 1970. This amendment provides for the above increase in a package which covers nine major areas of education appropriations. The Michel substitute increases the impact funds to last year's appropriation level.

Mr. Chairman, there is no question but that all of us here are vitally concerned that the best possible education be provided for our Nation's schoolchildren and that the Congress do all in its power to provide the financial assistance to our State and local education agencies which is necessary to make this education available. At this particular time, however, the Congress also has a solemn obligation to the citizens of this Nation to bring about a reversal of the inflation which is so rapidly reducing the purchasing power of their dollars. Not only is inflation the cruelest tax of all upon our citizens' hard-earned incomes, but it substantially increases the costs of such vital programs as those education programs we are considering in the Congress today.

Thus the task before us now is to find a way to fulfill our obligations both toward the educational needs of our schoolchildren and toward the fiscal responsibility which is absolutely essential in order to control inflation. This obviously poses a difficult problem and one which, in my judgment, cannot be solved by attempting to meet our responsibilities to education on a combination, or package, basis.

Included in the package amendment offered by the gentleman from New Jersey are funds for ESEA title I for the education of children of low-income families; impacted area aid; vocational education; NDE student loans; supplementary centers; guidance and counseling; library resources; equipment; and college construction. Because many of us do not see equal merit in each of these appropriation areas and because of the obligation to fiscal responsibility referred to above, it seems to me that we ought to deal with these appropriations on a more selective basis.

In specific reference to some of the education programs included in Mr. JOELSON'S amendment, I would fully support increased appropriation requests for such vital programs as vocational education, NDEA student loans, funds for title I of ESEA, and library funds.

Vocational education programs have always received my full support in the belief that they are a vital answer to our Nation's crucial problems of unemployment and poverty. Increased funds over the amount provided for in H.R. 13111 are particularly essential at this point to implement the 1968 Vocational Education Act Amendments, including those important provisions which call for occupational training programs for the disadvantaged.

In enacting title I of the Elementary and Secondary Education Act the Congress similarly sought to meet these problems by providing financial assistance to local educational agencies for the education of disadvantaged children. The provision of additional funds for this program would not only improve the quality of instruction for participating students, but would allow the expansion of the program to include more needy children. It is my understanding, however, that even with the additional funds provided for in Mr. Joelson's amendment the program will still be underfunded by as much as 60 percent.

The NDEA student loan programs have enabled countless students, who would not otherwise be able to do so, to complete their college educations. With the ever-increasing costs of higher education, together with the rapid rise in interest rates on loans, more Federal funds must indeed be made available to insure the successful continuation of this important program.

Compared with the above important programs, however, an increase in appropriations over that provided for in H.R. 13111 for impacted area aid cannot in my judgment be justified in the face of our current fiscal problems. In many cases the school systems benefiting from impacted area aid are already receiving taxes from those Federal employee families which enable them to qualify for the aid. As a result of this program many taxpayers in other places are being required to pay for the education of both their own schoolchildren and those children being schooled in Federal impacted areas.

In reiterating the need to carefully consider all these appropriations in the light of our responsibility to control inflation, I would like to close by calling attention to the President's recent call for congressional support in his efforts toward greater fiscal responsibility at the Federal level. In signing the Second Supplemental Appropriations Act for 1969 on July 22, the President directed the executive departments and agencies to make further spending reductions of $3.5 billion in order to conform to the expenditure ceiling established in that act. The ceiling of $191.9 billion on spending for fiscal year 1970 is $1 billion below the President's expenditure recommendations of last April. In the President's words, however—

> The new ceiling will be of little help in keeping federal spending under control—if the Congress that imposed it does not cooperate actively with the Administration in meeting it.

AMENDMENT OFFERED BY MR. SMITH OF IOWA TO THE AMENDMENT OFFERED BY MR. JOELSON

Mr. SMITH of Iowa. Mr. Chairman, I offer an amendment to the amendment offered by the gentleman from New Jersey (Mr. JOELSON).

The Clerk read as follows:

> Amendment offered by Mr. SMITH of Iowa to the amendment offered by Mr. JOELSON: On page 2 line 26 delete all beginning with "$33,000,000" in line 26 on page 2 through line 4 on page 3, and insert in lieu thereof the following: "$87,000,000 shall be for grants for construction of other academic facilities under title I of the Higher Educational Facilities Act of 1963 which amounts shall remain available through June 30, 1971, $20,000,000 to remain available until expended shall be for grants for construction of graduate academic facilities under title II of the Act, $3,920,000 to remain available until expended shall be for annual interest grants under section 306 of that Act $229,100,000 shall be for Federal capital contributions to student loan funds."

Mr. SMITH of Iowa. Mr. Chairman, the Joelson amendment is very unfair to higher education. The increases for higher education facilities in the Joelson amendment are very negligible as compared to what they should be.

The big bulge in the student load in this country is not in the elementary grades. It is in the colleges. That big bulge in elementary grades has passed. We did not do enough during those years, but those children did not stay that age. They moved on and are now in college or soon will be. Between now and 1975, we will have a 50-percent increase in the need for college facilities. It is not the elementary students where we are going to have the bulge. It is the college level.

This Joelson amendment has a mere $33 million in it for college facilities. That is only what was provided last year, and last year it was reduced drastically, because some money was shifted over to some other categories and because of the Expenditure Control Act. A very minimum amount needed is $107 million. That was the amount that was in the Johnson budget. This is a piker amendment as far as colleges are concerned. They are shifting from funds needed for the college level and putting it in other categories.

In addition to that, on the student loans, the very minimum needed is $229 million in the student loan fund. We have considerable evidence that the Department was very wrong on the amount of loan funds needed, but since that time we find there is even more need than was assumed at the time these hearings were closed, and we marked up this bill.

So I have added some money for student loans in this amendment.

Another thing we talked about is the interest subsidy. I agree with what the gentleman from California (Mr. COHELAN), said about this interest subsidy program. Some of the institutions cannot use it at all, but it is going to cost three times as much to go the interest subsidy route as it would under my amendment. The $7 million in here for interest subsidy is going to cost this Government $300 million over a period of years, and it will not do them as much good as the $107 million I have put into this amendment.

I suggest that the priorities on higher education are very much out of kilter in the Joelson amendment. I urge the adoption of this amendment to the Joelson amendment.

Mr. JOELSON. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from New Jersey.

Mr. JOELSON. I agree with the gentleman. My recommendations for higher education, for construction and for the NDEA student loans are very meager. That is why I cannot understand why the gentleman is supporting the bill, which has nothing. At least, meager as my amendments are, they are more than is in the bill.

Mr. SMITH of Iowa. The gentleman is

very much in error. The bill provides $188 million for student loans and we increased the budget on that item and I made it clear in the full committee and everywhere else that I am for more money in these two categories and I am very disappointed that the gentleman would let these other people run away with money needed for higher education.

Mr. EDMONDSON. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from Oklahoma.

Mr. EDMONDSON. Do I correctly understand that the gentleman's amendment does not affect adversely any increases in the Joelson amendment for elementary and secondary education?

Mr. SMITH of Iowa. It deals only with college facilities and student aid in the form of loans.

Mr. EDMONDSON. The gentleman would increase only the higher education features, and the amendment does not affect adversely the Joelson amendment in the other features.

Mr. SMITH of Iowa. There is one additional feature. It takes out the authorization for additional interest subsidy contracts which would cost $300 million, and the colleges and universities cannot use it as well as $107 million in grants and loans.

Mr. EDMONDSON. Mr. Chairman, will the gentleman yield further?

Mr. SMITH of Iowa. I yield.

Mr. EDMONDSON. I want to commend the gentleman for his amendment, which I believe is urgently needed by higher education in connection with this bill. I support his amendment and support the Joelson amendment once this amendment has been added to it.

Mr. Chairman, news in this morning's newspapers of a $3 billion surplus in the past fiscal year reinforces my conviction that we can afford to give education a higher priority than it has been given in the appropriation bill now being considered.

The dollar amounts carried in this bill approximate 1½ percent of our Federal budget.

That percentage should be doubled by this Congress, and we should be allocating at least 5 percent of our Federal budget to education within the next 3 years.

We should also provide advance funding to eliminate the uncertainties that continue to hamstring orderly administrating of Federal aid programs in our schools.

I will support the efforts of Chairman PERKINS of the House Committee on Education and Labor to secure full funding of the Elementary and Secondary Education Act and will vote for the so-called Joelson amendments to provide full funding of the impacted districts and to supplement budgeted funds for higher education, vocational education, library services, and other ESEA programs.

In my judgment, it will be pennywise and pound-foolish economy of the worst kind to cut back on our student loan and scholarship assistance programs at this time, particularly in view of the encouragement we have been giving low-income youth to continue education after high school.

The need for a higher level of funding for construction assistance to college and to vocational and technical schools have never been greater, and are compounded by today's high interest rates.

The most compelling need of all, I believe, is found in the elementary and secondary schools of the country, where we have begun to open the doors of full educational opportunity to millions of children living in lower income areas of the Nation—and must increase our efforts, rather than cut them back at this time.

Let me call your attention to some of the views of educators and school leaders in my own State of Oklahoma:

Here in summary, are the views of some Oklahoma educators on the critical issue of Federal funding before us today:

L. R. Harrington, Rogers County Superintendent of Schools—Title II ESEA: "A cut back here would drastically reverse what we have been programming for the future for girls and boys of this county . . . These funds are vital to the educational need of the schools in Rogers County. Whenever a good thing is removed from our schools, the girls and boys are the ones that really get hurt."

James E. Sooter, Coordinator, Vinita City Schools—Title II ESEA and Title III NDEA: "The acquisition of these instructional aids have enriched and upgraded our curricula offerings. It is my opinion that these programs are vital to educational needs in our Oklahoma schools. Education has many problems and retrenchment is not the solution to any of them."

B. J. Traw, Superintendent of Vian Public Schools: "Without Federal Aid it would be impossible to operate the Vian Public School."

Mrs. Billy M. Douthitt, Librarian, Picher Public Schools—"Our town is a former mining town on Indian land, and our school funds are very inadequate. In 1964, our school library was very poor with outdated books. After these years of Title II, there has been noticeable improvement."

Cliff Hudgins, Superintendent, Stilwell Public Schools—P.L. 874: "It would be hard for me to list all of the industries which the Federal Government is subsidizing. But tell me truthfully is there any of these any more important than the education of the youth of our nation?"

Frank Beck, Jr., Principal, Porter Public Schools: "A dollar spent for guidance and counseling services now will later save many dollars in institutional care."

Mrs. Lela Parkhurst, Counselor, Vinita High School: "If the gains that have been realized the past years are going to be pushed aside in this sweeping economy move, I wonder where we are placing our values."

Harold W. Jones, Principal, Picher Elementary School—Title II, III, V: "These agencies, since they were started . . . have done more for Picher Schools in 4 years than has been done in all the other 33 years that I have been in the system . . . Through funds furnished by these agencies we now have a central library . . . a science and mathematics room with a qualified teacher, a reading laboratory for grades 1, 2, and 3, playground equipment, a small gymnasium and a testing program. We have also received help through Title I, to feed the 30% of our students who eat free in the school cafeteria. The money that we have received has been spent wisely, with the thought in mind of getting those items which would help the largest number of children for the longest period of time."

Robert O. Williams, County Superintendent, Mayes County—Title II, III, and V: The elimination of these Federally financed education programs would . . . be a great loss to our schools. I feel these Federal programs are vital to the educational needs in our Oklahoma schools."

C. T. Mustain, Superintendent, Commerce Public Schools: "Some cuts may be mandatory for sound fiscal responsibility but surely education needs more, not less help."

D. D. Creech, Oklahoma State Superintendent of Schools: "Reductions . . . would be fatal for the education programs in some of these school districts . . . the State Department of Education . . . couldn't possibly absorb this kind of a reduction in funds without a critical curtailment of services and personnel."

Marvin B. Traw, Superintendent, Westville Public Schools: "With Title III funds we have been able by matching these funds to purchase much needed equipment and supplies in the areas of math, science, English, reading, history, civics, and geography. . . . With Title V funds we have provided a testing program for every junior high and senior high student . . . to provide counseling services . . . Title II . . . funds . . . we have been able to raise the quality of instruction and the standard of our schools with the use of better and more up-to-date instructional materials Many of our students are from low income families. Few students have access to good books other than through our school library . . . We have endeavored to use these funds to the best advantage of all our students."

W. Leslie Waid, Coordinator of Mathematics, Muskogee City Schools—Title II and III: "We are not a rich district and the withdrawal of these funds would place a great hardship upon the district and will deprive children of the poor district . . . of many of the instructional and supplemental materials needed to give them a well-rounded up-to-date education."

Claude Eubanks, Superintendent of Roland Public Schools: "I am very much against the proposed cuts to three of our Federal School Programs—Title II ESEA, Title III NDEA, and Title V NDEA. We are struggling now! We don't necessarily need more federal programs . . . We simply need 100% funding of the programs we do have."

William T. McCarty, Superintendent, Eufaula Public Schools—P.L. 874: "It is the feeling of those of us in the impacted areas that this just cannot be allowed to happen. Any of these proposed changes would drastically affect our school district. It is extremely urgent as far as we are concerned that P.L. 874 be left as is."

Sister Ann Rosera, Muskogee Christian Learning Center—Title II: "Financially our school cannot afford to provide its own library resources. We need the help of Title II, ESEA. Since Title II started our help from the government has decreased yearly instead of being increased and now there is the possibility that it will be cut out all together. We definitely need an increase in the help of the government rather than no help at all as is being proposed."

Sister Bridget Anne Parisi, Principal, Muskogee Christian Learning Center—Title II: "Since the initiation of this funding by the Federal Government, our students have been able to utilize twice the amount of library materials previous to its instigation. It greatly concerns me that this service is in danger of being terminated."

Resolution of the Board of Regents for the Oklahoma Agricultural and Mechanical Colleges: ". . . the delay in implementing Phase II in the College Program for the State will result in increasing cost and the denial of opportunities for college education to many Oklahoma citizens.

Robert B. Kamm, President, Oklahoma State University: ". . . if Federal funds are not available, Phase II of the College Pro-

gram for the State of Oklahoma will be seriously curtailed."

The University of Oklahoma Regents: "The people of Oklahoma have extended themselves to a maximum in their efforts to borrow against anticipated sources of revenue to meet the needs of a rapidly escalating enrollment . . . To accomplish this proposed building program it will be necessary for the University of Oklahoma to have access to federal funds to supplement the anticipated allocations from the recent state bond issue and gifts from private individuals and corporations."

Irvin Hopson, Director of Financial Aid, Panhandle State College: "You have urged us to seek out the economically handicapped student with talent and to assure him that if he wanted to go to college he could get financial help from his government. We have done so and now that we have him planning to come to college we get a notification from HEW cutting our NDEA allocation 31% from what it was last year. What do we tell the student?"

Joe McCormick, Head Student Financial Aid, Oklahoma State Tech: "Oklahoma State Tech provides very needed opportunities to the youth of Oklahoma and the nation in the field of technical and vocational education. Student Financial Aid can play a very important role in providing such opportunities to the disadvantaged youth of Oklahoma. To accept reductions in our financial aid program now would be very disturbing not only to me but to many Oklahoma students that could be helped."

Gary L. White, Assistant Director for Student Loans, Oklahoma State University: "We have been encouraged . . . to seek out the student from the low-income areas of Oklahoma, and urge him to attend college through the benefits of the federally funded programs. If the anticipated level of funding for next year is to be a reality, we will have to turn away many of these people that we have urged to attend college."

Mr. Chairman, these are only a few of the many, many views I have heard in recent weeks, as the time for debate on this bill drew near.

I have talked to one school superintendent in Oklahoma who tells me his school term will be cut by more than a month, if we do not restore the cuts in education funds that are contained in this bill.

Another superintendent has told me his school year will be shortened by nearly 2 months, if the cuts are not restored.

Mr. Chairman, I am sure this is a story that could be told in many parts of the country.

We cannot afford the kind of economy that is recommended in this bill.

The Nation cannot afford it.

Future generations cannot afford it.

We must restore the funds that assure to education the priority our children deserve.

I urge all Members to vote accordingly.

Mr. SMITH of Iowa. In summary, Mr. Chairman, this amendment would add about $114 million this year but save $300 million over a period of years.

Mr. JOELSON. Mr. Chairman, will the gentleman yield again?

Mr. SMITH of Iowa. I yield to the gentleman from New Jersey.

Mr. JOELSON. I believe it is a good amendment. I would be happy, if I had the power, to accept it.

Mr. SMITH of Iowa. I am always glad to have the gentleman's support.

Mr. COHELAN. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from California.

Mr. COHELAN. I want to say to the gentleman I did not have an opportunity to complete my remarks on higher education, but they concur perfectly with what the gentleman has said.

I want to explain that the package amendment proposed was done in consultation, trying to win agreement. So far as my personal feelings are concerned, they are exactly the same as those of the gentleman, and I personally will support his amendment.

Mr. GERALD R. FORD. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, sitting and listening to the various amendments and substitutes which have been offered, and listening to the arguments made in behalf of the various substitutes and amendments, I believe the only responsible amendment or substitute to be approved here today or tomorrow is the amendment or the substitute offered by the gentleman from Illinois (Mr. MICHEL).

I must say that I am almost overwhelmed by the inconsistency of some of of the actions taken and statements made here today in light of what was done within the last month or so by some Members of this body.

The gentleman from Massachusetts, a good friend of mine, a fine Member of this body, urged every Member here today to stand up and be counted to vote for more money. I did not hear anybody—in the main those who are urging that we spend more money—telling people to stand up and be counted to provide more tax money to pay the bills.

It is about time we get a little consistent around here.

Now we are even faced with another situation—and I am for it—which is the requirement for a tax reform bill. That will be on the floor of the House next week, and I am for that. At least with such legislation on the agenda and hopefully approved we can count on support for the surtax.

However, some of you are here today urging that we spend on the amendment offered by the gentleman from New Jersey $580 million more than the amendment offered by the gentleman from Illinois (Mr. MICHEL). Most of you who are urging that an additional $600 million be spent are the ones who are fighting or have fought any increases in taxes to pay the bill. It is about time you be a little consistent. Let me add this——

Mr. ALBERT. Mr. Chairman, will the gentleman yield to me?

Mr. GERALD R. FORD. I am glad to.

Mr. ALBERT. Did I understand the distinguished gentleman from Illinois who offered this amendment to indicate that the impacted area money would be a bonanza? Is that not what he said in general debate? And if he did, is this amendment being offered to promote impacted area aid or to circumvent the Joelson amendment?

Mr. GERALD R. FORD. I think it is being used as a practical solution to the problem of 385 Members who have impacted area aid programs in their districts to get them to be reasonable and rational in the consideration of our Federal fiscal problems.

Now let me go on to one further thing and then I will close. I would like to ask some of the Members around here a question. On July 9 the House approved a $191 billion limitation on expenditures for the current fiscal year. As far as I know, there was no vote in oppositon to that or certainly no recorded vote in opposition to it. There were few voices raised in opposition to it on that date. Now some of you are wanting on this occasion, through the Joelson amendment, to add $580 million that was not budgeted and which in effect would not be included within the limitation of $191 billion. Talk about standing up. Did you mean what you said on July 9 in that limitation? Are you not going to provide any money in necessary taxes to pay the bills? I think you ought to be consistent, I think you ought to be rational, and I think you ought to be constructive. To take this kind of action on the Joelson amendment today or tomorrow or whenever you do it I think would be irrational, confusing, and inconsistent. I just hope that a majority of the Members of this body will be practical enough and constructive enough and consistent enough to support the Michel amendment and beat everything else. That is the proper way to do it.

Mr. COHELAN. Mr. Chairman, will the gentleman yield?

Mr. GERALD R. FORD. I am glad to yield to the gentleman.

Mr. COHELAN. Mr. Chairman, I would like to remind the gentleman that on the supplemental appropriation this one member of the Committee on Appropriations took vigorous exception to the ceiling. It was voted on by a voice vote there. We even went further than that and offered a substitute to that which would include the Department of Defense in any ceilings that were set.

Mr. GERALD R. FORD. Did the gentleman from California try to get a rollcall vote?

Mr. COHELAN. I certainly did.

Mr. GERALD R. FORD. The gentleman could have. There was no problem about it.

Mr. COHELAN. We had great difficulty. The gentleman is quite aware of it. However, the record stands for itself. I am trying to say that I have been getting a whale of a record here this afternoon of people talking about what is controlled and what is not controlled. That is exactly why I am voting for this.

Mr. MAHON. Mr. Chairman, I move to strike the last word.

I think some clarification of the situation is in order.

The Committee on Appropriations recognized that there would probably be additional funds provided for impacted aid. We granted the budget estimate, but we decided that the House itself would want to work its will on the impacted

aid issue. So, we reported the full amount of the estimate.

Now, in the substitute which has been offered by the gentleman from Illinois (Mr. MICHEL), it is provided that we increase the budget estimate for impacted aid by $319 million, making the total about one-half billion dollars—about $521 million. That is the situation on impacted aid funds.

I have always supported impacted aid funds, as many of you have. I recognize that the program has many deficiencies, but there does not seem to be any practical way to cope with it other than by changing the existing legislation. So, I shall vote for the Michel substitute and the additional $319 million.

Now, the Michel substitute does something else. It adopts the committee recommendation to go above the budget in the sum of $84 million to meet a need about which many of you have heard. That is the $84 million which would go for library resources, for guidance counseling and testing, for equipment and minor remodeling, and for supplementary educational services.

These additional funds should make this bill acceptable. The grand total of the bill as submitted to the House is $156 million above the budget requests. With the Michel substitute it would be nearly one-half billion dollars above the budget.

We have been talking about not raising taxes. We have not been talking about increasing expenditures, but about expenditure limitations. This package, it seems to me, is as far as we should consider going under all the circumstances.

I hope no one will be stampeded by the thought that the decision on the Michel substitute will foreclose any attempt that may be made to provide additional funds for education. We are talking here only about pages 25 and 26 which include about $1 billion. We are not talking about page 27 which has $95 million for the Education Professions Development Act and which will be subject to amendment.

We are not talking about the $22 million for the Teacher Corps which will be subject to amendment.

We are not talking about higher education. That item still remains to be considered and amendments will be in order when we get to that paragraph.

Vocational education is not involved here. We can also work our will on that at the appropriate time.

Mr. Chairman, I would earnestly hope and trust that we can vote down the additional amendments which would add still another one-half billion dollars above the budget, in view of the fact that there are limitations to the resources which are available.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. MAHON. Yes, I yield briefly to the gentleman from Minnesota.

Mr. QUIE. I would raise the point, however, that those four titles and the paragraph that is being amended by both the Joelson and Michel amendments, that if the Michel amendment is adopted then the Committee would not have an opportunity to raise the figures for equipment, library resources, guidance, and counseling. Therefore, the Robison amendment will be necessary to add to the Michel amendment.

Mr. MAHON. That is another angle, of course. If you want to vote for more for these purposes then, of course, you have the opportunity in the Robison amendment.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Ohio.

Mr. HAYS. The gentleman from Texas read off a whole series of things that are yet to come up which could be raised. Is the gentleman implying that he is going to support some increases in appropriations for any or all of those items?

Mr. MAHON. I am going to stoutly resist any such additions to the bill. This bill includes more than $16 billion and I think adding one-half billion dollars above the budget is certainly far enough to go.

The CHAIRMAN. The time of the gentleman from Texas has again expired.

(On request of Mr. FLOOD, and by unanimous consent, Mr. MAHON was allowed to proceed for 1 additional minute.)

Mr. COLMER. Mr. Chairman, will the gentleman yield?

Mr. MAHON. Mr. Chairman, I yield to the gentleman from Mississippi (Mr. COLMER).

Mr. COLMER. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I have listened very intently, as one of those who are interested in the impacted areas, as some 380-odd Members, according to the statement of the gentleman from Illinois are interested.

The thing that impressed me about all of this debate and on the amendments, and particularly the amendment offered by the gentleman from New Jersey (Mr. JOELSON), is that I am reminded of the old Aesop fable about the dog that was crossing a bridge and had a bone in his mouth, and he saw an image in the water below the bridge of a bigger bone down there, and dropped the one that he had in his mouth in order to get the miraged one. Thus he lost the bone he had.

It seems to me that those who are interested in the impacted areas should vote down the Joelson amendment and then approach these other matters as they come up. Let us not lose the real bone in an effort to achieve the miraged unrealistic larger one.

Mr. MAHON. I thank the gentleman.

The CHAIRMAN. The time of the gentleman from Texas has again expired.

Mr. FLOOD. Mr. Chairman, I ask unanimous consent that all debate on the pending amendments and all amendments thereto close in 1 hour, the last 5 minutes to be reserved by the committee.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania.

Mrs. MINK. I object, Mr. Chairman.

The CHAIRMAN. Objection is heard.

MOTION OFFERED BY MR. FLOOD

Mr. FLOOD. Mr. Chairman, I move that all debate on the pending amendments and all amendments thereto close in 1 hour.

The CHAIRMAN. The question is on the motion offered by the gentleman from Pennsylvania (Mr. FLOOD).

The question was taken; and on a division (demanded by Mr. PERKINS) there were—ayes 204, noes 76.

So the motion was agreed to.

The CHAIRMAN. The Chair will now proceed to note the names of Members who desire to participate in the debate under the 1-hour limitation of time.

Members who wish to participate in debate will please remain standing until their names are noted and will other Members who do not plan to participate in debate please be seated.

The Chair will note the names of Members standing.

Mr. PUCINSKI. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. Evidently a quorum is present.

Mr. FLOOD. Mr. Chairman, I ask unanimous consent that the order limiting debate to 1 hour be vacated.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

Mr. ARENDS. I object.

MOTION OFFERED BY MR. FLOOD

Mr. FLOOD. Mr. Chairman, I move that the order to limit debate to 1 hour be vacated.

The CHAIRMAN. The question is on the motion offered by the gentleman from Pennsylvania to vacate the order.

The question was taken; and the Chairman announced that the ayes appeared to have it.

Mr. GERALD R. FORD. Mr. Chairman, I demand tellers.

Mr. HAYS. Mr. Chairman, a point of order.

I make the point of order that a quorum is not present. I would like to have a count on it.

The CHAIRMAN. It is evident to the Chair that more than 100 Members are present and the Chair will not count. A quorum is present.

Mr. GERALD R. FORD. Mr. Chairman, I withdraw my demand for tellers.

The CHAIRMAN. The gentleman may do so only by unanimous consent.

Mr. GERALD R. FORD. Mr. Chairman, I ask unanimous consent to withdraw the request for tellers.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan (Mr. GERALD R. FORD)?

Mr. HAYS. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Tellers were ordered, and the Chairman appointed as tellers Mr. FLOOD and Mr. GERALD R. FORD.

The Committee divided, and the tellers reported that there were—ayes 115, noes 70.

So the motion was agreed to.

Mr. FLOOD. Mr. Chairman, I ask unanimous consent that all debate on pending amendments and amendments

thereto terminate in 2 hours, the last 5 minutes to be reserved to the committee.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. FLOOD. I yield to the gentleman from Kentucky.

Mr. PERKINS. Mr. Chairman, I submit there are so many Members here who in good faith want to speak 5 minutes or so against this, that we should not be deprived of that opportunity. If there are no more than 40 Members who want to speak, perhaps we could do that, but if there is a move to take all the time, then I think we ought not to agree to that request. I just think we ought to find out how many Members would like to speak on this title of this bill.

The CHAIRMAN. The Chair will state there are approximately 72 names at this time on the list.

Mr. PERKINS. Then, Mr. Chairman, I will have to object.

Mr. FLOOD. Mr. Chairman, I have asked unanimous consent.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

Mr. HAYS. Mr. Chairman, reserving the right to object, may I be heard?

Mr. FLOOD. Mr. Chairman, I have asked for 2 hours. That is a long time.

Mr. HAYS. Mr. Chairman, reserving the right to object, I would ask the gentleman to make this request tomorrow. There may not be as many people who want to speak tomorrow. For instance, I have a very burning desire to make a speech tonight about consistency, and I may not have such a strong desire tomorrow. I know there may be some other Members who will feel about it in the same way.

I think if the gentleman would make his request tomorrow, we might be able to get it limited to 2 hours, or maybe less. No one knows how many will want to speak tomorrow.

Mr. FLOOD. Mr. Chairman, I withdraw my unanimous-consent request.

Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker pro tempore (Mr. PRICE of Illinois) having assumed the chair, Mr. HOLIFIELD, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 13111) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1970, and for other purposes, had come to no resolution thereon.

GENERAL LEAVE TO EXTEND

Mr. FLOOD. Mr. Speaker, I ask unanimous consent that all Members may have 5 days in which to extend their remarks in the general debate on this bill (H.R. 13111).

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

CHANGE OF LEGISLATIVE PROGRAM

(Mr. ALBERT asked and was given permission to address the House for 1 minute.)

Mr. ALBERT. Mr. Speaker, I take this time to advise the House that tomorrow the bill H.R. 13080, the extension of surcharge withholding tax rates for 15 days, will be taken up as the first order of business, under a closed rule with 1 hour of debate.

TECHNICAL CORRECTION OF MICHEL SUBSTITUTE AMENDMENT

Mr. MICHEL. Mr. Speaker, I ask unanimous consent that the amendment which I offered as a substitute for the Joelson amendment be technically corrected to read:

Amendment by Mr. MICHEL, offered as a substitute for the amendment proposed by Mr. JOELSON: On page 25, strike out line 9 and all that follows through line 22 on page 26 and insert in lieu thereof the following:

"For carrying out titles II, III, V, VII, and section 807 of the Elementary and Secondary Education Act of 1965, as amended, section 402 of the Elementary and Secondary Education Amendments of 1967, and title III–A and V–A of the National Defense Education Act of 1958, $254,163,000; of which $200,163,000 shall be for school library resources, textbooks, and other instructional materials under title II and supplementary educational centers and services under title III of said Act of 1965 and for equipment and minor remodeling and State administrative services under title III–A and guidance, counseling, and testing under title V–A of said Act of 1958, to be distributed in accordance with regulations promulgated by the Secretary of Health, Education, and Welfare); and $29,750,000 shall be for strengthening State departments of education under title V of said Act of 1965.

"For an additional amount for grants under title I–A of the Elementary and Secondary Education Act of 1965 for the fiscal year 1970, $205,360,700: Provided, That the aggregate amounts otherwise available for grants therefor within States shall not be less than 92 per centum of the amounts allocated from the fiscal year 1968 appropriation to local educational agencies in such States for grants.

"SCHOOL ASSISTANCE IN FEDERALLY AFFECTED AREAS

"For carrying out title I of the Act of September 30, 1950, as amended (20 U.S.C. ch. 13), and the Act of September 23, 1950, as amended (20 U.S.C., ch. 19), $521,067,000 of which $505,900,000 shall be for the maintenance and operation of schools as authorized by said title I of the Act of September 30, 1950, as amended, and $15,167,000 which shall remain available until expended, shall be for providing school facilities as authorized by said Act of September 23, 1950."

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

LEGITIMATE FOUNDATION ACTIVITIES ARE BEING WRONGFULLY ATTACKED

(Mr. KOCH asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. KOCH. Mr. Speaker, the time is fast approaching for a showdown on the tax reform bill to be soon reported out by the Committee on Ways and Means. Most of the measures forthcoming from that able and hard-working committee I will wholeheartedly support. The reforms are long overdue and correct many of the inequities in our tax system.

However, I oppose certain of the recent decisions made by the committee with respect to the tax treatment of private foundations. I understand there may be additional revisions made by the committee but at this time, I am opposed to:

First. The decision to place a tax on the investment income of private foundations;

Second. The decision to prohibit a private foundation from providing funds for vote registration drives;

Third. The decision to prohibit a private foundation from engaging, directly or indirectly, in any activities intended to influence the decision of any governmental body; and

Fourth. The decision to prohibit a private foundation from making grants directly to individuals for certain educational purposes.

All of these changes single out the private foundation as opposed to churches, schools, and foundations receiving the bulk of their funds from governmental units or the general public.

All of these changes go beyond anything recommended by the Johnson and Nixon administrations.

All of these changes are punitive and discriminatory with no relation to genuine tax reform which admirably closes loopholes and raises revenues.

It angers me that many who have long sought to deny the Federal Government a role in matters of social concern now seem bent on denying that same role to private charitable foundations which often provide the only alternative to governmental action. I suspect some people just do not want any institution, public or private, to challenge the status quo. They should not be allowed to prevail by using tax reform as a smokescreen to restrict the scope of charitable programs during this period of domestic crisis.

I take great pride that there are over 1,000 foundations located in my congressional district representing 40 percent of America's philanthropic wealth. I shall urge consideration be given to the modification or elimination of these measures before a tax reform bill is reported out by the committee or passed by this House.

The public interest is well served by the tax reform efforts of Chairman MILLS and his committee. There have been abuses by some foundations, particularly the small single donor type, and I am supporting the proposals of the Ways and Means Committee which deal with them. One important reform deserving of support is the proposal now being considered which would bar the payment by any foundation of any fee

or honorarium to any public officeholder on a local, State or Federal level.

However, the public interest is not served by a vindictive assault on the philanthropic efforts of private foundations. They can not adequately defend themselves—we in Congress must come to their support. The record of the overwhelming number of foundations engaged in philanthropic work has been exemplary and their good works ought not to be curtailed.

TAX REFORM FIRST, THEN SURTAX EXTENSION—PERHAPS

(Mr. PODELL asked and was given permission to address the House for 1 minute to revise and extend his remarks and include extraneous matter.)

Mr. PODELL. Mr. Speaker, again requests are heard from the administration that we extend the most unfair levy of recent times—the 10-percent surtax. I feel tax reform must come first at all costs. The Nation demands it. Our citizens require it. A glance at the erosion of our prosperity and economic vitality in the past 6 months reveals inability of the administration to come to grips with the real problems besetting our economy.

When this administration took office, unemployment had hit an alltime low. Prosperity was the order of our day. Interest rates were within reasonable bounds. Some precedence was being given to social priorities. The business community seemed confident, reflecting our overall situation in daily surges of common stocks. How quickly times have changed.

As of today, the prime interest rate has soared to an alltime modern high of 8½ percent, penalizing tens of millions of lower- and middle-income citizens. Banks record vast profits, enticing borrowers into their offices to borrow at such rates. The administration accepts their specious argument that these exorbitant interest rates are in the interest of curbing inflation. The efficacy of their argument is shown by an inflation that rages on and ever on. Food prices skyrocket. Loans are refused. Basic industry feels the pinch. Let us see them blame all these ominous portents on previous administrations.

Simultaneously, our business community is beginning to stagger. Lagging confidence is reflected in a plummeting stock market, which seems to be spelling out "recession" in plain language. Odd, is it not, that once again the touch of these gentlemen revives old economic fears of our past? Already unemployment rates are inching upward, first among black Americans—eventually reaching out for jobs of many others. Is it hindsight to remember Mr. Humphrey's campaign predictions that this would happen? Do we not hear a few echoes from a depression- and recession-cursed past?

Ignoring domestic priorities, the administration plunges onward. On all sides we see slashes in basic programs. A general 10-percent cut in aid to education and libraries. Job Corps emasculated. Clean-water funds hamstrung. The sad list goes on and on. Yet the piece de resistance is still to come.

All over America, millions have at last awakened to the unrivaled scandal which is our tax system. Favoring vested interests who have punched loophole after loophole in our tax laws, we are hagridden by a doubletalk-ridden morass which penalizes lower- and middle-income citizens. From across the land the cry is heard ever louder, tax reform of the most all-encompassing sort. Does this administration pay any attention to such demands? Does it show responsiveness to a truly national request? Look at what its priorities are for your answer.

Surtax extension is the title of the blinders worn by the gentlemen downtown. Needs of the mass of Americans being intolerably squeezed between millstones of inflation and taxes go unanswered. All these people are concerned with is continuation of the most unfair tax in recent history. It is a tax aimed at further penalization of the average citizen.

If we extend the surtax without first obtaining reform, we shall never obtain tax justice for our people. For myself, I shall not vote for extension for a single day until the most comprehensive tax-reform measure in recent history is signed into law.

CRIME WAVE REQUIRES ACTION NOW

(Mr. ROGERS of Florida asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ROGERS of Florida. Mr. Speaker, the seriousness of Washington's crime is pointed up again today with the report that even the U.S. Courthouse here has had to place security locks on its self-service elevators because of complaints ranging from molestation of secretaries in the building to the theft of equipment from court offices. Just last week it was also reported that the White House Police will take over protection of foreign embassies because of harassment, vandalism, and crime which the city police are unable to control.

It is a sad state of affairs when the city is unable to provide for the safety of foreign visitors. It is even more critical, however, that American tourists are not safe in their own Capital City and that the residents of the city are in constant threat.

During the campaign last fall the American people heard a great deal about the Washington crime problem, and the failures of the then Attorney General. I listened, and I agreed for the most part, since I had long before brought these matters to the attention of the Congress as had other concerned Members. But now we have a new Attorney General, a new chairman of the city council, and a new President. And we have an even greater crime problem, with June reflecting a 23.9 percent increase over the same month last year.

The President and his Attorney General, and their reappointed mayor and new city council president, must take action now to begin a fight on crime using existing authority.

The President may be able to walk down the street safely with Secret Service protection, and foreign diplomats may be safer with White House Police guarding their doors. But even the President's own private secretary has been a victim of a burglary. The ordinary citizens of this city, and the tourists who visit here, have every right to expect a major effort to end this lawlessness now.

It has taken 5½ months to get a crime bill from the White House to the Capitol, and it is sufficiently complicated and controversial to take the rest of this year for consideration. Local police are not able to fill existing vacancies, much less start on the new proposed authorizations.

The people of this city and this Nation look to the new administration for the kind of action that was indicated in the campaign oratory last fall. A 23.9 percent increase in crime in 1 month is not tolerable.

MEMBERS INTRODUCE ANTIPORNOGRAPHY LEGISLATION

(Mr. WOLFF asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. WOLFF. Mr. Speaker, my constituent mail in recent weeks has reflected a sharp rise in unsolicited pornography, being sent through the mails. These pandering advertisements, many of which are aimed at young people, are increasing not only in volume but also in the repulsive nature of the enclosures.

Accordingly, I am today introducing legislation, cosponsored by 24 other Members, to place a severe financial burden on those who mail such unwanted pornography. Under the terms of the bill, the smut merchant sender would have to pay double postage and administrative costs when the recipient returns such unsolicited filth.

This entire problem has been complicated by certain recent Supreme Court rulings and it is imperative that we act to control these disreputable mailers the only possible way—through their pocketbooks.

I appreciate the cosponsorship of the Members named below and invite others to join us. Under leave to extend my remarks I also wish to include a copy of the legislation and its cosponsors.

H.R. 13168

A bill to amend title 39, United States Code, to provide for the return to the sender of pandering advertisements mailed to and refused by an addressee, at a charge to the sender of all mail handling and administrative costs to the United States

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subsection (c) of section 4009 of title 39, United States Code, is amended by adding at the end thereof the following: "The Postmaster General shall return to the sender all pandering advertisements mailed by the sender in violation of the Postmaster General's order under this subsection, at a charge to the sender

of the cost of the return of such advertisements, plus an additional charge, allocable to the sender as determined by the Postmaster General, sufficient to reimburse the United States for its administrative costs under this section.".

COSPONSORS OF ANTIPORNOGRAPHY LEGISLATION

Mr. Addabbo, Mr. Anderson of Tennessee, Mr. Andrews of Alabama, Mr. Baring, Mr. Blackburn, Mr. Carver, Mr. Chappell, Mr. Cleveland, Mr. Duncan, Mrs. Hansen of Washington, Mr. Horton, Mr. Kyros, Mr. McKneally, Mr. Matsunaga, Mr. Melcher, Mr. Moss, Mr. Price of Illinois, Mr. Rarick, Mr. Rees, Mr. Vanik, Mr. Wright, Mr. Zion, Mr. Derwinski, and Mr. Murphy of Illinois.

Mr. ABERNETHY. Mr. Speaker, would the gentleman yield to me at this point?

Mr. WOLFF. I yield to the gentleman from Mississippi.

Mr. ABERNETHY. I think I could make a suggestion as to one way you can cure the mailing of this pornographic literature through the mails and this is what I intend to do: Tell the recipients to mail it to the residence of the Justices of the Supreme Court.

Mr. HALEY. Mr. Speaker, will the gentleman yield?

Mr. WOLFF. I yield to the gentleman from Florida.

Mr. HALEY. Mr. Speaker, I want to compliment the gentleman upon the introduction of the bill to which he has made reference. I and my colleague from Florida have introduced a similar bill and I hope we can get some action on it because, certainly, it is a critical situation.

Mr. WOLFF. I thank the gentleman for his comments.

DRUG SMUGGLING PRESENTS INCREASINGLY SERIOUS PROBLEM

(Mr. DE LA GARZA asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DE LA GARZA. Mr. Speaker, as the Representative from the 15th Congressional District of Texas, which borders on the Republic of Mexico, I am sadly aware that the smuggling of marihuana, heroin, and other illegal or dangerous drugs across the border from Mexico to the United States presents an increasingly serious problem.

In a special message to Congress, President Nixon called attention to the fears and worries of Americans concerning the illegal use of drugs—especially among young people. The President specifically stated that drug abuse "constitutes a national threat to the personal health and safety of millions of Americans." He cited a frightening 800 percent increase in juvenile arrests involving the use of drugs between 1960 and 1967 and noted that "half of those now being arrested for the use of drugs are under 21 years of age."

The International Good Neighbor Council, a notable organization that concerns itself with problems common to the United States and Mexico, took cognizance of this situation in a resolution recently adopted by its International Affairs Committee. This resolution, suggesting that wide publicity be given to the severe penalties attached to crimes of drug abuse, urged the U.S. Customs Service and the Departamento de Aduana Fronteriza of Mexico to post large and legible signs in suitable locations at all ports of entry warning people of the possession of illegal drugs when crossing the Mexican-United States border.

Copies of this resolution have been forwarded to the appropriate authorities of the Governments in Washington and Mexico City, with the request that increased attention be given to this grave problem and that the two Governments work together in every possible way to stop the illegal traffic in marihuana, heroin, and other illegal drugs—a traffic which poses deadly danger to our young people.

Public officials in the Republic of Mexico, fully aware that much of this traffic is conducted across their national border, are greatly concerned, as I learned when I took the matter up at the United States-Mexico interparliamentary meeting in Mexico. We can count on their cooperation.

Mr. Speaker, the time is due, and past due, to launch a comprehensive and coordinated attack on this problem.

With that purpose in view, I have introduced H.R. 13031 designed to help prevent and control narcotic addiction and drug abuse. The bill proposes authorization of Federal aid in the construction, staffing, operation, and maintenance of facilities for the prevention and treatment of narcotic addiction and drug abuse; in the development of educational programs; in the training of professional and other personnel; in the support of appropriate demonstration projects relating to narcotic addiction and drug abuse, and in the conduct of needed research, study, and experimentation.

My bill would provide increased Federal funding under the Community Mental Health Centers Act to cover costs of operation and maintenance, with coverage extended to meet staff expenses. The Secretary of Health, Education, and Welfare would be authorized to make grants, upon the recommendation of the National Advisory Mental Health Council, to develop specialized training programs for the prevention and treatment of drug abuse and to conduct surveys and field trips to evaluate the adequacy of State programs in this area. Grants also would be authorized for specific purposes to State or local agencies and to public or nonprofit agencies.

This bill would establish an Advisory Committee on Narcotics and Dangerous Drugs to assist the HEW Secretary, this committee to consist of 12 members of diverse professional backgrounds, including the fields of pharmacology psychiatry, psychology, and other behavioral sciences, and representatives of the drug manufacturing and distributing business.

Mr. Speaker, evidence appears every day in the media that no element of American life has immunity against the threat of the drug problem. No parent can be certain that his children are safe. This matter is critical. Effective Federal action must be initiated now.

CONGRESSMAN ANNUNZIO TESTIFIES BEFORE DISTRICT OF COLUMBIA CITY COUNCIL ON CRIME INSURANCE

(Mr. ANNUNZIO asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. ANNUNZIO. Mr. Speaker, on May 21, 1969, I introduced H.R. 11512, the Small Business Crime Insurance Act of 1969. Since that time, 93 Members of the House, on a bipartisan basis, have joined with me in cosponsoring the legislation.

At this time I will not go into a detailed explanation of the bill since that was done when the legislation was first introduced. Basically, however, the legislation would provide for the direct writing of crime insurance to small businessmen by the Federal Government. The coverage would be handled through the Small Business Administration.

The problem that the small businessman has in obtaining insurance is commonplace throughout every major city in our country. It is a particular problem here in the Nation's Capital where small businessmen in the northeast and southeast sections of the city have found it impossible to purchase insurance.

The Government Operations Committee of the District of Columbia City Council has been holding hearings on insurance problems in the District of Columbia for the past week.

Today, I appeared before that body to discuss my proposal and to ask for the support not only of the District of Columbia but of every city and town in the United States.

I have included in my remarks today a copy of my testimony this morning as well as a press release concerning the legislation. These two documents will serve to keep Members of the House current on the status of the legislation:

INNER-CITY SMALL BUSINESS WILL PERISH WITHOUT INSURANCE HELP PREDICTS CONGRESSMAN ANNUNZIO

"Congress and the White House must decide whether or not small businessmen will be able to keep their doors open in our major cities," Congressman Frank Annunzio (D., Ill.) told the Government Operations Committee of the District of Columbia City Council today.

Testifying on the need for adequate crime protection insurance, Annunzio said that without crime insurance, "we will not have small business in our major cities."

The Chicago Democrat told the Committee that insurance companies will not write crime coverage in major cities, and in Washington, it is almost impossible for a small business in the Northeast or Southeast area to obtain crime insurance. He added that even if the policies are available, the premiums are three or four times higher than the standard rate.

In order to correct the problem, Congressman Annunzio has introduced legislation which has been cosponsored by a bipartisan group of 93 Members of the House of Representatives, calling for the direct writing of crime insurance for small business by the Federal government. The insurance would be written through the Small Business Administration and would be available to small

businessmen who cannot obtain the insurance at reasonable rates through private insurance companies.

Congressman Annunzio, who in 1967 authored successful legislation to study the impact of crime upon small business, warned the Committee that "unless crime insurance at reasonable cost is available to small businessmen, the time is not too far off when there will be no small business in our inner cities. The trend has already begun and it is time now to take action."

The insurance industry, Congressman Annunzio explained, has completely turned its back on the need for crime insurance by small businessmen. He told the Committee that although insurance representatives had promised him two years ago that they would come to grips with the problem, nothing has been done.

"For this reason," said Congressman Annunzio, "I have introduced the Small Business Crime Insurance Act of 1969, which provides for the direct writing of crime insurance for small businessmen by the Small Business Administration."

Although the Annunzio legislation calls for an initial $50 million loan from the Treasury to start the insurance program, Congressman Annunzio does not feel that the money would have to be spent. "The funds would merely serve as a reserve since there would be premium income flowing into the insurance pool from the very beginning and the only time the Treasury funds would have to be tapped would be in the event that losses exceeded premium income," said Congressman Annunzio. He added that even if losses do exceed premium income, Congress and the White House must be prepared to appropriate the money to make up the differences or write the end to small business in our inner cities.

Congressman Annunzio predicted that with proper supervision and regulation, the program would be self-sustaining since the legislation would allow the Small Business Administration to require small businessmen to improve the risk factor of their business as a condition to obtaining insurance. Under such a plan, SBA for example, would tell a grocery store operator that it will only insure his market if he obtains a burglar alarm. Congressman Annunzio has also asked the Small Business Administration to provide low-cost loans for the purchase of such protective devices. "For too long," Congressman Annunzio said, "the insurance industry has sold policies with the attitude of a man who only wants to hold the winning ticket on a lottery. If a merchant in Northeast called an insurance company and asked for burglar coverage, he would not be able to get a policy, but if he asked for earthquake insurance, I am certain he would be sold the policy immediately. For such a policy in the Washington area would, indeed, be a winning ticket for the insurance company."

STATEMENT BY THE HONORABLE FRANK ANNUNZIO, U.S. REPRESENTATIVE, SEVENTH DISTRICT OF ILLINOIS, BEFORE THE GOVERNMENT OPERATIONS COMMITTEE OF THE DISTRICT OF COLUMBIA CITY COUNCIL ON INSURANCE PROBLEMS IN THE DISTRICT OF COLUMBIA, JULY 29, 1969

Mr. Chairman and Members of the Committee: I sincerely appreciate the opportunity to appear before this Committee to discuss the insurance problems facing small businessmen in the District of Columbia, particularly the effect that crime has upon the problem.

In the simplest terms, the problem is that small businessmen in certain areas of the city, particularly in the Northeast and Southeast sections where small businessmen have found it virtually impossible to obtain insurance for crime-connected losses, or if such insurance is available, it is at rates three to four times as high as standard rates. The problem is not unique in the Washington area. I think we can safely say it is prevalent in every major city in the United States, at least that is what the flood of letters that I have received on crime insurance indicates.

Quite clearly, Mr. Chairman, something must be done if small business is to survive in our major cities. I do not come here as a prophet of doom or gloom but I do feel quite certain that unless crime insurance, at reasonable costs, is made available to small businessmen, the time is not too far off when there will be no small businesses in our inner cities. The trend has already begun and it is time now to take action.

I first began work on this problem in 1967, when I introduced the Small Business Protection Act to provide for a study to determine the best ways that small businessmen could protect themselves from criminal acts.

I do not contend that the study is the solution to the crime problem but rather that it does set out areas of investigation where a majority of efforts should be concentrated in solving the problem. I am unhappy that the study devotes too much space to the statistical side of crime against small business and not enough space in telling the small businessman how to safeguard his property from hoodlums and vandals.

I sincerely hope, Mr. Chairman, that your Committee will not fall victim to the statistical syndrome that seems to arise whenever the question of crime is raised. At this point, we do not need studies to show that crime is, indeed, a problem to small businessmen. We can learn this by picking a newspaper from any metropolitan city. In fact, in many cities, including Washington, the crime rate has risen to such an extent that the newspapers do not have enough space to devote to crime stories but, instead, must summarize the crime news on a "boxscore" basis, much the same way the statistical aspects of the Senators' baseball games are reported.

Mr. Chairman, I do not want to go into psychological reasons for the crime increase nor do I wish to attempt to affix the blame for the problem. We have heard a great deal about who is responsible for controlling crime. I do know one thing though. It is not the small businessman who is responsible for the crime rise; it is not the small businessman who can crack down on the increase of crime; but it is the small businessman who is paying for the effects of criminal acts. If ever there were an innocent victim of crime, it is the small businessmen of our country.

Mr. Chairman, when I introduced my crime study bill in 1967, I did so in hopes that it would cause the insurance industry to do something about making crime insurance available to small businessmen. When I introduced the study bill, a member of my staff received a telephone call from an insurance executive inquiring whether the bill contained any provision for a direct program of government insurance. The insurance executive was told that the bill did not contain such a provision but that if insurance was not made available that my next step would be in that area. The insurance executive assured my staff member that would not be necessary since the insurance industry was ready to come to grips with the problem and to find ways to help the small businessman.

That was more than two years ago, Mr. Chairman, and we still have not seen any progress on the part of the insurance companies. For this reason, I have introduced the Small Business Crime Insurance Act of 1969, which provides for the direct writing of crime insurance for small businessmen by the Small Business Administration. This legislation has been cosponsored on a bipartisan basis by 93 Members of the House of Representatives. Let me take just a minute or two to discuss a few highlights of my bill. The legislation quite simply would establish a new position in the Small Business Administration—the Associate Administrator for Insurance. The Associate Administrator, working in conjunction with the Small Business Administration Administrator, would establish a schedule of insurance premiums based on the needs of the small businessmen and the type of risk to be covered. To be eligible for the insurance coverage, a business owner would have to qualify as a small business under the size standards set by the Administration, and, as in the case of Small Business Administration loan program, the small businessman would have to show that he is unable to obtain insurance at reasonable rates and terms.

The funds for the insurance pool would be obtained with a $50 million loan from the Treasury Department. As premiums were paid, the funds would be placed in a separate revolving fund within the Small Business Administration. At the end of each year, the amount of claims paid during the year would be deducted from the revolving fund. An adequate portion of the remaining money would be set aside for reserves and the balance would be used to repay the loan from the Treasury Department. Eventually, as the reserves increase, there will no longer be a need to borrow funds from the Treasury and the program will become self-sustaining.

Since the money obtained from the Treasury will be a loan and not a grant, this program will not cost the taxpayers any funds except for the personnel administration of the program, and I do not feel that this is too great a price to pay for assisting small businesses. To me, Mr. Chairman, the most important aspect of this legislation is its simplicity. Since it does not provide for the creation of a new bureau, agency, or department, there would be a minimal delay in establishing the insurance program and it could be in operation as quickly as the regulations were established.

In the beginning, the insurance coverage would be limited to coverage for losses due to criminal acts. This would still give the insurance industry the opportunity to write other forms of insurance for small businesses and, hopefully, correct some of their premium inequalities. However, I want to make it clear that if the insurance industry does not exercise its responsibility in this area, then I will offer an amendment to the legislation to provide for the direct writing of all small business insurance. I would add that, based on past experience, I am not optimistic that the insurance industry will cooperate.

Although the legislation calls for an initial loan of $50 million from the Treasury Department, such a loan could be, in reality, a paper transaction. The funds would merely serve as a reserve since there would be premium income flowing into the insurance pool from the very beginning and the only time the Treasury funds would have to be tapped would be in the event that losses exceeded premium income.

I personally do not feel that, except for perhaps the start-up period, that there will be losses in excess of premium income. But for the sake of argument, let us consider that there may be losses in excess of income. We must be prepared to make a value judgment. If we do not provide the insurance coverage, we will not have small business in our major cities. That is the value judgment that Congress and the White House must make. And, if we lose these small businesses because we are unwilling to appropriate the money to get the program started, we will be the victims of an economic mistake for every time a small business closes its door, we lose tax revenues at the city, county, state and Federal level. My bill speaks of an appropriation of $50 million. But Mr. Chairman, that is but a drop in the bucket compared to the amount of money that would be lost if small business is allowed to die in our cities. On the other hand, I feel very strongly that we will make the government insurance program a self-sustaining operation. My legislation would give the Small Business Administration power to require small businessmen to improve the risk factor of their business

property as a condition to obtaining the insurance. Thus, the SBA might tell a grocery store operator that it will only insure his market if he obtains a burglar alarm. I have also asked the Small Business Administration to make low-cost loans for the purchase of such protective devices. Or the Small Business Administration might require bars to be placed across a clothing store's display windows during non-business hours before it would insure the store.

Before the Small Business Administration can loan money to a small businessman, the loan applicant must show that he is unable to obtain the money from other sources on reasonable terms. The same procedure would be followed in handling the insurance. The small businessman would have to present proof to the Small Business Administration that he is unable to obtain crime insurance at a reasonable premium. Thus, SBA would not be competing with the private industry since private industry will not handle this type of insurance. Therefore, the charge of government interference cannot be made. I think it is quite clear from the apathy expressed by the insurance industry in the two years during which I have waited for them to take action proves my point quite clearly.

In order to cut down on the manpower and red tape, it is my plan that the government insurance will be sold through commercial insurance agents who will pay a fee to the government to be licensed to sell this insurance. Of course, we will have to make certain that we have agents in every part of the city who are accessible to the small businessman. The same procedure can be used by processing claims. It should be remembered that the insurance agent is also handicapped by the reluctance of insurance companies to write crime insurance. If the agent cannot sell policies, quite simply, he cannot make a living. While the plan to write direct government crime insurance may be new, it is not without precedent. We already have government insurance for home mortgages, bank deposits and crop damage. These programs have been highly successful. The mortgage insurance has been one of the main reasons why Americans enjoy the highest standard of living.

In review, Mr. Chairman, allow me to draw on a small piece of history. When Congress first considered the Federal Deposit Insurance Act, it was during the height of the depression and was shortly after the famous bank holiday in which thousands of banks across the country failed. When the Congressional sponsors of the bank deposit insurance bill first introduced the bill, they were ridiculed and almost laughed off the Floor of the Congress. The argument was made that such a program would bankrupt the country, since the government could not stand to pay all of the bank losses. But the bill was finally passed and instead of bankrupting the country, the federal deposit insurance program has resulted in the strongest banking system in the world. We must have faith that the same thing can be accomplished for small business.

In conclusion, let me say that I reject, categorically, the insurance industry's arguments that they cannot afford to write crime insurance. Insurance companies are making record profits. In fact, the insurance industry is much the same as the Nation's banking industry, which contends that it has to raise interest rates because of the shortage of money. However, bankers neglect to tell their customers that bank profits are at a record high.

For too long, the insurance industry has sold policies with the attitude of a man who wants to hold only the winning ticket on a lottery. If a merchant in Northeast called an insurance company and asked for burglary coverage, he would not be able to get a policy but if he asked for earthquake insurance, I am certain he would be sold the policy immediately. For such a policy in the Washington area would, indeed be a winning ticket for the insurance company.

I do not believe that small businessmen represent losing tickets. For this reason, I hope that the Small Business Crime Insurance Act of 1969 will become law and I ask the help of this body and every citizen of Washington, D.C., to making it a reality.

BOB MATHIAS—A CHAMPION SEES TEXAS

(Mr. BELCHER asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. BELCHER. Mr. Speaker, it was my privilege to visit the 18th Congressional District of Texas over the past weekend. Together with my colleagues from the Committee on Agriculture, I participated in a very thorough and well-organized tour of the agricultural community in the Texas Panhandle which is so ably represented by my good friend BOB PRICE.

During our visit we saw many examples of excellence in agriculture—cattle feeding—milo production—irrigated vegetable production, for example.

Included in our group which visited this championship area of American agriculture was a sports champion who once brought fame to our Nation and who now represents the 18th District of California.

I am, of course, referring to my distinguished friend and colleague, the gentleman from California, BOB MATHIAS.

In the Sunday edition of the Amarillo News Globe there was a story about BOB MATHIAS and his visit to Texas. I include this story in the RECORD at this point:

ROBERT BRUCE MATHIAS, A CHAMP REVISITED

(By Carlton Stowers)

As a youngster struggling toward manhood in rural West Texas I spent a good deal of time entertaining thoughts of what future achievements might be mine—millionaire, President of the United States, and perhaps most important of all, Olympic decathlon champion. For good measure I also planned to marry Mitzi Gaynor and be the first man on the moon.

The mere fact that there stands no bronze statue of myself on the Runnels County Courthouse lawn is stark testimony to the fact that I never realized any of the above goals.

I knew, I suppose, that my chance of gaining any great wealth was somewhat bridled by my financial bloodlines and, since I could hardly stand the idea of wearing a tie for even the two hours Mother required each Sunday morning, I was aware of the hard time I would have ever becoming President. Mitzi Gaynor never even gave me a second glance and, well, you can see what happened on the moon deal.

Which left the Olympic decathlon championship; something which I thought maybe I still had a shot at. Particularly after I had set a new all-time Runnels County indoor and outdoor record for seeing "The Bob Mathias Story" the most times. The more I watched, the more I realized the 1948–52 Olympic champ and I had a great deal in common.

After all, didn't Bob's folks make him take a nap two hours every day after lunch even if the rest of the kids in Tulare, Calif., made fun? And, wasn't he addicted to oatmeal cookies and a little scared of real girls? And like old Knute Rockne once pointed out, didn't he put his pants on one leg at a time just like me?

This amazing parallel of Bob Mathias' athletic career and mine ended, alas, when I stepped on the field of battle. Thus another ambition bit the dust.

Viewing my plight with the advantage of retrospect, I can, with a minimum of rationalizing, see where my final failure was not so great as you might be led to believe. Goodness knows there have been a lot of men who have lived in the White House. Wall Street can't keep up with the number of millionaires. And Mitzi's love life is no secret.

You could take the number of 17-year-old kids who have won Olympic championships, however, count them, and have several fingers to spare. Which is to say Bob Mathias was a youngster who was a man before Graduation Day. You name it, he could do it. Run, hurdle, pole vault, high jump, throw the javelin, broad jump and Heaven knows what all. He's the kind of guy they talk about when they call an athlete versatile. Pressure? Bob Mathias thrived on it.

He made up his mind to take a shot at making the '48 Olympic team four weeks before the decathlon trials and wound up amazing 70,000 fans in London by defying the rain, long hours and a Frenchman named Ignace Heinrich to capture the gold medal, thus becoming the youngest track and field performer to ever step to the top of the winner's stand.

For good measure he turned the trick again at Helsinki in 1952. In between he led Stanford to the host spot in the Rose Bowl. When he returned from London, President Truman was there to shake his hand. They changed the name of his hometown to Mathiasville. Paramount Studio signed him to a contract after his competitive days were over, saying that no one but Bob Mathias himself could handle the lead in his own life story. They signed up Ward Bond to play the role of his coach and wound up taking every cent of my soda pop bottle money before the movie left town.

Still a striking figure at 38, Mathias, now a Congressman in his homestate, has spent the weekend as a guest of fellow politico Bob Price, touring the agricultural accomplishments of the Panhandle. Just looking at him one still gets the idea that he could do just about anything he sets his mind to do. That's how it is with the true champions.

Which is a way of saying that, though I never quite managed to achieve some of them, you can't say I didn't set my goals high enough.

MOON SAMPLES BELONG TO THE PEOPLE OF THE UNITED STATES

(Mr. BRAY asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. BRAY. Mr. Speaker, the first moon samples brought back to earth belong, by right, to the American people—all the citizens of our Republic—and it is to them these samples should go before any are given away to foreign heads of state. I am introducing a bill today providing for this.

Of course, it is completely understood that none will be given to anyone until scientists have had ample time to thoroughly examine them. Dr. Robert Jastrow, one of our most eminent astrophysicists, has called the moon the "rosetta stone of the planets" and it is believed some of the deepest secrets of creation itself will be unlocked through examination and analysis of this less than 100 pounds of rock fragments.

Use any figure you wish for the ultimate cost of Apollo 11—$25 billion, or more, or less—but the hard fact remains that the billions required came from one source, and one source alone: the pockets of the American taxpayers. Therefore, by right, our citizens have first claim on them.

This is especially so since I firmly believe that all of our citizens, with the exception of a sour-grapes collection of professional soreheads, are immensely proud of what has been achieved in this solely American endeavor, and feel their money was well spent.

In time, I am sure, museums throughout the country will have for permanent display samples from the moon—if not from Apollo 11, then from subsequent flights. But, for the Apollo 11 samples, next only to the urgent scientific need for them, it is most important that they go to the people whose money, faith, and yes, prayers, made bringing them back to earth a reality.

Therefore, I have introduced legislation providing that as soon as practicable, after scientific requirements have been fulfilled, and at a time to be determined by the National Aeronautics and Space Administration, one sample be delivered to each Governor of each of the 50 States, for permanent display in, and to be permanent property of, the State and its people. Place of display is to be determined by the Governor. Many of our State capitals are centrally located, and besides, having 50 locations in the American Republic where these samples could be seen would make it much, much easier for Americans to see them firsthand.

The American people gave their Government the money that made it possible to get these samples. The Government of the United States owes it to its citizens to make it as easy as possible for them to see just what their money achieved.

Following is the text of my proposed bill:

H.J. RES. 844

Joint resolution providing for distribution of the Moon samples brought back by Apollo 11 to the Governors of each of the fifty States

Whereas Apollo 11, the most significant achievement of mankind in all of his recorded history, to date, was a solely American undertaking and endeavor, and,

Whereas the American taxpayer made it possible by providing the billions needed, and

Whereas by virtue of this, right of ownership is of Apollo 11's Moon samples is unequivocally invested in the American people; Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That as soon as practicable, after necessary scientific requirements of study, examination and analysis have been fulfilled, and at a time to be determined by the National Aeronautics and Space Administration, and before any part of these samples shall be delivered by the Government of the United States into the permanent possession of any foreign government, one sample in quantity or shape suitable for public display shall be delivered to the Governor of each of the fifty States. These samples are to be retained as permanent property of the States, and shall be placed on permanent, public display in such a manner and at such a location as the Governor of each State shall determine.

SOVIET NAVAL SQUADRON IN THE GULF OF MEXICO

(Mr. EDWARDS of Alabama asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. EDWARDS of Alabama. Mr. Speaker, a naval squadron of the Soviet Union today is cruising in the Gulf of Mexico. It is the squadron of seven ships which left Havana Sunday after helping Fidel Castro note the Cuban Communist celebration of July 26.

It is the squadron which steamed south along our east coast earlier this month and which ventured into the Gulf of Mexico just before the Havana stop, sailing to within about 400 miles of New Orleans.

Today the squadron has split up. The ships are all traveling in a westerly direction, four of them about 500 miles west of Key West, one submarine tender about 300 miles west of Key West, and the two other ships not far south of the tender.

This latest evidence of the growth of Soviet sea power follows the well-planned schedule the Kremlin set up shortly after the Cuban missile crisis in 1962 exposed Moscow's need for naval strength.

They sent ships into the South Atlantic for the first time in 1967. In 1968 they made their first voyage into the Persian Gulf and Indian Ocean.

Today they are in the Gulf of Mexico with a 4,300-ton guided missile cruiser with eight launchers for Shaddock surface-to-surface missiles with a range of about 450 miles.

I have been speaking of the significant growth of Soviet sea power, including all its elements of naval strength, merchant marine capability, fishing fleet, and oceanographic capacity, for 4 years.

Its significance is exceedingly great in terms of our overall national security.

Permit me to quote just one way of saying it, taken from the report of June 1969, of the Center for Strategic and International Studies of Georgetown University called "Soviet Sea Power":

The timely presence of Soviet naval units at a scene of local instability involving U.S. interests could restrict the actions of Washington or cause U.S. allies to lose confidence in the will of the United States to react in support of political forces favoring U.S. interests.

The magnitude of this is even more clearly seen in the light of yesterday's report of the special Armed Services Subcommittee on the *Pueblo* incident. That report found that the U.S. "military command is now simply unable" to respond swiftly to the needs of a major crisis.

All of this is clear indication, if we needed any new indication, that we must give far greater attention to sea power as a requisite of our national security.

STATEMENT IN SUPPORT OF INCREASE IN EDUCATION FUNDS

(Mr. MOLLOHAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MOLLOHAN. Mr. Speaker, when Congress passed comprehensive amendments to the Vocational Education Act of 1963, it authorized $766 million for the fiscal year 1970 to implement that program. The Congress did so in the knowledge that there were more than a million children who had left high school before graduation and in the knowledge that many many more needed special skills as a prerequisite for useful employment.

Yet, we are asked to provide less than half of the money necessary to fulfill our commitments under this legislation. This is nothing short of a national disaster. There are many things in our national budget that can be postponed even though they are necessary but education is not one of them.

How do you tell a young man or woman "come back for job training next year, we don't have the money this year?" Yet, this is exactly the effect of appropriating less than half of the money needed.

The hard, cold facts are that the crime rate among the young people in this Nation is sky-rocketing and the unemployment rate among the young people is the highest of any category. In the cities the unemployment rates runs up to 30 percent. The correlation of unemployment and crime is too close to ignore.

This appropriation is the most important piece of legislation that this House will consider so far as my State of West Virginia is concerned, because 60 percent of those graduating from high school are not going on to college and they must have advanced skills to be effective in today's labor market. Yet, where West Virginia should be receiving nearly $9 million, this appropriation will cut that in half.

West Virginia cannot afford that loss and the Nation cannot afford that loss either. Our labor needs are dynamic—they change and are changing rapidly. But high school education is still geared largely to college preparation. As a result, vocational education is of highest priority for providing a useful education to everyone.

PROHIBITING STATE AND LOCAL INCOME TAXES ON OUT-OF-STATE RESIDENTS

(Mr. HUNT asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. HUNT. Mr. Speaker, there has been no other time in memory that public opinion has been so unanimous in protest of high and inequitable taxes at all levels of government. There is no relief in sight. Instead, virtually every taxing jurisdiction in the Nation is persistently seeking new sources of tax revenues. Where the voters have had the opportunity to express themselves by referendum, an opportunity afforded only at the State and local levels, the trend in recent years has been to reject new taxes. Federal taxes are not subject to the final approval of the public except to the ex-

tent that each of us must ultimately answer to his electorate. But there exists still another situation in which the individual who is taxed has no vote or representation, and this is the case of State and local income taxes on out-of-State residents.

My attention was first drawn to this problem because of a local condition affecting several thousand of my constituents who work in nearby Philadelphia. It must first be noted that New Jersey does not levy an income tax. Neither does Pennsylvania, but in that State, political subdivisions are empowered by State law to impose income taxes on all persons whether they are residents, nonresidents (of the city, but residents of the State), or out-of-State residents. There is no distinction made among these classes of taxpayers as all are required to pay the tax at the rate of 3 percent on gross income. I might add that the 3-percent rate became effective on July 1, 1969, and was an increase of 33 percent over the 2 percent immediately prior to that date and a 100-percent increase over the rate first established by the Philadelphia Income Tax Ordinance of December 13, 1939.

In response to this problem, and not unmindful of the pitfalls in dealing with any tax legislation, I reintroduced a bill, H.R. 849, to prohibit any State or political subdivision of that State from levying income taxes on nonresidents of the State. Insofar as such taxes are imposed on out-of-State residents, I believe this is a subject for the consideration of the Congress in view that the taxes so imposed are interstate in application, presenting a clear-cut case of taxation without representation, and the only body with the jurisdiction to resolve this issue is the Congress in the absence of voluntary and cooperative action among the States.

Subsequent to this legislation, it has become increasingly apparent to me that the injustice of the Philadelphia wage tax on New Jersey domiciliary residents is not singularly unique. There are 11 other States that do not levy an income tax at present wherein similar conditions exist or are likely to occur. Each of the 50 States has dealt with the taxing of out-of-State residents as it has seen fit. More recently, the prevalence of this problem surfaced with the introduction of the District of Columbia Revenue Act of 1969. For the first time, it includes a title cited as the "District of Columbia Nonresident Tax Act," which provides for the imposition of a tax on commuters based on income.

In all fairness, Mr. Speaker, Congress has made the first substantive move on the problem of taxes levied by States on the incomes of out-of-State residents with the adoption of the so-called Smith of Iowa proposal in the form of an amendment to the Interstate Taxation Act. While the nature of the amendment, which essentially prohibits double taxation of individual incomes by more than one State, indicates a legitimate concern of the Congress and is a step in the right direction, I firmly believe the issue warrants further serious consideration. For example, the amendment leaves unresolved the plight of taxpayers in 12 States, where an income tax is not imposed, who work in a State where such taxes are levied. Furthermore, and perhaps more fundamentally, it does not concern itself with the issues of taxation without representation or double taxation in the sense that regardless of the primary revenue source, be it property or income taxes or a combination thereof, there is a class of individual taxpayers that pays a high property tax in the absence of State or local income taxes while at the same time paying an income tax at the full rate in an out-of-State taxing jurisdiction without the benefit of an offsetting credit.

It is argued by those taxing jurisdictions which tax nonresidents that such individuals receive certain public benefits for which they should share the costs. This argument is not without merit, but there exists no national standard by which State and local taxing jurisdictions may fairly and equitably apportion the tax burden between residents and out-of-State residents taking into consideration the relative benefits derived by each class. In this context, my proposal may seem drastic, but I believe the situation to be serious enough to justify drastic action with a view to devising and implementing new approaches respecting the taxing of out-of-State residents. Merely because commuter taxes have not been voided by the courts and are easily administered does not relieve us of the responsibility to represent the interests of a voiceless class of taxpayers with a legitimate grievance.

In my earlier remarks on the subject, I stated, "With respect to taxation versus benefits, I am fully cognizant of the fact the courts have consistently recognized that equal tax burdens do not necessarily require equal benefits. I do not infer from the attitude of the courts in this regard, however, that it is a mandate to any taxing jurisdiction to gouge the helpless taxpayer, especially the nonresident who has no voice at the polls or representation in the disposition of his tax dollar. Rather, I believe the courts view this issue of taxes versus benefits as one to be resolved as fairly as practical by the political instruments of government."

Returning once again to the legislative proposal to provide for a commuter tax on nonresidents of the District of Columbia, this is a unique situation in that Congress will have the opportunity to pass upon the issue. Because of the initial intent of the legislation to encompass all taxing jurisdictions in the Nation, I am today introducing a new bill to perfect its coverage by including the District of Columbia.

I am encouraged that others share my concern over this problem and list the following new sponsors of this legislation: Mr. ASHBROOK, Mr. BLACKBURN, Mr. DEVINE, Mr. GOODLING, Mr. PELLY, Mr. SCOTT, Mr. STEIGER of Arizona, Mr. TEAGUE of Texas, Mr. SCHERLE of Iowa, and Mrs. DWYER.

We respectfully urge the House Judiciary Committee to give this legislation a fair hearing in the interest of those taxpayers whose only recourse is now through the Congress.

ACTION BY THE INTERNATIONAL MONETARY FUND

(Mr. HANNA asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and to include extraneous matter.)

Mr. HANNA. Mr. Speaker, at a time when there are so many things that are being pointed out that are going wrong with the world, it is kind of a refreshing experience to find some things that are going right.

Mr. Speaker, all of us are aware of the great prospective benefits that our exploration on the moon have created. However, not so many of us are aware of another very important step in terms of the position of the United States and its prestige among the nations of the world. The adoption by the IMF of special drawing rights, SDR's, as they are called, is one of the things that has been accomplished quietly and out of the spotlight which, I think, down the corridor of history will stand out as being a landmark accomplishment in terms as to where the world is going and how it is going to be able to live peacefully and prosperously in the future. I think that the gentlemen who have brought this about are to be highly commended. They have brought silently, but through patient and persistent effort, constructive change in our times.

To move dramatically ahead in facilitating the great growth of trade between nations the major European traders had to first be persuaded to drop the "Linus blanket" of the old gold exchange standard. The new SDR's will be based upon a percentage of gold backing but they will multiply the effectiveness of the limited world gold reserve held by the IMF.

In the recently adopted new program the industrial nations have agreed to subscribe to $9.5 billion in SDR's over a 3-year period. In addition, they have committed themselves to doubling of their quotas from $4 to $8 billion when and if these steps are ratified by the IMF. This will give extended leverage for the growth of trade and it achieves an important though diluted goal sought for years by the U.S. representatives in the IMF and in the Treasury.

There remains now the two other major goals the United States rightly seeks. First flexibility in the currency exchange rates. A greatly needed improvement to avoid wild speculations in currencies and hot money flows which so upset the stability and long-term predictability necessary for trade improvement on the one hand and reduction of domestic politics as an operative fact in international trade on the other hand. Second, we need to get broader concessions for emerging nations in the financing of trade and development.

Let us hope Mr. Speaker that these improvements will add to the luster of the present success quite soon.

I would like to see us mark this as one

of the accomplishments that we have found for a positive country a positive position in the future.

TRUTH IN LENDING: A TRIBUTE TO PAUL DOUGLAS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. MIKVA) is recognized for 30 minutes.

Mr. MIKVA. Mr. Speaker, on July 1 truth in lending became a reality. Any man who has suddenly found himself imprisoned by debt because he did not understand the fine print knows the import of this occasion. His gratitude belongs above all to one man, a man for whom July 1 was the coming to fruition of a dream of fairness in the loan market, and the end of a long fight against powerful interests, a man without whose long, lonely struggle truth in lending might never have come to be. I refer to my most distinguished constituent, former Senator Paul Douglas of Illinois.

For 7 lonely years two forces had been opposed on the battlefield—the powerful business and creditor interests on the one hand and the consumer, represented by Senator Douglas, on the other. Each year for 7 years Senator Douglas reintroduced his bill, wrote article after article, and made speech after speech in support of it, driven by his own sense of justice and by the importunings of the desperate consumer. And each year for 7 years hearings were held and investigations made, piling up more and more evidence behind the economic necessity for the bill. And each year for 7 years the constant pressure of those who would be hurt by fair lending practices laid the bill on the committee table.

Senator Douglas was not totally alone. Presidents Kennedy and Johnson saw the need for legislation in this area and endorsed truth in lending in general terms. But the Senator's fight was no less frustrating for their support. In 1964 it was only the voice of the Senator from Illinois which was to be heard crying out on the Senate floor against the forces of resistance to truth in lending; it was only the voice of Senator Douglas announcing that during the next scheduled meeting of the committee he would call for a vote by the committee on the bill which had long been before it. The next scheduled meeting was canceled. For another year the chamber of commerce had had its way.

And so it was for 2 more years. More hearings, more speeches, more recommittals to the subcommittee. And then the vagaries of politics removed Senator Douglas from the scene.

In 1968 truth in lending was passed and now it has become a reality. But let us not forget the man who kept this matter before the public conscience. Let us not forget the man who can watch with pride from his present role as active citizen as his dream becomes reality—Senator Paul Douglas.

Mr. Speaker, I ask unanimous consent to revise and extend my own remarks and that the gentlemen from Illinois, Messrs. ANNUNZIO, YATES, and PRICE, be allowed to extend their remarks at this point in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. ANNUNZIO. Mr. Speaker, I want to commend my good friend and colleague, Hon. ABNER J. MIKVA of the Second District of Illinois for taking this special order today in order to mark the date, July 1, 1969, that the Consumer Credit Protection Act went into effect, as well as to pay tribute to Hon. Paul Douglas, the distinguished former senior Senator from Illinois.

Congressman MIKVA, since his election to the 91st Congress, has displayed a keen insight into the legislative problems affecting not only the people of his district, but of Illinois and of our Nation as well. I congratulate Congressman MIKVA for his dedication to the legislative process and for the outstanding service he is giving as a member of the House Judiciary Committee and the 91st Congress. The people of the Second District of Illinois are justifiably proud of the significant contribution he is making as a Member of this body.

It is indeed appropriate that Congressman MIKVA has taken this special order to note the outstanding contributions to this country that Senator Douglas has made, foremost among which is the truth-in-lending law which became effective on July 1, 1969.

More than any other man in this country, Paul Douglas has been responsible for setting consumer credit on the road of simplicity and full disclosure. As an economics professor at the University of Chicago, Paul Douglas first proposed uniform language for stating the rates charged on consumer credit.

Later, in the U.S. Senate, he continued his fight for full disclosure. He proposed, late in 1959, to his staff on his Banking Subcommittee that a bill be drafted and supported which would bring uniformity out of the confusion and deception which were almost universal in consumer credit charges. Through all of the subsequent years of hearings and debates, he consistently maintained that the simple annual percentage rate was the basic language for disclosing the price of consumer credit. His insistence on this fundamental prevailed, and today all extensions of credit to consumers must be made in the same language.

Senator Douglas can truly be called the father of the truth-in-lending bill for it was he who first conceived the idea and guided its progress through the early turbulent years when so many objections were raised to his proposal. During the 18 years that Mr. Douglas served in the Senate, he was a pioneer in the fight to achieve truth in lending. On many occasions he stood alone, but he never wavered. Thanks to his efforts, this month, for the first time in the history of our country, the open disclosure of the financial facts of transactions has become a reality. Now the families of the Nation have been given the means to acquire the information with which they may make consumer credit truly productive, each for himself, and together, for the whole economy.

I am certainly pleased that as a member of the Consumer Affairs Subcommittee of the House Banking and Currency Committee, I was one of the sponsors of the truth-in-lending bill which was enacted into law by the Congress of the United States.

The Congress did not expect all consumers to change overnight into rational and expert shoppers for credit when truth in lending became required of creditors. But the Congress did know that without truth in lending, consumers never could become rational and efficient in their use of credit, in their decisions about when to save and pay cash and when to postpone payment. The Congress, therefore, has made possible the rational and efficient use of income and credit by requiring creditors to make uniform disclosures, in language which permits comparison of sources of credit, and of the costs and gains of credit and of savings.

The open disclosure of the financial facts of transactions is going to make financing consumer transactions more productive for consumers, and more profitable and generally smoother for the efficient creditor.

Mr. Speaker, today as we mark this milestone in the financial development of our country, it gives me great pleasure to congratulate my friend of many years, Senator Douglas, not just for the part he played in achieving open and honest disclosure of consumer credit, not just for what he has contributed in the fields of social security, full employment, minimum wage standards, and civil rights, not just for his present contributions as chairman of the National Commission on Urban Problems, but for his championship of the cause of social justice during the entire span of his career of public service. For more than 50 years, he has battled for the poor and the downtrodden and the disadvantaged regardless of race, creed, or color, and he is continuing that fight today.

The magnitude of Senator Douglas' efforts in behalf of the people of America was aptly summed up by former Vice President Hubert Humphrey when he said in Chicago in 1966, "There is no Member of the Senate today who has his name stamped on more major issues, major bills, and major legislation than Paul Douglas."

I take this opportunity to extend my best wishes to Senator Douglas for abundant good health and continuing fruitful service in behalf of the people of America.

Mr. YATES. Mr. Speaker, I appreciate this opportunity to say a few words about Senator Paul H. Douglas. Beginning this month, the major provisions of the Consumer Credit Protection Act will go into effect. Though the act was passed after his Senate career came to a close, truth-in-lending legislation bears that unmistakable stamp of Paul Douglas. Because of his unflinching efforts, millions of Americans will be spared the scourge of unscrupulous credit practices.

The Consumer Credit Protection Act is characteristic of Paul Douglas because of its fundamental rightness. The idea that citizens, especially poor citizens, could be hoodwinked into committing themselves to financial obligations without an adequate understanding of the size and du-

ration of debts which they were incurring is alien to the canons of elementary fairness. Paul Douglas understood that and undertook a lonely fight against a whole panoply of hostile interests who would be served by a perpetuation of the abuses in the consumer credit industry.

The fact that truth-in-lending legislation is now a part of the law of the land stands as testimony to the perseverance and moral vision of Paul H. Douglas. But those of us who know Paul Douglas well cannot be surprised by that victory, because we know him to be a valiant, dedicated man—a man who realizes that even an idea whose time has come requires hard work if it is to become law.

Though Paul H. Douglas no longer spends his time on Capitol Hill, he is anything but inactive. Last year, he published a book entitled In Our Time, which is a remarkable discussion of contemporary America and the challenges that must be met if the American dream is to be made a reality. The book contains the combination of scholarship, pragmatism, and indignation out of which Paul Douglas fashioned his exemplary Senate career. His work on various councils and advisory commissions provides him with a continuing forum from which to challenge America's conscience.

Paul H. Douglas commands a measure of respect afforded few men. I can well imagine the satisfaction he must feel as the legislation he masterminded and for which he fought takes effect. Millions who will benefit from his truth-in-lending legislation may never know who their benefactor was, but those of us who watched it evolve will not forget the man who made it possible.

Mr. PRICE of Illinois. Mr. Speaker, nothing gives me greater pleasure than to join my colleague from Illinois who has arranged for this special order to pay tribute to the one man who led the often lonely fight for truth-in-lending, the beloved former Senator Paul H. Douglas of Illinois. Paul Douglas more than anyone else set the stage for the eventual enactment of this important consumer law. Despite the innumerable obstacles that he faced during the tortuous course of the Credit Protection Act's legislative history, Paul Douglas has been able to see the day when his vision has become reality.

I served in the House with his devoted wife, Emily Taft Douglas and I first met Paul Douglas at the end of World War II when he returned home with a battle wound suffered as a marine in the South Pacific.

The truth-in-lending law he authored is a measure of his worth as a public servant. It reflects his deep abiding trust in the people and his unswerving devotion to the public good. His legacy of excellence in pursuit of this legislative goal has nurtured those who have followed him in the fight for truth-in-lending. Our distinguished colleague from Missouri, the Honorable LEONOR K. SULLIVAN, and the distinguished Senator from Wisconsin, the Honorable WILLIAM PROXMIRE, carried forward the work begun by Paul Douglas.

Truth-in-lending is tied in the minds of Congress and the public with the name of Paul H. Douglas. Rarely has any legislation so justifiably borne the name of one man as has truth-in-lending, the antecedents of which always were referred to as the Douglas bill. This was not a bill prepared in a department or sent up the Hill to find a sponsor, or the product of some school or some lobby. The central idea of the first and the subsequent truth bills came from Paul Douglas' mind and hand.

He described the contents of the first bill for the draftsman. He held firm to those ideas against all proposals of halfway disclosure, without the yardstick of the annual percentage rate.

In developing the truth-in-lending bill, Paul Douglas' approach, which is reflected in the act which now is in effect, was essentially to minimize Federal interference and control. He could have proposed an act which would make the Federal Government the regulator of every aspect of consumer credit—the rates charged, the terms permitted, the treatment of defaults, et cetera. But instead, he sought the limited objective of requiring all those who extend credit to state the price of credit in the common language of the grade school textbooks and of the home mortgage, to state in full the cost of the credit, and to make all of these disclosures before the consumer become liable for the debt. He sought disclosure of the facts in language which all can learn and understand, which is the same from retailer to retailer, retailer to banker, banker to sales finance company, et cetera; and then left to the informed consumer in the marketplace the responsibility of using his income and the credit resources available to him for the greatest benefit. In the first weeks of discussion of the first bill, Paul Douglas proposed that the Federal Government step aside from enforcing the terms of the act whenever a State enacted and enforced a disclosure statute of at least equally high standards.

Paul Douglas set the tone of the discussion of truth in lending at his first hearings, when he sought statements of people, who had experience with the personal aspects of consumer credit, rather than seeking academic and statistical analyses which would try to show, for example, that the business cycle was a product of consumer credit.

The practices which had grown up in the various branches of consumer credit were shown to produce bewilderment, confusion, and unnecessary and wasteful expense to all consumers who used credit. Paul Douglas' approach to aiding them to use credit productively was to require that information be disclosed to them, so that they might learn to act independently to gain the greatest benefit from the resources they could secure. Truth in lending began as an aid to the ordinary family to seek its own welfare and the welfare of all—of the efficient creditor and the ethical merchant—by their own actions based on adequate information.

Consistent with the Senator's approach, all interested parties were invited to appear at hearings in Washington in 1960, 1961, 1962; then, in the next 2 years, hearings were held outside of Washington, in order to provide opportunity to many more consumers than would be able to finance a trip to Washington for a few minutes of oral testimony. These investigations were basic to the Truth-in-Lending Act.

Truth-in-lending brings the benefits of factual communication to transactions running to more than $100 billion per year, where comparisons always have been more than most people could manage, either because disclosures were not made in time to permit consideration before the consumer went into debt, or were made in terms special to a trade and which were unlike those used by the possible alternative source or credit. As consumers accumulate the information necessary for full judgment of when and where to use credit, their incomes will go farther for them; the efficient retailers and lenders will gain a greater share of the market; and the more productive economy will lower costs to consumers.

Paul Douglas' record of accomplishment is not limited to consumer affairs. The truth-in-lending victory is not a unique event in his career. It is merely a part of his overall record of solid achievement and an example of his philosophy that the business of government is to serve the people. Whether it is conservation, tax reform, welfare, urban affairs, civil rights, social security and medicare, or government waste, Paul Douglas has been in the forefront of the efforts to improve the quality of American society.

Paul Douglas is a man of the people. The truth-in-lending law exemplifies his devotion to the people. It is a long-sought measure of protection for the American consumer.

In closing, I would like to say how proud I am that I have been able to serve in the Congress with Paul Douglas. He has given me inspiration, and his integrity and vision have made him a legend in his own time.

Mr. KLUCZYNSKI. Mr. Speaker, I am pleased to have the opportunity to join my colleagues in emphasizing the importance of the truth-in-lending legislation and to pay a well-deserved tribute to former Senator Paul Douglas, who perhaps more than any other individual is actually responsible for this legislation.

It has been my privilege to know and work with Paul Douglas for many, many years. Personally and professionally he has reached distinguished heights in many fields, but there is probably none in which he took as dedicated and determined an interest as in legislation for the protection of the average citizen in his everyday dealings in the marketplace.

Paul Douglas is an absolutely honest man himself and he is dedicated to truth in every area. Even though this legislation was enacted after he had left the U.S. Senate, his years of tireless effort are almost certainly responsible for its ultimate success.

HIGH SPEED GROUND TRANSPORTATION PROJECT

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Texas (Mr. PICKLE) is recognized for 30 minutes.

Mr. PICKLE. Mr. Speaker, nearly 5

years has passed since we first set up the research and demonstration project for the high speed ground transportation project. Over 1 year has lapsed since the Congress authorized a demonstration site for the high speed ground transportation project. Although we have at long last seen the start of the Metroliner service between here and New York, this is still not a project fulfilled as originally contracted.

Almost every week accusations, reports, surveys and denials are issued by the railroad companies, the Interstate Commerce Commission, the equipment manufacturers, the Office of High Speed Ground Transportation and the Department of Transportation—each either surveying and viewing with concern and alarm, but most of them generally wallowing in a roadbed of timidity, uncertainty, and delay.

Regularly, the newspapers in the northeast corridors piously editorialize about the need for more passenger service and usually speak with disdain of the weaknesses of the ICC or the railroad companies' lack of vision.

While all of this analysis is going on, we still have not selected a demonstration site. I submit to you, Mr. Speaker, that this is the key weakness of this entire program: DOT has not yet recommended or selected a site to commence the demonstration of the various means of developing techniques that we know must be brought forth.

We must have new techniques for moving large bodies of people, particularly in the thickly populated urban areas. The new Metroliner service is a great improvement. The 110 miles-per-hour trains that have reduced traveling time between Washington and New York by almost 1 hour are the greatest improvement. We have new cars and somewhat improved roadbeds. The Pennsylvania Central Railroad primarily, as well as manufacturers, have reason to be proud of the advances thus developed, but I submit to you, Mr. Speaker, that the real answer in the high-speed ground transportation problem does not lie alone in improving the present system, that is, wheels on trains. The real answer lies in developing some means of tracked air cushion vehicles, linear electric motors and tube vehicles. We do not know what will be the best system, and while we must continue to improve the present methods, the ultimate answer lies in developing some type of new system that will shoot people quickly between big cities and at a reasonable cost. Before we can really produce this system, it seems to me that we must have a demonstration site.

And yet, DOT and the High-Speed Ground Transportation Office have refused to assume meaningful leadership in this field. As I will point out later, some recommendations have been made by subordinates but no one has bitten the bullet, no one down the street has really measured up to the responsibility. What makes it more disappointing now is that there are strong rumors that inaction on the site selection is based on political motives. I understand that new guidelines have been recommended to determine the methods for selecting a site and that these new procedures or guidelines are broad enough that the Secretary of Transportation can choose one of these sites strictly on a political basis. I do not believe the Secretary of Transportation would want to be placed in that position.

If that is the situation, Mr. Speaker, that is a reprehensible state of affairs. I therefore call on the House Commerce Investigating Subcommittee to call before it responsible officials to ascertain if these statements of recommendations have been made. It is not enough to say that we need new surveys and research analysis now. What we need instead is action. If we had a site to actually build the demonstration project, we might get underway. We were promised a year ago by DOT that this would move forward quickly and yet the entire project is now frozen on the tracks. If we wanted to do something immediately, we could put into operation the rapid train service already developed in Japan or we could demonstrate the air cushion tracked vehicle as in France.

There is plenty of knowledge available to start this type of project, but a combination of negative thinking has locked us in.

It is for that reason that I think the entire responsibility of the project should be given to one department—the DOT—with a clear mandate from Congress that something be done about it. A close examination of this project today would probably show as much bumbling confusion and uncertainty as any project which has come down the tracks in recent years.

It is for this reason, Mr. Speaker, and it is against this setting that I wish to address the House today on our serious transportation crisis.

The day-to-day routine and necessities of our urban society are pointing more and more to the fact that we will have to have new innovative steps in transportation unless we are satisfied to become bogged in our own mire of congestion. The problem is not simply a problem of highway congestion; of airport and airway congestion; nor of a declining rail passenger outlook.

Instead, it is a problem of deciding whether we will see the problem and deal with it rationally or simply let the times and events carry us listlessly on.

It does not take a great deal of foresight to know that we cannot continue for the future in the same vein followed in the past.

Air service in the so-called northeast golden triangle has already reached the point on some runs at which it is quicker to drive. But at the same time, we see recent studies by offices of the New York Highway Department showing that by 1980, Manhattan will need an additional 60 lanes of freeway in and out to provide adequate service.

In my view, we simply cannot tolerate this kind of uncontrolled expansion. New and more efficient ways of moving people must be found, and the strong indications are that the answer will be in one form or another of high-speed ground transportation.

Congress agreed to look into this possibility almost 4 years ago when final approval was given to the Department of Commerce transportation research program, Public Law 89-220. The report of the House Interstate and Foreign Commerce Committee indicated a relatively clear picture of the problem:

> It is unnecessary to set forth here at length the evidence respecting the overburdening of these facilities. Every Member of the House personally has experienced the inadequacies of our crowded air terminals and facilities, has observed the overcapacity loading of our highways, and is well aware of the demand constantly being made for the enlargement of both types of facilities. But what every Member has experienced and what he has observed is as nothing compared with what lies ahead.
>
> The time has come to see whether passenger traffic on the ground can be made attractive to people; to see whether it is possible to provide facilities that are convenient and economical and which people will use; to see whether this kind of transportation might relieve air congestion and save on the cost of additional air facilities.

In short, Congress saw the problem and made a commitment to solve it. We enacted an intensive research and development program to examine the feasibility of alternative forms of transportation. The program was complete with demonstration projects, and later test sites, to give us a fully tested system for determining both economically and technically what answer was best.

In large measure, the work to be done under this program was analytical and research in nature.

But at the same time, there were two projects which were quite firmly planned at the time the 1965 act was passed, and two others later appeared.

These projects were: First, the demonstration rail project initially between Boston and Providence, R.I., and later extended to New York; and second, the demonstration rail project between New York and Washington. The two which later appeared are: First, a project to determine the operational practicality and feasibility of piggybacking private passenger cars from Washington to Florida; and second, a high speed ground test facility to examine problems found in relation to tracked air cushion vehicles, linear electric motors, tubed vehicles, and other advanced technology.

Mr. Speaker, the original program was for 4 years, with June 30, 1969, slated as the expiration date of the act.

Possibly, the Congress and the Departments of Commerce and Transportation were a little overoptimistic in their estimates as to how much work could be done within this period of time. One factor is that the step-ups in the Vietnam situation was not anticipated, with the consequent cutback in funding. But the long and short of it is that the timetable was missed by a mile.

The emphasis and attention Congress brought to the area of high-speed ground transportation soon became frustrated in the performance of the contractors. To listen to the problems encountered by the car builders and suppliers, and the Penn Central Railroad, and DOT is like a primer of confusion.

First, the problem was an industrial one: the railroads and their suppliers, faced with the need to update their technology, found that they had completely underestimated the problem and the demands which it would make. In short,

there was the problem of an industry drained of resources having suddenly to come alive.

That alone, might not have been insurmountable; Americans are supposed to be engineering experts. But that was not all. In addition to technical problems, there were legal problems and institutional problems which proved just as dilatory. On October 12, 1968, the Washington Star reported that the New York-Boston demonstration had been hit by "a mountain of minor problems." The operating line, the New Haven Railroad, was threatened by a Federal court order to shut down, unless taken over by the Penn Central company; because of a labor disagreement between the New Haven and the Brotherhood of Locomotive Firemen and Enginemen, the cabs of the cars demonstration run had to be rebuilt to make room for a fireman; and finally, the trustees for the New Haven said they would not sign any contract that committed the bankrupt railroad beyond the date of its sale.

By mid-November 1968, the situation had become so log-jammed that on the New York-Washington demonstration, Secretary of Transportation, Alan Boyd, was reported as threatening to drop the project. As reported in the Washington Star on November 12, 1968:

UNITED STATES THREATENS TO DROP FAST TRAIN PROJECT

(By Stephen M. Aug)

Secretary of Transportation Alan S. Boyd, unhappy over a continuing battle between two railroad-equipment suppliers, has threatened to pull the government out of the New York-Washington high-speed passenger-train project.

Boyd's remarks—in a letter to Sen. Gordon L. Allott, R-Colo.—brought a flurry of conflicting statements over whether any work was even being done on the high-speed cars.

Boyd charges that work had stopped on cars with defective Westinghouse meters. Penn Central Co., which is to operate the trains, said it is testing two Westinghouse-powered cars. Westinghouse said it hadn't touched the cars since Aug. 26.

A spokesman for the Budd Co. said the company had not worked on the Westinghouse cars since it returned them to Westinghouse last Aug. 26. Budd was selected by Penn Central to build the cars.

If the Westinghouse statement is true, it could be next August before its 20 coaches are operating—at least according to testimony before a Senate subcommittee.

If the demonstration project ultimately proceeds without the 20 Westinghouse cars—as Penn Central says it may—the result could be that only snack-bar coaches and parlor cars with limited seating capacity would be available for the high-speed runs, which already are more than a year late in starting. The New York-Boston section of high-speed train service is not involved in the threatened pull-out.

The article later goes on to explain:

MOTORS AT ISSUE

The problem centers about Westinghouse motors supplied for 20 so-called Metroliner cars that were built by Budd. When the motors are started, a sudden in-rush of electric power results in short-circuiting, a Penn Central spokesman said. Such a problem does not exist with respect to 30 cars having General Electric Co. motors.

Until now, Budd has blamed Westinghouse for supplying faulty motors, and Westinghouse has claimed that Budd built cars that are too heavy for the motors—in effect, that Budd didn't follow the specifications.

Unfortunately, this is the kind of bottleneck that seems to be the general rule in connection with the high-speed project. By early 1968, we were to have had operational the two northeast corridor demonstrations, and by the middle of calendar 1969, the auto-on-car Florida project was to be operational.

The New York-Boston, the first demonstration project to open, got underway 6 months to a year late; the Penn Central began operating Metroliners a little over a year late, and it has not yet become operational on a full scale.

I am of course concerned over the time we have lost on these two demonstrations. Also, I cannot understand why the Florida project has not spent all the money appropriated for it prior to fiscal year 1968. This is a good project and one which in my opinion should not be sacrificed so quickly. From reports appearing in the papers this week, I am led to believe that this money will be spent on boxcar development, rather than on something which might help in the passenger area. I cannot understand the railroad's continuous desire to push freight activities to the disregard of passenger service.

Admittedly, Congress did reduce the funding under this program, but it certainly did not give cause to believe that the idea had been abandoned.

Also, on the project dealing with the high-speed test site, more progress should have been made. This is the only project in which all of the critical elements reside within the authority of Government offices, and yet this is one of the slowest to develop.

The latest word I heard from the Department of Transportation was that the test facility project is being delayed to consider the possibility of including in the same test site, programs necessary under automobile testing programs. That might sound like a good and economical objective, and yet DOT has been looking at this possibility for over a year and a half now. In hearing before the Transportation Subcommittee of the House Appropriations Committee on April 25, 1968, the following colloquy took place:

HSGT TEST FACILITY

Mr. BOLAND. On the test facilities you spent some time on that. Do you have any indication from the Federal Highway Administration that they would be interested in the joint use of a test facility such as you propose?

Mr. NELSON. The most likely possibility for a joint use of the Federal Highway Administration is in the facilities that they may set up under the traffic safety program. We have approached them several times and until recently we have been informed that they were not in a position to know for sure what kind of facilities they wanted. I understand that within the last month or several weeks that they have begun to focus on precisely what their needs are going to be, and we have arranged for a meeting with them to talk about the possibilities of joint use.

Mr. BOLAND. There is some indication on the part of a lot of people that the Federal Highway Administration, particularly the Highway Administration itself, does require some test facilities for the development of vehicles which can stand some of the impacts which occur in accidents today. Now you indicated the requirement of $950,000 for the proposed high-speed ground test transportation facility. This amount is for the building itself, for the support building.

Mr. NELSON. Well, it is more than the support building. It is, for example, for the acquisition, I believe, in that first year of a crane that will be able to remove the vehicle from the track and put it in the shop. I think I have a complete breakdown here.

Mr. BOLAND. Supply that for the record.

Mr. NELSON. Yes, sir.

(The information requested follows:)

5-YEAR PROGRAM—TEST FACILITY

	Fiscal year—							
	1968	1969	1970	1971	1972	1973	1974	
Engineering	315	150	250	250	350	300	200	Prepare construction bid packages, master planning, supervision of construction, fiscal year 1969, LIM and TACV; fiscal year 1970, 3-foot-diameter tube; fiscal year 1971, power collection and communication fiscal year 1972, full-scale tube; fiscal year 1973, mag. suspension.
Construction:								
Access road, construction and maintenance		25	150	50	50	50	50	Includes snow removal.
Buildings		300		150	180	150		Fiscal year 1969, main building; fiscal year 1971, tube vehicle support buildings; fiscal year 1973, additional support buildings for tube vehicles; fiscal year 1972, power and switch station.
Security			50	50	50	50	50	Includes security personnel; fiscal year 1970, fencing for LIM and TACV tracks; fiscal year 1973, fencing for 20-mile tube track.
Cranes		75			50			Fiscal year 1969; LIM and TACV; fiscal year 1972, tube vehicles.
Utilities		25	25	75	75	100	125	Power, water, sanitary, telephone, and heat.
Snow-ice maker			150					
Instrumentation: Equipment and Installation		100	200	100	100	200	100	
Maintenance:								
Mobile equipment			275	25	50	50	75	Track grinder; crane; snow removal equipment; automotive equipment.
Shop machine tools		75	150	100	150	100	50	Drill presses; lathes, millers, and small tools.
Electronics			50	25	25	25	25	
Labor			100	150	150	200	250	
Operation-test support: Labor		200	400	400	450	500	600	
Total	315	950	1,800	1,375	1,680	1,725	1,525	

As the above statements show, Dr. Robert Nelson, the Director of the Office of High Speed Ground Transportation, did indicate that the Bureau of Public Roads was considering the possibility of joining in the test site. But at the same time, the material he submitted for the record indicated that the project would be far enough along in fiscal 1969 to warrant the expenditure of substantial amounts of money for construction and access roads.

There has been no such construction, and moreover, there has not even been the selection of a site. I question now whether there has been or is now contemplated any serious action to select a site. This is a flouting of congressional intent and direction.

Possibly one of the strongest reasons for this delay is that the responsibility for selection of the test site was taken from the Office of High Speed Ground Transportation last October and placed in the Office of the Secretary of Transportation. At the time this change was made, a selection process had already been completed. A great many sites had been examined, and it was certainly possible that a reasoned selection could have been made.

At appropriations hearings in April 1968, Dr. Nelson indicated that they had looked at over 100 sites, about 25 of which warranted careful examination. One site with which I am quite familiar lies just to the north of my congressional district in Texas. It seems to fill the requirements on most all points. I am not in a position to know whether it came out as the top contender, but at least it, and I assume several others, were very much in the running.

Some of the background which went into the question of site selection prior to this October 1968 transfer is set out in the following discussion in the appropriations hearings in 1968:

Mr. MINSHALL. How many sites have you actually looked at now and can you tell us where they are?

Mr. NELSON. 25,000 acres in more or less a square is very difficult to find.

Mr. BOLAND. Except in Nevada.

Mr. NELSON. But that land is not available because the AEC and the Air Force have taken over a good part of it.

But we have looked at well over 100 sites. Obviously, a very large number of them were rejected almost immediately because they were impractical. But we have looked very carefully at about 25 sites. We are in the process of reducing that now to about five. We will give a very careful engineering evaluation to about five sites.

Mr. BOLAND. You will select a site this year. Is the item of $950,000 you have in this budget for the purpose of constructing buildings with reference to the site?

Mr. LANG. Yes, and that is all.

Mr. BOLAND. So you will select a site this year?

Mr. LANG. It should be understood that we don't plan to physically occupy all 25,000 acres, but in order to get the oval track, the center of which we don't need at all, we need the 25,000 acres.

With this much work having gone into it, I cannot understand why we are still left without a site to continue the testings.

Mr. Speaker, as I mentioned earlier, I can see no good reason for this kind of delay. We have seen delays throughout the high-speed test program, and I believe it is time that Congress give greater support to this program. We have a strong duty to ask questions and demand answers.

The original program was designed to run for 4 years, and there were certain things which were to be completed within that time. It was expected that the demonstrations would have been operational and providing information to determine "the public response to varying levels of speed, cost, comfort, and convenience of improved passenger service." That is how the demonstrations were described in the August 1965 report of the House Interstate and Foreign Commerce Committee. Also, that report indicated that:

During the actual demonstration of improved service, statistical tests would be conducted to find out what are the changes in the pattern of passenger utilization.

A significant amount of work was completed on the project by the 4-year deadline, but because of technical problems in the supply industry and cutbacks in funding, the program had to be extended.

During the latter part of 1968, at the request of the Department of Transportation, Congress considered and enacted H.R. 16024, Public Law 90–423, a 2-year extension of the program. This extended the termination date to June 30, 1971, just a little less than 2 years from today.

What I would like to know now is where we will stand 2 years from today. My fear is that this program is not being given the attention and emphasis it deserves either from Congress or the White House. There is not the spirit of urgency at administration levels that exists every day on our Nation's freeways and airways. There is not the push here that was felt when President Johnson announced the HSGT program 4 years ago and Congress determined that we needed more work in the field of ground transportation.

The bill extending the program through 1971 established authorizations which were designed to get us back on the track, but we are not even seeing budget requests which meet these authorizations. For fiscal year 1970, of an authorization of $21.2 million, the HSGT project under the Johnson budget was earmarked for $17 million; under the Nixon budget, for $14 million.

The program which started out as a recognition of the fact that a lot of catchup was needed, is ending up as a program which has had top-level neglect and which consequently could not withstand the pressures of the budget reducer's knife.

Mr. Speaker, I believe it is important now that Congress make a strong effort to instill a greater sense of urgency and give it greater resources.

In all fairness, I would like to present a portion of the evidence submitted by the Office of High-Speed Ground Transportation in support of its request last year for an extension of the program. On the two northeast corridor demonstration projects, this is the statement they make concerning the delay involved:

The timing of both the Washington-New York and the New York-Boston demonstrations of rail passengers service deserve an explanation.

Undoubtedly in the winter and early spring of 1966 when the demonstrations were being set up an optimistic view prevailed as to the time that would be required for the engineering, the building and the testing of new equipment. Considering that none of the equipment suppliers had built equipment of this kind before delivery commitments could not be based on prior experience. Nevertheless the car builders for both demonstrations accepted in their contracts penalty provisions for late delivery. Based on the estimates of time of delivery for equipment starting dates were set for the demonstrations. In the case of the demonstration between Washington and New York the time required for up-grading of the roadbed was thought to be the critical element and it governed the starting date. In April 1966, before the contract for the building of the Washington-New York demonstration cars was awarded, the Department of Commerce and the Pennsylvania Railroad agreed that ". . . the demonstration was expected to start in October 1967."

About 8 months after the award of contracts for construction of the equipment it became apparent that the Budd Co. would have difficulty in delivering equipment on time for the Pennsylvania Railroad to start the demonstration on October 29. A decision had to be made on the Railroad and the Government as to whether to hold to the original starting date. The Government took the view that an extra effort should be made by the Budd Co. to get equipment built as soon as possible. On this basis the Government agreed to pay for overtime and extra costs incurred by Budd up to a total of $220,000. Also the Government insisted that October 29 be retained as a target for starting the demonstration and public statements were made to that effect by the director of the Office of High Speed Ground Transportation.

Very clearly at this time the Pennsylvania Railroad, the Budd Co. and the electrical suppliers had very serious doubts that enough equipment could be ready for service by October 29. The office of High Speed Ground Transportation is responsible for holding to the original starting date.

The Government believed that there was an urgency (and there still is) to get the information which would be provided by the Washington-New York demonstration and in light of this urgency that it was desirable to set an early date for the start.

The measure of success or failure, however, in getting equipment designed, built, tested and into operating condition expeditiously should probably rest more on a comparison with the time required to carry out their similar projects than on whether or not an early estimate of time of delivery was met.

In making this determination it should be understood first that there is not an easy basis of comparison between this equipment and other rail passenger equipment which has been built in recent years. The electrically propelled cars which are to operate between Washington and New York are the most technologically advanced ever built. The complexities in the control system have required much more testing than was anticipated.

Mr. Speaker, I believe that the technical problems do, of course, give partial justification for the delays. But I do not think it is adequate reason to excuse the lack of support for this program.

At this point, I believe what the program needs more than anything is that the entire Office of High-Speed Ground Transportation demonstration project, including work on the high-speed ground

test site, be transferred from the Federal Rail Administration to the Office of the Secretary of Transportation.

Apparently, it will take this kind of muscle to get all of the related offices in agreement. I understand this possibility has been discussed and that the reason given for not making such a transfer is that the demonstration projects were associated in the public mind with the railroads. But it appears that the advantages we stand to gain from such a transfer outweigh the problems of associating the demonstrations with the Federal Rail Administration.

If a move of this nature were made, then I submit that Congress would be in a better position to oversee this program and to follow its progress. Secretary Volpe has stated a strong desire to improve our transportation picture both in the air and on the ground. If this is to be done, I believe Congress will be willing to assist.

The problem to this point has been one of getting adequate support for the project both in the executive branch and through congressional funding. I hope this picture improves substantially in the future.

But to get the problem off dead center, it is going to take more than just one branch of Government making noise about the need for high speed ground transportation. It will take a cooperative effort and a great deal of dedication.

I think the HSGT work deserves the prestige of being directly responsible to the Secretary. The organizational questions were not specifically spelled out in the initial legislation in 1965. But we must realize that the program is more than just a new-type railroad project, and that by being in the Federal Railroad Administration it does not necessarily receive the attention it should.

The program in its inception was meant to be a bold, innovative endeavor. It was meant to confront a very real and critical problem. I hope now that we are not losing sight of this.

In summary, Mr. Speaker, I suggest that the demonstration site for this high-speed ground transportation project has not been recommended or selected because subordinates down the street want to "restudy" the project and establish new guidelines, perhaps based on guidelines that would allow the Secretary of Transportation to make the site selection on a political basis. I recommend that the site be selected and we eliminate the confused line of administrative authority by transferring the entire responsibility to the Secretary of Transportation. Moreover, I think it is time that proper officials be called before the House Commerce Investigating Subcommittee to receive answers to these charges and to give the committee a full accounting on these developments.

It is well and good for the newspapers to lambast the ICC for allowing passenger service to be discontinued when indeed, the ICC is probably the only agency that has kept the passenger service alive at all. Though many discontinuances have been allowed, we still have a skeleton of passenger services. I agree with the ICC that we should establish a national need for passenger service, but assuming this study and blueprint, we are still years away from accomplishing our task because of the delays which we are experiencing now. There are a lot of individuals and agencies at fault: And the Congress is not blameless. But I think we ought to stop this business of pointing a finger at the ICC or the railroads or the manufacturers and establish a clear objective that this demonstration project will get underway and that clear responsibility be given to one department. Until that happens we are still traveling on the same old roadbeds, bumping over the same rough grade crossing and rolling over basically the same oval wheels.

GENERAL LEAVE TO EXTEND

Mr. MIKVA. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the subject of my special order.

The SPEAKER pro tempore (Mr. PRICE of Illinois). Is there objection to the request of the gentleman from Illinois?

There was no objection.

INFANT MORTALITY AND NUCLEAR TESTS

The SPEAKER pro tempore. Under previous order of the House, the gentleman from California (Mr. HOLIFIELD), is recognized for 20 minutes.

Mr. HOLIFIELD. Mr. Speaker, on Tuesday, July 22, 1969, I spoke about the "instant" experts in this country who will speak for hours on any subject whether they know anything about the subject or not. We have a classic example of a radiation physicist who speaks like an epidemiologist, radiobiologist, and physician. This paragon of knowledge will expound for hours on any subject—you name it. This year the subject happens to be infant and fetal death—due to the fallout of strontium-90. If you want to get a point home, hit the mother in the crib. These accusations are extremely serious because they have been irresponsibly tied to the ABM.

The so-called expert to whom I am referring is Dr. Ernest J. Sternglass, a physics teacher at the University of Pittsburgh. Dr. Sternglass' major thesis is that the strontium-90 in the fallout of fission products causes an increase in fetal and infant deaths. He states that he developed this thesis by recently examining the fallout from the first nuclear detonation—Trinity—on July 16, 1945. He is wrong from the word "go."

In articles and TV appearances—the last being his appearance on the "Today" show, Thursday, July 24—Dr. Sternglass has made very frightening statements concerning fetal and infant mortality, attributing the cause to radioactivity. At the conclusion of my remarks I would like to include the transcript of the "Today" show covering his appearance and the transcript of the Monday, July 28 show in which Dr. Sagan, of the Palo Alto Clinic, an authority on radiation and a former member of the Atomic Bomb Casualty Commission, and Dr. Storer, Scientific Director for Pathology and Immunology of the Oak Ridge National Laboratory, appeared to present the scientific facts on the matter.

First of all we would like to point out that Dr. Sternglass' information with respect to the direction of fallout resulting from the Trinity shot in Alamogordo, N. Mex., in 1945 is incorrect. By the testimony of his own reference, which is a book called "Day of Trinity" on page 253, it states:

> The main cloud went north from the site of detonation and finally wrapped itself around Gallinas Peak, 65 miles to the north there to break up and disappear for good.

Dr. Sternglass states that the cloud passed eastward and settled in the southern tier of the United States, that is, Texas, Louisiana, Arkansas, Alabama, Mississippi, Georgia, and the Carolinas.

The cloud, in fact, went north-northeast, as established by weather data and fallout measurements, corroborating the data in the book "Day of Trinity." These were collected by the people who participated in the shot itself and by representatives of the Weather Bureau. While the major deposition of fallout was in New Mexico itself, smaller portions of the cloud did pass northward into the States of Colorado, Nebraska, and Kansas.

The infant mortality experience in New Mexico itself, the State that received the heaviest fallout from the Trinity shot continued to decline steadily until 1958—13 years after the Trinity shot, when the rate of decline slowed.

Dr. Sternglass, whose title is professor of radiology and director of radiation physics at the University of Pittsburgh is not a physician. He is a physicist. As such, his background and experience in the area of study of infant mortality is limited.

Dr. Sternglass' thesis is that infant mortality which had been declining at a rapid rate prior to the early 1950's then slowed in its rate of decline. This he refers to as the "leveling off effect," which he attributes to fallout. If one examines individual States throughout the United States one sees a great discrepancy between the arrival of fallout and the leveling-off effect. In some States the leveling-off effect occurred long before the testing program began. In other States, the leveling-off effect, as in New Mexico, occurred many years afterward.

Infant mortality indeed has continued to decline in the United States with the exception of 2 years, 1957 and 1958, when there were slight increases considered by the U.S. Public Health Service to be associated with the coincident influenza epidemic. Dr. Sternglass, in referring to infant mortality rates as "excess," implies that rates have been climbing. This is untrue. They have indeed been declining steadily. No physician I know of supports Dr. Sternglass' contention that infant mortality rates should have indefinitely continued to decline at the rate they were declining prior to the early 1950's. Physicians are unanimous in believing that at some still unknown level there must be a basic threshold or basement level of infant deaths below which we cannot hope to go. These deaths will be due to uncontrollable genetic causes, accidents, or diseases as well as causes still not understood.

The levels of radiation to which the

U.S. population was exposed from fallout have been relatively small. Best estimates are that the increased exposure due to fallout when added to background radiation has added less than 5 percent to the total, and strontium-90 probably accounts for only a few percent of the genetic dose due to fallout. The question of harmful human effects to exposed populations from such levels of fallout have been carefully evaluated by a number of national and international organizations.

Dr. Sternglass' views on the effects of radiation run counter to the conclusions of objective scientific evaluations including extensive reports of the United Nations Scientific Committee on the Effects of Radiation, the reports of the National Academy of Sciences, and the reports of the Atomic Energy Commission.

Epidemiologists are in agreement that to analyze this kind of a problem one would need to expound, without recourse to the infant mortality data, a specific hypothesis predicting when the change in infant mortality would be anticipated in various geographic locations. Having done this, one would then examine the data for the various geographic locations to observe how often the hypothesis is supported and how often it is not supported. This would need to be done for areas in which increases are anticipated as well as in areas in which they are not anticipated. Unfortunately, Dr. Sternglass did not do this.

Dr. Sternglass has written a magazine article which, according to an advertisement, might influence the ABM argument. His military and weapons expertise is as deficient as his medical expertise. Dr. Sternglass' colleagues, who also write for the Bulletin of Atomic Scientists, should have told him that a 2-megaton fission ABM warhead would so mess up the sky that a radar would have difficulty seeing through it. Therefore, the ABM warhead must have something less than 2 megatons of fission. Where now will he get his 10,000 to 30,000 megatons of fission?

Also, since the long-range ABM warhead will be detonated exoatmospherically, it will take many years for the fission products to reach the earth's surface, and this means the entire earth's surface—so that we are talking about concentrations like millicuries per square mile.

Portions of the transcript from the July 24 and July 28 "Today" show follow:

TRANSCRIPT OF TAPED RECORDING OF A PORTION OF THE TODAY SHOW, JULY 24, 1969

Mr. DOWNS. This is Thursday, July 24th. It is Today. Barbara Walters is here. I am Hugh Downs. Frank Blair will bring you the news in just a few moments.

This half of the hour we have a guest, Dr. Ernest Sternglass. He is of the University of Pittsburgh, a man who has studied the problem of nuclear fall-out, and he concludes that it poses immense dangers, far beyond anything we have previously believed, to future generations. His conclusions have been disputed. Now we will be looking forward to talking to him.

Nuclear fall-out as a cause of lung cancer and leukemia has long been established. Defense planners take their probable rate into account when they calculate lives to be lost in a nuclear war. However, our guest today is a radiologist who says that the really massive dangers of fall-out have been overlooked, and that they may be far greater than anything we believed.

The threat he is talking about is to human reproduction and his argument is every time a nuclear blast releases debris into the atmosphere the lives of countless thousands of children, not only unborn but not yet conceived, are in deadly jeopardy. His evidence is new and has not been widely substantiated, and the Atomic Energy Commission says flatly that his conclusions are not borne out by the facts, but we think it should be heard, especially in view of our guest's claim that it has a vital implication for the current debate over the antiballistic missile system.

Before we talk with our guest, this graph may be helpful. I want you to take a look at it. This line—you will see a line here. This is years going down here. This is deaths—per thousand. Ranges from 10 to 60. The line does not go down to zero. If you take a close look at the line, you see it shows what our guest says was expected to happen in our time to infant mortality—that it would drop off dramatically. There was every indication that would happen, and it did until early 1950's.

But impose these indicators of periods of bomb testing. The first was the A-bomb test here that took place in 1945—right—and the Nevada and Pacific tests of the 50's. This is thermonuclear in the 60's.

Then the dots that we superimpose now are the actual rate of infant mortality. You see how it was falling off below this line here, and on down through—there is a little delay there, but now it rises. It doesn't actually rise, but the fall-off is not as fast as was expected. You see the correlation that our guest's research points toward.

Then this map—the site of the 1945 A-test—shows the distribution. This is the site here and the distribution of the fall-out by the prevailing winds. By 1950 in this tier of southern states, the downward trend and rates of death of infants under one year slowed down from what was expected—not the deaths, but the rate, the downward rate. In the rest of the country the rate continued to drop, and our guest says the cause was genetic damage caused by nuclear fall-out.

We are going to introduce our guest. Barbara, if you want to give a proper introduction, we have a lot of questions to ask him.

Miss WALTERS. Our guest is Dr. Ernest Sternglass. He is Professor of Radiology and Director of Radiation Physics at the University of Pittsburgh School of Medicine.

His studies have been presented and disputed at several scientific conferences, and he published articles on his findings in the April and June issues of the Bulletin of Atomic Scientists, and in Washington yesterday, Dr. Sternglass appeared before a panel of concerned congressmen.

Dr. Sternglass, scientists have warned us long ago that nuclear radioactivity can cause bone cancer and leukemia. Now you are saying this fear is dwarfed by the damage to human reproduction. As I recall from reading some of your articles, it is the children in future generations are born smaller, weaker than other children, not that they are necessarily born with deformities. So it is very hard to trace these weaker children to the radioactive fall-out.

In your opinion, what does this fall-out do to the reproductive process which causes these smaller, weaker children?

Dr. STERNGLASS. Well, apparently, according to studies on experimental animals that were performed in Sweden by Dr. Luning at the Swedish Research Establishment, it seems to affect the division process of cells in the early stages of the embryo's development causing, among other things, excess fetal deaths when injected into the male mouse, and apparently reducing the chance for resistance to disease and things of that sort.

Mr. DOWNS. I have to ask you on that southern states thing where you showed path of fall-out, hasn't there been an increase in poverty in those areas lately that would account for the effects on infant mortality rather than radio activity?

Dr. STERNGLASS. No, not in that sense. In fact, the argument has always been that it has been the movement away from the poor South into the urban centers of the North that has led to, supposedly, this increase or this failure of infant mortality to go down.

Furthermore, there is another way in which we can show that it is not related to poverty because it declines with distance out to the Atlantic, exactly as we now know nuclear fall-out intensity decreases in the wedge states. It declines from 25 percent increase above normal to 15, to 10, to 5 with increasing distance away from New Mexico.

Mr. DOWNS. Does it follow the inverse square law?

Dr. STERNGLASS. Not quite. Somewhere between the inverse first and the inverse square law. It is described in the book of Nuclear Weapons Effects.

Mr. DOWNS. I see. What do children of—I won't say genetically damaged parents, but those whose reproductive mechanism may be damaged, what do those children die of?

Dr. STERNGLASS. Mainly of infectious diseases because of an apparent lower ability to form antibodies and to resist infections and to recover. Another thing is, of course, congenital malformations, another is simply immaturity, underweight. We know that in the United States for many years now, relative to Europe, children have been consistently born underweight, and that by itself—2 or 300 grams—almost doubles the chance the infant will not make it in the first year.

Miss WALTERS. Doctor, let me ask one question just for clarification. In recent years, in the years since atomic bomb testing have the infant mortality rates increased to that degree so that our scientists say something must be wrong somewhere?

Dr. STERNGLASS. Yes, in fact this noticeable change in infant mortality had been a source of worry for the Public Health Service for many years. They have held international conferences on the subject and tried to discover what the cause was without being able to do so.

Mr. DOWNS. I was just going to say the Atomic Energy Commission called us yesterday. They were concerned about your appearance on the program today. They say that their experiments with animals show that there are no damage to offspring at all from parent animals given strontium 90 in those low dosages that we get.

What makes you so sure their research is wrong?

Dr. STERNGLASS. It is not a question of being right or wrong. You have to do this on millions of animals and at very low doses to see this kind of effect. No one has as yet been able to do such experiments, but the experiments on animals carried out by Dr. Luning and Neilson in Sweden have shown chromosome damage and abnormalities in the offspring of mice in Sweden, and more recently at the University of Utah with tritium and Germany using tritium, which is another product of nuclear bombs—that in every case the embryo has been found to be at least 20 to 50, or possibly a hundred times, more sensitive to internal radiation than to external x-rays completely upsetting all our calculations as to what would happen in a nuclear war.

Miss WALTERS. Doctor, the Atomic Energy Commission does have its own tests and its own research. If you are so certain that your research is correct, how do you explain their opposition?

Dr. STERNGLASS. For many years, the Atomic Energy Commission, like every other scientist had really believed, as I did too, that there were not likely to be very serious effects on our population. I did not discover this until last October myself, and I've been

interested in this problem for at least ten years. In other words, it was totally unexpected.

Mr. DOWNS. How do your findings relate to the question of whether the United States should build an anti-ballistic missile system? What are your feelings about that?

Dr. STERNGLASS. Well, you can look at it this way. According to these figures that we now have on our computer calculated program, one in a hundred children apparently died, one in a hundred of children born, as a result of 200 megatons of fission products released during all of the period of testing.

But we are now talking about massive strikes of 20,000 megatons. If one wants to shoot them down, one needs tens of thousands of megatons to try to detonate these things before they hit their target, but the fall-out from the ABM's being long-lived strontium 90 would spread around the world in a matter of 10 days to 2 weeks, and, therefore, reach Russia and cause the Russian children to die in the next generation thereby representing effectively national suicide for Russia if they launched such an attack.

Mr. DOWNS. Would that make you in favor of the ABM?

Dr. STERNGLASS. No, in the sense that the shelter program, if it had been carried through, by now would have been totally ineffective against these long range radiations, and the ABM program would merely introduce more and more and more of this biological poison into the atmosphere.

Miss WALTERS. How do you feel about something like radiation from x-ray?

Dr. STERNGLASS. I think my studies show that, fortunately, we are very lucky that external x-rays from x-ray machines are much less serious than internal isotope produced radiation due to ingested strontium 90 which comes into your body with, like the calcium you need to form your teeth and bones and so on. So internal strontium 90 now appears to be far more harmful than any external radiation.

Mr. DOWNS. If I understand correctly, external radiation, when it is turned off, that is the end of it.

Dr. STERNGLASS. Right. That is the fortunate part about it.

Mr. DOWNS. Internal radiation continues——

Dr. STERNGLASS. Continues with you for years and years and, in fact, it would take 28 years for it to die down to one half of its intensity. In other words, it would be with us for centuries if it were to be released into the atmosphere.

Mr. DOWNS. In the case of the Panama Canal and the use of nuclear blasting for something—peaceful uses—that sort of thing, does this, in your mind, pose a hazard?

Dr. STERNGLASS. Yes, I believe it is a very serious hazard. It has not been possible to find ways to eliminate the fission products or to prevent them from escaping when the bombs are detonated close to the surface, and you have to do that to dig a ditch.

Mr. DOWNS. What about bomb testing deep underground?

Mr. STERNGLASS. That is much less harmful.

Mr. DOWNS. I read a newspaper article where you said——

Dr. STERNGLASS. It to can be if it is done in a highly populated area. It is a question of where you do this thing. If you do it out in the Nevada desert and under carefully controlled conditions, then the hazard is very much less.

Miss WALTERS. Is this what you discussed yesterday when you met before Congress?

Dr. STERNGLASS. Yes, as a matter of fact, Mr. Holifield was there, who has been one of the top people in the program to bring to the attention of the American people the various potential hazards of nuclear weapons and nuclear war. In fact, he was very concerned and said, "You don't really need these long range effects to make it evident that a ten thousand megaton attack by either side would essentially represent the end of society as we know it, in light of all these things."

I think the argument now is more or less one of degree. I think most scientists are agreed today that because of the tremendous sensitivity of the early developing mammal—and all of us are mammals—we are simply a hundred times more sensitive than any of the computer programmed studies in the past had ever imagined.

Mr. DOWNS. Thank you, Dr. Sternglass.

In closing, I should say Dr. Sternglass' interpretation of facts is challenged by the Atomic Energy Commission and other scientists. But thank you for appearing today.

TRANSCRIPT OF A TAPED RECORDING OF A PORTION OF THE TODAY SHOW, JULY 28, 1969

Mr. DOWNS. Last Thursday one of our guests was Dr. Ernest Sternglass, who is Professor of Radiology and Director of Radiation Physics at the University of Pittsburgh School of Medicine. He said that nuclear fall-out causes great damage to human reproductive cells and that this increases infant mortality.

We pointed out at the time the Atomic Energy Commission disagrees with that, and to present the other side we want to talk now with two scientists who have worked directly for the AEC, but who now have positions with related agencies. They are Dr. John Storer, who is Scientific Director for Pathology and Immunology in the Biology Division of Oak Ridge National Laboratory, and Dr. Leonard Sagan, Associate Director of the Department of Environmental Health, Palo Alto Clinic in California. I want to welcome both of them to Today.

Barbara and I asked Dr. Sternglass some questions and we want to ask you some now. We had a graph at the time, which I have learned since had been destroyed shortly after, but you who saw it remember that the graph Dr. Sterngrass brought showed a projected rate of decline of infant mortality—what was expected for about a decade or a little over a decade. And the actual decline in infant mortality didn't conform to that line. It went a little bit higher in connection, he said, with some of the atomic testing starting with the Bikini H Bomb testing.

It is clear that you don't believe the levels of fallout that anyone has yet received can cause any reproductive damage but I understand you also see no link between fallout and the incidence of bone cancer and leukemia. What is the story on this and why do you believe that it is not dangerous?

Dr. STORER. Let me preface our remarks by pointing out, Hugh, that a tremendous amount is known about radiation. Radiation has been studied for 70 years, and it has been studied intensively for the past 25 years, not only in this country but throughout the world.

There is general agreement among scientists that radiation is probably the most thoroughly studied and best understood of all man's environmental hazards. It is against this background of accumulated information, as well as some specific criticisms we have of Dr. Sternglass' interpretation, that is the basis for disagreement.

To go back to your specific question, there is just no evidence that the very small amounts of radiation have caused leukemia or bone cancer any place in the country or any place in the world.

Mr. DOWNS. In any higher incidence than would have occurred, you mean, in normal life.

Dr. STORER. That is correct. There is just no evidence.

Mr. DOWNS. The background count has increased slightly, but I understand percentage-wise that would be miniscule compared to what would be required to do damage.

Dr. STORER. The increase is about 4 percent over what naturally occurs and what has always been with us, and if we include radiation exposure from medical uses and put that average in, then the radiation dose from fall-out would amount to one or two percent of what the average dose is to an American.

Mr. DOWNS. You don't argue that none of the fall-out is at all dangerous, do you? You say "of human hazards" so you link it as a hazard and say it has been studied.

Do you want to try that Dr. Sagan?

Dr. SAGAN. I don't think that is really a question any more argued. I think scientists now almost universally agree that the levels of radiation to which the American public was exposed from the fall-out source have been harmless.

Mr. DOWNS. How would you account then for Dr. Sternglass' graph that did show that, in fact, there was—this is hard to explain—a slowing up of the decline of infant mortality? What other causes could—

Dr. SAGAN. I think the information on that graph is entirely correct. It rather falls apart if you examine information state by state. For instance, there are a number of states in which the plateauing or leveling off, as you call it, occurred much before fall-out appeared, and contrary-wise in other states leveling off didn't occur until many years after the fall-out.

Mr. DOWNS. I see, so this was an average.

Dr. STORER. This is an average and gives an appearance that doesn't hold up very well on closer examination.

Mr. DOWNS. You think maybe there is coincidence that it coincides——

Dr. STORER. That is exactly what I think. It is coincidence.

Miss WALTERS. Doctor, I remember recently we had a guest—and I don't remember his name—who had written a book about the industrial uses of atomic energy and was concerned that they affected the human being and now Dr. Sternglass has added his report, and yet you say scientists, if I understood you correctly, are almost in complete agreement that fall-out is harmless.

Are these people just mavericks—just one or two among thousands? Is that what you are saying?

Dr. STORER. You have to, Barbara, consider dose levels. At high doses there is no question but that radiation can be damaging. It can produce leukemia and cancer, but these levels that we are talking about that occurred with fallout are really quite trivial. There is no evidence that they produced any of those effects.

Mr. DOWNS. We are going to be back in a moment with our guests because there are some other questions to ask, but right now this is Today on NBC.

We will go right back now to talking about the effects of fall-out and so forth. Public fear is not to be dismissed lightly, and we tend, as the public, to be afraid of things that are unfamiliar, and we can at times be out on a limb. I am sure that the manufacturers of thalidomide at one point felt it was a pretty safe thing, and they turned out to be resoundingly wrong.

In the case of certain radioactive things where there is a half life of over 5,000 years as in the case of one of the carbon isotopes, what if there was an error? It would be almost not correctible, and I think this is the reason people are afraid? Is there any danger that we might be out on a limb that we just don't know about at this time?

Dr. STORER. I don't see how we possibly could be in view of all the research that has been done in 70 years——

Mr. DOWNS. Because it is more studied——

Dr. STORER. We know a great deal about radiation effects.

Miss Walters. The other day, on Thursday, when Dr. Sternglass was on, he cited a Swedish study, I believe, in which he said strontium 90 was found when they tested mice. Strontium 90 was carried to their pelvic bones, and they were found to suffer damage in their reproductive cells and that these

tests had been reported and confirmed by scientists.

How do you explain that?

Dr. STORER. We agree that is precisely the case in that study. That was a well conducted study. But he neglected to point out that the range of the radiation from strontium is very short. It travels a very short distance. A mouse is a small animal—like so. The reproductive tissue is close to the bones in a mouse so the reproductive tissues can be irradiated from the trontium in the bone, but in the larger animal, such as man, reproductive tissue is out of the range of strontium radiation.

Mr. DOWNS. And that would only be concentrated in a bone like the pelvis.

Dr. STORER. That is correct.

Miss WALTERS. It would not just sort of seep into the body and affect the organs?

Dr. STORER. It goes to the bone—concentrates in the bone.

Mr. DOWNS. One other thing, Dr. Sternglass had a graph showing fall-out going across those southern states where he showed a higher incidence of infant mortality.

Do you want to comment on that?

Dr. STORER. Yes, that would be a persuasive argument except for the fact the fall-out didn't go in that direction. It went north—northeast up through New Mexico, a corner of Colorado and on into Kansas.

New Mexico has had higher levels of fall-out through 1954—nine times, as a matter of fact, more than the southern states and yet that is a state where Dr. Sternglass reports very little what he calls excess deaths. This another inconsistency in the argument.

Mr. DOWNS. I see. Did you want to add to that, Dr. Sagan?

Dr. SAGAN. No, I did have a comment I wanted to add to John's answer to Barbara's question——

Mr. DOWNS. We have only a few seconds——

Dr. SAGAN. In respect to those rates that is a question again of dose. The dose those rates received would be enough if given to man, to kill a man——

Mr. DOWNS. So it wasn't a parallel——

Dr. SAGAN. It was a massive dose.

Mr. DOWNS. Thank you very much. We have have to take a station break now.

We will use our last few moments to review what our guests said. Dr. Storer and Sagan said two things which I really hadn't thought too much about, but it is certainly worth repeating, I think, regarding atomic energy and the dangers of fall-out and how thoroughly studied it has been. First of all there is nothing new about radiation. We have been subjected to radiation since there has been man and the earth from cosmic radiation and so forth. So it is not new.

The faint increase due to the amount of nuclear activity we have had, they say is negligible and one of the reasons for public alarm, which is proper—the public should be informed and take an alert view of these things—is because it was introduced to atomic energy by the bomb, which is a destructive thing. But there are certainly other uses for atomic energy and perhaps what we will get rid of really is the tendency to destroy ourselves and each other and not merely try to get rid of the atom, which is here with us for the rest of time.

PROTECTING THE RIGHTS OF THE AMERICAN INDIAN

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Arizona (Mr. RHODES) is recognized for 5 minutes.

Mr. RHODES. Mr. Speaker, certain apprehensions have been expressed by the Indian community concerning the possible abridgment of their property rights and rights of self-government under the Civil Rights Act of 1968. Due to the manner in which the Indian provisions were enacted—without any hearings held in the House—a number of amendments to that act may be in order.

Today I am introducing legislation along with 10 of my colleagues representing the six Western States with over 70 percent of the Nation's Indian reservation population which will clarify, to some extent, the rights of the American Indian under this act.

First. This bill makes it clear that title II of the act—25 U.S.C. 1302—shall not be construed to affect tribal sovereignty or property rights secured by law or treaty except to the extent expressly set forth in that title.

Second. The bill would also extend from July 1, 1969, to July 1, 1973, the deadline before which the Secretary of the Interior is required to complete the model code of Indian offenses provided for in title II.

Third. The bill makes it clear that the model code will apply only to those tribes that have adopted it through the action of their tribal council or appropriate legislative body.

The Senate passed an identical bill—S. 2173—on July 11, 1969, and I am hopeful that the House will promptly enact this needed amendment.

TEAMS OF TRAVELING MAGAZINE SOLICITORS LEAVE BURDEN OF GUILT ON LEGITIMATE SALESPEOPLE

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Pennsylvania (Mr. ROONEY) is recognized for 20 minutes.

Mr. ROONEY of Pennsylvania. Mr. Speaker, for the last few months I have been speaking out on consumer abuses brought about by the deceptive practices of many door-to-door magazine solicitors. The record of methods they have used in duping the consumer with deceptive schemes is unfolding in disgusting detail. The economic burdens they have placed on the consumer also are well documented. The full impact of the practices of unscrupulous magazine solicitors cannot only be measured by the hardship placed on the consumer. Their methods have also had an impact on reputable companies selling products door to door.

In examining the impact of their activities on responsible direct sellers, we find that the unethical salesman has created pressures for legislation at the State and local levels to regulate and control door-to-door selling. As is usually the case, the companies striving to uphold quality marketing practices must suffer the consequences of the activities of the rascals in the marketplace. After a team of magazine solicitors moves into an area, disrupts the community with deceptive practices and sales techniques bordering on outright harassment, they leave for the next town with the police and other Government officials demanding the licensing of all door-to-door salesmen.

Since the magazine solicitor often has moved on, the licensing requirement falls the hardest on residents of the community earning their livelihood or supplementing their family income by selling the products of reputable companies. The efforts to regulate the unethical salesman do not, unfortunately, exempt the Fuller brushman, the Avon representative and representatives of other fine companies.

Even at the State level the unscrupulous door-to-door salesman has caused more and more legislation to be sponsored condemning his practices and creating a burden on the legitimate salesperson as well.

It is clear that fraud and deception in the marketplace not only affect the consumer but also have an adverse effect on legitimate companies at the same time. We can only protect the consumer and legitimate business by eliminating the unethical practices. Local licensing is not the desirable solution. The fraud and cheat leaves town after his economic rape of a community, leaving the consumer and the legitimate salesperson with the burdens of his deception. One answer to this problem lies in strict enforcement of existing laws and beefing up the powers and staffs of agenices charged with the responsibility of bringing to justice the practitioners of fraud and deception. Both the consumer and the legitimate businessman would welcome such action.

Mr. Speaker, I have been pressing the magazine subscription sales industry and the Federal Trade Commission to deal with this problem.

My own investigation of deception and fraud in the door-to-door sale of magazines demonstrates clearly that more rigorous action is needed. I look with hopeful anticipation to the Federal Trade Commission for firm action to deal with the magazine sales frauds which flourish today, despite an FTC-endorsed industry code of fair practices.

The existing code-enforcement program is not working. But the FTC has the authority to achieve what the code has failed to achieve. The faith of the consumer and the legitimate businessman is at stake and cannot be dealt with lightly.

THE UNITED STATES-WEST GERMAN OFFSET AGREEMENT

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 20 minutes.

Mr. REUSS. Mr. Speaker, the United States and West Germany have just concluded another agreement to offset the foreign exchange costs of the 220,000 American troops, and their dependents, in Germany. Under the agreement, America's nearly $1 billion annual balance-of-payments costs of this commitment is to be offset on the order of 80 percent by West German purchases in the United States of $760 million a year for 2 years.

In a remarkable editorial of July 20, 1969, the Chicago Tribune discusses the illusory nature of such an offset agreement. The Tribune relies largely upon a study by Dr. Joseph Aschheim of George Washington University, published in the April 1968, hearings of the Joint Economic Committee. That study contains the following conclusions:

First. The foreign-exchange cost of the American military presence in Germany

has continued unrequited by the Bonn government in spite of United States-German offset agreements since 1960. In other words, the offset agreements have essentially been window dressing.

Second. In addition to imposing a balance-of-payments burden, our defense presence in Germany imposes on American taxpayers a still more important fiscal burden of several times the size of the balance-of-payments burden.

Third. Granting that the United States is equally as interested in the American military presence in Germany as is the German Government itself, the fiscal burden of this presence should be shared on an equal, 50–50, basis between the two countries.

Fourth. Such equal sharing would amount to cash reimbursement of the U.S. Government by the German Government in the mark equivalent of at least $2 billion annually.

It is unnecessary to agree with Dr. Aschheim's precise suggestion for 50–50 sharing of the budgetary cost, or with his suggestion that West Germany alone, rather than West Germany in concert with other interested NATO powers, should do the requiting. Yet there needs to be an answer to his central point: The American budget, and the American balance of payments, should not bear the entire real burden of what is essentially a joint venture in the security of Europe.

The Chicago Tribune editorial follows:

TWO BIRDS WITH ONE STONE

For several years now the American public has been witness to an astonishing economic paradox. The giant among free nations in economic as well as military power, the United States, has been watching its currency weaken on world markets in the face of one governmental measure after another intervening in the freedom of private payments. This weakening of the dollar threatens the very existence of the present international monetary system, for an American devaluation would endanger the reserve-currency status of the dollar, still the world's leading reserve currency.

In contrast, the free successor to our principal vanquished adversary in World War II, the Federal Republic of Germany, has emerged over the last decade with the strongest and most coveted currency in the world. Indeed, the strength of the German mark has been a growing source of an embarrassment of riches to the German government. Having been upvalued in relation to the dollar once already, the mark has been the repeated object of sizable speculation on the prospect of a second upvaluation, most recently this spring.

Preceded by a massive rise of Germany's gold reserves while United States gold reserves have been declining, the recent refusal of the German government to upvalue the mark has become an object of major controversy in the German government itself, as well as in the German public generally. In May, a group of about 100 German economists, including some of Germany's most prominent university professors, addressed and open letter to Chancellor Kurt Georg Kiesinger, expressing their dissatisfaction and disappointment with his refusal to upvalue the mark. Similarly, influential pressures for mark upvaluation from other countries are bound to rise.

Germany has been a persistent source of both official and unofficial suggestions to the United States that the United States government put its fiscal house in order. Germany certainly shares with the United States a major stake in preventing the collapse of the international monetary system. In return, what should the United States counsel its German ally to do in regard to mark revaluation? No country has a greater interest in Germany's foreign exchange policy than the United States. The United States cannot, and it must not, be silent on this subject.

Official American influence has been exerted on the side of mark upvaluation. The Tribune regards this American stance as a blunder, itself the result of persistent hoodwinking of the American public by the United States department of state, grown to the dimensions of a national scandal.

For a generation now, Germany has been the locus of a substantial American military presence. Even since Germany joined NATO as a full-fledged ally of the United States, some 220,000 American troops (and their dependents) and some of the most advanced American military equipment have remained on German soil. Germany, of course, is not the only military and political beneficiary of this American presence; the United States is no less a beneficiary. Yet the American taxpayers alone have been paying the costs of this presence.

Under the impact of the United States' balance-of-payments and gold-drain problem, Germany entered a series of annual agreements with the United States, with the avowed aim of offsetting the United States' dollar drain attributable to United States defense expenditures resulting from the American military presence in Germany. From 1960 through 1967 these "offset" agreements had gone virtually without public attention, with tacit faith that the United States state department had fully looked after American interests in its annual renewal of these agreements.

It was not until December, 1967, that the joint economic committee of Congress commissioned Dr. Joseph Aschheim, professor of economics at George Washington university, Washington, D.C., to study the economic nature and operation of the "offset" agreements. The results of his study were published in April, 1968, as "The Dollar Deficit and German Offsetting," constituting part IV of the committee's hearings on the President's economic report. His findings, also summarized by Dr. Aschheim in a letter to the Voice of the People last June 17, amount to nothing less than an indictment of the state department of being a party to an economic fraud upon the American people. At the same time, his findings suggest a constructive proposal for a simultaneous and equitable resolution of the United States and German balance-of-payments problems.

Specifically, Dr. Aschheim's study shows that whether the so-called "offsetting" under the agreements was by German arms buying or by German lending, it was no more than window dressing. In other words, no economically genuine offsetting was instituted by the agreements at all. From the German viewpoint, the agreements were a masterstroke of German shrewdness, outwardly conveying the impression of their title, "offsetting agreements," while substantively being empty, or as the German saying goes, "Ein Tittel ohne Mittel" [a title without power"].

Furthermore, Dr. Aschheim's study shows that the attempt to imbue offsetting-by-buying or offsetting-by-lending with substance would be economically irrational, because it would imply a misallocation of resources for both parties. As acknowledged pace-setter in the liberalization of international trade, the United States should hardly be a party to agreements that palpably imply misallocation of resources.

Finally and most importantly, Dr. Aschheim's study shows that the United States' balance-of-payments burden due to the American military presence in Germany is but a fraction of the *fiscal* burden upon American taxpayers directly due to this presence. He finds that, at the very least, this fiscal burden amounts to 4 billion dollars a year. Because both the United States and Germany are beneficiaries of the American military presence in Germany, he proposes an equal, 50–50, sharing of this burden between American and German taxpayers. Thus, every year, according to the Aschheim plan, the German finance ministry should reimburse the United States treasury in the mark equivalent of 2 billion dollars.

Even such future reimbursement would still not begin to be restitution for the minimum of 15 billion dollars imputable to Germany for the period mid-1960 to mid-1969. Such future reimbursement, however, would terminate the hoodwinking of the American people that the annual "offset" agreements since their inception in 1960 have constituted.

Yet, tragically, the state department has persisted in its hoodwinking course even since publication of Dr. Aschheim's memorandum. Indeed, in the Nixon administration, the state department announced on July 9 a two-year offset agreement with Germany which, tho more complicated in detail, is still not a reimbursement agreement. Thus, risen out of the ashes of war to become the richest of our NATO partners and to possess the hardest of the world's currencies, Germany is slated to continue its evasion of the fiscal burden that American taxpayers have carried by themselves.

Yet perhaps all is not lost, and the spectacle of our richest ally beseeching us to put our fiscal house in order, while this ally fails to do its own share in our fiscal house reorder, may still be stopped. For, as reported by the Tribune's Washington bureau on July 12, "Chancellor Kiesinger of West Germany will face a tough problem when he visits Washington next month. Congress wants the Germans to pay more for American troops in Germany." So Congress may still be emboldened to rectify the state department's blunder.

To visiting Chancellor Kiesinger we extend a welcome. Addressing him and the 100 German economists who, in their open letter, have urged the upvaluation of the mark, we say: "German friends, do your fair share. Your reimbursement to the United States of 2 billion dollars per year will prove your genuine partnership with America. You will thereby have solved both the United States and the German balance-of-payments problems at the same time. The dollar will then have been spared devaluation, the mark will have been spared upvaluation, and the stable exchange-rate system will have been restored to viability."

In sum, Congress should invite Chancellor Kiesinger and President Nixon to redraw the 1969 offset agreement. The institution of equity of treatment to American taxpayers and the restoration of freedom of payments to the dollar cannot be safely put off for another two years. Before the international monetary system is engulfed, there is still opportunity for the two allies to join in their common concern.

FEDERAL PROCEDURES DESIGNED TO PROTECT MEMBERS OF MINORITY GROUPS FROM DISCRIMINATION ON FEDERALLY ASSISTED CONSTRUCTION PROJECTS

(Mr. McCORMACK (at the request of Mr. ALEXANDER) was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. McCORMACK. Mr. Speaker, in my remarks I include a copy of a letter that I have sent to Hon. Arthur A. Fletcher, Assistant Secretary of Labor, in relation to the "careful study of the

operation of Federal procedures designed to protect members of minority groups from discrimination on federally assisted construction projects," and in particular having the "Philadelphia Plan" made applicable to other cities throughout the United States, and particularly that the second city to apply this plan through should be the city of Boston:

THE SPEAKER'S ROOMS,
U.S. HOUSE OF REPRESENTATIVES,
Washington, D.C., July 29, 1969.

Hon. ARTHUR A. FLETCHER,
Assistant Secretary of Labor,
Department of Labor,
Washington, D.C.

DEAR MR. SECRETARY: I have had called to my attention by the Massachusetts State Advisory Committee of the United States Commission on Civil Rights a recommendation that the Advisory Committee has made and called to the attention of the Labor Department, and under your jurisdiction, namely the question of the careful study of the operation of Federal procedures designed to protect members of minority groups from discrimination on Federally assisted construction projects, and particularly call attention to what is known as the "Philadelphia Plan," and that this Plan should be applicable to other cities throughout the United States, and particularly that the second city to apply this plan through should be the City of Boston.

It is my opinion, and concurred in by Congressmen Burke, O'Neill and Macdonald of Massachusetts, and also other Members from Massachusetts, that Boston should be designated as the next city in which the so-called "Philadelphia Plan" should be put into operation. While I have referred to the Philadelphia Plan, my examination of it fails to disclose the fact that there is a training program provided therein. It is my opinion that such a program should be included in its application to the City of Boston, if Boston is selected as the next city in which this field of human endeavor would be put into operation by the Labor Department.

I am also aware of the fact that the Federal Executive Board of Greater Boston has endorsed the recommendations submitted by Reverend (Fr.) Robert F. Drinan, S. J., Chairman of the Massachusetts State Advisory Committee, and those associated with him on this Advisory Committee, and those associated with him on this Advisory Committee. Coming from this source, such endorsement lends great support to the proposal submitted to the Massachusetts State Advisory Committee in relation to the City of Boston.

In any event, Mr. Secretary, it appears to me that every effort should be made along these lines to assist members of all groups who are economically depressed, and with particular emphasis in relation to those of the Black race and Puerto Ricans. I can assure you that I will do everything I possibly can to cooperate in conveying to the members of the construction industry, and to the unions relating thereto, the importance of their complete cooperation in a program of this kind. Such a program is completely consistent with the very theory upon which our government is predicated.

If you have any suggestions to make as to how on the congressional level I can cooperate with you on this program, please have no hesistancy in communicating them to me. In any event, I strongly urge immediate action in the carrying out of the Plan known as the "Philadelphia Plan" in its application to the City of Boston, with the additional suggestion I herein mentioned in my letter in relation to emphasizing every activity possible in the training of those who will benefit from this Plan.

I will appreciate it if you will keep me advised of the action taken by you and the Labor Department on this matter.

With kind regards, I am,
Respectfully yours,
JOHN W. MCCORMACK.

PUBLIC LAND LAW REVIEW COMMISSION'S HISTORY OF PUBLIC LAND LAW DEVELOPMENT

(Mr. ASPINALL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ASPINALL. Mr. Speaker, the Public Land Law Review Commission, which I have the honor to chair, will submit its report and recommendations next year. In the meantime, the staff has been engaged in a comprehensive research program, based on which the Commission has been coming to grips with various facets of public land law and administration.

One of the works, prepared under direction of the staff, is basic to a full understanding by all those who are interested in public lands. It is a "History of Public Land Law Development," prepared for us by Prof. Paul Wallace Gates of Cornell University with a chapter by Prof. Robert W. Swenson of the University of Utah. The book was published by the Government Printing Office and is available from the Superintendent of Documents at $8.25 a copy; I commend it to all as an invaluable reference work which is both interesting and informative.

A review of the "History of Public Land Law Development" appears in the current issue of "Forest History," which is published quarterly by the Forest History Society at Yale University. Because of its timeliness, under permission previously granted, I insert at this point of the RECORD the full text of the review which was prepared by Marion Clawson who is a former Director of the Bureau of Land Management.

The review follows:

REVIEW BY MARION CLAWSON OF "HISTORY OF PUBLIC LAND LAW DEVELOPMENT"

(NOTE.—Mr. Clawson is director of the land use and management program of Resources for the Future, Inc. He is the author of many publications on land policy; most recently, The Leland System of the United States (1968).)

To those of us interested in the public lands—and our number seems to be growing in recent years—the publication of either of these books would have been a happy event. To have the two of them published, and within the same three-month period, is a greater reward for our interest than anyone could have expected. Each is a real find, worth reading and buying. Different in many ways, they tend to complement one another nicely, although apparently each was prepared independently of the other.

Professor Gates prepared his study under contract to the Public Land Law Review Commission. If the other studies of the Commission are as outstanding, and if they are made publicly available, then the Commission will be a success almost irrespective of its own findings and recommendations. Gates, with only 18 months to produce this book, had graduate students help him, and enlisted Professor Swenson of the University of Utah to write one three-part chapter on mineral resources exploitation. Still, a book of this length, detail, and scholarship could never have been done in the time allowed were it not for nearly 40 years of previous research in this field. To a very great extent, the Commission and all of us are benefiting from this long record of research, in what is now a comprehensive book.

The primary organization of the book is topical. There are chapters on private land claims, credit sales, cash sales (2), preemption, military land bounties, grants to states (2), railroad and other grants, homesteading, dry farming and stock raising, and others. Within each the treatment is primarily chronological. This method of subject organization enables one to follow an idea from inception to legislation, criticism, and later modification or repeal. These are substantial advantages, especially valuable in such a long and detailed treatment of a very complex and detailed subject. The chief disadvantage of this approach is that the interplay between different programs, and among different actors, is often not as clearly evident as a simpler historical treatment might afford.

Gates has written in the general tradition of Hibbard (*History of the Public Land Policies*), Robbins (*Our Landed Heritage*), Peffer (*The Closing of the Public Domain*), and others. His book is distinguished in that it is somewhat longer and more detailed, places less emphasis upon origin and history of legislation, tries (not always satisfactorily) to show how laws worked out in operation, and, of course, is more up-to-date.

Perhaps Gates's greatest contribution to public land history is the outstanding way in which he has shown that there has almost never been a single coherent and consistent set of federal land laws. As he clearly demonstrates, Congress is not a single body with a single mind, but a group of men representing diverse and usually conflicting interests. And often the easiest way to resolve a conflict is to include something for everyone, sometimes in the same act. The incongruity of the homestead law and the public land sales—which were continued for more than 25 years after homesteading was initiated—have been traced by Gates in earlier publications and are further illustrated here. But grants to railroads overlapped with grants to states; federal land reservations such as the forest reserves overlapped with both; sales could be made and homesteads taken—and both were—in the same areas, and so on. Neatness, orderliness, and ship-shapeness were precisely what the federal land laws never had.

Gates shows—as have earlier writers, but he does it in more detail—how Congress repeatedly sided with the land claimant, the "settler" as against the government agent and agency. This was most marked, perhaps, with private land claims where Congress repeatedly granted land claims rejected as fraudulent by generous commissions, while the land agent who caught a timber company in trespass was likely to be not only repudiated but also punished (by loss of job or otherwise).

The readers of FOREST HISTORY may find of particular interest the two chapters on federal forest land management and the one on federal grazing land management. Gates follows what might be called the "conservation line" in the interpretation of forest and grazing history of the past three decades or so; the federal agencies are the good guys, the ranchers and forest industry often the bad guys. Perhaps because of my own personal experiences, I found these less objective and somewhat less complete than earlier chapters; but they are nevertheless factual, and I think it clear that Professor Gates has done his best to report the record as he saw it.

Malcolm Rohrbough, associate professor of history at the University of Iowa, is a relative newcomer to the field of public land history, although his doctoral dissertation

did cover some of the subject matter included in his book. He deals with a much shorter time period than does Gates; early public land history, though complex enough in these early years of the nation, is obviously far simpler than history for that same period and the more than 100 years since, combined. Rohrbough digs much more deeply into the actual operations of the land laws and brings to our attention far more new material than has any writer thus far. To anyone reasonably familiar with American land history, the story Gates tells is mostly known, though he does bring in new detail and new perspectives; but I found far more that was new to me in Rohrbough. He has gone much less into the history and the politics of land legislation, and much more into the actual operations of these laws on the land, including the operations of the General Land Office as an organization.

Rohrbough's book is replete with incident and detail that cannot well be summarized here. I found it a fascinating story. For instance, I had not realized how much competition there was in the early days for government surveying contracts—not because they were profitable in themselves, but because they were a prime mechanism for ascertaining, at public expense, the character of the land in areas soon to be opened. Many of the largest land speculators had their surveying organizations and bid upon government contracts, taking their real profit in terms of the advance and detailed information on land quality yielded by the surveys. Other surveyors lacked such direct connections with land speculators, but made copies of their maps and notes which they sold or loaned for a fee to would-be land buyers.

One may summarize much of the detail in Rohrbough by saying there was a persistent and generally successful effort by people on the frontier—"settlers" and "frontiersmen" were words of praise, "speculator" was not—to make the federal land laws work as they wanted them to work, whether or not this was the way Congress intended them to work. The settlers association (perhaps more marked at a later date) that Bogue and others have studied, the efforts (usually but not always successful) to inhibit or prevent competitive bidding for land offered at public sale, and other actions were part of this. In Alabama around 1820, the competitive bidding really was competitive; a speculative fever swept the bidders, and prices reached heights not previously dreamed of—nor long sustained.

Each of these books suffers somewhat from being "trees" rather than "forest"; that is, one wholly unfamiliar with American land history—a foreigner, for instance—would probably find each too detailed and bewildering. If on the other hand one is even modestly knowledgeable about American land history, each is rewarding, rich with important detail, and well worth having in one's memory and library. One must assume that the authors achieved their objectives.

AND THE SLAUGHTER GOES ON—WHEN ARE WE GOING TO CURB IMPORTS AND SALES OF WEAPONS? WHEN ARE WE GOING TO REGISTER AND LICENSE EVERY WEAPON IN THIS COUNTRY?

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PODELL. Mr. Speaker, the Nixon administration has formally announced its opposition to Federal gun registration and licensing of gun owners. This is a position diametrically opposed to the Johnson administration's advocacy of such controls.

The administration claims that effectiveness of last year's Gun Control and Crime Control and Safe Streets Act is as yet unmeasured. It also pleads invasion of States rights and prohibitively high costs of administering national gun registration. One city, Toledo, Ohio has adopted an ordinance requiring handgun owners to obtain permits. As a direct result, murders there have fallen by 65 percent, and other major crimes have shown similar significant dropoffs.

Last year's act, barring importation of cheap, concealable-type handguns, is being defeated by domestic manufacturers of these weapons, or by importation of foreign-made parts for assembly here. How then, can anyone seriously suggest leaving it to the individual States? Twenty-six of them have virtually no restrictions on sale or ownership of firearms. Few jurisdictions show signs of acting to prevent the ongoing slaughter.

Such weapons from abroad were flooding our domestic market; 1.15 million foreign handguns entered our country in 1968, about half from West Germany. All were easily available to criminals, juveniles, and the mentally unbalanced from discount stores or through local "grapevines." The law passed last year allows importation of foreign weapons parts so long as the frame of the pistol is fabricated here. Restrictions do not apply to domestically manufactured handguns. So we are back where we started, except that the gun lobby is attacking even the thin seive of defense this law presently provides.

We could and should forbid importation of parts for guns which are already banned from importation as a complete unit. But we will not, even though it is right.

We could and should control domestic manufacture of these murder weapons by applying the same standards of size, barrel length, quality, and safety specifications that now comprise import restrictions on pistols made here. But we will not, even though it is right.

We could and should ban them as unsafe products by applying similiar standards under FTC legislation, which regulates quality of other domestic goods. But we will not, even though it is right.

We could and should register and require a permit for every weapon in the Nation, from the smallest caliber rifles and pistols to the heaviest weapons available and sold. But we will not, even though it is right.

As we meet here today, every drug addict, hardened criminal, juvenile delinquent, militant, lunatic, and assassin is free to acquire long weapons, ammunition, cheap domesitc handguns and other armaments. Daily the slaughter continues of innocent small business people, pedestrians, bystanders, and other innocents.

All the while, the National Rifle Association piously proclaims that Americans have an inalienable right to blow one another's heads off in the name of constitutionality. A President, a U.S. Senator and a great civil rights leader lie in their graves along with tens of thousands of other innocent victims of our beknighted gun laws. Still the gun lobby raves on about the right to self-defense in terms of freely purchased weapons. If moon men invade us, we should all be able to take pot shots at them from our hedges and dormer windows. Marvelous.

Such arguments are as bereft of sense as a herring is bare of fur. All have been struck down and proven false again and again. Yet like some mastodon or dinosaur of long ago, the gun crowd bleats louder and rumbles on—braying its specious arguments to all who would hear. Now they have been joined by the Nixon administration, which rattles on of States rights and difficulty and expense of administration. Other countries have been able to withstand the expense and administer the programs. We cannot?

Mr. Speaker, what will it take for us to act rationally and end this monstrous evil? No one is safe. No street will be secure until weapons are prevented from reaching those who prowl them. In the meantime, the slaughter goes on—and on—and on—and on. Who will be next?

SHORTCHANGING ELDERLY AMERICANS, OUR NATIONAL SHAME—PODELL CALLS FOR EXPANDING MEDICARE TO COVER ALL RELATED BENEFITS FOR SENIOR CITIZENS

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PODELL. Mr. Speaker, American goes to the moon, wages futile war in Vietnam, and pours billions into military spending programs. Yet the everyday needs of almost 20 million older Americans are not being met. Government is turning away from its partially realized goal of assuring that these fellow citizens are accorded their fair share of America's substance and prosperity.

I am heartily disgusted with those who pay lipservice to the needs of these people, while turning around the next moment and ignoring their pledges. We have created medicare and allowed it to be abused by some segments of the professions. We have promised our elderly an end to subsistence living, and have failed to keep that sworn word. We have assured them social security benefits would reflect financial realities of the marketplace. In this too we have fallen far short.

Other nations have caught up with and passed America in areas of necessary benefits provided to the elderly. These include everything from housing and social services to medical services, drugs, and dental care. In the name of one excuse or another, we are standing by as a nation while those citizens quietly go on doing without. So they live with a little extra pain than most, a little worse diet than most, and much less security than most. Such is the national disgrace of the United States. If we exist as a nation for 10,000 years, this blot upon our escutcheon will remain.

For several years, Congress has had placed before it a measure to provide free outpatient drugs to all the elderly under medicare. I have introduced this bill as a Member of this Congress, and

it lanquishes as medicare did for so many years before final enactment. Is there any excuse, except that major drug companies oppose it? It is a fact that although older people constitute 10 percent of our population, that pay approximately 25 percent of all national costs for prescription drugs. Not only, therefore, should we make this concept a legal reality, but should add to it several other natural adjuncts flowing from the original medicare concept. I am introducing a group of these measures today, each aimed at fleshing out the framework of medicare. By their passage, we would make available to our elderly a full range of medical benefits, treatments, and medically beneficial devices to vastly enhance the quality of their lives.

The first bill in this new packet of legislation would provide one routine annual physical checkup for persons insured under medicare's supplementary medical insurance benefits program.

Such a checkup would include physician's services, diagnostic X-ray, laboratory, and other diagnostic tests involved in complete physical checkups.

Next is a measure eliminating a requirement that an insured person must first have been admitted to a hospital to qualify for extended medical care services under medicare. It also expands posthospital extended care services under medicare to include therapeutic as well as nursing care.

A further measure amends that section of medicare dealing with home health services. Under it, transportation would be provided to a place where health services are given to those eligible for benefits under home health services. This is a case where health services cannot be provided at the particular home of a recipient.

Still another essential measure would affect the limit on posthospital extended care services, now limited to 100 days for any spell of illness under the medicare program. This bill removes the 100-day limit, so benefits would apply for any length of posthospital extended care.

My final measure would amend title XVIII of the Social Security Act—medicare; part B. It would include dental care, eye care, dentures, eyeglasses, and hearing aids among benefits provided by the medicare insurance program. Our Social Security Administration has already estimated that a program for this bill would cost $500 million annually for dental care, $150 million for eye care, and $100 million for hearing care—a total of $750 million.

Cost to those electing part B coverage would be an increase from $4 monthly to $6 monthly. There would be an equivalent increase in the Federal share for such benefits if the existing formula was utilized. Under this measure, the financial formula would be changed so that Government, not the beneficiary, would bear the load of any added costs. Present sharing of costs on a 50–50 basis would be changed to a one-third/two-thirds sharing by this bill.

Here, then, is a package of basic legislation which would combine to extend the umbrella of medicare out to its fullest extent to cover our elderly. Such complete ranges of service are available in numbers of countries, including many in Europe. It is worth noting that Bismarck's Germany in 1870 offered most of these services to the elderly of that time.

None of these measures is questionable from a merit standpoint. None threaten exorbitant demands upon any segment of society. Each would provide a fair minimum, which our older citizens surely have a right to ask for. None inhibits the physician, hospital, or prescribing pharmacist in the least. None threatens already massive profits already being enjoyed on all levels of the medical and related professions. Each would lessen apprehension, suffering, and pain. Each would be a potent reaffirmation of the promise of American life. We can do no less.

Daily the plight of 20 million senior citizens worsens. Pain goes unalleviated, fears remain unallayed, minimal security is jeopardized, and quality of their lives constantly lowers. We can change all of this by living up to promises already made. These bills are vehicles for such change.

THE DANGERS OF STUDENTS FOR A DEMOCRATIC SOCIETY

(Mr. CEDERBERG asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CEDERBERG. Mr. Speaker, since I made my remarks some time ago on the radical Students for a Democratic Society I have received hundreds of letters requesting copies of the RECORD containing my comments and asking for further information on this subversive organization. Almost daily today we read of various industries which have become aware of this group's efforts to infiltrate their plants for the purpose of stirring up trouble. Trade publications have published the "Work-In Organizer's Manual" in full as an effort toward keeping their members informed of the dangers presented by the SDS and its aims.

One of the best, and most well-documented, histories of this group which I have come across in my reading on this subject is the booklet, "Students for a Democratic Society," published by the Church League of America. In a readable and comprehensive, yet relatively short volume this organization has presented a picture of the growth and development of the SDS from its patently socialistic origins. The Church League has published other documentary-type materials which relate to groups which threaten to destroy the institutions of our society. These include "The Black Panthers" and "By Our Enemies You Will Know Us"—an exposé of student revolutionary plans.

I am advised that the Church League, of 422 North Prospect Street, Wheaton, Ill. 60187, will make this material available to Members of Congress on request.

It will not be too long before students begin to return to their campuses and again face the possibility that the doors will be closed due to the irrational and anarchistic behavior of a few. Some will be facing the challenge of the university for the first time. It is my hope that we will be able to bring about enough of an awareness of the dangers of groups such as those mentioned above that we will be assured that our young people will direct their energies into constructive rather than destructive channels.

As I have mentioned before, I do not challenge the right of individuals, in any institution, to work for the betterment of the society in which we live. This is the direction in which we all wish to move. I would, however, deny to anyone the right to destroy that which he dislikes, and that is my objection to organizations such as the SDS.

AID TO FEDERALLY IMPACTED AREAS

(Mr. MIZE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MIZE. Mr. Speaker, once again the Congress must debate the level of funding for education assistance to federally impacted areas. For 19 years, Public Law 874 has authorized funds for operation and maintenance of schools in school districts on which nearby Federal installations have placed a burden.

These payments have always gone to school districts with no strings attached and this aspect of the program has contributed mightily to its popularity over the years. Until fiscal year 1969, the authorization was never less than 98 percent funded in the appropriations process.

But popularity aside, the concept of Federal payments to school districts in impacted areas is sound on its merits. Military installations with substantial numbers of young families living on base are clearly a heavy burden on local schools. In some cases the rapid buildup of Federal activity has outpaced the capacity of local authorities to respond with adequate education facilities. Public Law 874, for 19 years, has been an appropriate response to this challenge.

COMMITMENT VERSUS PERFORMANCE

Mr. Speaker, today this body considers appropriations for the Departments of Labor and Health, Education, and Welfare and related agencies. Over the years, the Congress has made commitments to all the people through the enactment of authorizations for various education programs. Today, we shall see to what extent we are able to live up to those commitments for fiscal year 1970. As I review this appropriations legislation, I apprehend that we shall fall somewhat short of our promises.

This legislation fully funds category A of Public Law 874. Thus, it provides the full cost of educating those children whose parents both live and work on Federal installations. Payments under this provision are part of permanent law.

But this bill provides nothing under category B. Thus, school districts with children whose parents either live or work on Federal installations will receive

no relief during fiscal year 1970. If the legislation as it now stands becomes law, school districts in my State of Kansas, for example, will lose nearly $8 million of their 1970 entitlement under existing law.

School districts in California will lose over $75 million, those in New York will lose over $16 million, and those in Alabama will lose nearly $10 million. Mr. Chairman, the effect of this legislation will be clear: local authorities will be forced to substantially increase property taxes in the face of congressional unwillingness to meet an historic commitment.

IMPERFECT AUTHORIZATION LEADS TO DILUTION OF A MERITORIOUS PROGRAM

Mr. Speaker, I do not suggest that Public Law 874 is without faults. Over the years, this legislation has been expanded to the point where school districts are entitled to payments that cannot be justified under the original concept of the act. Indeed, in some instances, the presence of a Federal installation actually increases the tax base for a community rather than the other way around. In further instances, Federal installations have attracted families with income and taxpaying ability substantially above the community average.

The legislation has been expanded to include payments to schools with children from public housing developments.

The net effect has been to extend the authorization to an entitlement for fiscal year 1970 in excess of $650 million. The Bureau of the Budget and the Congress are unwilling to commit such large sums to this single education program in this year of record spending and inflation.

Mr. Speaker, in view of the fiscal realities this year, I urge a compromise in the funding of Public Law 874. I support the amendment which would fund the program—both category A and category B—to the fiscal year 1969 level. This would mean that Kansas, for example, should receive about $8.5 million, California should receive about $78 million, and Alabama should receive about $9.5 million.

Regardless of whether this compromise succeeds, the Congress should soon begin a thorough review of all authorizations under Public Law 874. Those students from families actually contributing to an increased tax base should not be eligible for assistance in future years. Those communities with Federal installations that contribute substantially to increased revenues at the local level should not receive additional windfalls from the Federal Government under legislation specifically designed to assist school districts adversely affected by the Federal presence.

Mr. Speaker, I support a compromise to fund Public Law 874 at the 1969 level. I urge the Congress to undertake rational reform of the basic legislation in the near future, to avoid destructive dilution of the program. Only through such reform can we protect those districts which, on the merits, deserve substantial Federal payments under Public Law 874.

JOBS FOR WELFARE CLIENTS SEEN AS ALTERNATIVE TO GUARANTEED INCOME

(Mr. TALCOTT asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. TALCOTT. Mr. Speaker, the welfare system devised way back in the 1930's, and patched up ineffectively ever since, is a failure for everyone concerned—the recipient, the administrators, the taxpayers, and society.

Many suggestions for change have been proposed and considered—negative income tax, family maintenance, guaranteed annual wage, insured income, and a dozen others.

It seems to me that many of the advocates of change in our "welfare system" are promoting only new labels for old ineffective methods.

The National Chamber of Commerce has given this matter of welfare considerable study.

Mr. Karl T. Schlotterbeck, director, manpower programs for the National Chamber of Commerce, had written an article which should be read by every Member of Congress.

Guaranteed full employment or guaranteed job opportunity are concepts which deserve more consideration. Our efforts to reform and improve the welfare system require sharper distinctions. The able must be more clearly separated from the unable. There must be clearer penalties for remaining on welfare; there must be better incentives for getting off welfare. The taxpayers are entitled to as much consideration as the tax user.

Mr. Speaker, I insert the article of Mr. Schlotterbeck at this point in the RECORD. I urge that this concept be considered among the many others:

JOBS FOR WELFARE CLIENTS SEEN AS ALTERNATIVE TO GUARANTEED INCOME

(By Karl T. Schlotterbeck, director, manpower programs, National Chamber)

The idea that all Americans should be guaranteed a regular income, whether or not they are able or even willing to work, will soon be up for decisive action.

Advocates, gathering in strong legislative battle formation, include such high officials of the Nixon Administration as Robert H. Finch, secretary of Health, Education and Welfare, and Daniel P. Moynihan, assistant to the President for urban affairs.

Guaranteed income legislation is pending in Congress, and President Nixon is expected to submit his own plans on the subject soon. A President's Commission on Income Maintenance Programs, appointed by President Johnson to make a thorough study, is planning to issue its report this fall. Chairman Ben W. Heineman is committed in advance to the income guarantee.

The businessman or anyone else who doesn't bother to learn what is involved here, and make his opinion heard where it counts, may soon come to realize that one of the proudest traits of the American people has suddenly vanished while his back was turned; that self-reliance, which built this nation, has been reduced from an ideal to an option.

To encourage idleness, waste potential manpower, increase consumer demand of able-bodied adults who produce nothing, or risk more federal deficit spending under present inflationary conditions—all of which a guaranteed income program would do—would be to "sweeten" welfare at the expense of those being hurt by inflation. Many persons, living on once-adequate fixed incomes, are now being dragged down toward poverty by the declining value of the dollar. *Their* rights need some attention.

To contend that inflation is only a temporary evil, and that a guaranteed income would be a permanent virtue, is to presume that our economy can grow sufficiently to afford these and all other costs of government without strain.

The guaranteed income would become a pressure to raise minimum wages. If an able-bodied adult and family is to have a higher income, guaranteed, the minimum wage might have to be raised to induce him to work. And experience shows that when wages rise at the bottom, workers at each succeeding level of skills up the line will insist on maintaining their pay differentials, thus intensifying the wage-price spiral.

Taking the inflation problem as it stands right now, we see:

(1) Widespread shortages of skilled workers.

(2) Pay rates rising faster than productivity, which inexorably brings on still higher production costs and higher prices.

(3) A growth of welfare costs at all levels of government as the unskilled and other disadvantaged persons become more costly to maintain, and impatient for a larger share of the general affluence.

(4) An incipient revolt of taxpayers against needed tax increases—and even present taxes.

As the Administration endeavors to hold the line on government spending to reduce inflationary pressures, some states and cities—burdened with a continuing growth in the welfare caseload and costs—look to the Federal Government for more help.

The natural tendency is to ask: Why not put to work many of those on welfare? This would make it easier to hold down government expenditures. It would give encouragement to oppressed taxpayers. It would help many employers desperately in need of more workers.

MISINFORMATION ABOUT WELFARE

Many heads of dependent families would welcome the opportunity to get off the welfare rolls. After all, personal dignity and self-respect cannot be purchased with a relief check. They can only be earned.

This solution, however, does not appeal to the "hand-out" artists who argue that there is very little work potential among welfare recipients.

About a year ago, one federal spokesman said that 95% of those on welfare, or eight million persons, were aged, disabled or children, and thus unable to work. The remainder, he said, were mostly mothers needed at home. He estimated that only about 50,000 of the 8.4 million on welfare were employable unemployed males.

That would be a most discouraging prospect if it were true. But it isn't.

Not only is our welfare system clouded by misinformation; not only is it perpetuating human apathy, hopelessness and idleness among able-bodied adults, but it is also badly in need of administrative reform. Procedures for getting monthly income to those in real need are cumbersome, costly and demeaning. There are numerous complaints about the indignities of the welfare "needs test."

Against these criticisms, the virtures of some form of a guaranteed income are proclaimed. Types most often mentioned are the so-called Negative Income Tax and the Family Security Plan.

Essentially, these propose that the U.S. Treasury pay money directly to those with incomes below certain income levels. A modified work incentive would be built in as an inducement to the able-bodied. The NIT idea

is being tested now on a small scale with money from the federal poverty program.

Right now, before there is a new national commitment to any plan for dealing with the related problems of manpower and welfare, and before we take further risks with our economic well-being, the businessman and other taxpayers should be demanding answers to basic questions.

What is "welfare"?

Why are they on welfare?

Where is the welfare growth occurring?

How do they qualify?

How substantial is the manpower potential?

WHAT IS WELFARE?

This term usually refers to the five federal-state programs of public relief—Old-Age Assistance (OAA) for people 65 and older, Aid to the Blind (AB), Aid to Families with Dependent Children (AFDC), Aid to Permanently and Totally Disabled (APTD), and Medicaid. The first three were in the 1935 Social Security Act. The fourth was added in 1950 and the last in 1965.

The purpose is to aid people who are destitute and in want. In the first four, need is met in part or in full by cash payments. In the fifth, medical care is paid for.

All 50 states have the first four of these programs. Medicaid pays for needed medical and hospital care for those on the other welfare programs. By law, every state must have a Medicaid program by 1970, and most do now.

WHY ARE THEY ON WELFARE?

The aged, the blind, and the disabled simply have insufficient income for a minimal living and, by and large, have no potential for earning through employment. Families receiving AFDC also have inadequate income and, hence, are in need. While many of the family heads are potential workers, immediate health problems or presence of young children (in families headed by women) may prevent their holding a job and earning a living.

The dependent child program accounts for virtually all the growth in the four cash welfare payment programs since 1960. According to HEW, the number of recipients (adults and children) has doubled from three to six millions.

The figures in millions of persons are:

Numbers of recipients in December

	1960	1968
OAA	2.3	2.0
AB	.1	.1
APTD	.4	.7
AFDC	3.1	6.1

Costs of benefit payments

	(*In billions*)	
OAA	$1.6	$1.7
AB	.1	.1
APTD	.3	.7
AFDC	1.0	3.3

Note. These data do not include administrative costs, which in some jurisdictions will add another 30%.

HOW TO QUALIFY FOR WELFARE

A person (or family) in one or another of the four categories—aged, blind, disabled, or with dependent children—can qualify by *proving to be in need.* This is the "needs test." They must show that their available income and other resources are inadequate to provide a minimal or subsistence level of living, a level defined by state law and regulations and varying from state to state. The "needs test" involves considerable investigation—case by case—to verify an applicant's statements about income and other resources.

WHAT IS THE MANPOWER POTENTIAL OF THOSE ON WELFARE

The 2.8 million aged, blind and disabled who are on welfare have little or no work potential. In their case, it might be feasible to replace the present "needs test" with a simplified income test, and thus eliminate some of the administrative costs.

This is being tried now on an experimental basis. To maintain state and community concern for these people, the programs for aged, blind and disabled should continue to be financed jointly by the federal, state and local governments.

To appraise the manpower potential among the six million receiving aid for dependent children, we need more facts.

WHO GETS AFDC HELP?

By updating the figures from an HEW sample survey made in 1967, we can reasonably estimate that:

There were approximately 1.5 million families with 4.6 children on AFDC in December, 1968.

More than one million of these families live in the 130 cities with populations of 100,000 or more.

Almost 800,000 families are white; more than 700,000 are nonwhite.

About 1.1 million families—73% of the total—are headed by the mother.

Typically, but perhaps surprisingly to some persons, the AFDC family is not large. Fifty per cent, or 750,000 of the families had no more than one or two children to support. Another 450,000 families had only three or four dependent children.

A substantial part of the caseload growth results from loss of job income by the head of the family. At the same time, many families drop off the AFDC rolls as the family heads get jobs.

About one million of these families were receiving near the end of 1967 less than $200 monthly from AFDC—less than the monthly pay at the $1.60 minimum wage.

In summary, the adults in the families receiving aid for dependent children represent a substantial manpower potential. They are highly concentrated in our larger cities. Their income needs are not extraordinarily large. A number of them have had job experience, including those mothers who are heads of families. A substantial number—even with no prior work record—have sufficient schooling to be trainable for job openings.

In the light of these and other facts, there should be a new direction for Aid to Families with Dependent Children. But these data are for the nation as a whole. A sample survey should be made in each of the 130 larger cities to determine the manpower potential of adults on AFDC. Then this potential could be developed.

HOW CAN WE DEVELOP MANPOWER POTENTIAL?

The primary objective should be occupational rehabilitation of the family heads. A financial incentive should be offered to encourage them to take training, and basic education, if needed. A family living allowance should, of course, be provided while in training. Quite possibly, many of those with prior work records will need some additional skill training to qualify for jobs that will pay enough to help them off welfare.

Child-care facilities may have to be arranged if mothers are to take training and hold full-time jobs. Illegitimacy and father-abandonment are substantial contributing causes of families being on relief. Family planning information and devices should be freely available to adults on AFDC.

NATIONAL CHAMBER POLICY

This is the kind of program that would do most to bring out the manpower potential of adults on AFDC. It is based on a policy adopted this year by the National Chamber after a six-month study by a special Committee on Welfare Programs and Income Maintenance. The essence of this policy:

1. Needy persons, such as the elderly and disabled, who cannot care for themselves, should be provided for by the public.

2. Able-bodied adults in need should be given opportunities and incentives to work.

3. Guaranteed income arrangements should be rejected. At best they tend to preserve the status quo rather than to improve conditions for the needy.

It will be up to business to take an active part in rehabilitation programs. An appropriate slogan of the National Chamber referring to the welfare mother caring for dependent children is, *"If you won't hire her, don't complain about supporting her."*

Business, of course, is not alone in this responsibility. Other segments of the community—education, churches, labor and government at all levels should share in the endeavor.

Secretary of Labor George P. Shultz has said that "manpower [training] programs can increase the supply of useful labor and thereby increase the ability of the economy to match the output and demand." Clearly, occupational rehabilitation, in place of a guaranteed income, is the proper way to relieve both the welfare and inflation problems at the same time—and give these people a helping hand to rise up out of poverty.

LIBRARY SERVICES AND CONSTRUCTION ACT

(Mr. HOLIFIELD asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HOLIFIELD. Mr. Speaker, I wish to commend the Appropriations Committee for reporting out a figure of $40.709 million for funding of titles I, III, and IV of the Library Services and Construction Act. While this amount is still short of the program level for fiscal year 1969—$49.894 million—it is gratifying that the committee has acted to appropriate nearly the same level as last year. I am hopeful that when this bill is considered in the other body, the full amount from the previous fiscal year can be reached.

The figure of $40.709 million is the same as that recommended by the Johnson administration. More significant however is that the Appropriations Committee has reported out a figure which is $17.5 million above the amount requested by the Nixon administration for this vital program. The lesson should be clear to all. In California particularly, the lesser amount as requested by the Nixon administration would have meant the end of many valuable State library services.

The need for education is one of the most fundamental needs of this century. Our recent achievements in space would not have been possible if our schools and teaching resources had fallen short of the excellence we must have to maintain our position of world leadership in many areas. The public library stands as one of our greatest educational resources.

It is inconceivable to me that the present administration would seek to curtail the many great services provided by the Library Services and Construction Act. Prior to the inception of the Library Service Act in 1956, only one-half the amount needed for minimum service was provided for public libraries. At that time, State library agencies recorded that only 25 percent of the population had adequate library service, with 89 percent of the inadequately served living in rural areas. The need for im-

proved facilities and services existed in all areas but passage of this act was most directly concerned with rural areas.

The need in urban areas received recognition with the Library Services and Construction Act, signed into law on February 11, 1964, by President Johnson. At that time, he stated in part:

The central fact of our times is this: books and ideas are the most effective weapons against intolerance and ignorance.

The 1966 amendments to this act added to its purpose the promotion of interlibrary cooperation and provision of assistance for specialized State library services.

Over the past decade, these acts and their amendments have benefited over 85 million Americans in new and improved libraries. Over 27 million books and other materials were purchased under the program with Federal, State, and local funds during the first decade.

It is indicative of the success and popularity of this program in California, and in my congressional district, that I have received considerable mail and other communications urging full funding of the Library Services and Construction Act. A recent address by the California State librarian. Mrs. Carma R. Leigh, delivered in Norwalk, Calif., on July 19, is worthy of inclusion at the close of my remarks. Following Mrs. Leigh's speech are some additional documents which demonstrate the need for continued funding of this program, as well as its considerable accomplishments in California to date. I insert these materials in the RECORD at this point:

REMARKS OF CALIFORNIA STATE LIBRARIAN, CARMA LEIGH, AT DEDICATION OF LOS CERRITOS REGIONAL LIBRARY OF LOS ANGELES COUNTY PUBLIC LIBRARY, NORWALK, CALIF., JULY 19, 1969

Dr. Ringwald, Supervisor Bonelli, County Librarian William Geller, all other distinguished platform guests, and all of you as friends and owners of this new regional library facility, the most distinguished and important of all: I bring greetings from the California State Library, and, as State Librarian, greetings on behalf of the other libraries of California.

This building you dedicate today with so much pride, pleasure, and anticipation for the future, is one of 60 such public library buildings in California which the State Library has assisted financially with grants of approximately one-third of their cost. These grants have come from federal funds under the federal Library Services and Construction Act Title II that has been in effect since 1964.

This cooperative local-state-federal public library building program has brought to California $10,772,507 of federal funds since 1964, to which $22,964,888 of local funds has been added, to make a total of $33,737,395 for California public library building purposes. This approximately thirty-three and three-quarter million dollars has provided 1,095,830 square feet of new public library space, in 60 buildings.

Los Angeles County Public Library has received 11 of those grants:

From Federal LSCA II funds	$2,221,061
From Los Angeles County funds	4,858,929
Total	7,079,990

This Los Cerritos Regional Library building represents the largest of the federal grants to Los Angeles County Public Library: $459,711 of federal funds, to $919,423 of Los Angeles County funds, for a total cost of $1,379,134 for 39,000 square feet of space.

Besides the 11 grants to Los Angeles County Public Library, there have been 5 other federal LSCA II grants for public library construction to other independent public libraries in Los Angeles County. These have made lic library buildings in: Altadena, Long Beach, Monrovia, Palos Verdes Peninsula, Pasadena.

Plus, of course, the grants to 44 other localities throughout California, from Siskiyou County on the Oregon border to San Diego County on the Mexican border.

This is a most gratifying record of local initiative, state and federal assistance, and overall accomplishments, for 60 California communities in California's cities and counties.

We wish we could go on helping toward similar accomplishments in other California communities. But it is coming to an end. There will be no more federally assisted public library building construction program—unless Congress acts to restore funds to the federal appropriations budgets under consideration this month of July, in the House of Representatives. Action on these appropriations is expected to be final on the House floor by July 30. If you are interested, and wish to have other communities benefit from federal assistance in constructing needed public library buildings, you may wish to tell your Congressmen, your representatives in the House of Representatives in Washington. Some 40% of California public library buildings are over 40 years old, out of date, and hopelessly overcrowded, despite all the new buildings recently constructed.

In addition, many newly settled areas where our fast-growing California population has moved have no library buildings at all to serve the new populations.

I greet and congratulate you today on bringing to completion this largest of Los Los Angeles County Public Library's regional library buildings. I know you will use and enjoy it many years into the future, and I hope many other Californians will be able to do the same.

APPLICATIONS RECEIVED IN FISCAL 1969 FOR FEDERAL LIBRARY SERVICES AND CONSTRUCTION ACT FUNDS WITH WHICH TO SUPPORT LOCAL LIBRARY IMPROVEMENT PROGRAMS, CALIFORNIA STATE LIBRARY, SACRAMENTO

Title I—Services

Number of applications received	22
Number of applications that could be funded	3
Number of applications that could not be funded	19

APPLICATIONS FUNDED

Black Gold Cooperative System, on behalf of 7 member libraries in 3 counties (see list of systems and members) for development of Reference and Information Center to serve all member libraries.

Eureka City Library, on behalf of north coast libraries, to plan for a system of coordinated library services, including all types of libraries. (Some Title III funds involved, for inter-type-of-library cooperation.)

Metropolitan Library System (See attached 4-page list of members of this 16-member cooperative system in Los Angeles County.) To develop library service to the economic community of all 16 cities.

APPLICATIONS THAT COULD NOT BE FUNDED

East Bay Cooperative System, on behalf of 4 member libraries in 2 counties (see list), for demonstration of bookmobile service to minority population areas, including films and records; also staff to coordinate system-wide services.

49–99 Cooperative Library System, on behalf of 8 member libraries in 5 counties, to acquire and provide educational films for entire area.

49–99 Cooperative Library System (see list of members) for reference materials to serve entire area: 5 counties.

Long Beach Public Library, for intensified service to economically & socially disadvantaged areas of Long Beach.

Los Angeles County Public Library, for extended hours for 4 community libraries in "curfew" (disadvantaged) areas of unincorporated Los Angeles County.

Metropolitan Library System (see list of members) to establish strengthened library services for the families of children enrolled in or eligible for participation in the Head-start Program.

Metropolitan Library System, for educational but not curriculum-oriented films & videotape recordings for people of 16 cities.

Mountain-Valley Library System, on behalf of 7 libraries in 5 counties (see list), to establish a film circuit of 16 mm. & Super 8 cartridge films for use throughout the mountain and valley counties.

North Bay Cooperative Library System, for development of central physical processing of books and other materials for 16 libraries in 6 counties north of San Francisco Bay. (See list of members.)

North State Cooperative Library System, on behalf of 16 libraries in 9-county area of 27,995 square miles, for establishment of strong reference and information service for entire area. (See list of members.)

Richmond Public Library, for acquiring books, written materials, audio and visual materials, for strong, well-rounded cultural enrichment program in the area of Shields Park, with a black population, in cooperation with Contra Costa County Library.

Sacramento City-County Library, for Libros en Espanol (Books in Spanish for 75,000 Spanish-speaking population in the greater Sacramento area, in cooperation with the non-profit corporation, Sacramento Concilio.)

San Luis Obispo County Library, for establishment of bookmobile, small library bus, and extended mailing service to residents of remote areas of the county, Spanish-speaking, and elderly, who are unable to get to regular library outlets.

San Jose/Santa Clara/Sunnyvale Cooperative Library System, for special library services to reach shut-ins and senior adults throughout the 3 cities.

San Joaquin Valley Library System, for library service to physically handicapped and aging throughout 6 cities and counties.

Santa Clara Valley Library System in conjunction with the San Jose/Santa Clara/Sunnyvale Library System, for strengthened reference and information services for 5 libraries in Santa Clara County.

Santa Clara Valley Library System, to establish special business and industrial library services in Santa Clara County.

Santiago Library System, to acquire foreign language collections to serve needs of 4 member libraries in Orange County.

Solano County Library, for intensified library service to disadvantaged areas of Solano County.

$3,116,365 would be required to fund all these programs in the first year, and $2,138,656 in the second year of their operation, making a total of $5,255,021.

California will receive only $1,154,367 under Title I, if the 50% cutback in LSCA I appropriations prevails, in Fiscal Year 1969–70.

NEW FINDINGS ON THE EFFECTS OF NUCLEAR FALLOUT: RELEVANCE TO "FIRST STRIKE" TALK

(Mr. BINGHAM asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BINGHAM. Mr. Speaker, on behalf of my colleague from Michigan, Congressman LUCIEN NEDZI, and myself, I wish to inform the House of a most interesting open seminar which we conducted last week to look into some disturbing new developments regarding the effects of nuclear fallout—particularly strontium-90—on infant mortality. Congressman NEDZI and I concur as the significance of the information and opinions revealed in this informal session.

Three months ago, on April 24, 1969, I inserted into the RECORD new research on the effects of radiation from fallout on infant mortality conducted by Dr. Ernest Sternglass, a well-known radiation physicist from the University of Pittsburgh. Dr. Sternglass' startling findings, while still tentative and quite controversial, suggest that the effects from nuclear fallout may be many times more severe and persistent than the Atomic Energy Commission or anyone else has ever indicated or supposed, particularly upon children born within a period of years after nuclear blasts. They suggest, also, that these severe effects would not be geographically limited, but would very likely extend across the entire hemisphere in which multiple nuclear blasts might occur. It was for the purpose of giving wider exposure to these possibly crucial findings that I called attention to this material earlier this year.

In an effort to learn more about the Sternglass findings, which are very new, and also to learn more about the view of scientists who are dubious about his work, Mr. NEDZI and I invited Dr. Sternglass and two other prominent radiation scientists to review their knowledge of this field in an open seminar last week. The two scientists appearing with Dr. Sternglass were Dr. Shields Warren, professor emeritus of pathology of the Harvard University Medical School, and Dr. George Hutchison, an epidemiologist from the Michael-Reese Hospital in Chicago. Dr. Warren was formerly head of the U.S. delegation, United Nations Scientists Committee on the Effects of Radiation, 1957–62, and Director of Biology and Medicine at the Atomic Energy Commission, 1947–52.

Various interested Members of the House were invited to attend this open seminar and participate in the discussion and questioning. We were honored to have with us the distinguished Chairman of the Joint Committee on Atomic Energy, Chairman HOLIFIELD, and Congressmen GEORGE BROWN, FRASER, and ROYBAL.

Several things become evident in the course of our discussion. First, the correlation Dr. Sternglass has discovered between the presence of radioactive strontium–90 from nuclear tests and infant mortality in the United States appears to be the only explanation currently available to explain the excess infant mortality in this country noted in recent years by the Public Health Service. As a result of this excess infant mortality, the United States has dropped from second or third from the top of the list of developed nations with regard to low rates of infant mortality, to 18th on that list. Despite many efforts to find an explanation for this phenomenon, various possible causes have been eliminated as possibilities, and no theory currently has much evidence to support it, other than that now offered by Dr. Sternglass.

Second, Dr. Sternglass seems to be the first researcher to look into the relationship between strontium–90 radiation and infant mortality on a comparative basis in various States of the Union and various nations of the world which, over the past 25 years, have been subject to nuclear fallout.

While the Atomic Energy Commission and various scientists working both independently and under contract to the AEC have kept careful and continuing track of radiation in the atmosphere in search of possible health effects, and while the AEC has sharply attacked Dr. Sternglass' findings, it appears that the precise relationship, or apparent relationship, identified by Dr. Sternglass has not been specifically studied or investigated by any of these analysts.

Finally, while such replication and additional research will be needed adequately to verify Dr. Sternglass' findings, the implications of those findings are such that we may not be able to afford the time required fully to verify the findings before we change our national policies in various fields in response to them. It may be necessary to assume that Dr. Sternglass' findings are substantially correct and to act accordingly now, rather than risk the thousands of unnecessary infant deaths and deformities that might result if we ignore Dr. Sternglass' findings and they are eventually shown to be accurate.

In the view of Congressman NEDZI and myself, the most significant inference that must be drawn immediately from the Sternglass work is its implication for the "first strike" argument that is so widely used to justify proposed new nuclear weapons systems like the ABM and MIRV. If the Sternglass findings are correct—that even low levels of strontium-90 may have devastating effects on subsequent generations of all nations in the same hemisphere where a nuclear first strike occurs—such a first strike becomes "unthinkable" for any nation, if it is not unthinkable already. Even if the Soviet Union, or the United States, were tempted to strike first on the basis of a belief that such a strike would render the other side incapable of retaliation, the striking nation would have to face the certainty that succeeding generations of its own people and succeeding generations of allied nations would suffer infant mortalities and deformities in very large proportions; those born fit might be forced to destroy the overwhelming number of unfit in order to have any hope themselves of surviving.

In short, the greater the certainty and magnitude of the devastation a nation

contemplating a first strike would face not from a retaliatory strike—which it might hope to preempt—but from the explosion of its own first-strike weapons, the less likely it would be to launch such a first strike. The Sternglass findings, which are well known to Soviet scientists, have plausibly, if not yet conclusively, posed a much more frightening picture of the total effects of any nuclear blast for all nations in the same hemisphere than has ever before been even tentatively documented. It is our view that given the strength of these findings, the lack of immediate evidence to refute them, and the enormity of their implications should they eventually turn out to be true, the only reasonable and responsible thing for world leaders to do is to assume that they are true unless and until they are refuted, and act accordingly in the meantime. These findings thus lessen substantially the prospect that either the United States or the Soviet Union will ever launch a first strike against the other, leaving both sides with correspondingly less justification than can now be mustered for the immense increases being contemplated in our nuclear capabilities.

It is particularly significant that Dr. Shields Warren, although skeptical of Dr. Sternglass' precise findings, agreed that extensive multimegaton attacks, whether in the form of a United States-Soviet exchange or of a first strike, would be "terribly harmful" throughout the Northern Hemisphere, that there would be a "tremendous increase in the number of abnormalities, in still births," and that "there would be a pretty horrible degree of problems for a great number of generations."

Key portions of the discussion, unedited by the participants, follow. The complete transcript of the seminar will be available as soon as participants have had an opportunity to review and edit their remarks.

Mr. BROWN. I gather that Dr. Sternglass would agree that the hypotheses he is making are not fully substantiated. They are intriguing and it leads to a speculation as to the effects of a nuclear exchange.

Let's postulate that we have a nuclear exchange of the type set forth in the Defense Department, which would result in 10 to 6 times the 20 kilotons perhaps you are talking about in the paper here. Of course, the physics of that exchange would be important as to whether it was a ground blast, air blast or water blast. But, assuming that something of that magnitude and recognizing again that we are talking in hypothetical terms, what would be your extrapolation as to the effects upon infant mortality?

Dr. STERNGLASS. Well, I can only go on the basis of quantitative results the computer produces for us, and the results are something like this:

For a ground burst of 20 kilotons in New Mexico, one out of 100 children born downwind as much as 1,000 miles away died presumably in terms of some effect, presumably due to immaturity or other factors that caused an infant to die more readily.

If, therefore, one were to have 100 20-kiloton bombs in a ground detonation, there would be essentially few children surviving born in the next generation for the next ten to twenty years, in that area.

Now, for air bursts of megaton weapons the situation is somewhat different. There, our figures show that for 200 megatons released in the stratosphere in different parts of the world, one child out of 100 born in the United States may have died as a result of this release. Again, therefore going from 200 megatons to what is needed for an effective first strike, namely 20,000 megatons, one again has a factor of 100, or coming close to the situation where even if you and I are adult survivors, might survive, to see a large fraction, of not all children, subsequently born to die of the effects of this massive deposition of long-lived fallout.

Mr. NEDZI. I think one of the crucial questions, assuming the Soviet Union originated an attack, is the effect on the Soviet Union 3,000 miles or 6,000 miles away.

Dr. STERNGLASS. Let me explain this. If strontium 90, and I say if this continues to be confirmed, and if strontium 90 is the primary agent responsible, then we are dealing with a very long lasting effect. So that since strontium 90 has a half life of around 28 years, it would not disappear or decrease significantly in the time required for the fallout to drift back to Russia in the matter of some 5 to 10 days since the upper stratospheric winds move at a typical velocity of 60 to 100 miles an hour, the material circulates the entire world in about a period of two weeks, so that this is a short time compared to the time necessary for a strontium 90 to die away. As a result, this is in effect a suicidal type of attack.

Mr. BINGHAM. Do you have any information about Soviet views or findings in this?

Mr. STERNGLASS. I do indeed. At the very meeting at which I presented this at Hanford, Russian scientists presented similar data showing very surprisingly strong effects on animals at very low radiation doses.

In addition, the Russians have for many years been very concerned about the effects of the central nervous system. They have taken young Beagles and during pregnancy exposed them to only a few rads of external X-ray, and found significant differences in their ability to train these Beagles subsequently to make them respond in their Pavlovian experiment. So the Russians are extremely concerned.

In addition, Dr. Sakarov, whom we all know released his famous statement that was reproduced in New York Times, has expressed personal concern repeatedly about the genetic effects of carbon 14 produced by nuclear weapons even in the absence of any fission materials whatsoever, in the so-called clean weapons releasing only or producing only carbon 14. He has himself written an article pointing this out in Russian magazines and, more recently, he has pointed out that nuclear war would be suicidal for mankind.

Mr. NEDZI. Dr. Warren, can you comment on that?

Dr. WARREN. I have no doubt that nuclear war would be a very devastating thing. Suicidal is a very strong term to use. One of the things that impresses one about almost any species of animal, including man, is its ability to survive under a wide variety of adverse conditions.

We have been trying to get rid of rats probably ever since man tried to store food. The rat population today is larger than it ever has been.

I don't think that there is any absolute answer that that can be given here one way or another. If one accepts Dr. Sternglass' hypothesis that there is something peculiarly bad about the placement of the radiation from strontium 90, I think that very worrisome figures would result from a quantitative study of this.

I find myself that it is difficult to assume that one type of beta radiation varies greatly in its effect from another type and I would not take as pessimistic a view as Dr. Sternglass.

However, I think there is no question but what any nuclear exchange of any magnitude would have very serious effects as far as the world as a whole is concerned.

* * * * *

Mr. FRASER. May I ask a couple of questions? One is if at a given level of radiation you get one additional death per thousand—I may not be asking the question right—if you double radiation would you get a linear rise?

Dr. STERNGLASS. As a matter of fact I wrote a paper on this which was published in Science in June, 1963, in which I showed that based on the evidence then available from X-rays given to pregnant women, there was a direct relationship you might say a straight line relationship—between the num- of X-rays given the mother and the likelihood that the child would develop leukemia even down to one X-ray.

Now, at higher levels, such as encountered in Hiroshima, linearity was established from about 50 rads up to 1,000 rads long before the article. Of course, precise linearity is not necessarily the most important point. Even if there is some curvage in the line, what is really important is that by now, in contrast to what we knew 15 years ago, there is no reason to suppose that even very low level radiations do not produce some effect. That was the so-called "threshold issue."

Now we have much more data suggesting that there is no evidence, again this is threshold, for most genetic effects. There is some healing and there is some indication of some slight curvature, but I think basically most radiobiologists today, including the Federal Radiation Council in its recommendations to the Government, has assumed that the conservative approach requires us to assume that we do have, in fact, a direct linear relationship at levels of a few rads. Wouldn't you say that?

Dr. WARREN. I think that is quite a fair statement. I think probably the few rads that you speak of lie somewhere around 50 or 100 rads.

It is much better established at higher levels.

Mr. HOLIFIELD. This is a very important point I think, that has been made. It is true that this assumption has been made, but it is not an assumption susceptible to proof. It is made on the basis of having a cushion of protection far greater than we can at this time say. The Federal Radiation Council was set up statutorily by my Committee for the expressed purpose of giving it independence to set standards.

* * * * *

They are men that are completely objective. They are scientists who are contributing their professions, putting their professional judgment on the line when they do this.

There is one thing that I think Dr. Warren will testify to, that the Joint Committee has done from the very beginning, it has placed safety as their primary duty, that nothing should be done from an economic standpoint or any other standpoint, where in the best judgment they would say it is detrimental. In other words, if there were going to be any mistakes made, it would be mistakes on the side of safety.

We have spent literally hundreds of millions of dollars in research and development on all kinds of animals, mice; and the genetic work that the two brothers down in Oak Ridge——

Dr. STERNGLASS. The Russell brothers.

Mr. HOLIFIELD. Russell, yes. And the famous geneticists out in Indiana, Dr. Mueller and others, that worked over the years, Always we have abjured them and we have adjured the Commission to take no chances, put a factor of safety as far as you can in everything that you do.

Dr. WARREN. This is absolutely true. I have been at times directly responsible for carrying out these instructions, and I have always

been very much impressed by the attitude that Mr. Holifield and all of the other members of the Joint Committee have shown, as well as the AEJ.

I think it is worth saying that this is a clear demonstration over the years that safety in a new and unknown field can be bought if you are willing to pay the price for it.

Mr. NEDZI. Dr. Hutchison, could we get a comment from you on the relationship between dosage and damage?

Dr. HUTCHISON. The comment that Dr. Warren had a moment ago, I think, it is important to put it in reference to the question of linearity. The doses in which we can speak of a demonstrated effect, starting someplace at 50 or 100 rads, I think we can talk about it at a somewhat lower dose.

Dr. STERNGLASS. Right.

Dr. HUTCHISON. We can speculate, and it is speculation to say that linearity is the most likely way the thing works at lower doses. But this must remain as speculation.

Of course, it has to be true for higher doses, because there are only limited doses that can be observed in the human population. However, for the ranges at which we have good observational data, a linear sit is pretty good.

Mr. FRASER. Let me pursue this question. I get the impression, among other ways of getting at this too general kind of investigation, one would be attempting to establish the specific causal relationship where you have controllable experiments. The other is kind of a macro-analysis, where you deal with general, long-term trends and try to establish causal relations.

I gather that is what Dr. Sternglass has been trying to do.

On that score, the Public Health Service obviously is very much interested. You made an observation that there has been a conference to find out—have the others pursued the same kind of inquiry you have been making? And, if they have, I am curious as to what kind of answers are being developed.

Dr. STERNGLASS. There has recently been a book published by Drs. Schlesinger, Nesbitt and Shapiro, published by Harvard University Press, devoted entirely to the problem of infant mortality changes in the United States. It includes a discussion of fetal, childhood, and maternal mortalities, because for every child that dies there are some mothers that also perish at the time.

So, in this book, a careful analysis was made, a review of all the things that the Public Health Service had uncovered in its attempt to find an explanation.

The general conclusion of the book is that there is, at the moment, no known medical, sociological, or other single factor that could account for the difference observed between the United States and other countries, despite the enormous efforts that have gone into this. Radiation was the only factor that I know of that was not considered.

Mr. FRASER. The book does not seek to explore that?

Dr. STERNGLASS. It does not mention the word "radiation."

Mr. FRASER. It apparently rules out other—

Dr. STERNGLASS. Other variables, such as the introduction of sulpha drugs, or the introduction of various other new drugs, the thalidimide series situation, the effect of the population movement in the United States, all these other factors have been examined and looked at in his book and found not to explain these abnormal patterns in the United States.

Mr. FRASER. Dr. Sternglass, are there not other investigators——

Dr. STERNGLASS. There are still people working on it.

Mr. FRASER. Of radiation?

Dr. STERNGLASS. Not in the relation of fetal mortality. No one has ever looked at it, not even myself. I, myself, have been obviously concerned about possible low level fall-out effects since 1959, 1960 and 1963. Even though I was very concerned, it never occurred to me to tie the well-known poor performance in infant mortality to radiation until last October, when I ran into this data.

Mr. FRASER. Your work here is——

Dr. STERNGLASS. It is new, within the last four, five or six months. In fact, it is for this reason that it has been so difficult to have it fully studied and examined. And this is what one likes to do. These procedures generally take many years for something of this magnitude to be widely studied, and to be fully accepted.

But I am afraid that we may not have the time. That has been my concern. The reason why I brought this up at these meetings in the Health Physics Society and others and why I wrote a letter to the New York Times, is that I felt a very intense concern that this fact, although not yet, by any means, fully proven, should be examined as soon and as widely as possible because of this vast implication if it turns out to be true.

* * * * *

Mr. FRASER. Let me see if I have this. You are apparently the first one attempting to make a study of this correlation?

Dr. STERNGLASS. That is correct.

Mr. FRASER. Since that is the case, others may follow along, and develop either identical or different solutions not yet available?

Dr. STERNGLASS. That is right.

This is very early data and it has not yet had a chance to be widely discussed in the scientific literature.

Mr. FRASER. Let me put a question. Your conclusions, at the moment, are considered to be uncertain or controversial?

Dr. STERNGLASS. Surely, both.

Mr. FRASER. Prior to your work, starting in October, this is really not a fair question and only a lawyer would ask it—have you been publishing papers and taking positions with respect to the effects of radiation?

Dr. STERNGLASS. For years.

Mr. FRASER. Which evoked a similar controversy?

Dr. STERNGLASS. Certainly, because in 1963, at the time of the Test Ban Hearings, I published a paper in "Science," in which I took some of the data of Dr. MacMahon and Dr. Stewart and drew attention to the point that they suggested they did not exclude the possibility of linearity; and that, therefore, low level fallout from continued testing in the atmosphere was likely to produce serious defects, even though one could not prove this. Since this was clearly a hypothesis, it could not be proven beyond a shadow of doubt.

It was, by its very nature, controversial. But I did not hesitate to bring the evidence to the attention of the scientific community at the time, because of the potential importance of this matter.

For this reason, I believe that this is a similar situation now. Through forces of circumstance, I ran into a totally unexpected but potentially serious matter, which, if it were merely a scientific matter, could be left to internal discussions within the scientific community without affecting the health and safety of our society as a whole. But, being also a father of young children, and hopefully a grandfather, and being humanly concerned of crippled children—and I happen to be living next to a home of crippled children, through no circumstances that I could control—I had a natural concern for these matters. And I don't believe that, as a scientist, I need to separate my driving motives from my interest as a scientist to look at the facts and have others study them.

I certainly have a clear concern about bringing these matters to the attention of the people.

Mr. BROWN. Dr. Warren, has the AEC pursued this kind of analysis, do you know?

Dr. WARREN. In this specific form, as I am aware, it has not. I believe that there is a staff study of Dr. Sternglass' work being made at the present time. I have not seen this, however.

Mr. BROWN. You don't know of any other independent——

Dr. WARREN. No.

Mr. BROWN. You are in agreement that there is very little inquiry other than Dr. Sternglass' pursuits?

Dr. WARREN. Yes. I think it would be, perhaps, fair to say that the method of determining this excess mortality, which Dr. Sternglass has used, is not a widely used procedure. I think it is probably worthwhile to make some very careful estimates along these lines.

Mr. BROWN. It is a case that the Public Health Service has developed a concept independently of his research?

Dr. STERNGLASS. Yes, without a cause.

Dr. WARREN. It is true this is one of the tools which is used. However, in almost no human mortality problem can one ever hope to get a zero point, carrying the straight line on to zero.

Dr. STERNGLASS. May I correct that impression?

These are logarithmic plots, and they do not go to zero. They have no bottom. In other words, they go to 100 cases per thousand. There is no zero; and the straight line does not mean that I anticipate someday there will be zero infant deaths. It is a logarithmic plot. Really a plot of exponentials, when plotted on a linear scale, gradually and slowly approaches zero as an infinity, but never actually reaches it.

Mr. BINGHAM. Dr. Warren, is it true that the Public Health community has found a mystery here with regard to this fluctuation or trends of infant mortality that has puzzled a lot of people, and it has not been explained?

Dr. WARREN. I think it is fair to say that there is not complete agreement. No, there is no consensus as to why the U.S. mortality rate for infants apparently has stayed so high. I am not a statistician, but perhaps Dr. Hutchison, who is much more of one, would care to comment here.

Dr. HUTCHISON. It has been a surprise. It has been studied very extensively. I don't know that it is thought of as more of a surprise than any other things that one sees in statistic trends that are gotten by similar investigation. But it is a well known phenomenon, the fact that the United States infant mortality rate has fallen from its high position to a relatively low position in the Western world.

Mr. FRASER. In relative terms.

Dr. STERNGLASS. Right. Might I just once answer this. In my Hanford paper, I quote, as pointed out in the summary of the Special International Conference on the paranatal and infant mortality problem in the United States, held May 13th, 14th, 1965, there seems to be "No simple, concise explanation for the leveling off or for the unfavorable position of the infant mortality rate in the United States. No single statistical demographic or medical factors appear to account for the international differences observed in the paranatal and infant mortality rate."

The quote is taken from Reference 39 of my paper; and it essentially refers to the following: a report of the International Conference of the paranatal and infant mortality problem of the United States, report series four, three June, 1966, National Center for Health Statistics, U.S. Public Health Service; and also a reference of the same pointing out, the same anamoly in Public Health Report, Volume 75, page 391, 1960. There the early evidence on the leveling trend in the United States is first pointed out.

Mr. BINGHAM. I would like to ask a question particularly in light of what Dr. Warren has said. We have talked about the effects of a nuclear exchange, and everybody agrees

that such an exchange would be a pretty bad thing. But what I would like to ask, in light of the discussion, is this: There has been discussion of the possibility of a Soviet first-strike against this country.

Now, assuming that they might conclude that they would wipe out, in one blow, our capacity to retaliate by, let's say, an attack on all ICBM's, they could knock them out with one strike with their SS-9—or whatever it is —and produce explosions of five to ten megatons on the ground—how serious from their point of view would it be? How serious would they have to consider the problem of fallout to be, as it might affect (a) themselves from that attack, and (b) countries such as Cuba nearby that are their friends?

Mr. NEDZI. Or the other way around. What affect would it have on the United States if our leaders determine that we have a capability of a first strike against them?

Dr. WARREN. I have had, in the aggragate, about 400 R of radiation through some foolish experiments that I did when I was young and should have known better, and other things. This was spread out over a long period of time. I have attempted to do some rough calculations of what the fallout average might be from an exchange of this sort.

These are not, in any way, statisticated, they are essentially off the cuff. I think, using the U.N. Scientific Committee's information and the effects of atomic weapons, we could assume that a very good share of the U.S. and of the U.S.S.R., and for that matter most of the Northern Hemisphere, would probably in 30 years subsequent to such an event aggragate perhaps in the 300 to 400 R range of radiation.

Dr. STERNGLASS. I would concur with that calculation. I have carried it out myself.

Dr. WARREN. I am glad we have the same figures.

This spread out and protracted radiation would be harmful, terribly harmful spread out over a huge population. It probably would not be completely lethal, not completely suicidal. It might not have serious effects as far as the living population was concerned. And one would, hence, have to figure out how hard boiled, so to speak, the rulers are—to what extent they are concerned about the future of the Northern Hemisphere.

Mr. NEDZI. Could you discuss or describe the effect it might have on future generations?

Dr. WARREN. I cannot, with any degree of accuracy, except that I am sure there would be a tremendous increase in abnormalities, in still births, and that the surviving population might have to change its entire social atmosphere, and instead of caring for the unfit, kill the unfit so the few fit can survive.

However, the changes inherent in the genes pool, the germ plasma as a whole would be very seriously damaged. There would be recurrences of a pretty horrible degree of problems for a great number of generations.

I think it all comes back to what we have said earlier, that there is no question but what this would be the most serious catastrophe that mankind has ever faced. It could be quite comparable with some of the epidemics of the Black Death in the Middle Ages.

* * * * *

MORE DICTATORIAL AND ANTILEGAL ACTS

(Mr. HECHLER of West Virginia asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, the present leadership of the United Mine Workers of America, fearful of losing out on its high salaries, special benefits and nepotism, apparently is accelerating its efforts to block the nomination of Joseph (Jock) Yablonski for UMWA president against incumbent W. A. Boyle.

Reports of attempted bribes, threats, and other illegal activities in the coal fields to keep Joe Yablonski's name off the UMWA ballot are becoming more commonplace.

There follows an article from the August 2, 1969, New Republic magazine and another letter to the Secretary of Labor giving some of the details of the rough-shod tactics being used in this most important election:

THE MINERS PLAY ROUGH ELECTING A UNION PRESIDENT

For the first time since 1926, when John Brophy ran against John L. Lewis, the United Mine Workers of America will have a real contest for the union presidency. On May 29, Joseph Yablonski, a member of the International Executive Board, announced his candidacy against the incumbent Tony Boyle. If Yablonski loses, it won't be for a lack of a case against the incumbent. The union leadership, enjoying its high salaries, special benefits and nepotism, has lost contact with the rank and file.

When the wildcat strikers of the black-lung movement in West Virginia marched on Charleston last spring they booed the district UMWA headquarters, which had ordered them to go back to work. The spontaneous strikes and demonstrations produced a revision of the state's workmen's compensation laws. In Pennsylvania, where black-lung laws give more protection to the miners (Yablonski figured prominently in the lobbying effort), coal miners are troubled about other matters. The union and anthracite companies, most of which are in Pennsylvania, recently announced a contract that includes an outrageous "slave labor" clause giving companies the right to force miners to work seven days a week. When Boyle and his boys addressed miners at Gallitzin, Pa., they were drowned out by jeers and catcalls.

John L. Lewis was a tidal force. Tony Boyle is not. He is described by close associates as "moody and suspicious." But he is running hard now. When he spoke at Welch, W. Va., July 13, spot advertisements were carried hourly for several days on at least five radio stations in the area. Press releases including a biography and picture of Boyle were sent to the papers and TV stations. Buses, allegedly paid for out of union funds, carried Boyle supporters to the rallies. The UMW president arrived surrounded by union officers. Burly sergeants-at-arms were stationed at strategic spots in the hall. Behind the speakers' platform hung a larger-than-life picture of Boyle. He defended his six-year record, attacked the "do-gooders" who would "run this union," and called for union solidarity against "those who would split us." Emphasizing it was not a political speech, Boyle informed the miners of a new UMW department of occupational health, created on June 23 by a special session of the International Executive Board.

On the same day, Yablonski spoke to a small group of miners in the bleachers of an old and neglected athletic field in Matewan, W. Va. News of the meeting was passed around by word of mouth. Three union district representatives were present, writing down the names of those they recognized. Yablonski stood among the miners. He said he wanted to make the union both democratic and militant. He talked about changes in safety laws and in the union pension fund which would make coal mining more humane.

The miners understood. Although they get a basic daily wage of $32 while in the mines, they receive pitifully small sums when they are disabled. A miner's widow also has a hard time of it. An average of 300 miners are killed each year. Their widows get between $30 and $90 each month from the state and $2,000 for funeral expenses from the UMW pension fund. After 12 months the union takes away their hospital cards which had entitled them to free hospital care when their husbands were alive.

The Mine Workers Journal fawningly covers every activity of the union officers. (Its editor depends upon Tony Boyle for his job.) A recent 24-page issue carried 28 flattering pictures of Boyle; the discontent of the miners voiced at the Gallitzin rally was blanked out. Yablonski's announcement of his candidacy—reported by *The New York Times*, the *Washington Post* and *Newsweek*—got no mention by the *Journal*. However, the *Journal* staff wrote an eight-page scandal sheet entitled "Election Bulletin," in which Yablonski was called ". . . the ex-convict, the thief, the deserter of his family, the shake-down artist and the informer on his brother union members." (In 1931, by his own admission, Yablonski spent eight months in jail for breaking into a slot machine, which had taken his money.)

Since declaring his candidacy Yablonski has been fired as director of the union's Labor Nonpartisan League, threatened with a loss of salary, and physically assaulted. On June 28, after talking to local union leaders in Springfield, Ill., he was knocked out from behind by a karate chop. According to the doctor who treated him, the blow would have been fatal if it had landed one-quarter of an inch closer to the spinal nerve. A day later, 50 "pickets," paid $20 apiece and organized by a certain John Karlavage (he's paid $15,400 a year by the UMW as an International Representative), broke up a pro-Yablonski meeting at a school in Shenandoah, Pa. Karlavage is also the president of the Shenandoah Borough Council; he had tried to convince the school board secretary to lock out the meeting. Although unsuccessful he managed to deter the town police from giving the meeting requested police protection.

Back in the days when unionists were fair game for Pinkerton goons, union solidarity was a necessity and elections a luxury. As a result, most of the 23 union districts have traditionally had presidents appointed by the International. Boyle recently eliminated two more districts which still had elected presidents: now there are only four districts with autonomous officers. District organizations supply ready-made, union-paid campaign committees for the incumbent. In District 30, for example, the Committee for the Re-Election of our International Officers operates out of the district headquarters in Pikesville, Kentucky. The chairman of the committee has a salary of $11,130 as a district representative, the secretary of the committee is secretary to the district president. The district has a fund, supplied by the international, of $55,000 for "expenses," partly used it's said to bankroll the campaign committee. The committee bought a newspaper advertisement in nearby District 29, which ominously warned Yablonski, who was addressing a rally there, to "stay out of District 30." It has mailed the "Election Bulletin" to all District 30 union members.

In brief, Boyle is financing his campaign with money from the rank-and-file miner. Two of every five dollars paid in monthly dues go to the international. The international has utilized money from the $169-million pension fund by placing $70 million of its assets in a no-interest checking account, at the National Bank of Washington. The UMW owns 75 percent of the bank.

Against such well-financed organization,

Yablonski can summon only a small staff of volunteer miners who work for him over vacations or in their spare time.

Union locals are now voting on nominations for international officers. Five years ago, nominations from only five locals were needed to win a place on the ballot. Steve "Cadillac" Kochis, a relatively unknown candidate, received the requisite number of local nominations for President and proceeded to win 20 percent of the miners' votes. That was too much. So in 1968, the number of locals necessary to put a man on the ballot was raised to 50 by an International Convention stacked with Boyle delegates. That convention was held in Denver, Colo. The cost of sending delegates was prohibitively high for many small locals. The international paid their expenses and in some cases even supplied "delegates"—but it did it selectively.

Approximately 500 of the UMW's 1,100 locals are "bogus locals," which have less than the ten active miners required by the union constitution. These are dominated by pensioners. (70,000 of the union's 185,000 members are pensioners.) When John L. Lewis died this past June, Boyle took his place as a director of the UMW pension fund. He promptly raised the pensions of bituminous miners from $1,380 to $1,800 per year. Pleasing pensioners is good union politics. The nomination made by a "bogus local" with four or five active miners and a majority of pensioners is equal to the nomination of officers made by a local with 600 members. The international disbanded all such "bogus locals" in District 5, where Yablonski was once elected district president. "Bogus locals" in all other districts were not touched.

On weekends during the nominating season (July 9 to August 9) when most locals hold their meetings, the district officers and international and district representatives are busy men. Nominating elections are arranged and then announced only to a few members who support Boyle. Where Yablonski men appear to be present in sufficient numbers to win the local, ballots are counted in a back room, and Boyle is announced the winner.

Supporters of Yablonski are alternately offered jobs on the union payroll and threatened with the loss of their company job. The coal companies feel very comfortable with Boyle and are willing to cooperate in blacklisting dissident miners. They are especially alarmed by some of Yablonski's ideas for encouraging better observance of safety. He has suggested, for example, that the companies be required to pay $100,000 above regular state compensation to the widows of miners killed in accidents.

On July 9, Yablonski asked the Labor Department to investigate and monitor the nominating procedures, but to date there has been no response. Unofficially, (the UMW will announce the official results after August 9), Yablonski has already won thirty of the fifty locals necessary for a nomination. With two more weekends to go there is a good chance he will be on the December 9 ballot for the general election in which miners vote as individuals.

If the tactics used during the nominating procedures are any indication of what Yablonski may expect in the general election, the chances are good that another election will be held after December 9. Under the Landrum-Griffin Act, the Secretary of Labor may supervise a new election where illegal tactics are in evidence.

JULY 25, 1969.

Hon. GEORGE P. SHULTZ,
Secretary of Labor,
Department of Labor,
Washington, D.C.

DEAR MR. SECRETARY: This letter is a request for reconsideration of your letter of July 23, 1969. During our meeting yesterday afternoon on this same subject, I set forth a number of reasons why the investigation should go forward at this time, and I also set forth additional violations of law which have come to our attention since my letter of July 18, 1969. As agreed, I will not repeat in this letter all of the many reasons I gave for reconsideration, but simply set forth the new violations. Some of the worst violations (see e.g. paragraph 15 hereafter) came to our attention even since our meeting with you yesterday afternoon. They are listed below:

1. On the night of July 19, 1969, Mr. John Aiello, a paid employee of UMWA trusteed District 17, who illegally blocked the nomination of Mr. Yablonski at Local 7113 (Paragraph 10, July 9 letter), telephoned Mr. Charles Shawkey, the pro-Yablonski president of UMWA Local Union 9616, Boomer, West Virginia, and threatened to kill him.

2. Officers of UMWA Local Union 6086 placed an advertisement, under the union seal, in the Williamson, Kentucky *Daily News* of Saturday, July 12, 1969, demanding that Mr. Yablonski "stay completely out of District 30".

3. On July 19, 1969, Boyle henchmen pulled a new trick at UMWA Local Union 1577, Girardville, Pennsylvania. This is the background. As has been the case elsewhere on numerous occasions, no notice was given that nominations would be conducted, as required by Section 401(e) of the LMRDA and the UMWA Constitution. Second, and again this practice is widespread, Mr. John Karlavage (Paragraph 8, July 18 letter) and Mr. William Rogers, both International Representatives of the UMWA and non-members of of the local union, were present in the vicinity and at the meeting in order to intimidate local union voters and otherwise to manipulate a Boyle nomination by illegal means. That afternoon (July 19, 1969) Mr. Karlavage telephoned Mr. Al Albert, a Yablonski supporter, and warned him to stay away from the meeting that night. Nevertheless, about forty local union members supporting Mr. Yablonski appeared and waited outside of the meeting hall for the 6:00 p.m. meeting to begin. At this time, Mr. Rogers approached one Julius Savitsky, a Yablonski supporter, and offered him five dollars to leave or to vote for Mr. Boyle. When Mr. Savitsky refused, Mr. Karlavage offered him five more dollars, but this bribe also was rejected. Finally, when an outdoor clock and the watches of the Yablonski supporters reached the designated hour of 6:00 p.m., they entered the meeting hall, in which the clock had deliberately been set forward to read 6:10 p.m., and were informed that a Boyle nomination had already been conducted by those other members (approximately 20) who had entered earlier.

4. William J. Savitsky, a Yablonski campaign worker (and no relation to Julius Savitsky, *supra*), sought to observe nomination meetings at UMWA Local Unions 1443 and 7226 and was barred therefrom by paid UMWA officials supporting Mr. Boyle.

5. Even the old trick of spreading rumors about the death of the rival candidate has been tried. In the Nashville, Tennessee, coal area, efforts were made to plant this rumor. The Associated Press finally killed it.

6. UMWA Local Union 1376, Hazelton, Pennsylvania, held its nomination meeting on July 18, 1969. Present were non-member UMWA International Representatives "Jimmy" Thomas and Boley Overa (also a leading instigator of the illegal activities in Shenandoah, Pennsylvania, referred to in Paragraph 4 of the July 9 letter). In order to assure a Boyle nomination, one Steve Crowbar, a paid UMWA employee, brought to this meeting more than ten persons who were identified by Mr. Joseph Onduko and Mr. Rex Marshall, an active local union member for more than fifty years, as not being members of Local 1376.

7. It is a regular practice for UMWA District officials and employees to show up at nominating meetings to intimidate the voters. Especially intimidating is the effect upon small pensioner locals with only a few persons present, where up to a dozen paid district officers and representatives have appeared at the nominating meetings. Examples of this intimidation occurred at Local Unions 4917 and 5600.

8. On July 17 Local Union 1451, Girardville, Pennsylvania, held a regularly scheduled meeting. No notice had been given that nominations would take place, so only about 10 members out of at least 124 appeared. Mr. Boyle was nominated by a vote of 6 to 4. Many members have told Mr. Savitsky that they would have gone to the meeting and voted for Mr. Yablonski had they been notified of the nomination election.

9. With further reference to Paragraph 9 of the July 18th letter, Mr. Karlavage, after most of those at the meeting had left, declared the earlier nomination illegal, re-held the meeting with only 5 members present (less than a quorum under the UMWA Constitution), and declared Mr. Boyle nominated. Mr. William J. Savitsky and Mr. Joseph Monaghan witnessed portions of this illegal maneuver.

10. In paragraph 7 of the July 18th letter, it was pointed out that a secret ballot had been refused at the UMWA Local Union 1686 meeting. Again, a secret ballot was not taken in the 4–3 vote nomination of Mr. Boyle on July 19, 1969, at the Snap Creek Coal Company Local Union, Logan County, West Virginia. Notice of nominations was not given prior to this meeting either. And also on July 19, 1969, a nomination election was scheduled for UMWA Local Union 1443, Shenandoah, Pennsylvania—but again under the watchful eyes of UMWA International Representatives Karlavage and Rogers. The members attending this meeting demanded a secret ballot vote, and three times a vote by show of hands was passed by hefty margins in favor of a secret ballot election. Three times George Humetsky, the Boyle "floor manager", conferred with Mr. Karlavage and was told to "make them stand". Thereupon, amidst great confusion and while several members were walking about or leaving in disgust, Mr. Boyle was declared nominated in a standing vote. These are clear violations of LMRDA Sections 401(c) and 401(e). Certainly LMRDA did not intend to provide secret ballot only at the general election and not at the nomination stage when it is equally, if not more, important.

11. Local 7604, Kopperston, West Virginia, held a regularly scheduled meeting on July 19, 1969. No notice was given that there would be nominations. As a result only about 40 people showed up, whereas there are at least 700 members of that local. This is a union where the majority was clearly for Yablonski but he did not get the nomination because of the failure of notice.

12. Nor was notice provided for the nomination meeting of Local 6553, Brownsville, Pennsylvania, where only eight members attended and nominated Mr. Boyle. Subsequently, more than 25 members of that local have personally contacted Mr. Yablonski and complained that they had wanted to vote for him but had received no notice of the meeting. And finally, clearly inadequate notice was again omitted with respect to the nomination election of Locals 1868, Schuylkill County, Pennsylvania and 1443 referred to in paragraph 10 above.

13. With respect to paragraph 16 of our July 18th letter, Mr. James Manfredi offered Mr. Robotny five dollars to vote for Mr. Boyle. Mr. Robotny rejected the bribe.

14. With respect to paragraph 4 of our July 18th letter, the attempted discriminatory dechartering of pro-Yablonski Local 7488 has now been completed, even though this local has approximately 75 members, fifteen of whom are currently working mem-

bers, and the UMWA Constitution provides that locals may be chartered with only ten working members (hundreds of UMWA locals, still chartered, have less than 10 working members). Furthermore, although no final action has yet been taken, in May, 1969, shortly after Mr. Elmer Brown had announced his candidacy for International Vice-President, UMWA trusteed District 17 President R. R. Humphries announced that Local Union 8752, which has 102 members and of which Mr. Brown is President, and the strongly pro-Brown "Lando" local, which has 27 members, would be merged into UMWA Local Union 6001, which has about 50 members. (All three of these locals are in Delbarton, West Virginia).

15. Nor is the Boyle camp satisfied merely with illegally blocking Yablonski-Brown nominations by vote of local union members. The UMWA Constitution provides that local recording secretaries shall forward the nomination blanks containing the names of those persons nominated to reach UMWA Secretary-Treasurer Owens' office not later than August 9, 1969. On Saturday, July 19, 1969, UMWA trusteed District 28 Acting President Ray Thornsbury ordered the local presidents and recording secretaries within that District, including one Ray Hutcheson, president of UMWA Local Union 1374, Oakwood, Virginia, to report to the principal offices of District 28 in Norton, Virginia. There, Mr. Earl Brown, the paid District 28 official alluded to in paragraph 4 of our July 18th letter, pursuant to the instructions of Mr. Thornsbury, ordered each local official to refrain from mailing the nomination blank in time to reach Mr. Owens by August 9, 1969, in the event that such official's local nominated Mr. Yablonski and Mr. (Elmer) Brown. At the same time, Mr. Earl Brown presented to each such official numerous copies of a libelous sheet concerning Mr. Yablonski, which sheet was prepared under the direction of Mr. Thornsbury, and a written directive, signed by Mr. Thornsbury in his official capacity, ordering these local officials to post copies, in their official capacities, of the libelous sheet on the bulletin boards of their respective local unions.

* * * * *

When I left your office yesterday afternoon, I predicted that, unless you acted, there would be an acceleration in violations of the law you are charged with enforcing. As we spent last night rechecking the oral allegations I had made to you, we also validated that prediction. The gauntlet has now been laid down to us and to you by the Boyle crowd—*even if we get the fifty nominations, they will find a way not to count them* (see paragraph 15).

Tomorrow and Sunday the largest number of local unions will hold their nomination meetings. It is not too much to say that only your announcement of an investigation of illegal activities inside the UMW election process can prevent fraud and intimidation and possible violence from one end of the mining country to the other.

We are seeking some measure of internal democracy in the upcoming UMWA election in line with the spirit and purpose of LMRDA. We know that is your spirit and your purpose, too, and we beseech your action now.

Sincerely yours,

JOSEPH L. RAUH, Jr.,
Attorney for Joseph A. Yablonski and H. Elmer Brown.

EDWIN LAHEY DIES

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, Mrs. Pepper and I were shocked and saddened by the recent death of Ed Lahey, an old friend and wonderful man who enjoyed an illustrious career as a newspaperman. Ed was a journalist for better than 40 years and widely respected by his associates and those whose names he struck with the keys of his typewriter.

Ed Lahey combined the skill of a poet, the charm of a leprechaun, and the diligence of a hunting dog. He had great professional skill and dedication, as well as human warmth and understanding. He was a good and decent man whose public self was dedicated to informing others, while his private self always sought to understand and appreciate them. Mrs. Pepper and I will miss him. So will we all.

Mr. Speaker, I would at this point like to include in full the notice of Mr. Lahey's death as reported in the Washington Post of Friday, July 18:

NEWSMAN EDWIN LAHEY DIES

Edwin A. Lahey, who emerged from the Chicago railroad yards to become one of the most illustrious newspaper reporters of the modern American scene, died here yesterday at age 67.

In more than 40 years of journalism, Mr. Lahey had been a leading crime and labor reporter in Chicago and chief Washington correspondent for the Chicago Daily News and for the Knight Newspapers. He had been in declining health for several years due to emphysema.

Mr. Lahey described himself as a grammar-school dropout and he often maintained that he wrote "for the people who move their lips when they read." Nonetheless, he was the friend and confidant of Presidential candidates, Supreme Court justices, labor leaders and many other National figures.

President Nixon yesterday called his death "a real loss to American journalism" and hailed Mr. Lahey as "an excellent practitioner of the kind of hard-hitting, direct but always fair reporting that seeks to cover every area of political life."

The list of news beats that he scored in his years of Washington reporting was, Newsweek said in 1962, "practically endless."

His 1952 interview with a brooding Sen. Robert A. Taft, whom Mr. Lahey tracked to Quebec, was credited with leading to Taft's Morningside Heights reconciliation with Republican Presidential candidate Dwight D. Eisenhower.

In 1953, he scored a national beat in reporting the resignation of Labor Secretary Martin Durkin, the "plumber" in the Eisenhower Cabinet of millionaires.

In 1956, when communist Gilbert Green decided to surrender to Federal authorities after jumping bail, he made his decision known in a special delivery letter to Mr. Lahey.

A small man with twinkling eyes and winning Irish wit, Mr. Lahey possessed a gift for penetrating and sometimes devastating phrases. His lead sentences—the first lines of news stories—were legendary.

When "Machine Gun" Jack McGurn was killed during a Chicago shooting match in the 1930s, Mr. Lahey wrote a sympathetic obituary taking note of the mobster's love for golf. His story began:

"Jack was killed last night. He died in the low Eighties," (an address on the Chicago South Side).

When Richard Loeb of the Loeb-Leopold murder case was killed in prison after making a pass at a fellow inmate, Lahey wrote: "Dickie Loeb, despite his erudition, today ended his sentence with a proposition."

In 1956, Mr. Lahey was selected as a pool reporter to observe the first hydrogen bomb tests in the Pacific. His story began: "Megatons, shmegatons. It was a hell of a blast." Later, during a wave of National debate about fallout shelters, Mr. Lahey wrote that "the only defense against nuclear blast is a state of grace."

His journalistic credo was "Fawn Not Upon the Great," a quotation from Thomas A. Kempis, and in his long career he rarely breached it in print or private.

He described Lyndon B. Johnson as "not the kind of guy you'd like to be stuck in a bus station all night with." Mr. Lahey summed up the 1960 Presidential election in simple terms: "Nixon had the wrong kind of kisser. Kennedy sends the women."

Lahey covered every Presidential campaign from 1944 through 1964, but he did not count himself as a pal of Presidents. "I have advised my associates," he once wrote, "to preserve one paragraph in my obituary to point out that in my long career as a Washington correspondent, five Presidents have ignored me at press conferences."

Mr. Lahey was a devout Roman Catholic and active in Alcoholics Anonymous. He was a member of the Gridiron Club and, because of his year at Harvard as one of the first group of Nieman Fellows, a member of the Harvard Club. He lived at 3863 Chevy Chase pkwy. nw.

He is survived by his wife, Grace; two daughters, Mrs. Allen Kobliska of Washington and Mrs. Bernard Nigro of Alexandria; two brothers, James and Joseph; a sister, Gertrude Meiers, and five grandchildren.

Funeral services will be held at 11 a.m. Saturday at the Blessed Sacrament Church, 6001 Western ave. nw. John Hightower, president of the Gridiron Club, asked that members attend.

MANDATORY RETIREMENT: PRO AND CON

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, it was my privilege recently to accept the kind invitation of the American Legion magazine to write a brief article for its "Washington Pro and Con" feature on the proposal that mandatory retirement ages be established for members of the legislative and judicial branches of our Federal Government. My distinguished colleague, Congressman GEORGE BUSH, of Texas, took the affirmative and I took the negative opposing arbitrary limits upon the service of the Members of Congress and our Federal judges. I believe these articles might be of interest to our colleagues, and I therefore include the texts, as follows, in the RECORD:

SHOULD WE HAVE A MANDATORY RETIREMENT AGE FOR MEMBERS OF THE LEGISLATIVE AND JUDICIAL BRANCHES?

"YES"

(By Representative GEORGE BUSH, Republican, Seventh District, Texas)

In developing a premise for the argument favoring mandatory retirement age for members of the legislative and judicial branches, one is ultimately confronted by the maximum—if a minimum age, why not a maximum age?

In researching the many whys and why nots of this issue (which I did extensively before proposing legislation on the subject), I found myself continually referring back to the Constitution. Although the document does specify a minimum age limit for members of Congress, and does qualify the terms of judges by stating that they should

hold office "during good behavior," nowhere is there found any specific reference to the matter of a maximum age limitation for those in Congress and the federal judiciary.

Over the years, Congress has provided for a retirement age for civil servants, yet it has exempted itself and the courts. Even though the retirement benefits for members of Congress and judges are highly appealing, they have not exactly induced an unbridled rush for retirement row among those now qualified. Indeed, the allure of these benefits has had a relatively negligible effect upon those eligible for retirement.

Accordingly, I feel the time has come for us to consider a mandatory retirement age for judges and members of Congress. I have introduced a resolution proposing a Constitutional amendment that would do just this.

Specifically, my bill calls for a mandatory retirement age of 70 for members of Congress, the Supreme Court and other federal judges. In deference to those in office, it would not apply to any member of Congress serving at the time of enactment.

In proposing this legislation, I am not advocating that anyone be "retired just for the sake of retirement." I do think, however, that all of us reach a certain point in our later adult years when our talents for existing jobs are not as complete as they once were, though we still may maintain an inherent interest in the routine of the work. Case in point: the involved and demanding daily work load that a Congressman faces; one which often becomes extremely difficult and physically demanding for older members. I would hope that these older members could be called upon to give their services—on a voluntary basis—in some other capacity. I would also hope that I am offering them a new approach—an alternate avenue through which these older members might better apply their talents. I feel that the adoption of this amendment by Congress and the American people would result in a more efficient Congress and a more effective court system.

I have always believed that one of the primary rules of life is change. What I am arguing for here decidedly represents change—change that, I feel, will ultimately mean a constructive manner of progress.

"NO"

(By Representative CLAUDE PEPPER, 11th District, Florida)

My opposition to a mandatory retirement age for members of Congress and federal judges may appear to be self-serving. But I suggest that there are objective reasons for rejecting this well-meaning but ill-advised proposal.

The unfortunate consequences that might flow from its adoption are easily illustrated. A mandatory retirement age of 70 would have prevented many distinguished political leaders in Great Britain, France and the United States from serving, and serving well, their respective countries.

For example, Henry Palmerston could not have served as Prime Minister of England from 1855 to 1865, because he became 70 in 1854. Benjamin Disraeli could not have served as Prime Minister of England from 1874 to 1880, for he turned 70 in December of 1874. William Gladstone, who became 70 on December 29, 1879, would have thrice been prevented from serving as Great Britain's Prime Minister—1880–1885, 1886 and 1892–1894. And Winston Churchill, who became 70 in 1944, could not have been Prime Minister from 1951 to 1955.

In our own country, a mandatory retirement age of 70 would have prevented Henry Clay from serving a final term in the Senate. It would have denied the House of Representatives valuable years of service by Joseph Cannon, Sam Rayburn and John McCormack as Speakers. It would have eliminated eight years of service by John Marshall, nine years of service by Charles Evans Hughes and eight years of service by Earl Warren as Chief Justices of the United States. These men rank among the most active and brilliant justices to serve on the high court.

The point is simple but cogent: mandatory retirement for members of Congress and federal judges would deprive the country of valuable leadership.

I support voting at age 18 because I believe young voters would counterbalance an electorate weighted with age and would have a beneficial effect on politics in our country. I do not discount young people because of their age, nor reject a member of Congress or a federal judge because he has passed the age of 70. So far as a member of Congress is concerned, the electorate can determine when he is too old to serve, and that determination is best left in their hands. Most federal judges, I am convinced, retire when they deem themselves too old to perform the duties of their office.

There is no proof that a man's usefulness is finished at age 70, and until I can be convinced otherwise I remain opposed to mandatory retirement age.

MEMORIAL DAY, 1969—ADDRESS BY WILLIAM A COBLENZ

(Mr. SCHWENGEL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SCHWENGEL. Mr. Speaker, every year the Lincoln Group of the District of Columbia and their friends make it their business in the District to pay proper tribute on significant days. It has just been called to my attention my good friend and for years a good friend of the Congress, Mr. William A. Coblenz, was selected to deliver the address on Memorial Day. I would like to place his remarks on permanent RECORD.

I should point out, Mr. Speaker, he is a former public affairs specialist in the Legislative Reference Service of the Library of Congress. He delivered the principal address at the Memorial Day exercises on the Battle Ground National Cemetery, Brightwood, May 30, 1969.

The occasion was given under the auspices of the Ladies of the Grand Army of the Republic, the GAR Memorial Day Corporation, the Lincoln Group of the District of Columbia, the Brightwood-Manor Park Citizens Association and the Wheaton-Silver Spring Civil Air Patrol, Cadet Squadron.

Mr. Coblenz is a volunteer veteran of both World War I and World War II, and was for more than 7 years before his Library of Congress service, the Acting Director and Assistant Director of the Division of Public Information in the Department of Justice. Before that he had been a Boston newspaper reporter, editorial and feature writer, and daily columnist.

Without either agreeing or disagreeing with the substance of this excellent memorial address I nevertheless regard it a thoughtful, vigorous, and searching commentary on the campus turmoil of our time and related subjects and feel it deserves wide and respectful circulation and consideration from us all:

MEMORIAL DAY 1969—BATTLE GROUND NATIONAL CEMETERY, BRIGHTWOOD, D.C.

These are solemn and—as I see them—tremendously important memorial services.

They are important because of the turmoil of the era in which we live.

They are important because they enable us to draw some kind of contrast between the age when these men gave their lives for their country and the age today in which not a few of our youth insult the flag and cast shame upon themselves and the tradition of this free and open society.

So I, as a citizen, feel grateful to the group of patriotic organizations who made this thoughtful and reverent function possible and I am immensely proud to be your speaker.

The age in which we have our being right now is at once the most decent, the most humane, certainly the most civilized since man first began to walk erect—and it is also the most barbaric, and the most ungrateful since man first began to communicate with man.

The contrasts on this planet in this hour are dramatic, dynamic and terrifying.

We have the means at hand, stored, labelled and ready, to totally destroy ourselves and all life on this planet.

And we even have those who have the will and the drive to do it. But we can also fly to the moon.

What confronts us like a monster spewing fire is the extremism of the left actually feeding, by reaction, the extremism of the right.

Between these two violent and massive mob-stupidities rests a central force, which I hope is mightier than the other two, and which I call the current maturity of western civilization.

I mean in fact this audience before me here on this battleground.

We here in these environs today stand in the midst of a solemn and simply magnificient historical fact:

This is the sacred graves of the dead upon whose lives and sacrifices our nation was built.

Our own generation—at least mine, the adult, the midle-aged, the elderly—stands accused of having failed our youth.

They say we gave them Vietnam.

They say we gave them outworn, unchanging, decaying, misused, inadequate and mismanaged institutions of higher learning.

They say we gave them the premonition of total doom on the very doorstep of their future which we threaten, by our mistakes, with annihilation.

They say—some of them—we gave them an exploitive and materialistic society, and a false sense of values.

They say we are callous to the needs of the poor and the disadvantaged.

They say we are supinely servile to the rich and the powerful.

Our society, they say, is the flunkey and the handmaiden of the military-industrial complex.

The colleges and universities are the very entrance gates, they say, to the total dominance of our civilization by the entrenched minions of cupidity, greed and ruthlessness.

On the other hand they, the dissident students and their associates, would have us believe that they are the advance troops for the millenium and the harbingers for the coming of the Messiah. They may be against soap but they are wholeheartedly for flowers and for love.

Taking these complaints and these boasts, all in all, I know of no greater fraud since demagoguery first became an amazingly successful technique for organizing, promoting and advancing anarchy and nihilism. There has been nothing like it since the Communist manifesto.

This demagoguery is particularly ugly because it cloaks itself in the robes of civil rights, justice and equality.

They have already succeeded in befuddling the minds and paralyzing the will of some of our most distinguished university administrators.

A student who commits a criminal act is not a criminal—he is a dissident.

These young malefactors pretend to idealism. They enjoy the immense charisma of youth.

The inherent awfulness of this special kind of demagoguery is that it uses what may very well be a profound wrong or a whole catalogue of wrongs, and, under the guise of righting them, creates a far greater wrong.

First let me put down this basic proposition:

There has never been a moment in the history of mankind when man has achieved for himself the degree of decency, justice under law, and grandeur of character that invests this government today on this soil, under this flag.

The noble dead we honor on this Memorial Day bear testimony to this divine truth. For they helped create it, and not by burning their draft cards, or doing what would have been the equivalent in their time.

Now then, if against what I have just said, we want to catalogue the crimes against decency and against humanity that exist today, all of us, of course, can present a long and formidable indictment. And this indictment I am honest enough to say goes far deeper and is much longer than anything the socially and judicially backward Students for a Democratic Society have so rudely shoved forward so far.

My answer is that our society—our open society—has an answer to these evils and is correcting them even as they happen.

That's the great, the profound, the monumental difference!

The key phrase is: Open society.

What does that mean?

When the conspiracy came to light in the plumbing industry of this country only the other day fifteen of the country's largest manufacturers of plumbing fixtures were convicted of raising, fixing and stabilizing prices against the law. Twelve of the fifteen were fined a total of $370,000 by Pittsburgh's Federal District Court. Millions of dollars are yet to be returned to those who have been cheated.

We've had Senator Gaylord Nelson, Senator Warren G. Magnuson, the late Senator Estes Kefauver expose irregularities in our massive automotive industry, in our giant and ruthlessly profiteering pharmaceutical industry. We've had some of the corporations in the extremely powerful and financially unlimited electric appliance industry brought before the bar of justice, heavily fined and some of its major executives jailed for rigging bids. They included some twenty-four corporations and they made huge and dishonest profits.

But what is the answer?

The answer is that under the system these radical students condemn, under this flag, under this basic law of the land—the Constitution of the United States, these immensely powerful corporations, were brought to book. Some went to jail. Millions of dollars were returned, under law suits, to those whose pockets, economically speaking, had been picked, and for as long as this nation's business history is written, this chapter of our economic chronicle will show these violators of our economic laws to have contributed a very sad chapter, indeed, to the economic history of the United States.

Thus to this degree at least our industrial system was washed clear and clean with the simple, severe, commanding detergent of law, of equal justice under law, the detergent of congressional investigation, the detergent of a free and widely sweeping press and communications network, the printed, the pictorial, the magazine, the graphic processes of publicity.

Consider what it means to a free and open society, so unquestionably free and open, that whether you agree with him or not, a relatively unknown, unmoneyed, unsubsidized, young lawyer, fresh out of the Harvard Law School, and himself a student only yesterday, found it possible to bring the greatest industrial giant of all time—General Motors—and the whole automobile industry, to its knees. His contribution to automobile safety is one of the greatest contributions to the public interest in the last two decades, decades in which upwards of 53,000 of our people have been slaughtered on our highways annually. And the motor industry's effort to find a scapegoat by blaming it on drunken driving failed miserably to hold water. What we have today (Federal regulation) is not what I would ordinarily recommend, but it turns out to be the best solution under the circumstances.

The solution is that Washington is now, under the legislative cudgal which the industry brought upon itself, telling Detroit how to design an automobile. What has done is to shove more and more socialism down its own throat and the throat of the American economy and the American people.

But what is my point?

My point is that evil will always be with us, whoever governs and whoever is enriched, but that what all this history teaches us is that we have the will, the means, the courts, the press, the public opinion, to correct, to wipe out, to diminish or eliminate these evils as they occur.

Dissent against economic crime? Dissent against judicial impropriety? Dissent against legislative malfeasance? Dissent against executive abuse?

Of course there is dissent!

And under our system, under law, under due process, we manage to renew and to rededicate ourselves to the tradition and to the nobility, to the honor, to the sense of fairness and fair play, that has made us great—the greatest nation of all time. The sense of duty and patriotism we memorialize today. If the Pentagon perpetrates a lie and a deliberate misrepresentation of contractual and fiduciary facts, we find it exposed, emblazoned as if in Neon Lights, editorialized upon, discussed in our mass circulation magazines, and detailed on television, with the actual faces and voices of those involved.

Against this what is the ground for complaint? Who is complaining, and how do they complain?

This Federal Government, whose flag they trample upon and whose draft summonses they burn, now pays nearly a quarter of the total cost of American higher education. I repeat: a quarter of the total cost of American higher education!

Did you get that in your struggle for an education?

Did I?

The National Defense Student Loans promised by the Johnson administration reached a total of $270 million. It is now not the inconsiderable sum of $155 million, under the Nixon administration. Is this something to complain about? These are low-interest, long-term loans that benefit lower and middleclass families.

As I speak some half-million students out of a total of 6½ million students now derive their higher education from these loans.

Nor is that all:

There are college work-study programs. The idea here is to provide decent paying jobs for needy students working their way through college. The sums involved were $211 million and now come to $146 million.

Is this neglect of our youth?

There are all manner of scholarships available now that were undreamed of two generations ago. Our country on every level of industrial talent; skilled, unskilled, superskilled is crying out for men and women, the disadvantaged, the discriminated against, the advantaged, the super-advantaged, to please come and fill these jobs and situations at prices and fringe benefits that would have meant paradise to my generation. They are offered everywhere and the pages of the newspapers are full of classified appeals for employe-help—engineers, professional, nonprofessional—if only those applying are qualified. If they *excel* the salary rates are nothing short of phenomenal compared to what the generation of our time got that did not riot, that worked hard, that toiled its way to higher education on its own, and that made the success they enjoy solely on their own merit and effort.

How did the generation—our generation, yours—complained against so violently today let our youth down?

I ask how?

This is the generation of Americans who fought their way through two savage and astronomically costly world wars—*and won both!* The whole of mankind, including—and especially including Germany and Japan—had their liberties preserved for them because of there gargantuan sacrifices that are, as of now, the greatest wars in the whole chronicle of human conflict. This is the mass of Americans who valiantly and courageously legislated their way through the greatest depression known in the whole long tragedy of modern economics, the tragedy of economic cycles, panics, depressions, recessions, prosperity and bankruptcy. The legislation on our books today, effected by the generation complained of, is a magnificent and brilliant deterrent to these economic catastrophes. The very liberty, the very prosperity, the very security created for those who constitute our radicals, in and out of the universities, is precisely what made possible the very freedoms they enjoy and abuse.

The generation complained of is the generation that after the world's most savage and barbaric war created the Marshall Plan. That plan alone from 1949 to 1952 poured twenty-two billion dollars into foreign aid, military and economic. Altogether our foreign aid program up to June 30th, 1968, shovelled a total of one hundred and thirty-six billion—I repeat 136 billion dollars of our taxpayers' money, the money and treasure of our time, into the *very Christian* business of helping the impoverished and the war-ridden.

We, the United States and mostly the generation complained of, were the very foundation force in the rehabilitation of Germany and Japan, our enemies of yesterday, who are now—because of this enlightened statesmanship—our allies of today.

Was this creating danger and havoc and hopelessness for our youth?

When in the history of man was there such an implementation of the teachings of Holy Writ?

And on such a scale?

And with such an immense national effort, personal sacrifice, total altruism?

Who are these mostly young people who tear down, and burn, and insult, and take possession?

I ask:

What is their approach to curing the ills that afflict us?

Their immediate approach is the gross degradation of the human spirit.

It is a violent rejection of elementary good manners.

It is a contempt for the respect owing to teachers and parents and elders. It is insult to scholars and men of the mind.

It is the most supine and abject imitation and emulation of Hitler's bully-boys when Nazism was in flower and in the ascendancy in Germany.

Before the Nazis insulted the whole of mankind they insulted their own German nationals, their universities, their great physicists, their Nobel prize winners and the best and decentest among their folk.

They ran amuck as these student agitators are running amuck today.

A student militant with a meat cleaver in his hand was photographed leaving a con-

ference between the warring students and the administration at Harvard.

The Secretary of Defense, invited to speak at Harvard, found himself the target of every imaginable verbal and physical outrage and contumely so that he couldn't speak and had to be spirited away from those who—for all we know might have killed him—by sneaking him through a series of interconnecting cellars.

That was Secretary McNamara.

In another incident this type of student shoved a banana into the mouth of an instructor who differed with him.

With certain differences in style but not in technique this very thing happened all across the country. Under these tensions the President of Swarthmore dropped dead. A Harvard dean had a stroke. You saw the authentic photographs of armed students, with rifles and knives and shotguns, coming out of a university building they had seized at Cornell in Ithaca. You all know what happened at CCNY and the University of California at Berkeley; at Howard University here in Washington. President Ray L. Heffner resigned as President of Brown University and President Buell G. Gallagher from City College in New York. President Grayson Kirk resigned from Columbia University under vicious and unjustified attack. College and University boards all over the country have to beg for qualified administrators to take over this thankless job of running these institutions of higher learning.

This irreverence, this contempt for order, this scurrility, this obscenity, this hoot and jibe, this business of girl-students insulting President Mary Bunting of Radcliffe with language that would make a guttersnip wince, is said in some quarters to be the freedom of expression of youthful idealists.

Is it unreasonable to ask:

What are these progressive young idealists, these young geniuses of the world of tomorrow, these brilliant, top-drawer students, doing in such inferior institutions of alleged higher learning as: Harvard, Brown, CCNY, Dartmouth, Berkeley, San Francisco State and a dozen others? If they cannot find universities to equal their intellectual prowess, their idealism and their talents, what stops them from creating a university of their own?

At least one?

All it takes, if they are sincere, is a shelf of books and a boarding house. They can get their faculty easily from among the radical professors who support them.

Or could they?

If they were genuinely sincere and they did that—created a university of their own—even people like myself, might contribute however modestly from our modest means to help them.

Don't tear down the other people's schools, like Harvard, in existence for 331 years; build up one of your own.

If you hate the school you are in, why don't you leave it?

I saw the recent presidential inaugural marred by some young misguided hoodlums a few blocks from the White House.

Of course they have a right to protest.

But not on the scene and on the day when the United States is swearing its duly elected President into office. I believe that the local authorities were dead wrong in granting any kind of permission to protestors on the day of the inauguration. The dissidents have a right to hire their own hall, make their own speeches, yell their immature and thoughtless heads off, to their own audiences within their own environs, or any permitted environs, so long, to repeat an obvious cliche, as they do not interfere with the rights of the rest of us.

On this solemn Memorial Day, amid these graves of our honored dead, whose sacrifices for us—for all of us—put to shame the disrupters and revolutionaries of our time, what does all I've said add up to?

Basically the noise and the theatrical pretentiousness of this peculiarly privileged criminal class hopelessly exceeds its substance, its validity and its durability. They have seized on some more or less obvious wrongs to create a great deal of black smoke. The fundamental truth according to the best available statistics is that the student criminals and near-criminals, the dissidents and the doctrinaries, constitute no more than, or less than *one-half of one per cent* of the nation's students. Their case—that part of it that does make sense—if wisely and fairly presented, would, perhaps slowly, have a good chance to prevail at the court of collegiate and public opinion. Changes and corrections in college administration and curricula would have been affected in any case.

Harvard is not today what it was 331 years ago; nor is Columbia today what Columbia was when Alexander Hamilton was a student there. This Nation—an open society—constantly undergoing change, often depthful change, is itself capable of improving its social conditions without resorting to violence.

We did marvelously well through the decades.

The fortunate weakness of this campus hue and cry rests in the fraud of its pretentions and the dishonesty of its claims. It is not just a lunatic fringe; it is an example of hard-core psychotic unbalance. That makes it its own enemy. And, as such, it will disappear in the pages of the history to which it has added an unpleasant and an ugly footnote. What will endure so long as freedom is the goal of man is the the respect and the memory, the infinite values which have been left to us by these men whose graves we honor today and who gave us and freedom striving mankind, their last full measure of devotion.

Ladies and gentlemen: We salute them and I salute you for honoring them.

EDUCATION IN THE UNITED STATES

(Mr. LOWENSTEIN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. LOWENSTEIN. Mr. Speaker, this week the House of Representatives is considering legislation that will deeply affect the future of education in the United States. This is, therefore, a most appropriate time to remind the House that we ought to give early consideration to the question of the minimum age at which Americans can vote in national elections.

Hardly a politican opens his mouth these days without inveighing against those young people who have given up on "the system," without urging young people to participate in "the system" as the best way to redress their grievances and to affect their country's policies. Now the bedrock of participation in a democracy is surely the right to vote, but for reasons so obscure that hardly anyone can conjure them up from memory we continue along with the minimum voting age set at 21. Does anyone doubt that 18-year-olds today are better educated, better informed, and more involved in public matters than 21-year-olds were when 21-year-olds were given the vote? Does anyone suggest that there is wisdom or fairness in a situation that finds half the men who are killed in Vietnam were too young to have taken part in the election of those who made the policies that sent them to their deaths?

The franchise in America has been extended gradually—to the nonpropertied, to blacks, to women, to those who don't speak English. Each extension has strengthened democracy and strengthened the Nation. The vigor and political sophistication of our 18 to 21-year-olds—to say nothing of their broadening frustration with things as they are and with the way decisions are made that affect their lives—all argue that now it is time once again to extend the vote to another disenfranchised group of Americans.

Both Democratic and Republican 1968 party platforms supported the idea of an 18-year-old minimum voting age. So did President Eisenhower, President Kennedy and President Johnson, and President Nixon in his campaign last year. One of the most general and most bitter complaints of young Americans is the disparity between statements and actions of the political leadership of the country. That disparity suggests a cynicism, a hypocrisy, on the part of the leadership that creates further spirals of cynicism and despair among young people. Is it really helpful or honest to urge young Americans to seek social change through democratic channels when they continue to show more readiness to participate in the democratic process than we have shown to admit them?

If we think for a moment how good it would be for the electoral process in America, as well as for the health of the public dialogue on the great issues that now divide us, I believe we would move to lower the voting age with as great dispatch as the cumbersome machinery of constitutional amending permits.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows:

To Mr. FISH, for Wednesday, July 30, for personal reasons.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. HOLIFIELD, for 20 minutes, today and to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. FISH), and to revise and extend their remarks and include extraneous matter:)

Mr. RHODES, for 5 minutes, today.

Mr. TALCOTT, for 30 minutes, on Thursday, July 31.

Mr. SCHWENGEL, for 15 minutes, today.

(The following Members (at the request of Mr. ALEXANDER), to revise and extend their remarks and to include extraneous matter to:)

Mr. GONZALEZ, today, for 10 minutes.

Mr. ROONEY of Pennsylvania, today, for 20 minutes.
Mr. REUSS, today, for 20 minutes.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. SIKES in five instances and to include extraneous matter.
Mr. BELCHER, and to include extraneous material.
Mr. HANNA, immediately following the remarks of Mr. PERKINS in the Committee of the Whole today.
Mr. MCCARTHY to revise and extend his remarks following remarks of Mr. JOELSON.
Mr. DOWNING to extend his remarks immediately following the remarks of Mrs. MINK.
Mr. ROSENTHAL to extend his remarks immediately following those of Mr. REID of New York on the amendment on page 21, line 8, of H.R. 13111.
Mr. COHELAN to revise and extend his remarks and to include extraneous matter and tables during general debate on H.R. 13111, today, in the Committee of the Whole.
Mr. ADDABBO to extend his remarks following those of Mr. JOELSON, on his amendment, today.
Mr. PETTIS to extend his remarks following those of Mr. DOWNING, today.
Mr. MICHEL to include extraneous matter and tables with his remarks made today on H.R. 13111 in the Committee of the Whole.
Mr. PUCINSKI (at the request of Mr. MIKVA), to extend his remarks in connection with Mr. MIKVA's special order today.
(The following Members (at the request of Mr. FISH) and to include extraneous matter:)
Mr. SANDMAN in two instances.
Mr. MCCLURE in two instances.
Mr. ASHBROOK.
Mr. MCDADE in two instances.
Mr. PELLY.
Mr. HALPERN in two instances.
Mr. CARTER.
Mr. WYMAN.
Mr. HOGAN in two instances.
Mr. WOLD.
Mr. WINN.
Mr. POLLOCK.
Mr. SCHWENGEL in two instances.
Mr. CONTE in two instances.
Mr. HORTON.
Mr. BUSH.
Mr. LANDGREBE.
Mr. DICKINSON.
Mr. RUPPE.
Mr. ESCH.
Mr. HOSMER in two instances.
(The following Members (at the request of Mr. ALEXANDER), and to include extraneous matter:)
Mr. EDWARDS of California in two instances.
Mr. ROSENTHAL in five instances.
Mr. TEAGUE of Texas in eight instances.
Mr. GIBBONS in two instances.
Mrs. CHISHOLM.
Mr. CHARLES H. WILSON.
Mr. OTTINGER.
Mr. DIGGS in three instances.
Mr. RARICK in three instances.
Mr. ROONEY of New York.
Mr. HAWKINS.
Mr. GONZALEZ in two instances.
Mr. BIAGGI in two instances.
Mr. HUNGATE in two instances.
Mr. MOORHEAD in six instances.
Mr. OLSEN in two instances.
Mr. MINISH.
Mr. POWELL.
Mr. STEPHENS in two instances.
Mr. KASTENMEIER in two instances.
Mr. ANDERSON of California.
Mr. BOLAND.
Mr. FRASER.
Mr. BURTON of California.
Mr. WOLFF.
Mr. HELSTOSKI in two instances.
Mr. MAHON.

ENROLLED BILLS SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 2785. An act to authorize the Secretary of the Interior to convey to the State of Tennessee certain lands within Great Smoky Mountains National Park and certain lands comprising the Gatlinburg Spur of the Foothills Parkway, and for other purposes.

H.R. 3379. An act for the relief of Sfc. Patrick Marratto, U.S. Army (ret.).

H.R. 5833. An act to continue until the close of June 30, 1972, the existing suspension of duty on certain copying shoe lathes.

H.R. 6585. An act for the relief of Mr. and Mrs. A. F. Elgin.

H.R. 10946. An act to promote health and safety in the building trades and construction industry in all Federal and federally financed or federally assisted construction projects.

ADJOURNMENT

Mr. ALEXANDER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 54 minutes p.m.), the House adjourned until tomorrow, Wednesday, July 30, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1001. A letter from the Comptroller General of the United States, transmitting a report on a survey of progress in implementing the planning-programing-budgeting system in executive agencies; to the Committee on Government Operations.

1002. A letter from the Comptroller General of the United States, transmitting a report on financing of costs incurred to preserve the Columbia River Basin as a source of salmon and steelhead trout, Department of the Interior; to the Committee on Government Operations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. O'NEILL of Massachusetts: Committee on Rules. House Resolution 499. Resolution for consideration of H.R. 12829, a bill to provide an extension of the interest equalization tax, and for other purposes (Rept. No. 91–398). Referred to the House Calendar.

Mr. YOUNG: Committee on Rules. House Resolution 500. Resolution for consideration of H.R. 13018, a bill to authorize certain construction at military installations, and for other purposes (Rept. No. 91–399). Referred to the House Calendar.

Mr. COLMER: Committee on Rules. House Resolution 501. Resolution for consideration of H.R. 13080, a bill to continue for an additional 15 days the existing rates of income tax withheld at source (Rept. No. 91–400). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. CLANCY:

H.R. 13150. A bill to provide for orderly trade in footwear; to the Committee on Ways and Means.

By Mr. GIBBONS:

H.R. 13151. A bill to amend title II of the Social Security Act to increase, in certain cases where an individual entitled to a widow's or widower's insurance benefit remarries, the portion of such benefit which such individual may continue to receive after the remarriage; to the Committee on Ways and Means.

By Mr. GONZALEZ:

H.R. 13152. A bill to amend the Railroad Retirement Act of 1937 and the Railroad Retirement Tax Act to provide for the continued payment of supplemental annuities in accordance with present law; to the Committee on Interstate and Foreign Commerce.

By Mr. HALEY:

H.R. 13153. A bill to designate certain lands within the Island Bay Wildlife Refuge in Florida as "wilderness"; to the Committee on Interior and Insular Affairs.

By Mr. HUNT (for himself, Mr. ASHBROOK, Mr. BLACKBURN, Mr. DEVINE, Mr. GOODLING, Mr. PELLY, Mr. SCOTT, Mr. STEIGER of Arizona, Mr. TEAGUE of Texas, Mr. SCHERLE, and Mrs. DWYER):

H.R. 13154. A bill to prohibit any State from levying income taxes on nonresidents of the State; to the Committee on the Judiciary.

By Mr. PODELL:

H.R. 13155. A bill to amend title XVIII of the Social Security Act to include dental care, eye care, dentures, eyeglasses, and hearing aids among the benefits provided by the insurance program established by part B of such title; to the Committee on Ways and Means.

H.R. 13156. A bill to amend title XVIII of the Social Security Act to provide for the coverage, under the supplementary medical insurance benefits program established by part B of such title, of one routine physical checkup each year for individuals insured under such program; to the Committee on Ways and Means.

H.R. 13157. A bill to amend title XVIII of the Social Security Act to permit payment thereunder, in the case of an individual otherwise eligible for home health services of the type which may be provided away from his home, for the costs of transportation to and from the place where such services are provided; to the Committee on Ways and Means.

H.R. 13158. A bill to amend title XVIII of the Social Security Act to remove the present limit on the number of days for which bene-

fits may be paid thereunder to an individual on account of posthospital extended-care services; to the Committee on Ways and Means.

H.R. 13159. A bill to amend XVIII of the Social Security Act so as to eliminate, in certain cases, the requirement that an insured individual have first been admitted to a hospital in order to qualify under such title for the extended-care services provided thereunder; to the Committee on Ways and Means.

By Mr. PRICE of Illinois:

H.R. 13160. A bill to implement the Federal employee pay comparability system, to establish a Federal Employee Salary Commission and a Board of Arbitration, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. ROUDEBUSH (for himself and Mr. BRAY):

H.R. 13161. A bill to adjust agricultural production to provide a transitional program for farmers, and for other purposes; to the Committee on Agriculture.

By Mr. SHIPLEY:

H.R. 13162. A bill to implement the Federal employee pay comparability system, to establish a Federal Employee Salary Commission and a Board of Arbitration, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. STAGGERS:

H.R. 13163. A bill to amend the Community Mental Health Centers Act to extend the programs of assistance under that act for community mental health centers and facilities for the treatment of alcoholics and narcotic addicts, to establish programs for mental health for children, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. TEAGUE of Texas (by request):

H.R. 13164. A bill to provide for an annual audit by the Comptroller General of the accounts of the AMVETS (American Veterans of World War II); to the Committee on the Judiciary.

H.R. 13165. A bill to amend section 3101 of title 38, United States Code, to prevent consideration of proceeds of, or transfer of proceeds of, U.S. Government life insurance, and national service life insurance for Federal estate tax purposes; to the Commitee on Veterans' Affairs.

H.R. 13166. A bill to amend chapter 1, title 38, United States Code, to provide a statutory presumption of service-connected death of any veteran who has been rated totally disabled by reason of service-connected disability for 20 or more years; to the Committee on Veterans' Affairs.

H.R. 13167. A bill to amend subchapter IV of chapter 81 of title 38, United States Code, to authorize the Administrator to contract with hospitals (or medical schools or other medical installations having hospital facilities) for the use of hospital beds when not needed for the care and treatment of veterans; to the Committee on Veterans' Affairs.

By Mr. WOLFF (for himself, Mr. ADDABBO, Mr. ANDERSON of Tennessee, Mr. ANDREWS of Alabama, Mr. BARING, Mr. BLACKBURN, Mr. CARTER, Mr. CHAPPELL, Mr. CLEVELAND, Mr. DERWINSKI, Mr. DUNCAN, Mrs. HANSEN of Washington, Mr. HORTON, Mr. KYROS, Mr. MCKNEALLY, Mr. MATSUNAGA, Mr. MELCHER, Mr. MOSS, Mr. MURPHY of Illinois, Mr. PRICE of Illinois, Mr. RARICK, Mr. REES, Mr. VANIK, Mr. WRIGHT, and Mr. ZION):

H.R. 13168. A bill to amend title 39, United States Code, to provide for the return to the sender of pandering advertisements mailed to and refused by an addressee, at a charge to the sender of all mail handling and administrative costs to the United States; to the Committee on Post Office and Civil Service.

By Mr. DELANEY:

H.R. 13169. A bill to amend the Internal Revenue Code of 1954 to provide a basic $5,000 exemption from income tax for amounts received as annuities, pensions, or other retirement benefits; to the Committee on Ways and Means.

By Mr. DENT:

H.R. 13170. A bill to provide for the orderly expansion of trade in manufactured products; to the Committee on Ways and Means.

By Mr. GALLAGHER:

H.R. 13171. A bill to provide for Federal Government recognition of, and participation in, international expositions proposed to be held in the United States, and for other purposes; to the Committee on Foreign Affairs.

By Mr. GRAY:

H.R. 13172. A bill to amend the Humane Slaughter Act of 1958; to the Committee on Agriculture.

By Mr. MIKVA:

H.R. 13173. A bill to amend the Consumer Credit Protection Act to provide minimum protection to citizens of the United States from garnishment for debts due for State or Federal taxes; to the Committee on Banking and Currency.

H.R. 13174. A bill to amend the Internal Revenue Code of 1954 to provide minimum protection to citizens of the United States from garnishment for debts due for Federal taxes; to the Committee on Ways and Means.

By Mr. MILLER of Ohio:

H.R. 13175. A bill to amend title XVIII of the Social Security Act to eliminate the inpatient hospital deductible which is presently imposed under the hospital insurance program upon an individual's admission to a hospital; to the Committee on Ways and Means.

By Mr. MOLLOHAN:

H.R. 13176. A bill to amend title II of the Social Security Act to provide that a widow or surviving divorced mother who has been entitled to mother's insurance benefits may generally continue to receive such benefits, without regard to her age, even though none of the children of her deceased husband are any longer entitled to child's insurance benefits; to the Committee on Ways and Means.

By Mr. RHODES (for himself, Mr. STEIGER of Arizona, Mr. MCCLURE, Mr. HANSEN of Idaho, Mr. OLSEN, Mr. FOREMAN, Mr. STEED, Mr. CAMP, Mr. BURTON of Utah, Mr. LLOYD, and Mr. MELCHER):

H.R. 13177. A bill defining and limiting the application of certain acts of Congress to Indians and Indian tribes; to the Committee on Interior and Insular Affairs.

By Mr. SPRINGER (for himself and Mr. GERALD R. FORD):

H.R. 13178. A bill to amend the Federal Hazardous Susbtances Act to protect children from toys and other articles intended for use by children which are hazardous due to the presence of electrical, mechanical, or thermal hazards, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. BRAY:

H.J. Res. 844. Joint resolution providing for distribution of the moon samples brought back by Apollo 11 to the Governors of each of the 50 States; to the Committee on Science and Astronautics.

By Mr. BROTZMAN (for himself, Mr. SCHADEBERG, Mr. PELLY, Mr. WYMAN, Mr. HANSEN of Idaho, Mr. OLSEN, Mr. MESKILL, Mr. BEALL of Maryland, Mr. RHODES, Mr. MAYNE, Mr. WHITEHURST, Mr. HOSMER, Mr. CUNNINGHAM, Mr. THOMPSON of Georgia, Mr. STEPHENS, Mr. LUKENS, Mr. FULTON of Pennsylvania, Mr. UTT, Mr. ADDABBO, Mr. CHAMBERLAIN, and Mr. PEPPER):

H.J. Res. 845. Joint resolution providing for the display in the Capitol Building of a portion of the moon; to the Committee on House Administration.

By Mr. EDWARDS of Louisiana (for himself, Mr. LONG of Louisiana, Mr. HÉBERT, Mr. CAFFERY, Mr. RARICK, Mr. PASSMAN, and Mr. WAGGONNER):

H.J. Res. 846. Joint resolution proposing an amendment to the Constitution of the United States relating to the freedom of choice; to the Committee on the Judiciary.

By Mr. VANDER JAGT (for himself and Mr. CORBETT):

H.J. Res. 847. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. WOLFF (for himself, Mr. ADDABBO, Mr. BIAGGI, Mr. BLANTON, Mr. BRASCO, Mr. CHAPPELL, Mr. DON H. CLAUSEN, Mr. DENT, Mr. DUNCAN, Mr. FLOOD, Mr. FRIEDEL, Mr. GALIFIANAKIS, Mr. GILBERT, Mr. HANNA, Mr. HORTON, Mr. MATSUNAGA, Mrs. MINK, Mr. MOORHEAD, Mr. PETTIS, Mr. PRICE of Illinois, Mr. PUCINSKI, Mr. ROBISON, Mr. ST. ONGE, Mr. SANDMAN, and Mr. VIGORITO):

H.J. Res. 848. Joint resolution authorizing the Civil Air Patrol to erect a memorial in the District of Columbia; to the Committee on House Administration.

By Mr. DICKINSON (for himself, Mr. HAYS, Mr. DENT, and Mr. DEVINE):

H. Res. 502. Resolution relating to the per annum gross rates of pay of certain positions under the House of Representatives; to the Committee on House Administration.

By Mr. FRIEDEL:

H. Res. 503. Resolution providing additional postage for Members and officers of the House of Representatives; to the Committee on House Administration.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BURTON of California:

H.R. 13179. A bill for the relief of Teodosia Bocoboc Bueno; to the Committee on the Judiciary.

By Mr. FARBSTEIN:

H.R. 13180. A bill for the relief of Giovanni and Marie Cordara; to the Committee on the Judiciary.

By Mr. GILBERT:

H.R. 13181. A bill for the relief of Mr. Giuseppe Cavallo; to the Committee on the Judiciary.

By Mr. McDADE:

H.R. 13182. A bill for the relief of Frank E. Dart; to the Committee on the Judiciary.

By Mr. McFALL:

H.R. 13183. A bill for the relief of Jimmie Kazu Uyemura and others; to the Committee on the Judiciary.

By Mr. MOLLOHAN:

H.R. 13184. A bill for the relief of Niko Lencek; to the Committee on the Judiciary.

By Mr. RYAN:

H.R. 13185. A bill for the relief of Iris Kathleen Preddie; to the Committee on the Judiciary.

By Mr. SCHWENGEL:

H.R. 13186. A bill to provide private relief for Lt. Comdr. LeRoy E. Coon, Supply Corps, U.S. Navy (ret.), continued on active duty in a retired status after June 30, 1967; to the Committee on the Judiciary.

By Mr. VANIK:

H.R. 13187. A bill for the relief of Eva Lengyel; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

JONES T. BOND SPEAKS TO LION'S CONVENTION

HON. ROBERT G. STEPHENS, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1969

Mr. STEPHENS. Mr. Speaker, on June 3, 1969, the Georgia State Lion's Convention of District 18F met in Augusta, Ga. My Good friend, Mr. Jones T. Bond, of Greensboro, Ga., delivered the main address entitled "Lionism in Action."

I think this speech will be of interest to all of the Members of Congress. I submit it, therefore, for insertion in the RECORD:

ADDRESS BY MR. BOND

Ladies, Lion District Governors, international counselors, fellow Lions, first, I want to thank District Governor Newby for allowing me to come before you and talk on this occasion of the Lion's Convention of District 18F breakfast meeting here in Augusta, Georgia at the Town and Country Motel on this morning of June 3rd, 1969.

Should I choose a subject to talk on, it would be "Lionism in Action."

The same principles of success that apply to life, to a nation, or to any business, must also apply to a Lion's Club.

The first fundamental is finances: We must have finances in order to run our club. Every club has a fixed overhead, just like a government, or business and we must not contract for more than our income.

The second fundamental is membership. We must have membership if the club is to exist.

The third fundamental is business methods: our club must be managed on a sound business basis; or like any business it will fall into the hands of receivers—dues must be collected and properly spent—it is not how much money we have but how we spend it that counts.

The fourth fundamental is attendance. Of course, we must meet in order to have a club. We have to get together in order to know each other, in order to keep up the members' interest, to get the other fellows point of view, to broaden and develop ourselves.

The fifth fundamental is co-operation. It is team work that counts.

The sixth fundamental is "enthusiasm," the greatest asset in the world—it surpasses money, power and influence—let us stress "enthusiasm" in our clubs—it means joy, pleasure and satisfaction, as well as success.

The fruits of these fundamentals is a good fellowship, which is one of man's inherent qualities.

"A minute's success pays the failures of years," said the poet Robert Browning.

When success comes, it is sweet enough to offset the failures of the past, and history bears this theory out. It can be applied to the lives of great men and it can be as well applied to every life.

One of our greatest Presidents had a life of failures preceding his years of success. His business failed in 1831, he was defeated for the State legislature in 1832; and failed again in 1833. He had a nervous breakdown in 1836 following the death of his sweetheart in 1835 and was defeated for speaker of the House in 1838.

He was defeated for Congress in 1843 and 1848. Was defeated for the Senate in 1855, for the Vice-President in 1856 and for the Senate in 1858. Of course, this great failure was Abraham Lincoln and he was elected President in 1860. Ask any American to name our greatest President and Lincoln's name will be on the list.

George Bernard Shaw said, "the people who get along in this world are the people who get up and look for circumstances *they* want and if they can't find them; *make them.*" This pretty well describes the type of person Lincoln was, and this *isn't* reserved for people with political aspirations. Anybody can make *his own* in almost any situation.

In our Lion's Club we can obtain success through our work, not individually but as a club, by carrying out our goals and projectives which we have set up.

Throughout our success we obtain our rewards of Lionism by what we can do for the unfortunate, the "down on their luck" people throughout our community and the world.

It is an eye operation for a child and the smile that breaks across his face after the bandage is removed and the eye blinks the great gift of sight to an anxious mother—it's a library to the school of our community; it's a food order to tide a family over and many, many more works of love. And our own personal rewards—rewards money can't touch—are the many great friendships made in our club and the wonderful feeling that comes from actually seeing those good deeds done—this—I think, is success.

Now, I wish to, at this time, pay a special tribute to the late great international secretary, Lion Melvin Jones whom I had the pleasure to know personally and visit in his home club in Chicago, Ill., which was most inspiring.

Lion's Club International is one of the few civic clubs which has survived the buffeting and trials of wars and depression.

Lion's International has passed its 50th birthday and I am proud to be able to say I attended this great convention in Chicago as a delegate from the Greensboro Lions Club of Georgia—I have been a charter member of the Greensboro Club for 35 years—and I hope we will pass the one million membership soon.

What is Lionism? Prognosticating is a risky business—founder Jones whose birthday was this past January 13th knew this. When he was asked for a prediction he would answer, "I hope there will always be a land of beyond for Lion's International!! A goal that will keep growing larger and larger as we approach it, yet will keep out of reach, challenging us to run faster, work harder, think bigger, and give more."

I wish to close with this thought and quote from the Bible, in which "Christ promiseth comforter." "Peace! I *leave* with *you* (not as the world giveth, gave I unto you) let not your heart be troubled, neither let it be *afraid.*"

It is an honor to be here as a delegate from the Greensboro Lions Club and to speak to you and in the language of Tiny Tim I say "God bless us every one"—Thanks.

POEM BY W. SPENCER McCALL, OF GREENVILLE, S.C.

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 29, 1969

Mr. THURMOND. Mr. President, the admiration and devotion Americans had for General Eisenhower has been felt in the months following his death. This is but a reflection of the high esteem which they held for this great American. A poem expressing this feeling was sent to me by a fellow South Carolinian.

I ask unanimous consent that the poem, entitled "President Eisenhower," written by W. Spencer McCall, of Greenville, S.C., be printed in the Extensions of Remarks.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

PRESIDENT EISENHOWER

(By W. Spencer McCall)

He was both soldier and statesman,
And he wielded great power,
He was a great American,
And his name was Eisenhower.

From the heart of the land he came,
And though his beginning was small,
In war and peace he won great fame,
Always answering duty's call.

Across the ocean he did go,
To defend liberty and right,
Loved by friend and feared by foe,
Loving peace, but ready to fight.

He fought—and tyranny was crushed,
And there was peace for which we yearned,
At last the cannon's voice was hushed,
Then to the homeland he returned.

Again to him the call went forth:
Would he the nation's leader be?
And this man of proven worth
Heard his fellow countrymen's plea.

He then agreed to their request
By piloting the ship of state,
And, as history will attest,
He was just and considerate.

Valiant soldier and wise statesman!
We now honor his memory.
Injustice he sought to ban,
He served the cause of liberty.

WASHINGTON WORKSHOPS GIVES STUDENTS AND CONGRESS RARE OPPORTUNITY

HON. JOSEPH M. McDADE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. McDADE. Mr. Speaker, I would like to commend to the attention of my colleagues a most unique and worthwhile study program on this Congress for the country's young people. The program is sponsored by the Washington Workshops, a private nonprofit educational foundation founded and directed by Mr. Leo S. Tonkin, and its purpose is to offer on-the-scene study of our American Government in action and to encourage a much-needed dialog between the Nation's leaders and its young people.

Nearly 150 high school youngsters, most of them about ready to enter college, are here in Washington right now. They have journeyed here to their Nation's Capital from every background and part of the country. Every day they

made their way about Capitol Hill—sitting in on committee hearings, discussing with the Members of this Congress the issues most critical to them and the country, and meeting with their own Representatives. They are also holding sessions with Cabinet members and key officials from the executive branch as well as the judiciary—including the Supreme Court. What is more, several foreign embassies are hosting receptions for the students to offer an experience in international education and friendship.

In addition to the regular Washington Workshops congressional seminars, 65 of last year's outstanding workshop students are here again this summer participating in an advanced workshop on the Congress. These students are here for 4 weeks to do 2 weeks of intensive independent study and research and to serve a 2-week voluntary congressional office assignment. By the time they have completed the workshop, they will know more than just the legislative process and the critical issues that confront our Nation. They will have experienced what kind of work must be done, day in and day out, if this Congress is to meet these challenges head on.

By the end of this summer some 1,000 young Americans will have had the opportunity to hear and be heard here on Capitol Hill. I know many of my colleagues in this House and in the Senate—Democrats and Republicans of every political persuasion—have joined me in meeting with these young Americans, and I am hopeful that both the students and my colleagues have found this experience as educational, stimulating, and encouraging as I have. It is vitally important that the country's young people and leaders share their thoughts, hopes, and goals with one another. The Washington Workshops are giving us just that opportunity.

CHEYENNE FRONTIER DAYS, THE "GRANDDADDY OF EM ALL"

HON. JOHN WOLD

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. WOLD. Mr. Speaker, the Apollo 11 moon landing was undoubtedly the most exciting event of the past week. The second most exciting had to be the 73d annual celebration of Cheyenne's Frontier Days.

The greatness of the United States has resulted from many factors. Surely, among the most important has been the ability of our people to change—to be innovative—to adapt to new realities. But the foundation upon which all this rests are the fundamental symbols and values that go from our Star Spangled Banner to the Constitution and beyond.

Frontier Days—"The Granddaddy of Em All" as it is affectionately known to rodeo fans—is a living symbol of the spirit that made our Nation and keeps it continuing.

It is made possible—just as was the Apollo program—by the ingredient that secured our frontier 100 years ago—by the willful cooperation of individual human beings.

It was this "let's work together" spirit that settled Wyoming and the West; it was the spirit that brought our Forefathers to the New World—and it was the spirit that made possible the footprint of man on the moon.

The spirit is especially evident during Frontier Days.

The whole shebang is put together by literally hundreds and thousands of people. They however, are given direction by the Greater Cheyenne Chamber of Commerce and a nine-man directing committee. The occupational range of the committee reflects the diversity of the citizens who make Frontier Days possible every year—a high school track coach, an attorney, a CPA, a dairy operator, an insurance representative, and so forth.

Even a rodeo requires special action, however. Livestock have to be collected, fed, dispersed, events have to be timed; a million and one chores have to be done.

A heel is ordinarily thought of as a not so nice person. But during Frontier Days it is the Heels that handle the specialized chores of the arena. As are everyone else, they are volunteers—in this case, men.

But the women of the community are not to be outdone. They are organized as Wheels to keep the 3-day parade rolling. In fact, most of the citizens of Cheyenne help out with everything from cooking up free flapjacks to timing bucking horse rides.

The population of Cheyenne triples during Frontier Days—and it is easy to see why. First of all, there is the world's greatest rodeo. It is a tradition among cowboys that a man is not a champion until he has won at the "granddaddy of 'em all."

For the visitor who wants to see the West as it really was, Frontier Days has authenticity that is impossible to duplicate. The town really goes Western with displays ranging from the world's largest collection of horse-drawn vehicles to the out-and-out cowboy.

Besides all the rodeos, visitors are kept entertained by evening shows, Indian dances, a carnival, and parades.

The heart of the rodeo is still the struggle between man and nature, between the cowboy and the bronco.

In a sense, the rodeo is a microcosm of the world in which we live and it shows pretty clearly that victory goes to the courageous and to the bold.

So to all of you who have never made it to Frontier Days, Cheyenne, Wyo., I extend an invitation for next year's ripsnorter so you can see Frontier Days for yourself.

IN DEFENSE OF THE INDEFENSIBLE

HON. WILLIAM L. HUNGATE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. HUNGATE. Mr. Speaker, I would like to say a few words in defense of the indefensible. Our Nation has a lifetime subscription to the Puritan ethic. Yet we spend more on liquor than libraries, more on cigarettes than schools. Great industrial and agricultural States like New Jersey—and until lately Illinois—rest their fiscal hopes on horseplayers, rather than the graduated income tax.

No Roman emperor was more aristocratic than Gen. Douglas MacArthur. Yet, we may owe our freedom to his military genius and leadership.

Gen. George Patton's purple language made a Marine drill sergeant sound like a Boy Scout applying for a God and Country Award. Yet one cause of our Vietnamese failure is our failure to find a general—a Patton—for that war, one who grasps those tactics and has the egotism and courage to pursue a victorious course, despite intraservice obstacles and critical winds at home. Under pressure, Patton's personal conduct toward his troops was indefensible. But those who overrode him left East Germany a 20-year supply of Russian troops.

Our White House has seen men who fell victim to a moral lapse. One fine President's illegitimate parenthood was so well known it gave rise to a campaign jingle:

> There's your ma.
> Where's your pa?
> Gone to the White House.
> Ha, Ha, Ha!

The mansion has seen generals as President whose private lives are described as infinitely more colorful—and in some cases more productive—than their public careers.

We all want to live in the house by the side of the road, but our heroes are the men on the moon.

A leader who prefers Edgar A. Guest to Edgar Allan Poe, and a President who prefers Guy Lombardo to Jose Feliciano probably will not get you into trouble. Indeed he probably will not get you anywhere.

ON LOSING OUR NERVE

HON. PAGE BELCHER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. BELCHER. Mr. Speaker, recently I had the privilege of attending a luncheon of the National Press Club and hearing the new president of the National Chamber of Commerce, Jenkin Lloyd Jones, who is, incidentally, the editor, and publisher of my hometown newspaper, the Tulsa Tribune, deliver an address entitled "On Losing Our Nerve." I feel this is a very frank, challenging, and optimistic statement on the present state of this Union. I include the material at this point in the RECORD:

ON LOSING OUR NERVE

(By Jenkin Lloyd Jones)

One of the functions of a good reporter is to keep his editor from coming to stupid conclusions. I have been rescued many times from making editorial gaffes by the boy from our state capitol bureau or the city hall who who begins a sentence, politely, "But you overlook——"

One of the greatest hazards in the newspaper business is obsolete information. We sometimes fail to learn quickly enough of the new trend, of the sudden damming of one

stream of history and the hurling of the waters into a new channel.

My fellow Oklahoman, Will Rogers, once said, "Ignorance ain't the trouble in this world. Everybody knows plenty. It's what they know that ain't so that's the trouble."

It has been a quarter of a century since Wendell Willkie, seeing a rosy future beyond the most horrible of all wars, wrote his book, "One World." It all seemed so simple. With fascist tyranny and Japanese militarism swept away what could have been more logical than a drawing together of the peoples of the world, first by their common cause in war, and secondly by the dynamics of ever-easier travel and communication?

The only trouble is, Willkie knew a lot that wasn't so. We have seen, not One World, but an unprecedented era of splittings. The majority of the votes in the UN are now cast by nations that have less population than Chicago.

With the removal of the disciplines imposed by colonial powers India has divided into warring Hindu and Moslem nations, Nigeria into an unstable compound of Ibos, Yorubas and Hausas, and much of the rest of Africa into tribal states.

Scottish nationalists drew cheers for swiping the Stone of Scone, and I note that the lunatic fringe among my brother Welshmen is threatening to spoil the investiture of Bonnie Prince Charlie the Third with some sort of rhubarb.

It would be dangerous to say that Wendell Willkie will be wrong forever. We may eventually get One World. Indeed, it could be imposed upon us by one victorious superpower that could arrogate to itself and keep a monopoly on cataclysmic weapons. Whether you like the prospect or not depends, of course, on who gets the monopoly.

But Wendell Willkie's optimistic forecast has been wrong up to now because he underestimated centrifugal forces. And editors like me who bought Willkie's promise were wrong, too.

I have the temerity to stand before you today as an expert on everything because I have just completed my third trip around the world. I don't have to warn you that travel is dangerous for newspapermen because it feeds our delusions of omniscience—a disease that afflicts even those of our brethren who rarely get out of the county.

But it is difficult to travel widely without seeing new vistas from new perspectives. And I would like to unload upon you a few fast conclusions.

I believe that in some areas the age of ideology is beginning to fade and the ancient forces of good, old geopolitics are winning out again. C. L. Sulzberger of The New York Times, certainly a better-traveled man than I, has a theory that the basis of the Russo-Chinese hatreds is Mao's conviction that no white nation can be tolerated as a co-savior of humanity as outlined in the Communist dogma.

I would disagree. I think the imbroglios along the Ussuri River would be conjured up by governmental systems of any kind that find themselves in deep internal trouble. The Chinese and the Russians, being of different races and holding contiguous territory, make far more believable enemies for each other than the distant Americans. The more an authoritarian government falls short of delivering on its promises the more necessary an external peril becomes. Such governments cannot be turned out of office by elections, but they are always in danger of revolt. Nothing dampens revolt like the prospect of a common enemy.

Some distinguished optimists have suggested that our efforts to achieve a detente, i.e., an understanding, a lessening of tensions, with the Communist world should be increased now that there are serious divisions among the Reds, themselves.

I see no hunger among Communist leaders for a detente with the West based on anything less than unilateral concessions and surrenders by the West. With prospects brightening for a total American defeat in Southeast Asia, and with internal problems apparently becoming more serious in both Russia's European empire and Red China, I would think a lessening of external tensions would be the last thing the Communist leaders, however much they may hate each other, would want.

I suppose the best chance of world peace would be provided by a communist system that worked. If such a system delivered the dream of Marx—prosperity for all, total justice, a flowering of the humanities, the greatest leisure—then all the nations of the world, like ripe apples, would fall into communism's lap and there would be nothing left to fight about.

Unfortunately, this system has yet to be discovered, even though the SDS seems to think it knows how to discover it. What we have seen for half a century, instead, is a system that has failed most spectacularly in achieving human values. And, whether in the jailing of Russian poets or the seizure of peasants' grain by Chinese troops, more and more we see the outlines of old and traditional tyrannies that have nothing to do with revolutionary ideology.

The trouble is, old tyrannies can be pretty effective tyrannies, given the techniques of modern propaganda. As an example, the constant drumming by Moscow and Peking on the thesis that the Americans are engaged in a cruel, reckless and selfish imperialist war in Southeast Asia has been amazingly successful, not only among our traditional friends, but among ourselves, as well.

It is sad enough that our old pals, the Swedes, have apparently bought in toto the idea that Lyndon Johnson was a Genghis Khan and that our sleaziest deserters are heroes in the fight for human freedom. But it is even more remarkable that Harvard can burst into tears at the sight of a Vietnamese baby burned by American napalm while ignoring completely the windrows of Vietnamese bodies left after the Viet Cong's departure from Hue.

We are becoming pariahs in the world. Some of it, as our British friends wryly remind us, is the historic fate of front-running nations. Some of it is more apparent in the headlines and on the TV news than in fact. A small disciplined minority properly positioned for maximum exposure can give the impression that an entire community or even a nation has exploded in disgust at the Americans.

But we have seen an American President cancel a trip to Japan because the radical young Zengakuren threatened to stain the streets with blood. We have seen one secretary of state spirited away from a New York City speech through an adjoining garage to avoid a well-led chorus of hatred. We have seen other cabinet officers shouted down by riotous claques in college audiences. Our present President a few years ago was nearly killed in Colombia and we have recently observed the governor of New York, first, literally driven from South America, and then return to hold a second meeting, not in the national capital where it was scheduled, but in a small and well-policed resort.

The American people read these headlines. The American people know that we have poured more than a quarter of a trillion dollars into foreign aid and that our defense commitments gobble up one-tenth of our gross national product. The American people are hurt by taxes. So it is not remarkable that there is a rising spirit of neo-isolationism, led, oddly, by some able and articulate senators who, only yesterday, were our most eloquent internationalists.

President Nixon has now been drawn into a distressing numbers game. With the Paris peace talks getting nowhere he is pressured on every hand to announce ever-larger withdrawals of American troops, and whatever number he announces is sure to be denounced as "tokenism" by his opponents.

Does anyone wonder why the Viet Cong and North Vietnam see no sense at this point on talking peace in any terms except their total victory?

Two weeks ago in San Francisco I sat in on a meeting on Japanese-U.S. trade problems which was attended by some of Japan's leading industrialists and exporters. And they were full of rosy expectations of booming trade opportunities in Southeast Asia as soon as the Vietnam war was "settled," as they put it.

It is not cricket at such a meeting to mention politics, but I quit the cricket game briefly to suggest that how the war was settled might have a lot to do with the trade opportunities of Japan or any other noncommunist nation.

It is my understanding that Walt Rostow's "domino theory" is in general disrepute, not only among the distinguished guessers on our faculties of political science, but among Washington intellectuals, as well.

The counter-theory is that all Southeast Asian states are highly nationalistic and will gravitate toward political solutions that suit their own people, regardless of what may happen in Vietnam.

This certainly provides a comfortable rationale for an American bug-out from an intolerable situation. But, at the risk of being thought a troglodyte, may I say that I am still a domino man. I think if all the friends of the Saigon government and all the supporters of the Americans wind up with their throats cut it may have more than a little effect upon the rest of Southeast Asia.

I believe most influential Southeast Asians will not let abstract principle interfere with the more urgent business of keeping their heads on his shoulders. I believe the spreading of terror and chaos by the systematic assassination of village chiefs—a technique brought to a high polish by the Viet Cong—will work equally well in Laos, Cambodia, Thailand, Burma, Malaysia—yea, and Indonesia, too.

As a matter of fact, this technique is now a clear and present danger in northeast Thailand, and who can say that it is purely coincidental that the Huks are stirring again in the Philippines, that Red terrorists are showing up once more in Malaysia, that that most Quixotic king of Cambodia, who only yesterday was denouncing Americans for their "aggressions," is now yelling for their help.

It is argued that even if these nations eventually succumb to leftist coups there will be no real change in the power balance of the East because the people of these nations have always looked upon the Chinese with suspicion and distaste.

I can only say that with the British out of the area, with the Japanese disarmed, and with the Americans gone it would take some imagination to imagine that a treasurehouse of oil, rice and minerals would be ignored by a state of 800 million people that has a huge standing army and is short of everything.

This has sounded like a lugubrious speech. I do not mean it so. I think we are approaching a crisis because so many good things are happening. I feel that the reason why there is so much pressure upon the American people now to make foolish and short-sighted decisions is because our enemies, themselves, are pressed.

Here, let me hasten to point out that intelligent gentlemen of undoubted loyalty to this country have arrived at opposite conclusions to mine. I refer to the sincere purveyors of the doctrine that we can depart from Southeast Asia under any or no terms without hazard to ourselves or the so-called "Free World." I point no fingers at brilliant

American statesmen who say that we can watch Russia build all by itself an antiballistic missile system without any qualms because, in the first place, it won't work, and, in the second place, if we built one it would be provocative.

One of the troubles with being a newspaper editorial writer in the late Twentieth Century is that he is increasingly called upon to reach definite conclusions on matters about which he has little ability to judge.

If you would ask me whether a soldier should be equipped with a muzzle-loader or a breech-loader I could give you a pretty wise opinion. If you should ask me whether percussion caps should replace flintlocks I'd be pretty smart. But that's the wrong century.

As one who does not yet completely understand the crawling lawn sprinkler I have no way of knowing whether an ABM will work or not. I do know that some presumably intelligent gentlemen in Russia seem to think it is worth a try.

I do believe that a balance of terror is better than an imbalance of terror, that the peace of the world might be in very great jeopardy if our friends in Moscow ever arrived at a position where they could inflict unacceptable casualties on us while risking only acceptable casualties on themselves. We would then be in the same position we would have been in if Josef Stalin had ever found himself the exclusive possessor of the atom bomb.

There are those who say that the age of raw aggression has passed. If so, it has passed recently for I was in Czechoslovakia last summer.

There are those who say that atomic holocaust is "unthinkable." But atomic blackmail may not be. If I were a Western European I would worry about the day when the Americans, if they ever lost their ability for a devastating counter-strike, would have to decide whether to watch the immolation of our cities or let Western Europe go.

I am interested in the program of the so-called New Left. Let's tick it over:

End millitary research by American universities.

End the training of officers in the ROTC.

Pull out of Vietnam now—period.

Take the ABM money and put it into more generous social services.

Encourage desertion and dissension in the American armed services.

Dismantle the so-called "industrial-military complex."

I don't believe all this was spontaneous inspiration of idealistic young collegians. I detect a sort of professional flavor that rings a bell or two as I review the history of the past half century.

Gentlemen, I think we're in trouble because Marxism is in trouble. I think that as we enter the eighth decade of the Twentieth Century we are under increasing attack because collectivist theories are not working out, and because those who are dedicated to them are fearful.

I think we are seeing an ably managed effort to tip a military balance in favor of a system that has steadily lost hope of winning by example.

Your committee invited me here, today, not because I'm a prairie editor and an old member of this club, but because for a brief period I am president of the Chamber of Commerce of the United States. Therefore, let me get in my commercial.

Karl Marx and Friedrich Engels thought they had a formula for licking 19th Century capitalism. Perhaps they did. For that was the capitalism of monoply and cartel, of little social conscience and less taxes, of ever-greater concentrations of land-holdings and of wealth, and a perpetual war on workers. Some of this capitalism still survives, particularly in Latin America.

What Marx and Engels didn't know about was something not yet invented—a people's capitalism in which equity ownership was widespread, even among labor, itself. People's capitalism is heavily taxed for the commonweal and is subject to the disciplines of the marketplace, which is another way of saying the approval of the consumer.

Among its freedoms is the freedom to go broke. Unlike enterprises operating under government ownership and enjoying monopoly this new capitalism must respond to demand or perish. It must meet not only competition in price and quality, but competition in wages that it pays.

This is what is frightening the communist world, for it is becoming increasingly apparent that communist dogma is obsolete and out of touch with reality, that it is overdue for revision, and that no revision which can come close to meeting the rising demands of the people will be achieved by anything short of the dismantling of centralized controls and a lessening of the power of a self-perpetuating elite.

The communist leadership does not wage war against the people out of choice, but desperation. The Berlin Wall was humiliating. Sending the tanks to Budapest was, no doubt, the result of an agonized appraisal. Calling out the Red Guards, then trying to call them back, then exiling them to the country, then sending the soldiers out to overawe both the Guards and peasants were not, I am sure, the way Mao and Lin would like to run China. And the flattening of Czechoslovakia, with all the damage to the Russian image that it entails, represented the lesser of two fears.

Gentleman, I don't know the solution to Vietnam. I have ridden the patrol boats and the helicopters. I've seen the corruption and the agony. I've looked upon the oblong boxes under the flags crowding the warehouses at the Saigon airport. It's not the kind of war I'd choose, even for my enemies.

But I think we should understand why at this moment we are under such pressure to let go, why all the powers of propaganda on a worldwide scale are concentrated on alienating our former allies, making us disbelieve in ourselves, and euchering us into a position where we may some day have to accept the choice between surrender or destruction.

We are in this peril, not because the institutions of economic freedom have failed, but because they have been so successful. Our enemies threaten and rampage, not because their philosophies have been successful, but because they have so uniformly failed.

I would say that this is a ridiculous time to lose our nerve.

QUESTON AND ANSWER PROGRAM, MR. JENKIN LLOYD JONES, NATIONAL PRESS CLUB LUNCHEON, THURSDAY, JUNE 26, 1969

Mr. HEFFERNAN. The range of questions I have here, Mr. Jones, suggest that the audience does not take your strictures to heart, about you're not being an expert and not being able to answer the questions because they persist in bringing them up. The first question is "As president of the United States Chamber of Commerce what is your prediction as to the U.S. economic situation? Are we headed for inflation, or depression, or both?"

Mr. JONES. I don't know about a depression. Of course, we are told that we have now machinery for adjusting government expenditures, and so forth, that would make a depression out of the question. But I do think there is no prosperity such as we have known it that can survive a ten-cent dollar.

I do believe that we have reached a point in which, I think it was Tennyson who spoke of vaulting ambition that overleaps itself.

We have a vaulting economy that overleaps itself and that even months after the very high discount rate has gone on and the very high interest rates spread throughout the country, we are seeing still an increase in the pressure to buy, and the pressure to build and, of course, the wage settlements recently have been highly inflationary.

We, in the Chamber of Commerce, take the position, that nothing good can happen to the business community, to labor, to domestic peace and tranquility, to the government itself if we ever get in a situation where all pensons are swept away, where all insurance policies become valueless, where people acting together can no longer float bond issues for the commonweal, where you begin to get a headlong flight into things like gold and land, and so forth, and we repeat the history of Germany in the 20's.

We think we are close enough to the runaway point, so that we as a Chamber of Commerce are going to have to recommend some things we hate to recommend, such as an extension of the surtax, such as the crunch that may over-slow business as the brakes, instead of being applied slowly, suddenly grab. We are more frightened at the prospect of inflation than anything else facing this country right now and the attitude of the Chamber's Board of Directors is to take some risks with a high level of prosperity in an effort to save the dollar.

Mr. HEFFERNAN. Your eloquent words on Vietnam anticipated many of these questions, but I think we should go over them again if you don't mind. Perhaps I can lump them together. "Can the United States tiptoe out of Vietnam, safely, without having all that part of the world becoming Communist?" "What do you think is the ultimate solution in Vietnam?"

Mr. JONES. Well, of course, I have already said that I don't think we can tiptoe out, or rush out, without creating a power vacuum in which I think the power that remains closest to that point would take over.

I would say that unless our military has been lying to us utterly, the Viet Cong have been very badly hurt, the North Koreans have been very badly hurt and you can't say that the Chinese economy is booming.

I would think that we should look at the fact that there is an awful lot of things that a de-escalation of the war in Vietnam could do for the relief of pretty desperate conditions among our enemies.

We find that they are having great recruiting problems and certainly the casualties, although our casualties are very substantial, they have never gotten down to a ratio where I have ever thought that they can continue accepting the casualties, at the rate they are suffering them, indefinitely.

I would say simply this, that I think we have got to show determination, to pursue this very bloody, desperate, horrible war for some time longer. Because I think that if we show that determination and if it looks as though those casualties are going to be inflicted upon our enemies for some time in the future, then there will begin to be some progress in Paris.

But the way so many Americans are talking, and the way the TV commentators have sounded and the great number of my brother editorial writers have sounded, I think that the Viet Cong, the North Vietnamese and the Communist Chinese are utterly convinced that we are ready to surrender outright, and I don't see why they should move as long as they are convinced.

Mr. HEFFERNAN. Going back to the economic situation, where does the Chamber stand on the 10% surtax and what is the Chamber doing about one of our most serious problems—our communities?

Mr. JONES. On the surtax, the Chamber of Commerce firmly believes that we are not going to get inflation under control until we have some solid and long range cuts in government spending. A great deal of government spending is nonproductive. It has gotten away from us, that substantial cuts can be made without doing violence to any

essential government or social services, and we would like to see the 10% surtax dependent upon previous cuts and expenditures.

But I think the Chamber of Commerce is realistic. You can't redo the whole federal budget while we are up against a deadline on the surtax problem and I think the Chamber of Commerce is going to be willing to, as I said, see that businessmen pay an awful lot of taxes which some of us don't think are entirely necessary, if this is going to slow down this floating down Niagara River, which is where we are right now, in the opinion of most of the Chamber board.

Now, as to what we are doing about the problem in the communities. The Chamber of Commerce of the United States, composed of about 2700 individual chambers of commerce, about 1100 trade and professional associations, and we have felt that a great number of government programs, particularly some of those hastily conceived, and hastily put together on the poverty war, did not do a job. We see no reason why it should cost $9,000 to train a chambermaid down in Florida.

But, a job is essential. So we feel that much more good can come out of programs initiated by Chamber of Commerce members, businessmen, industrialists and so forth in which solid, serious, definite programs with training the hard core and bringing the young people, who are now out of school, into the labor force, can be spread from community to community.

And we feel that we are in an unusually good position to spread the word on workable programs. What did Wilkes-Barre do? What did Yuma do? What did Spokane do?

What specifically was done in specific communities to meet a social ill?

We are not only engaged, as many government agencies are engaged, in abstract studies in the so-called problem of the city, but we are very heavily engaged in spreading the word about what we consider our pragmatic action programs, in which some good was actually done.

We do have the feeling that businessmen by their natures are pragmatic people, they have to be, if you are not pragmatic you do go broke and out of business. We feel that there is much the business community can do to solve these social ailments if we spread the word about the workable programs and this is one of our chief functions.

Mr. HEFFERNAN. This one seems to come from someone who is not a member of the U.S. Chamber of Commerce. "Would you deny that our business practices constitute a gyp economy, false labels, fake packaging, rigged bids, military industrial deceptions, income tax dishonesty contracts rigged for special benefits to business, pharmaceutical fakes and profiteering on the poor and sick and indigent, outrageous advertising frauds, conglomorate Wall Street scandals. Is the United States Chamber of Commerce the apologist for this massive corruption and are you its chief prophet?"

Mr. JONES. I would deny it, and I don't have to apologize for what I have denied.

Mr. HEFFERNAN. I was despairing of ever getting a question on the students. There is one now. "What would you do about the SDS?"

Mr. JONES. That is a very interesting thing, I was brought up, as I have said, I am the only president of the Chamber of Commerce who cast his first vote for Norman Thomas.

I was brought up a young radical, and one of my roommates, John Scott, son of Scott Nearing, the head of the Communist party of the United States at that time, who went over to Russia as a Stakhanovite and married a beautiful Russian girl and gradually got cured. Then they wouldn't let his wife out and so then he got very cured. He is now one of the assistants to the publishers of *Time* magazine and one of the great experts on the Russian system.

But neverthless, we were all young radicals and I cut my teeth on the Manifesto and Das Capital and I read a great deal of the League for Industrial Democracy literature at that time.

About three years, I was back at my old alma mater the University of Wisconsin and I dropped into a little hole-in-the-wall bookstore and I pick up something called the New Left Notes, and the fascinating thing about it was this was straight Marxism all over again, the Marxist Action Program, the League for Industrial Democracy program, this was the sabotage program, it was the infiltration program, it was the Molotov cocktail program (which hadn't been heard of when I was a kid in college but is only an extension of other devices).

So I wrote a piece about the Red plan for colleges, and this was three years ago. No faculty paid any attention to it.

There was some yahoo editor from Oklahoma suffering from a fright syndrome about the Communist. And yet everything that was written in the New Left Notes was worked out first on the Berkeley campus and then, of course it spread East.

I would say that we have to recognize that the SDS is a subversive organization.

The very interesting thing about this was, I thought that you newspapermen would be interested, I was down at the IAPA meeting in Dorado Beach, Puerto Rico, almost two year ago, Dr. Jaime Benitez, the president of the University of Puerto Rico came over and made his speech to us and said: "I have been reading the news from Berkeley." He said: "The thing that amazes me is that you American editors haven't the foggiest idea what's about to happen to you." Then he went on back to the history of the thing. He said that the University of Cordoda in Argentina in 1918, shortly after the Third International was established, erupted in a student program in which the president was thrown out of his office; the files were all seized; the administration building was captured, and it was dictated that the university could not be reopened except with permission of a student committee that would pass on the qualifications not only of the professors, but also of the courses to be taught.

He said this was the business of turning the university from a producer of a stable middle class, which is the last thing the Communist dialecticians wanted, into a cadre for revolution. And, he said this thing spreads first to the University of Santiago, then the University of Lima, then to the University of Caracas, it began to spread all over Latin America and the conservative professors were driven out of their jobs. Left Wing activists, regardless of how poor the academic qualifications were, were installed. It was decreed that the military should not appear on the campus regardless of the provocation.

He said the result was the ruination of the South American university system and I noticed the President got himself in real hot water when he mentioned that, a couple of months ago.

Well, Jaime Benitez said, look this has been two years ago, he said "I'll make you a prediction that within nine months a great eastern American university will be seized according to this formula." That was six months before Columbia.

And the utterly ridiculous situation is the fact that we have faculties who keep trying to carry on meaningful dialogues with young men who have spelled out the program for hanging 'em.

Well, as one of the professors of political science down at the University of Chicago said, and I thought was quite interesting, "You know the interesting thing about the average college faculty member, he regards himself as a liberal. He has excellent defenses against the right. Let him be attacked by the John Birchers or the DAR or the American Legion, he knows exactly what to do. He has no defenses against the left, because the moment he is attacked by the left, he fears that he has not been liberal enough."

And, as Dr. Hayakawa says, they are all like the defenses of Singapore, all the guns point in the wrong direction.

Mr. HEFFERNAN. This one came up a little late for the previous economic question; I'll go through it. "Do you think wage and price controls are necessary to control or contain inflation?"

Mr. JONES. Well, we found out that it is very difficult to run a war, an allout war, where there is this tremendous demand and an extreme shortage of goods, without wage and price controls. This really does cause runaway inflation, and causes the type of profiteering that was so apparent in the Civil War.

Now, how big a crunch do you have to get before you resort to this very strong medicine? Remember, when you go into wage and price controls you leave the free economy and you go to the managed economy.

And this then is where somebody in Washington, with the best intentions in the world, but with the inadequate information, just like the bureaucrat in Moscow, must try to decide what something is worth both in terms of the commodity labor, which is requited in wages, and the commodity, the physical commodity, which of course, is paid for in money.

We feel that if it ever gets to the point where you have to leave the free economy to save us from one runaway inflation, this a confession of stupidity, that you never should have got into this condition, even with a gnawing Vietnam war and with the other problems we have had.

We feel that this must be avoided at all costs, because once you get wage and price controls down you have set your economy in reinforced concrete. The imbalance is started one second after you enact the law and it is a long, long way to recover from this.

I remember, I was in Germany in 1947, and we had a lot of young government officials over there, and we were giving Germany and France all kinds of advice of how you recover. We went into France and said now look, you have got a shortage of everything and so forth, so you keep on those wage controls and you keep on those rent controls, and you keep on those price controls, and let's not let this economy get away from you.

And we went over to Germany and we said the same thing and the Germans said the hell with you. We are going free right now. And they did. And because half the housing in the country was ruined, immediately the price of husing went skyhigh. A hall room closet cost as much as the week's wages. It was a terrible crunch, but because there was such demand, everybody and his brother got in the business of building houses. And the result is, Germany recovered in three years from a housing crunch that France is still in. So we do go on the theory that if we have to ever go to wage and price controls it is because we have been stupid about other things in our economy and we don't think this is necessary—at least not in the foreseeable future.

Mr. HEFFERNAN. A question about your column on Japan recently: "The Japanese gravy-train is at the end of its run." Can you explain this observation and a similar question, "What role should Japan take in Far Eastern affairs to stabilize that area?"

Mr. JONES. Japan has become a great big powerful boy, who would like to have bottles of warm milk delivered as usual, every two hours. Japan has grown up, Japan is one of the world's greatest success stories. And it is a success partly because the Americans endowed the flattened Japanese industry with the latest machinery that we had; the latest techniques that we had. Many American industries that couldn't afford, under our tax system, to modernize completely found

themselves in competition with Japanese factories where the entire plant had been built by the Americans. But, it was a smart thing that we did, because these are an industrial people; they are a very able people; they are a very hard working people, and we couldn't have done better than set them back on their feet.

Now the next question is why is the gravy-train at the end of its run? It's at the end of its run because the American Congress is not going to accept very much longer unilateral situations in which the Japanese can invest in anything that they want in Alaska, wholly-owned corporations all there for taking. We can't invest substantially in anything in Japan, we are held out. The Japanese flood the American market with their automobiles, you can't put an American automobile into Japan at any price.

They have all sorts of artificial restrictions. They are perfectly willing to let us import to Japan anything that they don't make. That's not very much, because they are very clever people and they cover the industrial spectrum very well.

Well, we are simply trying to make the point that unless we get more quid pro quo treatment out of the Japanese, Congress is, probably out of resentment, going to start imposing stringent import quotas on Japanese goods and maybe retaliatory tariffs and the bias of the Chamber is for the freest trade possible consistent with the avoidance of the crunch that you get when you dump a lot of cheaply-made products, such as the textile situation.

If the Japanese don't meet us—won't meet the realities of their new strength—we are afraid that these very cordial relations are going to be less cordial.

Mr. HEFFERNAN. As a modern day philosopher, do you think we will ever see the day when one, Presidents get along with Congress; two, Oklahoma gets along with Texas; three, business gets along with labor; and four, the Cowboys get along with Indians?

Mr. JONES. The reason that Oklahoma doesn't get along too well with Texas is because there is no profit in getting along well with Texas, because the United States government wouldn't let Texas conquer us. If it weren't for the United States Army we would get along with Texas very well.

Mr. HEFFERNAN. How do you think Nixon is doing?

Mr. JONES. Well, it has been said of course, up to now the President has attempted to achieve a very low silhouette because he is up against a Democratic Congress. Because the less partisan he can make his program look, the better. The more Democratic holdovers he can manage to keep in government, the more pleasant his relations with Congress may become and so forth, and I think there is a great deal of truth in that.

I think that the time is now coming where the President is going to have to take some positions that are probably going to be unpopular with Congress, and take some positions that will probably be unpopular with the people.

I'm not privy in Mr. Nixon's plans. Mr. Nixon's plan so far has been to cool it.

He has sensed some popular ground-swells, discussed the conditions in the street, discussed the position of law and order. I'm sure he believes sincerely in law and order. I think he has capitalized on that, because that has something to do with his popularity.

They said three months ago that it is too early to say how Mr. Nixon is doing. I would say that at the present moment that it is still too early to see, because he hasn't come to grips with Congress on the major issues where I think they may be a cross purpose. He has only got a limited time for this honeymoon which is running out pretty fast.

Mr. HEFFERNAN. Before I ask the last question, Mr. Jones, I would like to present to you this certificate of appreciation from the National Press Club, awarded in recognition of meritorious service to correspondents.

Mr. JONES. Thank you very much.

Mr. HEFFERNAN. To go along with it, a handsome addition of the National Press Club tie.

Mr. JONES. Thank you very much.

Mr. HEFFERNAN. And now the final question: "How did one of our boys, a reporter and editorial writer ever get to be president of the United States Chamber of Commerce?"

Mr. JONES. As I say one of your boys, Spike Canham, preceded me as president of the United States Chamber of Commerce so the thing is not unprecedented and I thank you gentlemen very much.

URBAN BROADCASTING WORKSHOP

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. DIGGS. Mr. Speaker, in the essentially negative atmosphere which surrounds so much of our existence these days, it is truly refreshing, and I think, noteworthy to stop and mark an event of something extremely positive in character.

I am referring to the beginning of the Third Annual Urban Broadcasting Workshop for high school students from the Washington area. A joint university-industry sponsored project for the benefit of promising high school juniors selected by school counselors, NAACP, Urban League, and others, the program is designed to provide a tuition-free 1-month summer workshop in broadcasting.

Beyond the experience gained in the classroom and from visits to actual operating installations, the program is concerned with the future growth and development of these students. Scholarship assistance and loans for college studies, summer broadcast employment and job placement upon graduation are included.

The idea for the program originated with Dr. Roger Penn, former station manager of WAMU–FM and associate professor of communications at the American University here in Washington. Victor Sussman, a producer for WAMU–FM and currently a member of the English faculty there assisted Dr. Penn. Money was raised from local commercial radio and television stations.

This year the workshop has also received a grant from the Corporation for Public Broadcasting.

The implications of programs like this are apparent. Providing an opportunity to learn about a career in the communications industry and then being the recipient of continuing attention through school and into the beginnings of a professional career will certainly benefit the individuals participating.

It also offers the broadcast industry potential personnel who otherwise would probably not become interested in the field.

Mr. Speaker, I believe these sponsors of the current session of the workshop ought to be singled out for recognition. They include:

WAMU–FM, the American University.

WGMS–AM–FM, RKO General, Inc.

WRC–AM–FM–TV, National Broadcasting Co.

WTOP–AM–FM–TV, Post-Newsweek Stations.

WTTG–FM–TV, Metromedia, Inc.

WWDC–AM–FM, AVCO Broadcasting Corp.

WOL–AM, WMOD–FM, Sonderling Broadcasting Corp.

Corporation for Public Broadcasting.

Association for Professional Broadcasting Education.

National Association of Broadcasters.

National Association of Educational Broadcasters.

The American University, Washington, D.C.

THE ABM

HON. HOWARD W. POLLOCK

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. POLLOCK. Mr. Speaker, the enclosed information from the special ABM Subcommittee of the American Security Council was brought to my attention recently. I think it is a very good article and therefore I include it in today's RECORD.

TEXT OF SUBCOMMITTEE REPORT

Make no mistake. At this very moment the Soviet Union already is well ahead of the U.S. in overall strategic missile strength. The most urgent matter before the Congress and the American people today is deciding what to do about it.

The American Security Council urges that all of the facts be given careful consideration . . . and believes that a carefully reasoned evaluation of those facts leads to a single, irresistible conclusion: America needs to begin building a Safeguard ABM missile defense system at once.

COMPARISON OF STRATEGIC MILITARY TRENDS

Although the American gross national product is almost twice that of the Soviet Union, the USSR has for years been spending up to 3 times more than we have in strategic military forces. The current trends warns us that the Russians will have spent up to $100 billion more than us on strategic weapons between now and 1975.

At this moment the total of Soviet strategic missiles is estimated at 2,750 compared with our own 1,710 (including ICBMs, intermediate and medium range missiles and sub-launched missiles). We're not building any more missiles. They are!

But that's not the whole story. By 1975 the Soviets will, at the present rate, have deployed close to 500 mammoth SS–9 nuclear rockets with 20 to 25 megaton warheads. Each missile will be about 25 times more powerful than our own present Minuteman missiles—each will be about 1,000 more powerful than the Hiroshima bomb.

The Soviet Union has a missile defense. We do not!

THE SOVIET UNION'S MOTIVES

It no longer is necessary to "suppose" that the Russians are aiming for strategic military superiority. We now know that their objective is clear strategic superiority because they have already passed the balance point and are still building at a rate that suggests an all-out war economy. In both word and deed, the Russians have shown that they regard the world struggle as a fight to the

finish—a fight that the Soviets intend to win at any cost. Not a single political or military authority has been able to offer any reasonable explanation for the current Russian buildup of staggering destructive power, except in terms of deliberate, coldly calculated aggressive intentions . . .

Like the Soviet intentions and what followed in Czechoslovakia . . . Cuba . . . Vietnam . . . the Berlin Wall . . . Hungary . . . Poland!

The facts about this threat to our security have been carefully studied by a special Committee of distinguished Americans appointed by the American Security Council. Members of the Committee are outstanding experts in their respective fields. They include two Nobel prize winning scientists; the developer of the H-bomb; the developer of over-the-horizon radar; a former chairman of the Joint Chiefs of Staff; the general who headed the development of our own ICBM forces; the present head of the A.E.C.'s weapons division at Los Alamos; a former commander of the Strategic Air Command; a former chairman of the Atomic Energy Commission; a former commander of the Polaris Submarine fleet and 20 other such authorities whose combined credentials clearly establish them as the most qualified independent group ever to study this complex problem. None of them are "armchair strategists." They know what they are talking about. We believe their collective voice should be heard by every American!

THE ASC COMMITTEE'S RECOMMENDATION

The Committee has presented its findings and conclusions in the form of a highly readable 72-page book which, summed up, tells us this:

"An American ABM system is the soundest insurance for peace—and AGAINST war—that the United States can buy in 1969 for its security and protection in the 1970's.

The Committee urges that a dependable Safeguard ABM system can and MUST be built at once. Their report observes, "far from being an offensive weapon, the ABM is, in reality, insurance against war. It may well be, in fact, the single most important step the United States can take toward a real and lasting peace at this moment in history." . . . and they further emphasize that ABM has become a symbol of our determination to keep America strong. All major defense decisions in the next decade will probably be affected by the acceptance or rejection of ABM on Capitol Hill in the next few weeks!

Can anything stop us from building a workable Safeguard ABM System? Just one thing: A LACK OF NATIONAL RESOLVE. It is ironic that—not technology . . . not "hardware" . . . not money . . . but our failure to pull together for a strong America might be the single factor responsible for our downfall.

As a matter of plain common sense, the Russians will have us either by violence or by blackmailing us with the threat of violence, if we allow them to increase their nuclear superiority. History does not reassure us with a single instance of an aggressor nation that restrained itself, once that nation believed it could start a war and win!

SPECIAL ABM SUBCOMMITTEE OF THE AMERICAN SECURITY COUNCIL

Cochairmen

Dr. Willard F. Libby, Director, Institute of Geophysics and Planetary Physics, UCLA.

Dr. William J. Thaler, Chairman, Physics Department, Georgetown University.

Gen. Nathan F. Twining, USAF (Ret.), Former Chairman, Joint Chiefs of Staff.

Members

Gen. Paul D. Adams, USA (Ret.), Former Commander-in-Chief, U.S. Strike Command.

Dr. Harold M. Agnew, University of California—Los Alamos Scientific Lab.

Dr. James D. Atkinson, Professor of Government, Georgetown University.

G. Duncan Bauman, Publisher, St. Louis Globe Democrat.

Peter Bruce Clark, President and Publisher, The Detroit News.

Adm. Robert L. Dennison, USN (Ret.), Former Supreme Allied Commander, Atlantic.

Hon. Elbridge Durbrow, Retired Career Ambassador.

Adm. H. D. Felt, USN (Ret.), Former Commander-in-Chief, Pacific.

Robert W. Galvin, Chairman of the Board, Motorola, Inc.

Vice Adm. Elton W. Grenfell, USN (Ret.), Former Commander, Atlantic Submarine Fleet.

Dr. Montgomery Johnson, Chief Scientist, Philco-Ford Corp.

Vice Adm. Fitzhugh Lee, USN (Ret.), Former Commander, National War College.

Vice Adm. R. E. Libby, USN (Ret.), Former Deputy Chief of Naval Operations.

Dr. Nicholas Nyaradi, Director, School of International Studies, Bradley University.

Dr. Stefan T. Possony, Director of International Studies, Hoover Institute—Stanford University.

Gen. Thomas S. Power, USAF (Ret.), Former Commander, Strategic Air Command.

Brig. Gen. Robert C. Richardson, USAF (Ret.), B. A. Schriever Associates, Inc.

Ira G. Ross, President, American Ordnance Assn.

Vice Adm. W. A. Schoech, USN (Ret.), Former Chief of Naval Materiel.

Gen. Bernard A. Schriever, USAF (Ret.), Former Commanding General, Air Force Systems Command.

Adm. Lewis L. Strauss, USN (Ret.), Former Chairman, U.S. Atomic Energy Commission.

Dr. Kenneth Street, Jr., Professor of Chemistry, University of California (Berkeley).

Dr. A. D. Suttle, Research Scientist.

Dr. Edward Teller, Nuclear Scientist.

Rear Adm. Chester C. Ward, USN (Ret.), Former Judge Advocate General, USN.

Dr. Kenneth Watson, Professor of Physics, University of California (Berkeley).

Gen. Albert C. Wedemeyer, USA (Ret.), Chief U.S. Strategist, World War II.

Dr. Eugene P. Wigner, Physicist, Princeton University.

GRATITUDE FOR MEN AND WOMEN IN NATIONAL SPACE PROGRAM

HON. ROBERT E. JONES

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1969

Mr. JONES of Alabama. Mr. Speaker, I enthusiastically support House Resolution 487 which recognizes the splendid effort of the men and women involved in our Nation's magnificent space program.

The design, manufacture, and assembly of the hundreds of thousands of individual components into the single, though complex, space vehicle called Apollo 11 is a tribute to the vast knowledge, skills, and techniques of the men and women who worked so carefully and accurately in the space effort.

I am particularly proud that the powerful launch vehicle, the Saturn V, was a result of the work of the citizens of Huntsville, Ala., in the district I represent.

Beyond that, the basic concepts of Dr. Wernher von Braun, Director of the Marshall Space Flight Center in Huntsville, are widely acknowledged to have been a most significant factor in the realization of our national goal to have man explore the moon and return to earth successfully.

Every citizen of my State is justly proud of the work Dr. von Braun and his dedicated teammates have accomplished for science and the advancement of mankind in this, the world's greatest rocket development.

We stand on the threshold of interplanetary explorations which can bring new dimensions to all mankind and which offer such great promise for improvement of man's earthly problems.

The accomplishments of the past few days border on the miraculous. Especially impressive has been the technology which allowed us all to be participants at this, the beginning of a new age in history through the open and public broadcasting of this epic journey.

Again, I salute the dedication of the entire NASA team to the perfection which made this journey a reality.

CAPTIVE NATIONS WEEK

HON. CHARLES W. SANDMAN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. SANDMAN. Mr. Speaker, in 1959, the Congress designated the third week of July as Captive Nations Week in remembrance and tribute to those living behind the Iron Curtain under totalitarian governments. It has been 11 years since Congress began observance of this week. During these years, the people of the United States have continued living in freedom. Americans have continued to exercise their rights to think, to speak, and to act as individuals.

A "captive nation" is defined as one existing under Communist domination, one in which there is no freedom of personal expression, one which serves as a solemn reminder to the American people of the freedoms which we possess, and one whose people deserve our sympathy and support for the struggle that constitutes their way of life.

On August 23, 1939, the infamous Nazi-Soviet Pact—Ribbentrop-Molotov Pact—between Hitler's Germany and Stalin's Russia was signed. The "nonaggression" pact paved the way for Soviet aggression against the Baltic States of Estonia, Latvia, and Lithuania as well as the Russian-German division of Poland. Since that day, twenty-five more nations have become Communist controlled.

As a free nation, America cannot forget those which are no longer free. We must support the right of all nations to a free choice of government, and we must preserve their hopes of freedom.

This goal can be accomplished by the Congress in a practical and effective way through enactment of legislation which I introduced early in the 91st Congress.

House Resolution 182 would establish a nonpartisan committee, the Special Committee on the Captive Nations, which would conduct a study of all the

captive non-Russian nations. These nations include many in the Soviet Union, Asia, and Eastern Europe. This study would make special reference to the moral and legal status of Red totalitarian control over these nations, facts concerning conditions in the countries, and most importantly, means by which the United States can assist them by peaceful processes to alleviate their present plight and aid in their aspirations to regain national and individual freedoms.

I urge consideration of this resolution as a further positive expression of our dedication to the cause of freedom for all peoples. I am privileged to join with my distinguished colleagues in reaffirming sympathy and support for the struggling peoples of the captive nations, hoping the injustices forced upon them may be quickly and peacefully rectified.

THE EAGLES MERE PLAYHOUSE

HON. JOSEPH M. McDADE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. McDADE. Mr. Speaker, my State is justly proud of its varied cultural achievements which include some of the foremost theaters in the country. One of these fine playhouses is located in my congressional district at the lovely resort area of Eagles Mere in the beautiful Endless Mountains of Sullivan County.

The Eagles Mere Playhouse is a landmark in the history of central Pennsylvania. First used for Chautaqua, it was established as a professional theater about half a century ago. The first producers, Thomas R. Long and Bernard Moss, now in their 5th year of operation, have continued the traditions and the standards which have made the playhouse one of the leading attractions in central Pennsylvania, earning a reputation as one of the outstanding summer theaters in the Eastern United States.

I was delighted to have one of these producers, Mr. Moss, visiting in my office just this morning.

In presenting the finest of theatrical productions, including special performances designed for young people, and in bringing to Eagles Mere well-known personalities from the Broadway stage and television, the Eagles Mere Playhouse fills a vital role in the cultural and economic development of central Pennsylvania.

The contribution of the Playhouse to the continuing progress of the Endless Mountains area has been acknowledged by the Sullivan County Chamber of Commerce, the Eagles Mere Resort Bureau, and leading public officials. Former Governor Scranton wrote to the playhouse in 1965 as follows:

> The group has my wholehearted support and encouragement in its efforts to bring professional theatre to Sullivan County and to Central Pennsylvania.

I join wholeheartedly in these sentiments and express my best wishes to all associated with the Eagles Mere Playhouse.

THE VAST WASTELAND

HON. ARNOLD OLSEN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. OLSEN. Mr. Speaker, television holds the potential of being a vital media combining education, entertainment, and information. Yet more and more all of us hear it referred to as a "vast wasteland," and, as the three major networks announce the programs to be presented in the new season, I predict still harsher criticism of the television fare.

There is growing evidence that our major networks are, at best, inconsistent in applying their rules of censorship, program control, or taste. A general rule which the networks constantly refer to insists that prime time entertainment programs should not include editorial or news comment. Yet all of us have seen examples in which this rule has been ignored including the obvious exception which is made each year to broadcast the Bob Hope editorial/comedy hour on Vietnam.

I do not criticize the networks for broadcasting the Bob Hope show. Although I have misgivings regarding our involvement in Vietnam, I believe, personally, that we should give our boys fighting there our complete support as long as they must remain.

Rather, I criticize the networks for censoring statements or entertainment material made on television by performers speaking for a significant number of sincere critics of this Nation's involvement in Vietnam. I use this only as an example. The network control over programing has extended much further to include the blocking of healthy satirical skits or songs dealing with contemporary problems.

Recently I had the opportunity to join with a number of my colleagues in viewing selected passages which had been censored from a popular, prime time television program. I was shocked—not at the content of the material, but at the fact that material of such an innocuous nature would be censored.

A significant reason why this Nation has become and remained strong has been a jealous and cautious protection of the individual's freedom of thought and expression. We have thrived on a diversity of views and encouraged thoughtful debate on the major issues and problems of the day.

It is inconsistent with our efforts to preserve and protect free expression for our major networks to take it upon themselves to impose their criteria of "taste" or censorship on all Americans.

We hear more and more about the generation gap. I submit our networks are contributing to this gap by ignoring it. Our educational institutions are doing a better job than ever before in stimulating our young people to consider and accept the challenges of today. It seems to me that the networks are performing a disservice to young people and the Nation if they insist upon eliminating material of a contemporary, stimulating nature from entertainment programing.

Mr. Speaker, I want to call the attention of all of our colleagues to an excellent letter dealing with this problem which was written by my distinguished colleague ANDREW JACOBS of Indiana. Representative JACOBS' statement is just one example of a growing concern in the Congress about the threat corporate censorship poses for our democratic way of life. I am hopeful this concern will blossom into a thorough study of the roles of television and television networks in America today.

The letter follows:

MAY 7, 1969.

Mr. ERNEST F. ANDREWS,
Editor, RTNDA Bulletin, TV–Radio Department, Syracuse University, Syracuse, N.Y.

DEAR MR. ANDREWS: Please forgive my delay in responding to your letter which, because of my travels has only just caught up with me.

Unfortunately, the UPI story to which you referred did not adequately reflect my remarks on the occasion to which it referred.

As was indicated by the story, a tape of the rejected Smothers Brothers Show was played in a Washington studio for Members of Congress and others.

Following the program a UPI reporter asked my opinion of the action taken by CBS in canceling both this specific show and the Smothers Brothers contract altogether. My response was far closer to what follows than what was reported:

Q. What is your purpose in being here?

A. Truth.

Q. Well, all right. But what is your opinion of the CBS action in cutting off this program and canceling the Smothers Brothers contract altogether?

A. It was really pretty awful. In this program I saw no "sex" and I saw no "violence," only music and comedy which included current events topical humor. Topical humor is an art form least deserving of censorship in a free society. It is forbidden usually in societies which are not free or are in the process of losing their freedom. There was no controversial humor under the Soviet Communists. In fact, Alexander Dubcek was canceled yesterday. (4–21–69).

Following the showing of the CBS proscribed material, people present looked at one another and shrugged, "Where's the obscenity?" There was none.

This whole episode is reminiscent of an incident which occurred during my law school days when I was a police officer. Our Department was called upon by a private censorship group to confiscate literature the group had listed and arrest those found selling it.

Included on the list was Mad Magazine. When asked how this satirical magazine found its way onto a list of obscene literature, a member of the censorship group promptly explained that the magazine was Communist inspired because it made fun of America's great leaders.

Comedy has to be about something. And while there are those in our society who have an appetite for bland comedy about trivia, the success of comedians like Bob Hope indicates there are many in our society who favor topical humor about current events. A truly free society eschews holy cows. And whether it is Hope's humor about Humphrey or Smothers' humor about Pastore, or Will Rogers' humor about the inheritance tax, it all seems natural enough to me living as I do in what is generally a free society.

Suppression of such humor conjures up chilling visions of repressive authorities insecure in their own beliefs. Churchill described the powerful potentate, surrounded on all sides by his armed forces with bayonets at the ready, who nonetheless would shrink in terror at the appearance of a tiny mouse of an idea.

Error of opinion and reasonable opinion are matters of viewpoint, but part of the dream of Jefferson was that in America, ". . . error of opinion can be tolerated when contract marks the first time ever that a reason is left free to combat it."

The cancellation of the Smothers Brothers' network stopped a show whose ratings were good and for which advertising was secure.

The Smothers Brothers Show was clearly not in the position of the stuttering radio announcer who was sure he had been turned down for radio employment because of his beliefs.

The Smothers were not turned down for employment. They were already working for CBS. They had produced no pornography. And their show was a profitable venture for the network. So what is left? Thought control.

America is supposed to be a place where it is safe to be unpopular. Apparently some of the liberal political humor on the Smothers Brothers Comedy Hour has been unpopular with some people. The same can be said of the political humor of Bob Hope and Red Skelton, which more often runs along conservative lines. In my judgment neither brand of humor should be silenced. Both should be aired as responsive to each other in order that each individual television viewer might decide for himself which is error and which is reason. We call this "giving both sides." It is a concept which seems as applicable to the performing arts as to the more formal and direct areas of news commentary.

President Kennedy said that part of the work carried on by artists is building bridges of understanding among people. That understanding can never be accomplished if the bridges are permitted to touch only one side. If I believe one way and you another, each of us must hear the other out in order to accomplish the understanding necessary to resolve our differences peacefully. And the essence of art is the illustration of deeply felt ideas. It was true of Michelangelo and of Aristophanes and Dickens and Shakespeare and all the others whose special talents enabled them to express with beauty the deepest and sometimes most controversial thoughts of their patrons.

Should these principles, when applied to television and radio be the subject of legislation? Should there be an Equal Time For Art Law? I don't know. But so important a question probably deserves congressional hearings and debate.

The questions with which you suggest analogy between the electronic and printed media are certainly thought provoking. On the one hand we have the First Amendment guarantee of freedom of the press. Yet, on the other, we have the reality that the vital affairs of the nation are governed to some extent by the information which is disseminated by the wire services as news.

Obviously, the wire services are physically incapable of carrying all materials or opinions made available to them. A judgment must be made. And the ultimate question is whether the responsibility for that judgment should be restricted to the corporate limits of the wire services themselves. Government censorship has an odious ring. Yet corporate censorship in the case of printed media can be just as deadly damaging to the public interest. This dilemma deserves the most serious study by all of us who deeply wish to ensure the survival of freedom.

In answer to your question concerning whether a newspaper should be required to carry every column of a syndicated writer whose rights it buys, I would suggest that the deletion of words within a column the paper does run is more clearly objectionable than the failure altogether to run a given column. I should think the most serious offense against open discussion would be represented by the failure to print a column because of strong disagreement with it, rather than need for its space on a given day.

I have read H.R. 9566, but I do not expect fully to form my opinion concerning it until I have had the benefit of congressional hearings. At first blush it seems like a rather stringent regulation, which has yet to be justified to my satisfaction.

When one considers the apparent fact that the NBC Today Show is programmed by NBC News, he cannot be glib on the question of whether news programming holds "some position different from general entertainment on radio and TV." Surely the difference between the two suggested categories is not so great that a little entertainment should never be found on a news program and a little news should never be found on an entertainment program.

In any case, has history not taught that there is far less danger in rules which require that a person be allowed to say what he thinks than those which forbid him to do so?

With best wishes and appreciation for the trouble you took to write,

Sincerely,

/s/ANDREW JACOBS, Jr.

A BILL TO CORRECT SHORTCOMING IN OUR SOCIAL SECURITY PROGRAM

HON. SAM GIBBONS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. GIBBONS. Mr. Speaker, today I am introducing a bill to correct a serious shortcoming in our social security program which discourages widows who get social security benefits from remarrying.

Under present law, a widow who remarries may receive a serious reduction in her income. The law now provides a widow with a benefit which ranges from 71½ percent to 82½ percent of her deceased husband's benefit amount, depending on how old she is when she comes on the social security benefit rolls. If she remarries, however, her widow's benefit is cut to 50 percent of her former husband's benefit amount. For a widow who was drawing the full benefit of 82½ percent, this means that she experiences a 39-percent reduction in benefits.

Presently, a widow who remarries can get a wife's benefit equal to 50 percent of her new husband's benefit amount, if the wife's benefit is higher, but often it is not. In many cases, under these provisions of law, a widow's remarriage substantially reduces her income. A number of widows who would like to remarry do not do so because they cannot afford to.

Under my bill, an aged widow who remarries could continue getting the widow's benefit she had been getting. However, the total payment to her and her new husband together could not be more than the amount she and her former husband would have been paid as a couple. The widow could, of course, get a wife's benefit equal to 50 percent of her new husband's benefit amount if higher payments would result, just as she can now do under present law.

A similar provision for aged dependent widowers who remarry is included in my bill.

Mr. Speaker, the change this bill seeks to make may seem like a small matter, but to those persons who are directly involved—and there are many such persons in my district—this is an important matter. I therefore intend to do all in my power to see that this amendment receives early and full consideration.

HELICOPTER AMBULANCES FOR USE IN THE HIGHWAY WAR ZONE OF THE UNITED STATES

HON. LAWRENCE J. HOGAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. HOGAN. Mr. Speaker, pertinent to the Ambulance Service Corps bill which I recently introduced, I insert an article which appeared in the Government Executive magazine of May 1969. I am sure that my colleagues will find it very informative. This article points out some facts concerning the use of helicopters as ambulances. I am sure all are familiar with their effectiveness as demonstrated by military use in combat. The article also sets forth some glaring problems attached to emergency services when such a vehicle is applied to civilian use. I think this clearly demonstrates the great need, not only to consider favorably a separate ambulance service corps, as contained in my bill, H.R. 12552, but that such an organization as envisioned by the legislation, can only reach maximum effectiveness by the use of the latest rescue techniques and equipment. The latter should include helicopters. To have the very best of emergency services would result in a reduction of the timelag from notification to treatment and the helicopter has proved itself to be the instrument for such a reduction in certain cases.

Aside from the discussion of equipment, the article substantiates the need for a well-trained and separate ambulance service corps dedicated completely to the singular purpose of giving victims the optimum chance for survival.

The article follows:

THE REAL WAR ZONE

Young men who demonstrate bitterly against going to war in Vietnam might be a little less vociferous if they knew they'd be safer there than on their own country's highways. According to the National Center of Health Statistics in Washington, 48,000 males, 15 to 24 years old, were killed in highway accidents in 1966 through 1968 (approximately 12,000 more U.S. men than have been killed in all the years of the war added together).

From reports so far, that tragic track record will get no better in 1969. One thing that might, however, is the saving of people's lives after they've gotten into an accident. The way: applying a lesson learned in Vietnam, i.e. the use of helicopter ambulances to the highway war zone in the U.S. An expert in one company (Fairchild Hiller Marketing Corp.) actively pushing the program, estimates: "If applying military medical transportation techniques to highway accidents makes just a one-eighth improvement, we could save 5,000 lives and about $200 million in damage claims a year."

In Vietnam, using helicopter ambulance ships manned by trained medics to transport

the wounded to base hospitals, rough rule of thumb already is that if a medic can keep the wounded man alive for just five minutes after he's reached, his life probably will be saved. But getting the same helicopter techniques installed on the Nation's highways faces a mountain of problems. Among them:

Just about every conceivable form of state, city and local government jurisdiction is used around the country to provide ambulance service—and most of the officials in them, jealously guarding their entrenched traditions, have no knowledge of nor appreciation for helicopters.

No statistics are kept anywhere on how many people die in an accident and how many really die on their way to or at the hospitals later. So, in cold-blooded terms, no specific measure exists to gauge a helicopter's worth—except by extrapolation of the military experience and a few isolated cases in the U.S. where a helicopter has been used to transport the sick and injured.

In addition to the Government jurisdictional snarl, making it extremely difficult for the helicopter industry to find the man with authority to sign a contract, Government owns another built-in roadblock. The only Federal requirement of an ambulance driver is that he have a chauffeur's license. (Helicopter-borne military medics have had at least advanced first aid training.) Result, verified in Highway Safety Bureau films, is often appalling treatment of highway accident victims by ambulance personnel. Again, however, no one has studied how much this adds to the death toll.

Real point, however, at least to Fairchild Hiller, is that a potentially invaluable answer to the mounting highway death rate exists—and isn't even being checked out.

CAB'S FARE CRISIS—TOO MANY FLIGHTS

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. HAWKINS. Mr. Speaker, 20 Members of Congress, including myself, have petitioned the Civil Aeronautics Board to institute a general rate investigation. As a part of that investigation the Members have suggested the Board give consideration to the revenue-hour approach as a way to improve the consistency in the level of airline earnings.

Recently a very interesting pamphlet prepared by the Air Transport Association of America was brought to my attention. It is entitled "Too Many Flights?"

In reviewing this booklet I could not help but note that the association discussed its members' expenditures and, therefore, revenue needs in terms only of revenue-hours:

When an airline establishes a schedule it commits the capital investment of a jet costing up to $7 million—equivalent to the cost of a large industrial factory—and the associated operating expense of at least $1,200 an hour or more. (Page 5.)

Considering the minimum $1,200 per hour operating expense, airlines expect to operate a schedule for at least six months and usually well beyond that. (Page 7.)

In view of the amounts involved, it seems rather a shame that we do not have similar traffic and revenue data on this basis. It might be useful.

In our petition, the Members also pointed out to the Board that:

One of the key factors which has historically been recognized in determining the future earning potential, unit cost-of-service, and "just and reasonableness" of a rate is load factor. The relationship between cost, price, and load factor underlies the whole area of airline profitability.

We then went on to note that the Board's staff itself had recognized this relationship in its own study:

It seems equally clear, however, that the fare level affects the volume of service offered by the several carriers in the market and that a fare set well above costs, based on a reasonable load factor, may contribute to the operation of excessive capacity and resulting inefficient use of resources.

As a result, I could not help observing the extremely low occupancy of the flights in figure 4 of the ATA's pamphlet departing at 7 a.m. and 10:30 p.m.

I have been told that a trip on the Dallas-Chicago route is something in the neighborhood of 2 hours, so that the minimum revenue required by the airline to just break even would be around $2,400 per day. If this is true, then three of the nine trips are losing money, four are just making a reasonable return, and the remaining two are making up the loss of the first three. Consequently, I cannot help wondering if the Board has in this case given sufficient consideration to the relationship between cost, price, and load factors in approving these fares; if the present fare schedule is not contributing in some way to the operation of excess capacity, especially at nonpeak times; and if a different rate schedule based upon reasonably obtainable overall load factor guidelines might not bring about a more efficient use of the airlines' financial resources. For example, higher load factor standards might encourage the airline to reduce its cash operating costs by combining the 8:35 p.m. and 10:30 p.m. flights into one service.

Airline scheduling is admittedly a complex subject about which we all need a little more information, hence the full text of the pamphlet follows:

TOO MANY FLIGHTS?

In a real sense, it is the public that schedules an airline. For it is the traveler who demands good connections and departures at the magic hours—requirements that contribute to "peaking," that overworked and almost totally misunderstood synonym for airport congestion.

The demand for airline service does peak quite heavily around certain afternoon hours, flights catering largely to "get-me-there and back-the-same-day" businessmen. The largest number of passengers are in fact traveling on short or medium-haul trips, and for business reasons. Peaking of customer demand in this situation is as inevitable as the morning and evening rush hour peaks on the New Haven Railroad, Hollywood Freeway or any other big-city commuter artery.

CHAOS OR SERVCE

Some basic facts must be understood:

Airline schedules are tied to public demand.

The financial stakes, soaring into the billions, are too high for airlines to indiscriminately reschedule those peak-hour flights dictated by increasing public demand.

Airlines do not deliberately peak service. Such limited peaking as does occur is normally involuntary due to geography and time zones beyond the carrier's control.

While an airline does not deliberately hold planes idle awaiting the peak period, neither can it afford to hold planes idle during the peak period when the public most wants to travel.

Wholesale schedule adjustments would result in chaos and disruption.

THE GOLDEN THREADS

Between 1968 and 1971, the nation's scheduled airlines will invest well over $10 billion in new passenger and cargo aircraft, in new terminals, in personnel training and for such ground equipment as computerized reservations systems and mechanized baggage handling facilities. This massive investment is based on the forecast that passenger traffic will triple by the 1970's when the huge Boeing 747, scheduled to enter service late this year, and supersonic transports still under development promise to launch a new era of luxury and efficiency in commercial aviation.

Still, schedules are the golden threads in the fabric of air transportation. Schedules tie the system together and determine how well it works—efficiently for customers; economically for the airlines.

Schedule juggling is not the simple panacea for curbing the present increase in air traffic congestions over major airports.

Demand for air transportation should not be stifled in order to compensate for a lack of airport and airways capacity. The reason most frequently given for this lack of capacity is that public acceptance of jet travel grew so fast that it outstripped forecasts by even the most optimistic experts.

Conservative forecasts, however, are symptoms—not causes. The true cause of our undercapacity today is that for many years government expenditures for new facilities, for air traffic controllers, and for research and development in air traffic control have have actually declined. This decline was in the face of actual and predicted rising demand. There is no more effective way to produce undercapacity than to cut back on modernization, new equipment and manpower in the face of rising demand.

THE CHAIN REACTION
